1–72	14	337–408	19	673–728	24
73–144	15	409–472	20	729–792	25
145–208	16	473–536	21	793–856	26
209–272	17	537–600	22		
273–336	18	601–672	23		

SUBJECT OR COMMODITY INDEX.

A.

Abaca. *See* Fibers.
Abrasives, emery ore, increased production in Greece ... 38
Advertising, advertising matter, methods of shipment to foreign firms ... 549
export publications, American, development ... 75
illustrative cuts in foreign periodicals ... 76
"let the buyer believe" policy for American exporters ... 148
printed matter, tariff in Mexico ... 192
publicity to foreign agents of American exporters ... 475
window displays, value of ... 75
Agents and agencies. *See* Trade representatives.
Agricultural implements and machinery, cooperative purchasing in Italy ... 48
dairy equipment, market in Switzerland ... 113
demand in Argentina ... 511
demonstrations needed to develop Arabian market ... 765
exhibitions. *See* Expositions and conventions.
exportation from Czechoslovakia small ... 48
exports from United States, monthly statements ... 309, 510, 692
hand corn mills, market in Dominican Republic ... 765
harvesters, Canadian, in Yaqui Valley, Mexico ... 48, 574
implements, market and types in demand in British East Africa ... 764
imports into Finland, 1921 and 1922 ... 245
imports into Latvia to be tested ... 246
imports into Netherlands, 1921 and 1922 ... 112
industry in Germany depressed ... 48, 246, 429
investigations and research work planned in United Kingdom ... 574
Krupp project for supplying Russia ... 47
manufacture in Russia, plans for 1923 ... 429
market and types in demand, Saltillo, Mexico ... 430
market situation, Anatolia ... 310
Austria ... 48
Brazil ... 48, 837
Chile ... 837
Cochin-China ... 765
Czechoslovakia ... 645
India ... 837
Italy ... 246
Peru ... 837
Philippine Islands ... 113
Poland ... 511
South Africa ... 837
market in Brazil affected by exchange ... 765
production and prices in Belgium ... 309
production in Poland exceeds demand ... 765
purchases by cooperative association in South Africa ... 575
spraying apparatus, potential market in Australia ... 765
threshers, demand in Australia limited ... 575
tractor hauling in British Honduras lumber trade ... 837
tractor hauling in silver mine in Ontario, Canada ... 511
tractors, demand in Chihuahua, Mexico, small ... 511
imports into Argentina, January–March ... 245
market in Bulgaria ... 49
market in Egypt ... 48
Agricultural implements and machinery—Continued.
tractors—continued.
market in Mauritius ... 84
market situation in Bavaria ... 49
market situation in Portuguese East Africa ... 112
purchase by syndicate in Roja, Spain ... 511
sale of American product as result of agricultural show in Australia ... 575
sales in Chile small ... 575
use on farms in United Kingdom decreasing ... 575
types used in Yucatan ... 692
windmills in small demand in Belgium ... 764
See also Machinery and supplies.
Agriculture, agrarian measures proposed in Italy ... 815
crop conditions, China ... 544
Dutch West Indies ... 784
Europe ... 492
India ... 9
Mexico ... 132
South Africa ... 81
crop experiments in Malaya ... 669
development in Rio Grande do Sul, Brazil ... 461
development proposed in Greece ... 547
farm hands' wages. *See* Labor and wages.
hops, import restrictions in United Kingdom ... 125
industry in Argentina ... 722
industry in Brazil ... 846
power farming, interest in New South Wales ... 49
tenant farm system in Japan, proposed reform ... 265
See also Foodstuffs; Feedstuffs; Grain.
Airplanes. *See* Aviation.
Alcohol. *See* Chemicals and drugs.

GEOGRAPHIC INDEX

A.

Abyssinia, cotton goods, American product preferred 564
hide market active 377
Afghanistan, salt and wood, tariff regulations 68
Alaska, rubber goods, imports from United States, 1922, and market outlook 178
Albania, maize shortage 351
timber concession to Danzig company 615
Algeria, neroli oil exports to France, 1920 418
office supplies, market situation 107
optical goods market 621
patent fees increased 325
port improvement contract in Algiers awarded French company 685
radio system to France proposed 584
tariff, imports from Morocco free 192
telephone service improvements proposed 499
tire market competition 504
tires, market in Tunis limited 697
trade, 1922 406
wool situation 496
Anatolia. *See* Turkey.
Angola, cotton production hampered by labor shortage 229
disinfectants and insecticides granted tariff exemption 654
motor trucks in use 505
tire market situation 638
Arabia, agricultural implement demonstrations needed to develop market 765
gum market active in Aden 372
hides and skins, trade at Aden affected by exchange rates 513
Mocha light extinguished 651
trade disputes, arbitration by Indian merchants in Aden 387
trade, exports from Aden to United States, January-March, 1922-23 468
Argentina, agricultural implements and machinery in demand 511
agricultural industry 722
airplanes and accessories, local representatives needed 495
aluminum ware, increase in use 744
automobile customs valuation 255
broom corn industry, report available 19
coal imports, 1922, and current prices 424
commercial failures, 1912-1922 201

Indigo imports at Shanghai in 1922	31
Possible development of Spanish phosphate	31
Moroccan phosphate rock exports	31
Chemical trade notes	32
Coal:	
Coal situation in the Netherlands	35
Coal imports into Ceylon during 1922	36
Active Scotch coal trade	36
Construction news	45
Electrical equipment:	
Auxiliary steam plants needed in Japan	40
Market for electrical equipment in Aguascalientes	40
Cheaper current in Melbourne increases apparatus demand	40
Growing electrical activity in Belfast	40
Electrical notes from Brazil	41
Electrical trade notes	41
Foodstuffs:	
Coffee shipments from Mexico	27
Chicle industry in British Honduras	27
Consumption of staple food products in Belgium	28
Sugar industry in British and Dutch Guiana	28
Notes on food products	28
Finance:	
Market position and yield of Belgian Government bonds	50
Hides and leather:	Page.
Finnish leather industry in 1922	44
Hide and leather situation in Germany	44
Hide and leather trade notes	45
Chamois-skin industry in Niort, France	45
Industrial machinery:	
Machine tools and machinery in the Netherlands	46
Indian laws regulating steam boilers	47
Opportunity for abattoir equipment in Honduras	47
Lumber:	
World trade in box shooks	15
Methods of handling American lumber abroad	15
Recent foreign prices for box shooks	16
Advantage of patronizing regular steamship lines	17
Exports of Canadian box shooks	17
Lumber trade of Canadian maritime provinces	17
Current situation in Brussels	17
Austrian outlook unfavorable	18
Finnish sales in 1923	18
Consul helpful in promoting American trade	18
Cut-offs	18
Minerals and metals:	
Rising prices mark British metal trade	37
Rising prices on Japanese iron market	37
Output of pig iron and steel in the Saar	38
Greek emery-ore output to be doubled	38
Market for American cement in Cuba	38
Manufacture of tin plate in India	38
Mineral and metal items	39
Paper:	
Conditions in the Philippine paper market	49
Side runs of the paper trade	49
Petroleum:	
Canadian petroleum trade during 1922	32
Petroleum shipments from Tampico district during January	33
Bunker oil supplied at principal United States ports	33
Petroleum notes	33
Rubber products:	
Rubber restriction notes	25
Exports of Balata from Peru increasing	26
Rubber trade notes	26
January rubber exports from Brazil and Peru	27
Shoes and leather manufactures:	
Conditions in the German shoe industry	42
Slipper trade of the United States	42
Shoe manufacturing in Cuba	42
The German boot and shoe export trade	42
Items of interest to the trade	43
Specialties:	
Foreign competition in cutlery	13
Textiles:	
World textile news in brief	19
British artificial-silk trade	20
Condition of linen manufacturing industry in Russia	21
Dutch trade in textiles in January	21
Indian textile market	21
Philippine textile trade	21
Prince Edward Island market for corsets	22

Tobacco: Page.
The Dutch cigar and cigarette trade 30
Dominican tobacco crop 30
1922 tobacco production in the Province of Ontario 30
Tobacco market quiet in Belgium 30

Commercial law:
Argentine decision on D/P contracts 51
Purchase of interest in Czecho-Slovak companies by foreigners 52
New Zealand companies' amendment act of 1922 52
Consignment laws in Java 53
Ontario's new anti-combine bill receives first reading 53
Insurance companies in Japan 53
New Greek tax on profits 53

Transportation:
Shipping—
Japanese shipping subsidies for 1923 54
Assignment of Shipping Board tonnage to trade routes 54
Shipments to Austria via Trieste 54
Current American shipbuilding 55
Standard types of export cases 55
Vessels broken up during third quarter, 1922 56

Railways—
Additions to rolling stock of Finnish railways 56
Through traffic agreement between Germany and Russia 56
Danzig shipyard and car plant leased 56
Motor trains in New South Wales reduce operating cost 56

Communications—
Postal news of commercial interest 57

Regional divisions:
Western Europe—
The British industries fair, 1923 57
High prices hurt activity at Leipzig fair 58
Slight spread between American and British export prices 58
British fiduciary currency 58

Regional divisions—Continued. Page.
Eastern Europe and Levant—
Finland's foreign trade in 1922 59
Exports declared from Esthonia to United States 60
Exports declared from Danzig to United States 60

Balkans and Levant—
Economics and trade notes from Syria 60

Latin America—
Economic conditions in Mexico 61
Conditions in the State of Para, Brazil 62
Conditions in Guatemala show little change 62
Dominican prospects better 63
Produce exports benefit Venezuelan situation 63
Bolivian revenues and expenditures in 1922 63
Cuban exports to the United States 64

Far East—
The Chinese comprador 64
Trade of Chefoo in 1922 65
Improvement in Australian trade and economic conditions 65
Harbin business conditions 65
Decreased cost of living in India 65

Commercial treaties 66
General tariff changes 66
Import and export restrictions 67
Tariff changes on specific articles 68
Customs regulations 69
Patents and trade-marks 70
Internal regulations affecting trade 70
Trade-marks 71

Book notes 71

Foreign trade opportunities 72

Miscellaneous:
Commercial inquiries answered by bureau and district offices 4
Trade lists available 10
American consular officers on leave 53
War Department sales for April, 1923 71

INVESTIGATIONS BY UNITED STATES TARIFF COMMISSION.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the Tariff Act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles below:

Oxalic acid,
Diethyl barbituric acid and derivatives thereof,
Barium dioxide,
Casein,
Logwood extract,
Potassium chlorate,
Sodium nitrite,
Mirror plates,
Pig iron,
Swiss pattern files,
Paintbrush handles,
Sugar,
Cotton warp-knit fabric,
Cotton gloves made of warp-knit fabric,
Cotton hosiery for infants,
Wall pockets,
Artificial or ornamental fruits, vegetables, grains, leaves, flowers, and stems or parts thereof,

Being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission passed on the 27th day of March, 1923.

JOHN F. BETHUNE, *Secretary.*

COMMERCE REPORTS

A WEEKLY SURVEY OF FOREIGN TRADE

HERBERT HOOVER, SECRETARY OF COMMERCE

JULIUS KLEIN DIRECTOR BUREAU OF FOREIGN AND DOMESTIC COMMERCE

CULTIVATING GOOD WILL.

Good will is a plant of slower growth than hatred, suspicion, distrust, or prejudice. It is less prolific than any of these, nor can it flourish where they abound. But it bears better fruit.

Americans have never fully exerted themselves to do the many graceful things that are prized so highly by other peoples, particularly our neighbors to the south—the many courtesies not directly connected with the solicitation of business. Very often the amiable things they do or the pleasant letters they write are a prelude to a quotation or an offer, and this fact tends to destroy the recipient's belief in their sincerity.

Nowhere is there more fertile soil for the growth of good will than in the lands where the language is Spanish or Portuguese, though, indeed, no matter what the tongue or the country may be, the cultivation of good will is one of the most agreeable, useful, and profitable of policies. But it must be permitted to yield its own profit—voluntarily, as its natural fruit, untainted with selfish motives. Good will is not a hothouse plant and its growth can not be forced.

Among the acts that create a very pleasant impression, one may mention the custom of sending New Year's cards to customers; the making of a social call or two before talking business, while one is on a selling trip; the writing of an occasional letter without reference to business.

Chambers of commerce and trade organizations are in an excellent position to perform graceful acts to similar bodies, to municipalities, and to semiofficial institutions. Libraries and schools can extend courtesies to sister institutions abroad.

The question may be asked: "What has this to do with business?" The answer is "Inherently nothing"—and that is the secret of the whole matter. The value of these acts is that they promote good will. Their effect upon the recipient is heightened because they are not a calculated scheme to obtain an order, to derive profit, to be turned into dollars and cents. The final consequence is that they create a friendly attitude which must inevitably prove a benefit in due time, when business is to be discussed. It is a natural instinct for a buyer to do business with people that he likes, and it is just as natural to resent insincere friendliness from a person who offers something for sale.

In sowing seeds of good will it is necessary to eliminate all the factors that may endanger the result. It is the duty of all commercial organizations and individual business men to register their disapproval whenever the press, the stage, or the screen holds up foreigners to ridicule. Few things rankle more bitterly than an affront to self-respect.

It is highly desirable to seek information on those things of which a foreign nation is justly proud, and to demonstrate occasionally a proper appreciation of a country's or city's claim to distinction and fame. Recognition should be accorded to the jurists, scientists, and statesmen in the republics to the south of us (and elsewhere, to be sure) who have left a notable impress upon the world's course of events. This is not merely a matter of education—a pursuit for which a person is repaid in culture—but also often an opportunity for a delicate compliment pleasing to the foreigner and increasing his respect for the American.

Possibly the greatest compliment that one may pay to a foreigner is to learn his language; to speak and write to him in his native tongue; to visit him in his country; to address him in a style to which he is accustomed, and to convey to him American ideas in a manner suited to his conceptions.

Only the other day a letter was returned from South Africa written in the "go-getter" style so distasteful to many foreigners. The recipient of this letter not only felt insulted and humiliated by the patronizing and illiterate manner in which the letter was written, but was certain to form a low opinion of the average culture of American business men. A little study of the predilections of the foreigner in this instance might have resulted in creating good will, interest, and business.

There persists in the minds of millions of foreigners the erroneous impression that Americans are primarily "dollar chasers." The events of recent years have served to dissipate this impression to a considerable degree. Only the other day, in the foremost literary club of Buenos Aires, a great Argentine lawyer delivered an address on the idealism of Americans—a discussion that has been described as the ablest, most appreciative summary and analysis of American characteristics by a man of Spanish culture. It behooves Americans to help win the esteem of Latin Americans by acts of graciousness and good will.

COMPLIANCE WITH FOREIGN PASSPORT AND VISÉ REGULATIONS.

American business men traveling abroad have recently been seriously inconvenienced in crossing international boundary lines because they failed to have their passports properly viséd. Anyone planning a foreign trip should take special care to comply with passport and visé regulations of the countries that he plans to visit. The Department of Commerce is regularly receiving letters from Americans who have experienced vexatious delays as a result of noncompliance with these rules. A majority of such complaints concern European countries, although the difficulty is not confined to that region.

Since foreign Governments almost universally charge American citizens a visé fee of $10, in accordance with our own scale of charges, the visé fees for a short business trip through Europe frequently amount to $100 or more. However, the loss of time involved in complying with passport visé regulations is often more serious. Foreign consular offices are open for business for only a limited period each day—sometimes four hours or less. They are invariably closed on national holidays, of whose existence the American traveler may be unaware. It is often necessary to stand in line for one or more days in order to obtain a visé, and an American business man who has failed to allow a margin of time for such delays may miss important appointments and find the schedule of his entire trip very seriously disarranged. The safest plan is to make all possible arrangements in advance to procure the necessary visés in the United States—from the foreign consular offices situated in this country—and to leave as little as possible to chance.

Incidentally it may be mentioned that the Department of Commerce is endeavoring to bring about a reduction in the American scale of visé charges, in the hope that foreign governments will take like action.

COMMERCIAL INQUIRIES ANSWERED BY BUREAU AND DISTRICT OFFICES.

Correspondence Division, R. H. Brasel, Chief.

The following table shows the number of commercial inquiries answered by the Bureau of Foreign and Domestic Commerce in Washington and its seven district offices in the United States during the periods June 27, 1921, to July 1, 1922; July 2, 1922, to March 10, 1923; and the week ending March 17, 1923.

Classes.	June 27, 1921, to July 1, 1922.	July 2, 1922, to Mar. 3, 1923.	Week ended Mar. 17, 1923.
Total inquiries answered	[1] 505,661	[1] 584,632	[1] 17,094
The above total includes the following classified inquiries in addition to many others which could not be identified under a specific group: [2]			
Commodity:			
Agricultural implements	6,210	9,507	282
Automotive	17,674	37,381	879

[1] Does not include inquiries handled by foreign service of the bureau (27 posts, 80 representatives) by the cooperative offices maintained by the bureau in 25 chambers of commerce and boards of trade in the United States.

[2] This classification of inquiries under "Regional," "Commodity," "Technical," and "Miscellaneous" headings cover only the period from Oct. 2, 1921, to July 1, 1922. The figures for trade opportunity addresses and trade lists are for the entire year.

[3] Information reserved from "Foreign trade opportunity" announcements, printed in each issue of the COMMERCE REPORTS. (Name and address of foreign inquirer interested in the purchase of American goods, including references, cable address, and other details.)

MONEY SAVED IN CONNECTION WITH FOREIGN TARIFF PROCEDURE.

An important exporting firm in Connecticut writes to the Bureau of Foreign and Domestic Commerce as follows:

Thank you for the attention you have given our inquiry regarding the entry of prices on invoices for Argentina. With this information to act upon until further advice, we shall be in a position to save our customers in Argentina a considerable sum of money on each shipment. Your service in this instance is very much appreciated.

A New York City corporation asked the assistance of the American commercial attaché at Madrid in securing remission of a customs fine of 1,708 pesetas (1 peseta = $0.193 at par). The commercial attaché took the matter up with the Spanish Director of Customs, his efforts were successful, and the American exporters have now informed the Department of Commerce that this fine has been remitted to them.

MONTHLY CABLE REVIEWS

LATIN AMERICA.

J. R. McKey, Acting Chief, Latin American Division.

HEAVY EXPORTS LEAD TO IMPROVEMENT IN ARGENTINE SITUATION.

Based on cable from Trade Commissioner George S. Brady, Buenos Aires, March 24.

[Heavy exports and depleted exportable stocks are responsible for a generally improved financial situation in Argentina. Imports continue restricted and retailers are cautious.]

Improvement in the financial situation of Argentina, due to the continued heavy exports, is the feature of the trade of the past month, increases over the same period of last year amounting to 50 per cent in the case of customs receipts, 10 per cent in the case of railway receipts, and 5 per cent in the case of bank deposits. There is a good movement of bonds, and Government short-term notes, totaling 73,000,000 pesos, were renewed during March at 4 per cent. Although money is still easy, retail offerings are dull and retailers are cautious. However, the volume of business, as shown by clearing-house operations, is 12 per cent higher than for last year.

Export Movement—Imports Dull.

Exports for the first 23 days of March, compared with the same period of 1922, respectively, were as follows: Wheat, 1,064,000 and 1,270,000 tons; corn, 404,000 and 418,000 tons; linseed, 451,000 and 184,000 tons; oats, 214,000 and 139,000 tons; and wool (since October 1), 206,000 bales and 268,000 bales. Exports for January and February and for the corresponding 1922 period were as follows: Hides, 1,054,000 and 972,000; sheepskins, 8,000 bales and 18,000 bales; goatskins, 3,500 bales and 1,000 bales; beeves, 828,000 quarters and 830,000 quarters; sheep carcasses, 685,000 and 440,000; quebracho extract, 31,000 tons and 20,000 tons. tons.

There are indications of an improvement in the live-stock situation and prices of meat are expected to show an upward tendency, although banks are still carrying a heavy burden of live-stock loans. Cereals have been moving steadily and at increasing prices, giving every promise of a record year for the exports of these important commodities. The slaughter of sheep and lambs during 1922 is officially stated as 1,634,227 and 2,404,499 animals, respectively. Killings for 1923 are expected to show a 15 to 20 per cent decline, due to depleted flocks and improved prices for wool.

Improvement in the import trade is less marked. Such lines as plows and harrows continue in demand. The hardware market is fairly normal. German shipments continue, however, in this line, and paper imports are also coming largely from Europe, due to higher American prices. The market for industrial machinery is dull with no immediate improvement in view, and the same may be said of the dyestuffs market. Coal imports for February amounted to 143,000 tons, all of which came from Great Britain. Oil imports for the month were: Crude and fuel oil, 44,000 tons; gasoline, 126,000 cases; and kerosene, 72,000 cases.

Congress is still working on the 1923 budget. Expenditures for the first months of the year are being covered by special authorizations passed from month to month.

BRAZILIAN SITUATION CHARACTERIZED BY FALL IN EXCHANGE.

Based on cable from Commercial Attaché W. L. Schurz, Rio de Janeiro, March 23.

[Brazilian exchange fell to 9.10 milreis to the dollar in March. Coffee warehouses are being constructed. Hardware prices have increased and the demand is steady. Good business is reported in American textiles during February and March. Building operations are slack. Great interest is shown in possible revival of rubber industry.]

Decline in Exchange—Financial Conditions.

During the past month Brazilian exchange has suffered a steady decline. The rate fell from 8.74 milreis to the dollar for the week ended February 24 to 9.10 milreis to the dollar for the week ended March 24. The sight rate was 8.77 on January 23 and 8.69 on February 22. The weakening in the exchange rate during the past month was partly due to large purchases of exchange by the Government for remittances to meet foreign obligations. There is little prospect of any marked improvement in the rate.

The customs receipts for the port of Rio de Janeiro were 6,508,000 milreis for the period from March 1 to March 20, and 7,580,000 milreis for the Federal District during the same period.

According to information from the Rio de Janeiro representative of certain American bankers, the State of Maranhao has obtained a loan of $1,500,000 for public works. The construction is to be carried on by an American company. The contract was ready for signature on March 26. On March 21 it was planned to increase the loan to $4,500,000 for the construction of port works, but no information as to the result is yet available.

Stocks of Export Commodities.

On March 23 stocks of coffee at Santos amounted to 1,886,328 bags (a decrease of 201,175 bags from the stock on hand on February 21), while stocks at Rio de Janeiro on March 23 were 1,114,362 bags, as compared with 1,250,678 bags on February 21. Shipments from Santos and Rio de Janeiro during the period from March 1 to March 23 were 595,536 bags and 188,166 bags, respectively. The price of type 4 coffee at Santos on March 23 was 23.70 paper milreis per 10 kilos, and at Rio de Janeiro on the same date type 7 coffee was quoted at 22.67 paper milreis per 10 kilos. The market was quiet. Ten warehouses are being built in the interior of the State of Sao Paulo to hold 3,730,000 bags of coffee. Santos' share of the new coffee crop is now estimated at from 11,500,000 to

12,000,000 bags, and the first entries are expected early in May.

The sugar market is also quiet and little business is being done. Stocks on March 23 at Pernambuco amounted to 311,000 bags, and at Rio de Janeiro to 194,590 bags—an increase of 183,000 bags and a decrease of 44,420 bags, respectively, from the stocks held on February 21. Entries at Pernambuco since the beginning of the crop amounted to 2,416,000 bags. The price of first-grade sugar was 1.14 paper milreis per kilo at Rio de Janeiro, and 1.16 paper milreis per kilo at Pernambuco, the latter being an increase of 0.06 milreis over the price on February 21.

The cotton market was steady with stocks of 12,000 bales at Pernambuco, 15,879 bales at Rio de Janeiro, and 4,282 tons at Sao Paulo on March 23. These figures show a decrease of 1,000 bales at Pernambuco and 4,633 bales at Rio de Janeiro from the stocks held on February 21. Entries at Pernambuco since the beginning of the crop amounted to 126,300 bales. The price of first-grade cotton at Pernambuco on March 23 was 5.33 paper milreis per kilo—an increase of nearly 2 cents a pound (at the present rate of exchange) over the February price.

Exports of meat from Santos during January and February were valued at 2,664,000 milreis. The port of Santos showed a favorable trade balance of £4,182,256 for the first two months of this year.

Fluctuating Exchange Affects Imports.

The import business is still hampered by exchange fluctuations, with the Government and private concerns buying conservatively to meet current needs. The position of the United States in the iron and steel market is weak, due to higher prices and a lack of surplus for export. Imports of iron and steel products at Santos during February amounted to 7,011 tons, including 2,259 tons of rails from Belgium for the Sorocabana Railroad. Of the balance, 1,228 tons were from the United States. There have been considerable imports of cement from Great Britain. Canadian flour is entering the market, but sales of American flour are hampered by uncertainty in regard to the tariff preferential.

The demand for electrical goods is small and British competition continues strong. The warehouse of a large American manufacturer at Rio de Janeiro was destroyed by fire with a loss in goods of about $1,000,000. This is estimated to be approximately one-third of the entire stock of electrical goods in Brazil. The stock is being replaced from the company's stores in other places and by immediate shipments.

During March 66 automobiles were imported at Rio de Janeiro and Santos from the United States and 10 from other countries. Of the imports of tires and inner tubes the United States supplied 20,661 kilos and France furnished 16,830 kilos. Twenty-five airplanes were imported from the United States.

The demand for drugs and chemicals is fair with good prospects for the next 30 days unless the price war among the European houses prevents the market from improving. The rosin market is improving and imports of caustic soda are needed.

Imports of coal amounted to 20,255 tons during the month. The English c. i. f. price, Cardiff to Santos, is 48s. to 50s., as compared with a price of 42s. in February.

Sales of agricultural implements are normal, although somewhat affected by the rainy season.

Building and Construction—Crops.

Building operations are slack, except so far as office buildings are concerned. All public works, including the irrigation projects in the northern part of the country, are greatly reduced. In Sao Paulo, however, sewage works, involving nearly 4,000,000 milreis, are in progress. There is also a considerable hotel-building program in the smaller cities.

The general condition of the crops in most sections of the country is reported to be very good, especially the cotton, rice, and coffee crops. The area under cultivation for the production of cotton is 611,948 hectares (1 hectare=2½ acres) and the present crop is estimated at 119,870 tons. The wheat crop is estimated at 78,574 tons and the 1921–22 sugar crop is reported as amounting to 862,400 tons.

Conditions in the Textile and Rubber Industries.

The textile industry is expanding in certain lines and new mills are being constructed in various parts of the country. Great interest in the possible revival of the rubber industry has been aroused by United States Government reports.

Railway and Shipping Activities.

The Paulista Railroad plans the purchase of 140 freight cars and the Sao Luiz Theresina Railroad is to buy six passenger cars. Bids for four passenger cars for the Sul Mineira Line are to be opened April 20. The Belgian prices are low in this line.

The shipping movement is light, with reduced coffee shipments. The Shipping Board has reduced the coffee rate to New Orleans to 25 cents.

Centennial Buildings to Close.

The French, Belgian, Scandinavian, and Czechoslovakian Government buildings at the Centennial Exposition at Rio de Janeiro will close on March 31, but the American Industrial Building will remain open until the end of the exposition.

URUGUAYAN MARKET STILL DULL.

Based on cable from Trade Commissioner George S. Brady, Buenos Aires, March 24.

[Little buying in Uruguay, with prices falling. Textile market somewhat improved. Imports and exports for 1922 show increase over 1921.]

Although the country has passed the crisis, conditions in Uruguay are still unsatisfactory. There is very little buying. The prices of imported goods are slow in falling, and dealers report the movement of these goods as 75 per cent below normal. The textile market is somewhat improved, with buying principally from Europe on account of lower prices. There have also been some automobile sales, principally in the cities.

Imports for the calendar years 1922 and 1921, according to official customhouse values, were 43,037,000 and 39,719,000 gold pesos, respectively. It should be noted that these valuations are very low, those for 1921 being considerably less than half of the actual values

of the imports for that year. Exports for the years 1922 and 1921 were 77,485,000 and 70,265,252 gold pesos, respectively. (On March 21, 1923, the gold peso was quoted at $0.8447.)

LITTLE CHANGE IN VENEZUELAN CONDITIONS.

Cable from Consul Thomas W. Voetter, Caracas, March 24.

[Little change shown in Venezuelan conditions during March, although there are indications of increased activity in building. Constuction and repair work has reduced cement stocks. Petroleum development stimulates business in Maracaibo district. Coffee crop estimated as below last year's production. Cacao and coffee markets quiet. Cotton prospects are unfavorable.]

Business conditions in Venezuela evidenced but little change during March. Local trade in Caracas was still decidedly below normal and transactions with merchants in the interior were few and unimportant. There are, however, indications of increased activity in building, and new construction and repair work have greatly reduced the large stocks of cement which formerly existed in the capital. Swedish cement manufacturers have entered the market and are quoting c. i. f. La Guaira. Petroleum development has stimulated business in the Maracaibo region and the sale of petroleum drafts has forced the dollar slightly lower than the February value of approximately 5.28 bolivars (5.18 bolivars equal $1 at par).

Conditions in the interior have been unsatisfactory, due principally to the dull market for agricultural products and cattle, and the resulting lack of funds for purchase of manufactured products. The situation in the coffee-growing regions is more encouraging and merchants are just beginning to replenish their stocks. In central Venezuela the coffee picking is nearly finished and the yield is estimated at 30 per cent below last year's figure. Current estimates for the total crop of the country show a like decrease in production. The coffee market is inactive, with prices at 86 bolivars per bag of 46 kilos for superior "washed," and 70 to 72 bolivars for "threshed." Cacao sales were also limited and quotations at La Guaira were 58 bolivars per bag of 50 kilos. The tobacco crop is small, but a carry over from the previous crop is expected to make up the deficit. Cotton prospects are unfavorable and it seems likely that local mills will be compelled to resort to importing their raw material.

MEXICAN CONDITIONS QUIET DURING MARCH.

Cable from Assistant Trade Commissioner H. Bentley MacKenzie, Mexico City, March 23.

[General business in Mexico is slow, with small orders but increased Lenten buying in some lines. There has been an extension of the tax exemption of Mexico City real estate improved by the construction of dwellings. Government finances have been affected by the withholding of protested oil taxes. There is a continued shortage of raw cotton.]

General Conditions—Tax Exemption of Mexico City Real Estate.

Business conditions in Mexico during March were practically the same as reported for February—slow, with small replacement orders in certain lines. The Lenten season is causing some increased buying in the retail shoe and clothing trade, but other lines, with the exception of groceries and hardware, are still moving very slowly. Automobile sales in the Mexico City district have been fair.

The decree exempting from taxes for several years the real estate in the Federal District on which houses for renting purposes are erected has been extended from February 28 to August 31, 1923. This will probably help to prolong the present building activity in Mexico City, which had begun to decline, as mentioned in the cable review in COMMERCE REPORTS of March 5, 1923.

Banking and Finance.

No new development in banking circles were noted during March. Exchange rates for the Mexican peso dropped slightly from the February rate, the closing rate for February 24 being $0.49 1/16. The highest rate for March was $0.49¼, while the lowest was $0.49, which was the closing rate on March 23.

Current Government finances are affected by the temporary withholding of payments on February oil taxes, as the petroleum companies are protesting the levies for that month. Federal Government revenues for 1922 from oil production and export taxes are given officially as 85,980,000 pesos, against 62,885,000 pesos for 1921, the increase being reported as due to increased taxes since the spring of 1922.

Production and Exports.

Crops (especially growing potatoes) in the State of Hidalgo, which lies just north of Mexico City, are reported as damaged to the extent of about 1,000,000 pesos by a recent snow and hail storm.

Henequen exports from the peninsula of Yucatan during February, 1923, totaled 48,273 bales, as compared with 21,082 bales for the same month of 1922, and 77,531 bales for February, 1921. The price at Progreso, to producers, remained firm at $0.04 per pound.

Petroleum exports for February, 1923, decreased about 1,250,000 barrels from January, and were approximately 8,000,000 barrels less than in February, 1922. So far there has been no indication of improvement during March.

Shortage of Raw Material Affects Cotton-Textile Industry.

The situation in the cotton-textile industry is still serious, owing, among other things, to the shortage in supply of domestic raw material. An executive decree provides for the entry of fiber from the Mexican cotton-growing section of Lower California at half the regular import duties. The stocks on hand there are now very low, as most of that crop has already been exported, and it is expected that importations of raw cotton from the United States will begin about the latter part of April.

[Additional economic reports from various districts of Mexico will be found in the Latin American section of this issue.]

FAR EAST.

F. R. Eldridge, Chief, Far Eastern Division.

BETTER RICE DEMAND BRINGS IMPROVEMENT IN INDO-CHINA.

Cable from Consul Leland L. Smith, Saigon, March 22.

[The situation in Indo-China has shown improvement with a better demand for rice. The money market has strengthened and the buying power of the natives has increased. A new loan for railroads and construction is recommended.]

Exchange and Loans.

The exchange of Indo-China registered an increase in February, closing at 8.55 francs to the piaster, against 8.30 at the end of January, while New York rate for the piaster increased from $0.52½ to $0.53¾. Interest rates have slightly stiffened. The usual rates charged for overdrafts is 8 per cent, and 7 per cent for preferred customers. Loans of piasters are increasingly difficult because of speculation in francs.

The Parliamentary mission, which was called to Indo-China from France for the discussion of many important projects, has recommended a new loan for railroads, canals, and general construction work, to be offered locally and in France. Improvements for the port of Saigon are also under discussion by the Deputies.

Rice Situation Improved.

The pessimism which prevailed with respect to the rice situation has decidedly lessened and the natives' purchasing capacity has increased. The French law permitting bread making from rice flour has resulted in heavy shipments of broken rice. China is also in the market for large quantities of rice.

Hongkong Chinese interests have secured control of most of the Nam-Loong Rice Co.—their greatest competitor. This rice firm is the largest in Indo-China, rated at over 100,000,000 piasters.

BUSINESS IMPROVING IN STRAITS SETTLEMENTS.

Cable from Consul General Ernest L. Harris, Singapore, March 20.

[The month of February was quiet as a whole, with slight business improvement. A new company bill is proposed, affecting foreign companies.]

The exchange value of the Straits dollar on New York for the month of February was: High, $0.55¼; low, $0.54⅜; with an upward tendency. Credits were slightly easier to negotiate and banks have become less severe in their requirements than a few months ago. Salesmen returning from the interior report conditions materially improved and small merchants comment on business as being better than for several months. A small increase is noted in the number of American salesmen.

The first reading has been given a new Straits Settlements company bill, which requires foreign companies to file the certified copy of their charter and articles of incorporation, as well as a list of directors, the name of authorized president in the colony, and the balance sheets. Companies are also required to disclose mortgages.

Foreign trade of the Straits Settlements for February showed a substantial favorable balance, imports amounting to 39,000,000 and exports to 50,000,000 Straits dollars. Particular improvement is noted in the automobile trade. Stocks have practically cleared and new orders are being placed.

No ships are awaiting orders or arriving or departing in ballast and there is ample space for cargo offered. Stocks of bunker oil and coal are normal.

CONDITIONS IN INDIA CONTINUE TO IMPROVE.

Based on cable from Vice Consul Harold Shantz, Calcutta, March 24.

[India's foreign trade continues to show an increasing favorable balance. Conditions for spring crops are good. The money market is less stringent, exchange is steadier, and the bank rate remains unchanged. Rice and raw cotton prices have stiffened. Indian Government securities are in demand. Heavy loans are anticipated in view of the great actual deficit in the Indian budget for 1922–23. The demand for both gold and silver continues strong.]

Favorable Trade Balance Increasing.

India's total purchase of foreign merchandise amounted to 193,700,000 rupees ($64,567,000) for February—a decline of 19,600,000 rupees, as compared with the previous month, but a decrease of only 5,600,000 rupees from February, 1922. The sales of merchandise abroad, including 10,000,000 rupees' worth of reexports, advanced to 316,000,000 rupees—an increase of 21,400,000 rupees over the exports for January and of 104,000,000 rupees over February, 1922.

The total foreign trade for February shows a favorable balance of 122,300,000 rupees and represents an increase of 99,600,000 rupees, compared with the same month of 1923, but only 41,000,000 rupees over the trade for January, 1923.

The following table shows the principal Indian imports and exports in January and February, 1923:

Principal Indian imports and exports in January and February, 1923.

[1] Corrected from COMMERCE REPORTS of Mar. 12, 1923.

Money Market Less Stringent.

The money market remains quiet, but there is less stringency than during the last month. The bank

rate remains unchanged at 8 per cent, but a reduction is anticipated as the seasonal demand for funds decreases and money is realized from crops and exports. Calcutta exchange on New York for March has fluctuated less than in February. The month opened with the rupee at $0.3176. On March 5 exchange reached the highest for the month—$0.3182—and dropped by March 23 to $0.3143.

Government securities are growing stronger and quotations are running higher. The bullion market is active, with the demand still good. India has been purchasing gold in considerable quantities from South Africa and Australia, and the United States furnished $6,000,000 in January. Owing to the continued pressure of the Indian bazaars, orders for early-shipment supplies of ready silver have been scanty.

Because of the realized deficit in the 1922–23 budget, amounting to 175,000,000 rupees, great interest is attached to an estimate made for borrowing, during the year, sums amounting to £15,000,000 in London and 250,000,000 rupees in India, and the general belief prevails that the government loans will be floated at 5½ per cent.

General Business Less Active—Piece Goods Improving.

General business is reported dull. The raw-jute market is quiet and there are few calls for manufactured jute.

The improvement in the piece-goods trade, however, which was predicted some time ago, has commenced. The large warehouse stocks have been moved to a greater extent than is generally realized. There is a steady demand for imported goods, but the local product is not moving to any considerable extent. The upward trend of the price of raw cotton also reflects the altered condition. Cawnpore and Madras, which have experienced the greatest delay in disposing of the old stocks, report a tone of confidence in the market.

Crop Prospects—Prices.

Crop conditions are generally unchanged. Rains in certain sections have done some damage to spring crops, but have improved prospects for sugar cane. The final forecast for rice for 1922–23 is 81,535,000 acres and 33,135,000 tons—an increase of 301,000 acres and 141,000 tons over previous forecasts. A part of the increase, however, is due to the inclusion of a part of northern Burma in the returns for the first time. The second forecast for rape and mustard seed is 6,098,000 acres; for linseed, 2,499,000 acres; and for wheat, 30,032,000 acres; each representing some increase over the first forecasts. The sowings for the next crop of jute are estimated at approximately 1,820,000 acres, or 370,000 acres in excess of the 1922–23 acreage.

The Calcutta shellac market is fairly steady and a moderate business is being transacted. The wholesale price of linseed—13 rupees, 1 anna per hundredweight—is a decrease of 1 anna for the month (16 annas=1 rupee). Rice has advanced from 430 rupees to 450 rupees for 7,500 pounds, and the price of raw cotton has advanced 15 rupees and is now quoted at 554 rupees per 748 pounds.

WESTERN EUROPE.

Charles E. Lyon, Acting Chief, Western European Division.

NORSE SITUATION DOMINATED BY POLITICAL DEVELOPMENTS.

Based on cable from Assistant Trade Commissioner Harry Sorensen, Copenhagen, March 19.

[Conservative measures are being advocated by the new Norwegian Cabinet, including a reduction of budget expenditures through taxation and other economic measures. The program also proposes a change of the prohibition act to permit free wine importation, the immediate negotiations of German and Portuguese treaties, and the revision of the Spanish treaty on the free wine import basis.]

Note Circulation—Bank Clearings.

The note circulation on March 17 amounted to 354,000,000 crowns which was a slight increase over the figure for the middle of February of 347,000,000 crowns. The crown is steadily depreciating and continues weak.

A consolidated bank statement for December shows loans amounting to 3,172,000,000 crowns and deposits to 2,887,000,000 crowns as compared with 3,071,000,000 crowns and 2,887,000,000 crowns, respectively, for the month before.

Banking Outlook—Capital Emissions.

Bank share quotations are dropping sharply, largely because of unfavorable annual statements. Quotations in the shipping industry are steadily and slowly declining. The shipping and industrial stock index shows 65.4. The majority of the annual reports being given out by industrial, banking, and commercial concerns are unfavorable. The annual statement of the Central Bank of Norway, a very important bank, indicates that considerable future losses are anticipated, and the fall of bank shares to about 40 per cent par and the withdrawing of large deposits show the loss of public confidence.

Capital emissions amounted to 4,900,000 crowns, of which 3,900,000 crowns was taken by new enterprises. One important shipping concern, the Nordeneaux Shipping Co., is proposing to write down its share capital from 20,000,000 to 10,000,000 crowns on account of the large deficit of 620,000 crowns for last year. Commercial failures for February numbered 70 as compared with 67 for January.

Measures Advocated by New Cabinet.

Because the commercial treaty with Portugal was rejected the cabinet resigned and has been replaced by a new cabinet headed by Minister Halvorson, former premier. The new cabinet proposes a change in the prohibition act to permit free wine importation; immediate negotiations of the German and Portuguese treaties on free wine importation basis; and the revision of the temporary treaty with Spain on the basis desired by that country.

A reduction of the budget expenditures by taxation and conservative economic measures is also advocated. The cabinet makes no statement as to the extension of the labor court act. The measures advocated by the new government are satisfactory to business interests, and it is generally felt that the adoption of the greater part of the cabinet's program now under debate should materially advance the welfare of the country.

Industrial Situation—Unemployment Increases—Prices Increase.

Serious labor difficulties are expected to occur in the lumber industry in the spring, and buying now con-

tinues from hand to mouth. The paper and pulp industries are well occupied, with prices firm and rising. The fish industry reports good catches but unsatisfactory market conditions. The canning industry is busy and its production is already contracted for at good prices. Shipbuilding, although slightly better on account of repair work, remains comparatively dull. Freight rates have improved considerably but the amount of idle tonnage continues the same. The ice conditions are not serious. The fertilizer industry is working at full capacity with good sales.

The number of unemployed on March 15 registered 27,000, an increase of 3,000 over the February 15 figure. It now appears certain that the labor court act will not be extended after April 1 as wage decisions have been affirmed by 70,000 workers.

The wholesale price index on February 1 was 224.3, showing an increase over 219.6 for January 1 and 220.9 for December 1. This increase in price was due partly to the Franco-German developments.

Foreign Trade for January.

Norwegian exports for January were generally unsatisfactory, amounting in all to 47,600,000 crowns. Of this total, foodstuffs represent 7,500,000 crowns; paper, 8,300,000 crowns; pulp, 9,100,000 crowns; lumber, 4,400,000 crowns; and mineral manufactures, 7,200,000 crowns. The decline in export values was caused by a decrease in export prices and volumes. Fish products and lumber exports were especially low, but shipments of wood pulp and paper were good.

The imports for the month include the following items: Automobiles, 80; motor cycles, 104; coal, 190,000 tons; iron bars, 2,800 tons; and mineral oils, 4,270 tons.

DANISH INDUSTRIES EXPERIENCE DIFFICULTY IN OBTAINING MATERIALS.

Based on cable from Assistant Trade Commissioner Harry Sorensen, Copenhagen, March 19.

[The Danish trade balance for February was unfavorable and exercised a depressing influence on crown exchange. The low industrial activity of the month may be viewed as a result of the Ruhr occupation. A distinct rise in prices was noted during February and a restriction in the granting of credit. Shipping was fairly active and freight rates improved.]

Note Circulation—Exchange Rate—Loans and Deposits.

The note circulation of the Danish Riksbank amounted on March 10 to 435,000,000 crowns with a gold cover of 53 per cent. The Danish crown exchange, after a period of stability at the beginning of March, dropped considerably up to March 9 but has since recovered. The quotation was 19.23 on March 19. The Danish consolidated bank statement shows loans amounting to 2,965,000 crowns and deposits to 3,030,700 crowns.

In an effort to balance the budget a drastic wage reduction is being entered upon by the Government and the way is prepared for the dismissal of many Government employees. It is hoped that this will bring about a saving of about 10,000,000 crowns.

Foreign Trade Legislation.

Negotiations are again under way for a commercial treaty with Russia and a commission is on its way to Moscow. Import regulations on boots, shoes, and tobacco products are still in force. On April 1 an emergency tariff will doubtless go into effect providing for a permanent duty on tobacco, cigars, and cigarettes of 6 crowns per kilo and a provisional increase in duty on footwear from 60 ore per kilo plus 7½ per cent of value to 4 crowns per kilo plus 7½ per cent of value. This proposed legislation, which appears certain to go into effect, will seriously affect the importation of American goods, which consist chiefly of heavy shoes.

Stock Quotations—Business Results in 1922 Above Expectation.

Stock quotations, which have shown a firm or rising tendency as a result of the comparatively favorable yearly statements for 1922, are now dropping, but they are still above those of a month ago. The bank-share index for March 10 shows 104; the shipping index, 84; and industrials, 82—all slightly in advance of the February position. The turnover was above the average.

Three minor banks have written down their capital about 25 per cent, while many bank and company reports published during the month show considerable losses with no dividends. However, the results of last year in shipping, commerce, and industry were better than was generally expected, nearly all having shown fairly good dividends.

Industrial Situation Affected by Ruhr Occupation.

The industrial situation of Denmark is seriously influenced by the occupation of the Ruhr. The shipbuilding, cable manufacturing, foundry, machinery, building, and chemical industries are affected by the difficulty of obtaining raw materials, and particularly by the sharp rise in prices of iron, steel, and coal. These troubles are aggravated by the fact that many Danish firms have made advance payments on orders from Ruhr manufacturers which can not be delivered.

Shipping Favorable.

Danish steamship tonnage is all occupied but some sail tonnage is idle; ice is disappearing. The freight market is improving especially for coal and for Baltic shipments. A shipping line has been established between Copenhagen and Canada by the United Shipping Co. and the activity of lines between Denmark and England is extended. The shipbuilding industry is well occupied and has many new orders.

TRADE LISTS AVAILABLE.

The Commercial Intelligence Division has recently compiled the following trade lists, which have been mimeographed, and copies of which can now be obtained from the Bureau of Foreign and Domestic Commerce, or its district and cooperative offices, by referring to the titles and file numbers:

Department stores, India	FE–21026–A
Automotive products, importers and dealers, Australia	FE–23007–D
Flour and cereals, importers and dealers, Egypt	NE–14010–A
Iron and steel, importers and dealers, Italy	EUR–6030
Cereals, importers and dealers, Madeira	EUR–10002–A
Groceries, importers and dealers, Canary Islands	EUR–11039
Iron and Steel, importers and dealers, Bolivia	LA–11023
Dry goods, importers and dealers, Ecuador	LA–15012
Musical instruments, importers and dealers, Ecuador	LA–15013
Groceries and provisions, importers and dealers, Cuba	LA–31003–A
Drugs and chemicals, importers and dealers, Ecuador	LA–15010

DEVELOPMENT OF INVESTMENT TRUSTS IN THE UNITED STATES.

Excerpts from an address by Grosvenor M. Jones, Chief, Finance and Investment Division, before the Bankers' Forum of New York City on March 28.

An investment trust is a convenient form of organization by means of which the funds of small investors are aggregated for the sole purpose of investment. Its capital is raised by the sale of shares, common or preferred, and by the issuance of debentures or bonds. The proceeds are invested in a variety of securities—in most cases, foreign securities—distributed over a number of countries or a number of industries. These securities may include preferred and common shares as well as bonds. As a rule, the investment in any single security is small and in practically every case is a minority holding. The purchase of securities is solely for investment purposes and never for the purpose of getting control of an enterprise.

The distribution of its funds among a wide variety of carefully selected bonds and shares is made chiefly with a view to diversifying the risk. This is one of the principal advantages offered by an investment trust and the one that makes the strongest appeal to the investor whose capital is too small to be spread over a number of issues. An investment trust has the additional advantage that it is in a position to investigate carefully the merits of the securities it buys and to protect its interests in case anything should go wrong with any of its holdings. These advantages also make a strong appeal to small investors.

Ordinary and Special Sources of Profit.

An investment trust frequently participates in underwriting syndicates or buys at the prices set for distributors of securities. This enables the trust to make underwriting profits or to buy securities at special rates. Its chief income, however, is derived from interest and dividends. If it has issued debentures at rates 1 or more per cent below the return it receives on the securities in which the proceeds have been invested, the return to the shareholders may be greatly increased. Likewise, by acquiring securities at low prices in times of depression or when the exchanges are depressed and later selling them when the market or the exchanges are more favorable, additional profits can be made.

These special sources of profit have enabled many long-established and well-managed British investment trusts to pay annual dividends of 10 to 15 per cent or more to holders of their common stock, but especially favorable circumstances are required to make such returns possible. These conditions do not exist at present in the United States, and it would be misleading to suggest that an American investment trust could, for some years to come, operate under conditions permitting it to increase the returns to its shareholders on capital invested in a trust over that which they might obtain by direct investment on their own account. The present appeal to American investors must be on the grounds of safety and protection.

Post-War Interest in Subject.

The adaptation to American conditions of the underlying principles and methods of operation of British investment trusts has been discussed for several years. Interest in this subject was particularly active in the period following the war, when the strength of the creditor position of the United States was realized and the question of how to finance the reconstruction of Europe and to maintain American export trade at a reasonably high level was uppermost in the minds of many.

From the marked interest then aroused it seemed likely that the organization of investment trusts on a fairly large scale would soon follow. In fact, a few corporations were organized along these lines, but not so many as might have been expected. Among them were the American Foreign Securities Corporation, the American International Corporation, the Electric Bond & Share Corporation, the Foreign Bond & Share Corporation, and the Overseas Securities Corporation. Time does not permit a discussion of the results attained by these five pioneers. Of the three corporations still in existence there is only one (the Overseas Securities Corporation) which can be said to approximate closely the British model of investment trust.

The time has come, I believe, for reviving the subject of investment trusts and for urging the great importance under present conditions of the organization of companies which shall mobilize for investment the capital of the small investors, particularly those interested in the purchase of foreign securities. The need of investment trusts is more urgent now than it was several years ago, and conditions favor their creation now as never before.

Direct Buying Reached Large Scale.

One reason why the investment-trust idea has not developed in this country is that the American investing public has taken a greater interest in the direct purchase of foreign securities than was anticipated. The small investor, educated by the Liberty Loan campaigns to the value of investments in domestic bonds, was quick to appreciate the advantage of buying foreign securities. The average American was quick to see the need for buying foreign securities, if the prosperity of other countries was to be restored and the export trade of the United States maintained. Moreover, funds for investment were plentiful after the depression of 1920–21, and the yield on the foreign securities offered was very attractive.

Lately, however, the fervor for the purchase of foreign securities has diminished. Since the middle of last year, despite greatly improved business conditions and far greater prosperity than in the preceding 18 months, the volume of foreign securities underwritten in this country has been reduced to low levels. As proof of this, it should be noted that in 1919, 1920, and 1921 the total gross sales of foreign securities in the United States were, respectively, about $720,000,000, $575,000,000, and $690,000,000, while in the first half of 1922 they were about $675,00,000. Against this must be set a total of only $180,000,000 for the second half of 1922 and less than $100,000,000 for the first quarter of 1923.

Reason for Decline in Foreign Security Purchases.

The recent decline in American purchases of foreign securities, which still continues, may be accounted for by several important factors, among them:

(1) The unsettled political and economic conditions in Europe;

(2) The absorption of the resources of banks and other reservoirs of capital in the revival of domestic industry and trade and in building construction;

(3) The extraordinary issuance of domestic bonds and shares, not only by large corporations long accustomed to this method of financing their requirements, but also by smaller industrial and merchandising concerns that never before issued bonds or offered their shares to the general public;

(4) The fact that the funds of the smaller investors were largely absorbed by the extraordinary purchases of foreign securities in 1921 and the first half of 1922; and

(5) The reduction in the yield on the foreign securities that have lately been issued.

Most, if not all, of these adverse factors will be removed in time. The European situation will eventually be cleared up and its deterring influence on investment in all foreign securities will be removed. The demand on the banks for current financing will adjust itself when the requirements for the revival of domestic trade and industry are provided for. The flood of domestic securities can not continue indefinitely. The interest rates on foreign securities will doubtless be adjusted. And the average investor will be in the market again for foreign securities.

Advantages to the Small Investor.

This is the time to prepare for the reentry of the small investor into the foreign-bond market. In order to hasten his reentry, to make him a more or less regular buyer and a holder of foreign securities, and to safeguard his interests, the organization of investment trusts seems to be greatly needed. The chief advantages of the investment trust to the small investor are:

(1) *Diversification of risk.*—The holdings of an investment trust are distributed over a number of countries or over a number of industries or enterprises.

(2) *Safety of investment.*—A well-managed trust has a better knowledge of the merits of securities than the average individual investor possesses and is therefore in a better position to know when and what to buy and when and what to sell. The trust can, moreover, defend the interests of its shareholders when defaults in interest payments, or reorganizations, or receiverships, or other unusual events occur.

Advantages to the Investment Banker.

To the investment banker the chief advantage of investment trusts lies in their continuous education of the investing public to the advantages of the purchase of securities. By acting collectively for small investors, by making it possible for them to diversify the risks of investment, by safeguarding their interests in the ways just indicated, and by possibly increasing the earnings on their capital, investment trusts would popularize security investments to a greater degree than is otherwise possible. This is particularly important in the matter of foreign securities which the average investor, because he is not well-informed, is slow to buy except under such unusual conditions as prevailed in 1920, 1921, and the first half of 1922.

Another advantage to the investment banker would be the probability that, if owned by investment trusts, foreign securities would be withheld from the market longer than if owned by individuals. The latter are more liable to be stampeded on unfavorable news regarding political and economic conditions abroad and therefore more liable to dump their securities on the market, whereas the former, being in a better position to know the facts regarding its holdings, would not sell unless conditions really warrant selling. The banker would, accordingly, benefit from a more permanent distribution of the securities which he has underwritten.

Advantages to the General Public.

The development of investment trusts offers advantages not only to the small investor and the investment banker but also to the general public. Investment trusts would make it possible for a larger volume of foreign loans to be issued regularly in this country. Since many of these loans would be devoted to the building of factories, railroads, electric plants, and public works of all sorts, many orders for machinery and equipment would be placed with American concerns, the United States export trade, in which so many of the American people are directly or indirectly interested, would be maintained at high levels.

The principal object to be achieved by the organization of investment trusts under present conditions is the mobilization of the present holders of foreign securities, particularly the smaller investors. Many small investors bought foreign bonds chiefly because they carried a high rate of interest and because they thought that a government bond was a government bond and would therefore be like the only government bonds they had known, those of the United States—quite a safe and steady investment. With the events that have since taken place in Europe the prices of most foreign securities have declined considerably and many of the smaller investors have become more or less panicky. Even if they have not already sold their holdings they have become reluctant to acquire further foreign issues. If through some central organization created in their interest the small investors of the country were brought together, their position would be greatly improved.

Plan of Organization.

Since new capital will not flow freely into investment-trust ventures until investment trusts have demonstrated their efficiency, it would seem advisable to begin the formation of nuclei for such organizations from the ranks of the present holders of foreign securities. The appeal to present holders of foreign securities might be along these lines:

You have bought various foreign securities concerning the merits of which you know little. You have been perplexed as to the significance of recent political and economic events in the countries whose securities you hold. You have seen some of those securities decline greatly in value. You are in doubt as to what you ought to do about them. Perhaps you have sold some of them at a considerable loss only to see them increase in value later. You have become somewhat skeptical about the advisability of purchasing foreign securities.

Since there is no central organization that can keep you continually informed as to the foreign securities you hold, it is proposed to organized what is known as an investment trust. This plan has worked out very successfully in England and has been of special assistance to small investors like yourself.

We shall, therefore, arrange for the organization of an investment trust, to which you will transfer your present holdings of securities in exchange for shares of the trust. In this way your investment will automatically be diversified because the holdings of each trust will be spread over a wide variety of securities and your shares in the investment trust will be secured by this diversity of holdings.

This is one of the chief advantages which the investment trust can offer you, but there is another advantage. The trust will be directed by persons well informed in the subject of foreign securities, who will make close studies of the investment markets. As a result of its investigations the trust will perhaps sell some of its original holdings and acquire others. In this way the average value of its holdings will be increased or strengthened. * * *

If an appeal were made along these lines to the thousands of small investors who hold foreign securities and do not know what to do with them, and if this

appeal were made by a group of public-spirited citizens who enjoy the confidence of the community and are known to be men of sound business judgment, it might be possible to organize a number of investment trusts throughout the country.

Numerous Small Trusts Preferable.

A number of small trusts rather than a few large ones seems most desirable. Thus in each Federal Reserve district there might be several investment trusts, one to embrace the holders of Latin American Government securities, another to include the holders of European Government securities, a third to take in holders of foreign industrial, railroad, or public-utility securities.

It would seem advisable to make a special appeal to some of the leading business men in these cities to sponsor the organization of these trusts and to serve as members of the board of directors or advisory committee. They might supervise the selection of the personnel of the organization and give it the benefit of their counsel on the purchasing or holding of securities.

The cost of operation should be kept down to a minimum—say to not more than 1 per cent of the capital. This might be done if in each principal center one set of officials should serve the several trusts having headquarters in that center.

Central Advisory Organization.

If a number of small investment trusts were organized throughout the country, it might be found advisable later to form a central organization with headquarters in New York, which would do all statistical and research work for the several trusts and thus enable them to operate with smaller staffs. This central organization would probably have the benefit of the advice of leading bankers and business men in New York City and other financial centers. This counsel, together with its own researches, should enable the central organization to supply excellent advisory service to its affiliated investment trusts.

The question may be asked: What motive would induce even public-spirited men in the several cities to devote any part of their time to local investment trusts? The answer is that such men recognize the importance of Americans taking a deep interest in the matter of foreign loans. They realize the average investor is timid and needs to be encouraged and that a local investment trust is a good way to develop his interest in foreign securities. As leaders who are interested in everything that makes for the progress of the community, these men would be glad, I am sure, to devote the comparatively small amount of time which the work of director would entail.

Edge Law Corporations a Possible Beginning.

Reference has been made to the possibility of Edge Law corporations developing into investment trusts. These corporations seem to have an unusual opportunity in the privilege of issuing debentures up to 10 times their capital and surplus against holdings of foreign obligations. Corporations might be organized under the Edge Law for the sole and express purpose of buying and holding foreign securities with the capital subscribed by their shareholders, and, later, of issuing debentures for the further purchase of securities. Persons subscribing to the stock of such corporations would understand that a certain amount of the returns on the bonds and stocks transferred to or purchased by the corporation would be expended in overhead expenses, but many would be willing to forego a portion of the return they might obtain by a direct purchase of securities in consideration of the safety which this indirect method would afford from the start.

In a word, the mobilization of present holders and prospective purchasers of foreign securities might well be undertaken through the organization of a number of Edge Law corporations.

Henry H. Morse, Chief, Specialties Division

FOREIGN COMPETITION IN CUTLERY.

[An analysis of conditions in the British and German competitive cutlery field, with particular reference to production costs. Foreign markets for British and German cutlery, in comparison with those of the United States.]

The chief competitors of American cutlery manufacturers in the various markets of the world, and in the home markets as well, are the English and the Germans. Much fine cutlery is made in France, and Japan has built up a large domestic and foreign trade in the lower grades of cutlery, but for the purposes of an article of this kind, which must necessarily be brief, attention must be concentrated on the two main competing nations.

The Cutlery Situation in England.

The main source of cutlery manufacture and cutlery exports in England lies in Sheffield. According to the latest available reports, Sheffield manufacturers have been experiencing a number of difficulties during the past year, both in manufacturing and marketing their product. In the first place, labor troubles have been encountered, chiefly over the question of wage reductions. This has resulted in strikes, with consequent dislocation of production, and while these have been satisfactorily settled, production is by no means back to normal. In fact, some of the factories are working at little more than two-thirds capacity.

Foreign demand for British cutlery has fallen off considerably. This applies as well to the British colonies as to other markets. In all cases German competition has been particularly keen.

The Sheffield razor trade also has undergone a slump, partly on account of the growing popularity of safety razors. This is regarded as an essentially American trade, even though England has gone in for their manufacture.

The British cutlery trade, therefore, although providing keen competition in world markets during 1922, did not come up to expectations. Larger sales are predicted in 1923, particularly for export, as a concerted drive is being made for world trade.

Conditions in the German Cutlery Industry.

In spite of the unsettled and uncertain political and economic conditions in Germany, the Solingen cutlery industry, from the viewpoint of foreign sales, enjoyed in 1922 a fairly successful year. Production was hampered chiefly by the difficulty of obtaining raw materials, particularly steel and coal, while the ever-increasing prices of domestic and raw materials, such as celluloid, brass, ivory, tortoise shell, wood, etc., made it difficult to finance purchases. The greatest obstacle that German cutlery manufacturers had to overcome was the depreciation of the mark, which brought with it frequent and heavy price increases. Thus in December, 1922, the prices of cutlery products in Solingen were from one thousand two hundred to two thousand times those of pre-war years. An illustration of this is the percentage increase of prices during 1922 over the average price for August 1, 1921. As compared with this earlier date, the prices for 1922, expressed in percentage (August 1, 1921=0 per cent) were as follows: January 2, 90; February 1, 110; March 1, 180; April 1, 260; May 15, 275; June 15, 300; July 1, 450; July 25, 600; August 14, 900; August 24, 1,800; October 10, 2,400; October 26, 3,900; November 8, 5,900; November 20, 7,900; December 7, 10,900. These increases were, of course, due to increased production costs in consequence of mark depreciation.

The increase in domestic prices of knives per dozen, f. o. b. factory, over pre-war years were approximately as follows: Pearl-handled pocketknives in 1913 sold for 21 marks; in January, 1922, for 1,600 marks; and in December, 1922, for 72,000 marks; wooden-handled knives for the same periods were 3.7 marks, 185 marks, and 6,500 marks; and horn-handled knives sold for 15 marks, 410 marks, and 16,000 marks, respectively, in the three periods. The same condition prevailed with regard to scissors and shears. Of the former, 3½-inch embroidery scissors sold for 5, 150, and 7,100 marks, respectively, for the three periods, while 5½-inch nickeled household shears brought 6, 720, and 9,000 marks, respectively. In spite of this, the domestic demand for pocketknives and table cutlery of medium quality remained good throughout the year, while the razor trade and trade in high-grade cutlery slackened.

What has aided the Germans, so far as their export trade in cutlery is concerned, is the fact that it has been conducted almost exclusively on a foreign-exchange basis, which kept it on a much firmer foundation than if calculations had been made on a mark basis.

Foreign Markets for British and German Cutlery.

As already noted, there has been a falling off in cutlery exports from England to the various markets of the world. While this applies to shipments to the British dominions and colonies also, these were still the largest purchasers of cutlery from the mother country in the past year. Australia, Canada, the British East Indies, South Africa, and New Zealand showed the highest totals, with the United States next on the list. Norway was the largest European purchaser, and Brazil and Argentina led in South America. It should be understood, however, that England sold sufficient cutlery abroad to be a keen competitor both of the United States and Germany.

So far as Germany is concerned, the United States was by far the largest buyer of its cutlery products during 1922. This trade was, however, seriously curtailed after the new tariff went into effect, and will probably continue dull throughout 1923, at least with respect to knives, scissors, and table cutlery of medium quality. England ranked second as a buyer of German cutlery (chiefly scissors and razors), while the Netherlands ranked third. This latter country was a large reexporter of German products. German trade with other European countries, except France, was fair. Among the Latin American countries, Brazil, Argentina, and Mexico showed the largest totals, in spite of keen competition, while in the Far East British India ordered in large quantities. It is worthy of note that German cutlery was virtually excluded from Australia and New Zealand by prohibitive legislative measures.

Comparative Cutlery Trade of England, Germany, and the United States.

Due to wide differences of classification, it is almost impossible to give any accurate or trustworthy figures of comparative amounts of cutlery exports from the United States, England, and Germany to the various foreign markets. That Germany has made tremendous gains since the war, however, and that it leads in a number of markets seems to be borne out by such approximate figures as are available. In Chile, for example, the American commercial attaché reports that for 1921 Germany supplied about 28,000 dozen of all classes of cutlery, valued at approximately 265,000 gold pesos (1 gold peso=$0.365), while the United Kingdom furnished about 10,500 dozen, valued at 100,000 gold pesos, and the United States supplied about 7,500 dozen, valued at about 30,000 gold pesos. It is understood that these figures are little changed for 1922, so far as a comparison is concerned.

The total approximate figures of the cutlery exports of the three countries for 1922, reckoned in the currencies of the three countries, are: For the United States, about $4,615,000; the United Kingdom, about £850,000; and Germany, approximately, 8,000,000,000 marks. This latter figure is difficult of comparison with the other two.

The indications are that, in spite of the keen competition in cutlery which prevails virtually everywhere, American cutlery manufacturers are perfectly capable of holding their own. Signs are not wanting that German competition is on the wane, as German manufacturers will have increasing difficulty in keeping up the quality of their products on account of the lack of raw materials. They are finding it increasingly harder to maintain deliveries, and the financial stability of the country is becoming impaired to a point where radical changes in the matter of prices and credits may be necessary. British competition, on the other hand, while less spectacular and easier to cope with, will probably show no signs of diminishing. This factor, however, should in no way prevent the maintenance and expansion of American foreign trade in cutlery, provided that sound merchandising methods are employed.

Additional information regarding specialties appears in this issue under the following sections:

Cable review, Latin America: Argentine hardware market normal.
Tariffs and trade regulations: Increased Polish duties on certain specialties.
Foreign trade opportunities Nos. 5895, 5898, 5903, 5912.

LUMBER

Axel H. Oxholm, Chief, Lumber Division

WORLD TRADE IN BOX SHOOKS.

It is estimated that the total export trade in box shooks throughout the world amounted in 1922 to about 300,000,000 board feet. So far as figures are available the 1922 exports (and 1921 for comparison) for the principal shook exporting countries are shown in the table. In addition to the countries shown, there are other countries which export smaller but important amounts. Box shooks used in Italy are now coming largely from Yugoslavia, but no figures are available. There are shooks moving from countries in central and eastern Europe to the eastern Mediterranean countries. In Argentina and Uruguay, Parana pine shooks from Brazil are now the principal supply in addition to native shooks.

World trade in shooks during calendar years 1921 and 1922.

Articles and countries.	1921		1922	
	Board feet.	Value.	Board feet.	Value.
Box shooks:				
United States		$2,534,938	[1] 59,795,978	[1] $1,962,535
Canada		846,448		[1] 488,624
Sweden	[1] 72,814,368		[1] 87,479,680	
Norway	16,365,976		[1] 30,555,136	
Finland	9,633,704		[1] 26,756,520

[3] Figures for 11 months, January–November, 1922.

Developments in World Trade Since 1919.

A commercial estimate in 1919 indicated that the total export shook trade of the world amounted to approximately 500,000,000 feet a year. Since that time the condition of trade throughout the world has no doubt resulted in a considerable decline in the demand for box shooks. In addition there has been a development of native resources in several countries that have further reduced the demand for imported shooks. A number of countries which have supplies of timber on which they can draw for box lumber are now using their own material for all or as much of their requirements as possible. At the present time Spain and Portugal are practically self-supporting in the matter of box shooks. Likewise the countries of central Europe are self-supporting, and also are in a position to export to some extent with the exception of Switzerland. In the case of France, Belguim, and Netherlands, these countries are first drawing on the native supplies of pine and European poplar, and so far the additional box lumber they have required has come from northern Europe.

An element which restricts the export shook trade somewhat is the extensive use to which secondhand boxes are put in most foreign countries. In some instances foreign soap factories use secondhand oil cases, which are available in their countries in large numbers. The use of secondhand boxes has probably been extended in recent years because of the cost of new boxes. In countries where labor is very cheap, as in China, often the principal source of new boxes is lumber reclaimed from secondhand boxes coming in filled with imported goods.

Foreign Markets for Shooks.

A matter which should be considered carefully by American exporters of shooks is the geographical extent of the foreign trade of our principal competitors in this line. A study of world trade for several years back has shown that in different years the Scandinavian countries have been able to ship shooks not only throughout western and southern Europe but also to South Africa, South America, Asia, and Australia. The Japanese have now very largely entered the Asiatic trade, but Scandinavian shooks are still going to South Africa. Recent figures showing the distribution of the shook exports of the principal producing countries are not now available, but the following table of the trade for the calendar year 1921 (excepting Swedish figures, which are for 1920) has been prepared to show the principal markets of the world and will serve to show American exporters where markets for shooks exist.

[1] Unplaned. [2] Exports for 1920.

METHODS OF HANDLING AMERICAN LUMBER ABROAD.

In an effort to encourage American lumber exporters to follow the regular channels of trade, the Lumber Division has recently secured about 400 answers to an elaborate questionnaire on this subject sent to Department of Commerce representatives and to the leading American consular offices abroad. These answers will be available in the form of Trade Information Bulletins. As the supply of copies will be limited, preference will be given to concerns on the Exporters Index.

RECENT FOREIGN PRICES FOR BOX SHOOKS.

Reports recently received from American consuls in certain countries give foreign prices for box shooks for spring delivery. It is believed that American shook manufacturers will be interested in having such prices for the purpose of determining the possibilities of their competing in these markets.

South Africa.—Consul John M. Savage of Southampton, England, reports that the Swedish orange box, which is constructed on the standard California orange box specifications, is quoted, c. i. f. Port Elizabeth, at 28 cents for the cheaper grade and 31 cents for the best box, which is more generally used.

England.—Prices, made in January, for margarine shooks made of Scandinavian lumber were 10 to 12 cents for a box 12⅞ by 11¼ by 6¾ inches, 18 to 24 cents for a box 21 3/16 by 13⅛ by 7 inches, and 18 to 24 cents for a box 20¼ by 13¼ by 7 inches.

Ends of these boxes are one-half inch in one piece; sides, three-eighths inch and seven-sixteenths inch in one piece; and top and bottom, one-fourth to three-eighths inch in two pieces, tongued and grooved (conversions made at $4.85).

A recent quotation for Swedish shooks delivered at Hull averaged $63.13 per thousand feet.

Consul Percival Gassett, at Leeds, has reported as follows: Swedish prices per 1,000 pieces for sound, dry shooks, finely sawn, in following sizes were obtained on January 29, 1923:

10,000 feet, 20⅛ by 7⅞ by 7/16 inches	$27.62
30,000 feet, 20⅛ by 5½ by 7/16 inches	18.69
24,000 feet, 18 by 2½ by ½ inches	9.06
24,000 feet 22⅞ by 2½ by 7/16 inches	8.13
24,000 feet, 21⅞ by 2½ by 7/16 inches	7.67

The prices have been converted to United States currency at the rate of $4.65 to the pound sterling. The quotations are c. i. f. Hull. If planed, the price is 5 per cent more. The terms are 2½ per cent for cash in 30 days, net in 60 days after landing goods on dock at Hull.

Local sawmills that import lumber from Sweden in a deal 3 by 8 inches, which will make eight boards, are offering prices of 18½ cents per 1,000 pieces lower than the above figures.

Spain.—The principal consumption of boxes and crates at Valencia for the fiscal year 1921–22, and prices reported February 10, 1923, by Consul Robert Harnden, Valencia, are as follows:

Consumption and prices of orange and onion boxes and onion crates at Valencia.

Item.	Number consumed in 1921–22.	Price on Feb. 10, 1923.
Orange boxes:		Cents.[1]
Box 41.8 by 16.5 by 13.4 inches	7,545,384	47–55
Half box, 39.3 by 15.3 by 12.2 inches		30–31
Onion boxes:		
Box, about 2.33 bushels	2,444,824	30–31
Half box, about 1.15 bushels		20–23
Onion crates, about 0.77 bushel	1,433,827	12–16

[1] Conversion at the rate of 6.4 pesetas to the dollar.

A report from Consul Lucien N. Sullivan, at Cadiz, dated February 10, states that recent orders for northern European pine shooks for packing tunny fish in tins are to be delivered to the packer at the equivalent of $0.50 per box. These boxes measure: Inside, 25 7/16 by 17¾ by 9⅛; ends, thirteen-sixteenths, one piece; sides, two pieces, one-half inch; bottom, two pieces; top, two or three pieces, seven-sixteenths inch; inside cleats (U. S. style 5), 1 by seven-sixteenths inch.

Consul Thomas W. Chilton, at Barcelona, reported on January 10 that the prices of imported box shooks (coming mostly from Sweden and Norway), based on the February 23 average New York quotation for the peseta (approximately $0.1566), are as follows:

Barcelona prices of imported box shooks on January 10.

Item.	Inside dimensions.	Price per 100.
Orange cases:		
Ordinary 420's	39.3 by 15.3 by 12.2 inches	$39.15
Floretas ordinary 714's	41.8 by 16.5 by 13.4 inches	45.40
Onion cases:		
Ordinary No. 5	About 2.33 bushels	28.18
Half cases	About 1.15 bushels	19.10
Ordinary crates	About 0.77 bushel	14.40

Egypt.—In 1921 the United States exported 3,464,000 board feet of box shooks to Egypt, but only 2,250 board feet in 1922, according to Consul S. Bertrand Jacobson, Alexandria. The total Egyptian shook imports in 1921 were 6,612,000 board feet, and in January to November, inclusive, 1922, were only 2,741,000 board feet. The 1922 imports were supplied principally as follows, the quantities being stated in board feet: France, 789,000; Sweden, 767,250; Finland, 702,750; Italy, 245,250; Germany, 129,750; Czechoslovakia, 48,750; and Austria, 48,000.

These imports of shooks are largely for the exportation of eggs and dates. The egg crates measure 65 by 18.9 by 8.66 inches. The ends are solid and 0.86 inch thick, with two partitions of the same thickness. The strips on the sides, tops, and bottoms are 5.9 inches wide by 0.47 inch thick. The date boxes are 23.62 by 11.02 by 7.08 inches. The prices of egg boxes vary seasonably between $0.97 and $1.46, delivered in Alexandria. Date boxes are delivered in Alexandria at $0.53 to $0.66 (conversion at $4.8665 to the Egyptian pound.)

Near East.—Consul Coert Du Bois, at Port Said, Egypt, under date of February 1, reports that shooks for oil cases for a refinery at Suez are manufactured in Port Said from Rumanian pine. About 10,000 oil cases per month are delivered at a price of $0.32 (exchange at $4.8665.) In construction these oil cases are similar to American oil cases, except that the top and bottom edges of each end have close-fitting cleats about one-half by one-fourth inch, hammered and glued into a centered mortice. The Lumber Division is informed that this method of cleating is patented in this country and certain foreign countries. Such a cleat is a substitute for corrugated fasteners and further gives a side-grain nailing edge on the end-grain edges of the part. The consul further reports that ends and sides are often made up of narrow strips glued together. A limited number of orange-box shooks are annually shipped from this city to Palestine, but the bulk of the annual demand of about 800,000 boxes is supplied direct from Rumanian mills at a price of 4 to 5 piasters per box, c. i. f. Jaffa (Egyptian piaster=$0.0494).

Netherlands.—Vice Consul Sydney B. Redecker reports from Rotterdam under date of February 9 that prices each for the made-up boxes chiefly in demand in the Netherlands, manufactured in accordance with standard specifications, are as follows:

Cabbage crates, ordinary sizes (22.59 by 16.92 by 14.37 inches)	$0.26
Onion crates, 110 pounds	.41–.46
Potato crates:	
110 pounds	.40
55 pounds	.26
Apple boxes, 40 pounds (American type)	.32
Apple crates, 66 pounds	.32
Sugar boxes, 21.85 by 13.98 by 17.91 inches	.34
Sugar boxes (tablet), 17.72 by 12.67 by 7.75 inches	.17
Flower-bulb boxes, 7 bushels	1.08
Flower-bulb crates:	
7 bushels	.98
2.84 bushels	.56
4.54 bushels (American type)	.86
3.97 bushels (American type)	.82
2.84 bushels (American type)	.66

ADVANTAGE OF PATRONIZING REGULAR STEAMSHIP LINES.

Certain large European lumber exporters obtain surprisingly low freight rates on their foreign shipments, which makes it possible for them to compete with American shippers even in cases where it would seem that the greater distance from the European countries would make it impossible to carry on this trade.

The Lumber Division has investigated this matter and has found in many cases that these European shippers have special arrangements with native steamship companies. At times these contracts are made on a yearly basis and have worked out so satisfactorily that it is not infrequent to find that a company has maintained the same relations with one shipping company for 10 years or more.

It has been noticeable how lumber shipments have changed from cargo to parcel lots following the establishing of regular steamship lines, and it is evident that if a shipping company can count on a steady trade this will naturally assist them in maintaining such steamship service on a profitable basis. It is true that the lumber exporters may at times obtain temporary advantages by contracting for their freights in the open market, but it has been the experience of these European lumber exporters that in the long run they have been benefited by patronizing one steamship company, thereby enabling it to maintain regular sailings which again influence the market possibilities.

The matter is of great interest to our lumber exporters, because it has been frequently found that keen competition among shipping companies fighting for the business will eventually result in the leaving of the territory to the stronger, and, as a consequence, advantage is taken of the position and invariably the freight rates are raised. In this way the survivor can cover the loss sustained through keen competition prior to the defeat of his competitors.

There are unmistakable signs of the shifting of cargo shipments to parcel lots in this country. Foreign importers have to pay a good deal more for their lumber at present than they did in pre-war years, and the heavy fluctuations in freights and lumber quotations make it undesirable for them to carry larger stocks than they need for the immediate future. The result is that parcel shipments are preferred by them. Our exporters should therefore take a broad view in these matters and should encourage the establishing of direct steamship lines by patronizing such shipping concerns and should disregard the momentary profit which may be realized from the taking advantage of an occasional cheap offering of space on a tramp steamer.

Exports of Canadian Box Shooks.

Vice Consul Gilson G. Blake, jr., Ottawa.

In 1919 there were seven box-shook factories in Canada, the same number in 1920, and nine in 1922. The figures on the total box-shook production of Canada in 1920 show 70 per cent produced in the Western Provinces, about one-fourth in Ontario, and the remainder in Quebec and the Maritime Provinces. No information is available on the exportation of box shooks by the different Provinces, but the following statistics show the total exportation from Canada during 1921 and 1922 (fiscal years ending March 31):

Countries of destination.	1921	1922	Countries of destination.	1921	1922
United Kingdom	$203,072	$52,857	New Zealand		$1,332
British South Africa		5,504	China	$39,003	
Bermuda	94,101	7,024	Colombia	375	
British India	27		Cuba		5,680
Straits Settlements	340,163	348,838	Japan	31	35
British Guiana		125	Mexico	35,222	285
Barbados	1,185	500	Peru	7,405	2,566
Jamaica	8,539		United States	90,262	53,974
Trinidad and Tobago	23,674	11,920	Porto Rico	1,024	
Other British West Indies	189	2,822	Ceylon		1,490
Hongkong	3,124	1,020	Dutch East Indies		19,687
Newfoundland	20,065	245	Total	1,068,390	602,700
Australia	200,929	86,796			

Lumber Trade of Canadian Maritime Provinces.

Consul General E. N. Gunsaulus, Halifax.

The final quarter of 1922 brought a boom in the lumber industry of Nova Scotia and New Brunswick so far as sales of existing stocks, rising prices, and brisk demand were concerned.

Production in Nova Scotia for 1922 is estimated at 125,000,000 feet. An official of New Brunswick estimates that the current season, extending into the spring of 1923, will see a production in that Province totaling more than 400,000,000 feet. During the latter part of November and early December the market showed considerable improvement and many operators went into the woods. Owing to heavy snowfalls after Christmas a great many mills have not renewed work, and few have yet sawed any considerable amount of lumber.

Market conditions have caused increased output in New Brunswick, while in Nova Scotia the effect of the great demand and higher prices will probably become more apparent early in 1923.

Demand for Canadian spruce in the United States and Great Britain in 1922, espceially during the latter part of the year, practically cleaned out surplus stocks at the mills. Sales to the American market were limited only by ability of the shippers to obtain cars. Bidding by English buyers against Americans and others was the cause of rise in prices. Spruce selling a few months ago at $18 a thousand is now quoted at about $23.50, offering encouragement for production larger than normal.

Current Situation in Brussels.

Cable from L. W. Hunt, secretary to trade commissioner, Brussels, March 19.

The lumber market is at present somewhat improved. There are prospects that the stocks of American lumber will be depleted before spring arrivals. Shipments of eastern European oak are continuing, but are of poor quality. Imports of Japanese oak have not occurred recently.

AUSTRIAN OUTLOOK UNFAVORABLE.

Assistant Trade Commissioner F. W. Allport, Vienna, February 5.

The lumber industry has felt most keenly the unfavorable developments of the month in Germany. Practically all the Austrian lumber exports at the present time go to that country. In addition to the closing of Ruhr markets to Austrian timber products, the decline of the German mark has placed Austrian prices out of the reach of German buyers, who are able to offer only about one-half the price demanded by Austrian exporters. The Ruhr occupation has affected not only Austrian timber exports to Germany, but its shipments to Netherlands via the Rhine as well. Timber felling is practically at a standstill at the present time and stocks are rather large. A reduction of freight rates on timber shipments is sought, particularly on felled timber for sawing and export. Notwithstanding decreased sales, timber prices remain fairly steady. The outlook of the industry is not encouraging. It had been hoped that the spring would bring a revival of building that has long been deferred, but the prospects for such a revival are not encouraging at the present time. Sales of firewood, which became brisk when coal prices were at their highest point, have now fallen off. There is some doubt that the attempt of lumber manufacturers and dealers to force a downward revision on freight tariffs will be successful, as any reduction granted for their benefit must apply to transit shipments as well, a concession the railway minister is reluctant to make.

Finnish Sales in 1923.

Consul Leslie A. Davis, Helsingfors, February 20.

Up to the present about 445,500,000 board feet of timber products have been sold from Finland for shipment next navigation season, most of the sales having been made to England. The buyers in England have been careful, however, in making purchases, as they think that a weakening of the markets will lower the prices, and they have consequently adopted a waiting attitude, especially in view of the fact that the international situation has not cleared up.

France and Belgium did not enter the markets during the first few weeks of the year owing to the depreciation of their currencies and to the uncertain international situation, but recently they have made inquiries for considerable quantities of sawn lumber. Netherlands and Denmark have been good buyers. Several contracts for spruce, covering the usual sizes, have been placed in Netherlands. The prices have been generally $35.50 to $36.50 for 7-inch battens. Contracts have also been closed at $44.50 for 3 by 9 sizes.

Prices in general are said to be satisfactory. The price for 7-inch battens is $44 to $45.50, although $46.50 has been obtained for some small lots of well-known brands from northern Finland, which have been sold to Denmark, and $47.50 for boards of the same dimensions, with payment against shipping documents. (These prices are computed per M on the par values of quotations in foreign currency.)

The demand has been mostly for the smaller dimensions, which bring comparatively lower prices, but it is thought that the prices for these dimensions will be affected by the other prices. Shippers in southern Finland have closed contracts for wide boards for Alexandria and South Africa. It is expected that all more important lumbering in northern Finland will be completed by March 1. Lumbering went on smoothly until the beginning of January, after which it decreased on account of the heavy snowfalls. The weather in February, however, has been more favorable, with better results.

Consul Helpful in Promoting American Trade.

Last spring Consul C. R. Nasmith, at Ghent, Belgium, encouraged an important lumberman to visit the United States. Through the Lumber Division this importer was connected with several exporters in the South, and as the result of this trip the concern is now sending over another representative with a view to making important purchases of American lumber.

CUT-OFFS.

Liverpool Walnut Market.

The current reports on various classes of hardwoods by two firms of timber brokers in Liverpool for January, 1923, show that there was no importation of American walnut logs during the month, and the opinion was expressed that fresh square logs would sell at high prices. The price per cubic foot during January varied from $1.95 to $2.87 (on a basis of $4.60 to the pound sterling). During January fair quantities of American walnut boards and planks arrived against contract. There is a steady demand and prices are firm. (Consul Horace Lee Washington, Liverpool, February 9.)

Yellow-Pine Market of Huelva, Spain.

The only importer of lumber in this consular district estimates that there will be a 25 per cent decline in the importation of American southern yellow pine in 1923. While no statistics are yet available, it is believed that this decline will not be a serious blow to the American trade in this district, since the year 1922 witnessed the importation of United States timber practically on prewar footing. American southern yellow pine will be used largely for building and repairing railway cars and renewing railway ties. During 1922 French and Czecho-Slovak oaks made their appearance as serious competitors to American woods, as they sell about 30 per cent lower. (Consul Horace Remillard, Huelva, January 29.)

Yellow Pine and Red Gum in Port Said.

An American steamer arrived in Port Said January 26, 1923, and discharged 4,331 pieces of southern yellow-pine timber and red-gum lumber. The yellow pine, which consisted of about 250 timbers 26 to 42 feet long, was consigned to the Suez Canal Co. for special construction work. The red-gum lumber was consigned to an Arab firm for sale in the interior. The size and quality of the yellow-pine timbers aroused considerable interest, and as a result an order has been placed by an Arab firm, through the agents of the ship, for 100,000 feet of yellow pine 12 by 12 and 17 by 17 inches by 26 to 42 feet long. (Consul Coert du Bois, Port Said, February 6.)

Additional information regarding lumber appears in this issue under the following sections:

Tariffs and trade regulations:
Imposition of export duty on Samar Khel wood in Afghanistan.
Polish prohibition on lumber exports.

TEXTILES

Edward T. Pickard, Chief, Textile Division

WORLD TEXTILE NEWS IN BRIEF.

Demand for Raw Cotton at Vera Cruz.

It will probably be necessary to import during the current season 20,000 to 25,000 bales of cotton through Vera Cruz for use in the textile industry of this district. (Vice Consul Willys A. Myers, Vera Cruz, Mexico, February 28.)

Italian Hemp Prices.

Prices of hemp exported from the Florence district per 100 kilos (220.46 pounds) were: Good quality, 480–500 lire; medium, 440–460 lire; ordinary, 375–400 lire; poor, 190–200 lire—all f. o. b. Bologna. (Consul W. Roderick Dorsey, Florence, February 21.)

Latvian Flax Monopoly.

Ten thousand tons of flax were collected by the Latvian Government flax monopoly from April 1, 1922, to January 1, 1923. During the same period 15,000 tons of flax were sold, thus reducing considerably the surplus of previous years. (Minister F. W. B. Coleman, Riga, Latvia, February 17.)

Austrian Hand-Made Linen Laces.

Hand-made linen laces in patterns of excellent taste are being made for export by a private organization of women of the better class of society. They also furnish designs for the leading Vienna manufacturers. (Consul Carol H. Foster, Vienna, February 19.)

Prices of Bookbinding Materials.

Prices of bookbinding materials in Germany effective February 5, 1923, have been received from Consul M. K. Moorhead, Stuttgart, Germany, and will be loaned to those interested upon application to the Textile Division, Bureau of Foreign and Domestic Commerce, Washington. Refer to file No. 86376.

Prices of Curaçao Straw Hats.

A report on prices current for Curaçao straw hats, as published in the Government Gazette at Curaçao, West Indies, for the month of January, has been received from Consul B. S. Rairden and will be loaned to those applying to the Textile Division, Bureau of Foreign and Domestic Commerce, Washington, and referring to file No. 87045.

Sisal Growing in Tanganyika.

Tanganyika sisal commands a higher price on the London market than any other kind of African sisal. Exports for the first nine months of 1922 are encouraging and indicate that the 1921 figures (7,923 tons) will be exceeded. Sisal growing at present is beyond the capabilities of the natives and must be in the hands of Europeans. (Consul William L. Jenkins, Nairobi, Kenya, Africa, December 28.)

Wage Increase in Madeira Embroidery Industry.

The improvement of the market for Madeira embroidery in the United States has increased the demand for labor in the islands, with a resultant advance in wages amounting to 20 per cent. It is stated that embroideries in stock at present will be invoiced at former prices, but shipments in the near future will carry this increased cost of labor. (Consul Stillman W. Eells, Funchal, February 14.)

Bombay Piece-Goods Market.

The Bombay piece-goods market is maintaining a firm tone, although buying is being checked by advancing prices. A better feeling has been noticeable in local mill gray goods, and negotiations with well-known mill agents will probably result in business at 1.5 rupees per pound. Japanese cloths are also in better demand, and current values have remained firm. (Consul T. M. Wilson, Bombay, India, January 27.)

Japanese Trade in Pig Bristles.

Pig bristles are an important item in Japanese trade, exports during the 11 months, January 1 to November 30, 1922, amounting to 63,139 kin (kin=1.3227 pounds), valued at 383,204 yen. Approximately 60 per cent of these shipments are made from Kobe and Osaka. The bristles are prepared for manufacture into brushes or made into brushes before being shipped abroad. (Consul E. R. Dickover, Kobe, February 15.)

Breslau Sample Fairs.

Three sample fairs are held annually in Breslau under the management of a limited-liability company. Textile exhibits consisting of cotton, linen, wool, and mixed fabrics and other articles and wearing apparel are displayed at the first and third fairs, which are held for four days the latter part of March and the middle of September. (Consul John E. Kehl, Breslau, Germany, January 20.)

Argentine Broom-Corn Industry.

A comprehensive report on "Production, Stocks, Prices, and Exports of Broom Corn" has been received from Consul General W. Henry Robertson, Buenos Aires, and will be made available to interested persons upon application to the Textile Division of the Bureau of Foreign and Domestic Commerce at Washington. Refer to file No. 85494. Argentina has become an exporter of broom straw instead of, as formerly, an importer.

Polish Market for Furs.

The Polish market affords only small quantities of domestic furs, largely red fox, but in season considerable amounts of Russian furs are sold in transit to other markets. Imports of furs, undressed and dressed, were 1,184 tons in 1921 and 325 tons in the first half of 1922. Exports during 1921 totaled 1,740 tons, and for the six months, January to June, 1922, amounted to 311 tons of undressed furs and 236 tons of dressed furs. (Acting Commercial Attaché H. B. Smith, Warsaw, January 25.)

Montevideo Wool Shipments.

Wool shipments at Montevideo from October 1, 1922, to January 31, 1923, according to a private estimate, by principal points of destination were: New York (including wool for Boston and Philadelphia), 26,680 bales; Hamburg, 8,586 bales; Antwerp, 1,653 bales; Genoa, 1,624 bales; Liverpool, 1,316 bales; Netherlands, 1,269 bales; Dunkirk, 1,015 bales; other, 1,188 bales; total, 43,331 bales. Shipments for the corresponding period last year were 42,512 bales. (Consul David J. D. Myers, Montevideo, Uruguay, February 2.)

BRITISH ARTIFICIAL-SILK TRADE.

Trade Commissioner Hugh D. Butler, London, February 14.

Artificial silk is being turned out in constantly increasing quantities in the United Kingdom, the output of the dominating concern being 50 per cent greater to-day than in January a year ago. Estimates of British production vary widely. An official of one company states 300,000 pounds a week to be the correct figure, while another estimate places the average daily output at 15,000 pounds.

The bulk of the British production of artificial silk is made by the viscose process. Of the total viscose output to-day, hosiery, knit goods, ties, and braids consume about 50 per cent, woven cloths between 10 and 20 per cent, artificial-silk yarns twisted with wool about 5 per cent, and elastic webbing between 5 and 7 per cent. These figures are necessarily rough because of the fact that yarns are sold to a number of manufacturers who produce a wide range of goods, frequently including several of the descriptions listed above.

Development of Acetate Process—Yarns from Waste.

A further development of the industry is the manufacture of artificial silk from cellulose acetate. Belgian experts have recently been brought in to aid in perfecting the process, on which a British company has been working for years, to make quantity production of acetate silk yarns commercially feasible. An attempt is also being made to develop these yarns for the binding of electric cords as a substitute for silk, which is now used for that purpose. The acetate silk, on account of its resistance to moisture, is better fitted for this work than the viscose. These moisture-resisting qualities are thought to adapt it especially well for underwear and gloves.

Sales of British cellulose yarns for warp knitting and as a substitute for natural silk in cloths both at home and in Switzerland have been most successful. The yarns are sold already dyed in most cases. This is absolutely necessary, if they are to match colors in cotton and other materials. Acetate silk does not dye the same color as other materials, but it is hoped this difficulty will eventually be overcome. From another point of view, this characteristic is a decided advantage, for two-color effects can be obtained with but one dyeing or printing where cotton or wool are mixed with acetate silk. It is planned to exploit this feature this year.

Another development of interest in the artificial-silk world here is the efficient use of waste for yarns of 20s and downward, which has only come into practice during the last 18 months.

Underwear, Shirtings, and Specialties.

British manufacturers believe that a good future is in store for artificial silk underwear. The restriction on the import of cotton gloves from Germany ought to provide an excellent opening for cheap artificial silk gloves, as the higher price of German gloves has already reduced the demand for the cotton article. Artificial silk sweaters and women's dresses are not so popular as they previously were in this market, although sales to the colonies are still large.

Keen interest has been taken in the manufacture of fancy silk shirtings with an artificial-silk stripe, or with cotton warp and artificial-silk weft, or made entirely of silk. The British market for these goods has been much slower to develop than the American. Whether artificial silk will partially take the place of fine cotton yarns is a matter of some concern to Lancashire. It seems inevitable that all British textile production will tend more and more toward higher-grade goods and fancies as a consistent accompaniment of the movement in newer countries to supply the cruder staples from home mills. If this be true, then the artificial-silk industry should find and hold an important position in fine shirtings and other specialties.

Marked Increase in Imports.

Great Britain's average monthly imports, including artificial-silk waste, yarn, and manufactures, except apparel, amounted to £53,349 in 1920 and £100,000 in 1921, and for the month of January, 1923, were £269,605—a figure nearly three times the 1921 average. Exports of these same commodities were valued at £270,958 and reexports at £33,698 in January, 1923.

No details are available as to the origin of imports and the destination of exports in 1922, but the following table showing British imports of artificial-silk (including waste and yarn) piece goods and other manufactures of artificial silk will indicate the principal sources of British foreign purchases:

British imports of artificial silks and manufactures of.

Countries of origin.	Artificial silk, including waste and yarn.				Piece goods, including plushes.		Other sorts.	
	Pounds.		Value.					
	1920	1921	1920	1921	1920	1921	1920	1921
Netherlands	7,944	85,457	£4,553	£32,836	£6,506	£1,826	£5,550	£7,918
Belgium	224,624	372,747	169,430	119,773	13,884	4,571	6,906	16,375
France	12,025	149,032	11,216	68,487	20,749	118,436	8,558	30,802
Switzerland	115,186	500,272	95,671	235,057	33,205	65,034	111,633	51,816
Italy	21,207	15,177	13,860	8,098	3,178	4,597	25,090	4,655
United States	36,530	150,213	10,643	64,772	22,983	24,102	32,114	400
Germany	3,717	7,322	3,550	3,763	8,488	223,384	26,048	101,179
Other					522	8,905	557	2,579
Total	421,233	1,280,220	308,923	532,786	114,515	451,455	216,756	215,745

With the exception of Italy, all Continental suppliers and the United States enormously increased the size of their shipments to the United Kingdom in 1921 as compared with 1920. Total British 1921 imports of artificial silk, including waste and yarn, were three times the 1920 quantity, but the unit values were considerably lower. Taking the value of artificial silk, waste, and yarn as an index, the figures for the value of piece-goods imports would indicate a large increase in 1921 quantities. Here again, it may be noted that Continental and American suppliers, particularly the former, had expanded their sales, and the big increase in January, 1923, already noted, can doubtless be attributed to these countries.

Exports Did Not Hold Up Well in 1921.

The value of exports of artificial silk, waste, and yarn dropped 8 per cent while the quantity was 62 per cent greater in 1921 than in 1920. Shipments of piece goods were evidently reduced during the 1921 depression, but gains are registered in the case of China, Mexico, Egypt, and Australia. Australia has been one of the United Kingdom's best textile markets during the last two years, and artificial-silk goods are no exception. The large increase in the production of American mills has undoubtedly played an important part in the reduction of British exports to the United States and Canada; then, too, the leading English companies have branches in the United States. British

exports by countries of destination are tabulated below for 1920 and 1921:

British exports of artificial silk, and manufactures of.

Countries of destination.	Artificial silk, including waste and yarn.				Piece goods, including plushes.		Other sorts.	
	Pounds.		Value.					
	1920	1921	1920	1921	1920	1921	1920	1921
Portugal	44,125	17,815	£38,670	£11,746	£52,514	£26,324	£6,979	£1,679

[1] Not shown separately; shipments, if any, included with "Other foreign countries."

The January, 1923, figures are about double the average monthly exports for 1921 in value. Because of the wide range of markets supplied by British makers and the changing economic conditions in buying countries, it is difficult to suggest where these sales were consummated, but the English-speaking colonies are the most likely destination for these goods in view of their increased buying of British wares generally.

It should also be noted that no account is taken of the movements of textiles made of artificial silk mixed with other fibers.

Condition of Linen Manufacturing Industry in Russia.

Abstracted by the Eastern European Division from Economic Life (Moscow), February 1. The bureau assumes no responsibility for the accuracy of the statements.

In connection with the plan of further curtailing production of the textile industry, now under discussion by the Gosplan (State planning commission), it transpired that the linen industry has reached its limit of contraction and that, if anything is done, the operation of the linen mills should be extended. The present load of going concerns represents 65 per cent of the total capacity of their equipment; 10 per cent of the spindles are doomed to idleness through absence of fine Belgian and high-grade domestic flax, for which this part of the equipment is specially adapted; 25 per cent of the spindles are out of commission on account of their dilapidated condition. Consequently, the present load of the linen industry is barely within the limit of capacity and may have to be increased, in view of the possibility that this industry may be called upon to make up the threatening shortage of cotton fabrics on account of the deficiency of raw cotton.

Dutch Trade in Textiles in January.

Consul General G. E. Anderson, Rotterdam, February 24.

The Netherlands' January trade in textiles and clothing was better than that of a year ago. Although exports of yarns decreased, the piece-goods trade on the whole was very active. Shipments of unbleached cloth increased from 130 metric tons to 209 tons, 146 tons of which went to the Dutch East Indies. Shipments of bleached, dyed, and printed goods increased from 1,331 to 2,266 tons, the Dutch East Indies being the chief buyer, but there was also a rather remarkable distribution of the goods throughout the Far East and Africa. Exports of woolen cloth also gained, Great Britain being the best customer. Foreign sales of clothing showed a decline in most lines except knit goods, the United Kingdom and the Dutch East Indies having taken a fair amount of knitted products.

The United States, Spain, and Great Britain, in the order named, took most of the exports of artificial silk, which amounted to 108 metric tons, against 33 tons in January, 1922. Exports of cordage were 250 tons, compared with 204 tons last year, the United Kingdom, Germany, the United States, and France importing most of this commodity in the order mentioned.

Indian Textile Market.

Cable from Vice Consul Harold Shantz, Calcutta, March 24.

The Calcutta piece-goods market shows improvement. February imports of piece goods comprised 72,553,000 yards of gray cloth, 34,904,000 yards of bleached, and 28,659,000 yards of colored cloth. The United Kingdom furnished 91 per cent of the gray cloth, 99 per cent of the bleached, and 92 per cent of the colored cloth imported. Japan's share was 8 per cent of the gray cloth and 3 per cent of the colored cloth, while the Netherlands supplied only 2 per cent of the colored cloth. During January the United Kingdom sent 83 per cent of the gray and colored goods and 99 per cent of the white, while Japan contributed 18 per cent of the gray and 5 per cent of the colored, and the Netherlands supplied 5 per cent of the colored.

From September 1, 1922, to March 15, 1923, receipts of raw cotton at Bombay totaled 2,349,000 bales. Stocks on hand on March 15 were 864,000 bales, and the mill consumption since September was estimated at 546,000 bales.

Exports of raw cotton amounted to 90,770 bales. The price of raw cotton advanced from 539 rupees to 554 rupees per bale of 784 pounds.

The jute market is quiet, with jute fabrics weaker. February exports of raw jute were 36,183 tons. Jute sowings are reported as being 25 per cent in excess of last year, and crop conditions favorable.

Philippine Textile Trade.

Cable from Trade Commissioner John A. Fowler, Manila, March 26.

Philippine exports of manila hemp during February were valued at 5,412,000 pesos, compared with 3,134,000 pesos worth exported in January. February prices of manila hemp advanced approximately 1 peso per picul throughout all grades; grade "I" opened at 18.50 pesos and closed at 20 pesos. Unofficial but reliable trade figures show the year's receipts to March 12 as 264,000 bales, while shipments amounted to 296,000

bales. Stocks on hand March 12 were estimated at 123,000 bales.

Imports of cotton and manufactures of, except cotton cloths, amounted to 736,000 pesos, and of cotton cloths to 2,073,000 pesos in February. This is a decided decrease from January imports, which registered the following totals: Cotton and manufactures of. except cloths, 1,180,000 pesos; cotton cloths, 3,488,000 pesos.

Prince Edward Island Market for Corsets.

Vice Consul Arthur B. Giroux, Charlottetown, Prince Edward Island, Canada, February 23.

High-priced corsets and brassieres do not find a ready sale in Prince Edward Island, the chief demand being for corsets selling at $1 to $3 and for brassieres at $0.30 to $1.50. Most of the goods of this nature sold here are of Canadian manufacture, but if American producers of these articles can meet Canadian prices it is believed a market can be found in this island.

An obstacle that would militate considerably against the introduction of American corsets and brassieres in Canada is the customs tariff, which assesses the following duties: Corsets, 35 per cent; corset blanks and busks, clasps, covered, steels and wires, 35 per cent; cotton and wool manufactures, 35 per cent; silk manufactures, 37½ per cent; rubber manufactures, not otherwise provided for, 27½ per cent; garters and hose supporters dutiable according to the material used in their manufacture.

Additional information regarding textiles appears in this issue under the following sections:

AUTOMOTIVE PRODUCTS

AUTOMOTIVE SERVICE-STATION EQUIPMENT NEEDED ABROAD.

M. H. Hoepli, Acting Chief, Automotive Division.

Modern automotive service-station equipment, such as is used in nearly every garage and service station in the United States, is still needed in almost every territory of the world. The rapid increase in the use of passenger cars and trucks within the last few years has caused considerable competition among foreign distributors and dealers; and this condition, combined with the necessity of giving better service, is creating a demand for the best and most modern service-station equipment.

A survey of these needs in each country has already been started by the Automotive Division. Some of the returns on this investigation, regarding markets for mechanical tire inflation equipment, are now available. Although the reports thus far cover only Canada, Mexico, and Cuba, they bear witness to the definite need for such equipment in those countries.

Analyses Show Growing Demand.

Canadian motor-vehicle dealers are alert to install any machinery which gives better service. Consequently, air compressors are already in general use, in proportion to the registrations in the various centers, and abundant electric power makes their operation cheap. American manufacturers, therefore, will find a market not only in supplying rural garages but in replacing out-of-date equipment as fast as dealers and garagemen find that free air brings increased sales of gasoline and oil.

In Mexico the registration of motor vehicles is small outside of the Federal District; but even so, in most of the northern States air compressors are well known to the large number of Mexicans who have made use of free-air facilities in their frequent trips across the border. In southern Mexico, however, very few compressors are in use, as there is a prevalent feeling that while the chauffeur has a strong back it is unnecessary to use mechanical equipment. Nevertheless, representatives of our Departments of State and Commerce who are located in Mexico state that the American manufacturer's problem resolves itself largely into a matter of demonstration which will drive home the advantages and economies found in the use of air compressors. All up-to-date Mexican dealers are anxious to install modern equipment, and as registration is increasing rapidly both initial and additional sales should increase in the near future.

The use of air compressors in Cuba is somewhat limited by conditions similar to those in Mexico; outside the city of Habana approximately only 50 per cent of the garages and motor-vehicle dealers are using them. The largest market, of course, is in the capital, and distribution generally takes place from that city, as direct importations are seldom made to other parts of the island.

Specific Information Available to American Manufacturers.

The replies to the questionnaire on mechanical tire-inflation equipment will be analyzed in the Automotive Division and the information sent out for the use of those American service-station-equipment manufacturers who are registered on the Bureau's Exporters' Index. From the nearest district office of the Bureau the manufacturer can then secure the complete report, attached to which he will find a list of jobbers who handle automotive accessories and equipment in each country, as well as prospective buyers who are interested in installing and distributing automotive service-station equipment. All American manufacturers of automotive equipment who are not registered on the

Exporters' Index should immediately communicate with the Automotive Division, if they desire to extend their foreign trade in a field which has very great potentialities.

Trade Opportunities Result from Questionnaires.

One of the most remunerative results of a questionnaire sent to the foreign representatives of the Government, and one which perhaps is not adequately known by most manufacturers, is to be found in the large number of trade opportunities that follow. The representative in his investigation of the market usually stirs up considerable interest in the specific product. In this particular case, trade opportunities for mechanical tire-inflation equipment are now being received and published in COMMERCE REPORTS. Manufacturers should follow closely the columns of this publication, as requests for air compressors point the way to possible buyers of other service-station equipment, as well as of automotive accessories.

JAPANESE AUTOMOTIVE IMPORTS WILL INCREASE IN 1923.

Assistant Trade Commissioner Paul P. Steintrof, Tokyo, February 5.

General economic depression and large stocks in warehouses caused a decrease in the automotive imports of Japan during 1922, as compared with 1921 when such imports were substantially lower than during the two preceding years. During 1923, however, this trade is expected to show a considerable gain, and American manufacturers will probably recover the ground lost in 1922.

Imports of American cars decreased in 1922, furthermore, as a result of the keen competition offered by European producers and of the popularity of the small Continental cars. The latter held the advantage under the Japanese high taxation system based on horsepower and as the result of the currency depreciation in most European countries. Japanese motor-vehicle users soon found, however, that European cars were not suited to local road conditions; this factor, combined with a reduction in taxes during 1922, has tended to restore the American car to popular favor. [Recent cable reports state that motor-vehicle taxes probably will be reduced still further in the near future.]

Sources of Japanese Motor-Vehicle Imports.

The foreign markets from which Japanese dealers have secured motor vehicles, with the relative extent of that patronage, are shown in the following table:

Japanese imports of motor vehicles during 1921 and 1922.

Countries of origin.	1921.		1922.	
	Number.	Value.	Number.	Value.
		Yen.		*Yen.*
Kwangtung Province	5	16,006	1	2,700
Great Britain	75	476,480	71	412,915
France	83	353,432	106	332,691
Germany	22	32,009	46	114,057
Belgium	4	41,042	3	9,403
Italy	46	160,645	24	124,503
Austria			1	6,634
United States	832	2,160,638	461	1,138,198
Canada	6	31,112	35	71,639
Other			3	1,400
Total	1,074	3,261,808	751	2,214,140

The foregoing table does not take into consideration the imports of one of the most popular American light cars, which is imported in the form of parts and assembled locally. There were 1,911 cars and trucks of this make sold in Japan during 1922. Cars credited to Canada are of American make, either assembled in that country or shipped from a Canadian port.

The increase in number of motor vehicles imported from France is due to the large number of Citroens brought in for taxicab service in Tokyo. These cars, however, have not proved satisfactory for this class of work, and shipments during 1923 are expected to be smaller. German cars were imported in increasing numbers, owing to the exchange situation and their low tax rating; as they have been found well adapted to the Japanese market and are energetically pushed, imports during 1923 are expected to increase, provided manufacturers can continue to make deliveries. Imports of Italian cars declined, owing to poor representation. Imports of British cars, the most popular of which on the Japanese market is the "Bean," showed only slight decrease compared with 1921, as a result of the activity of their distributors.

AUTOMOTIVE DIGEST.

Jamaica—Heavy Motor Vehicles Prohibited.

The most important item in the Jamaica motor-vehicle law of 1922 is that prohibiting the importation or use in Jamaica of any motor vehicle weighing more than 50 hundredweight (about 2½ tons), except on conditions decided by the Governor in Privy Council. The law was proclaimed by the Governor on January 26 as effective after March 31, 1923. [In its proposed form the law was listed in COMMERCE REPORTS, November 20, 1922, page 477, as Exhibit 70762.] (Consul Charles L. Latham, Kingston, February 6.)

France—Use of Electric Horns now Permissible.

New motor-vehicle regulations, published during January, differ little from those in effect in 1921, with the exception that the use of electric horns and other mechanical signals is authorized in cities, thereby doing away with the bulb-horn requirement of the past. The use of nonglare headlights is also advocated, and definite speeds are given for trucks. (Commercial Attaché Chester Lloyd Jones, Paris, February 16.)

Ceylon—Electric Commercial Vehicles for Colombo.

The municipality of Colombo in its budget for 1923 has voted to purchase an electrically propelled street water sprinkler. This will be the first vehicle of its kind in Ceylon, according to the Ceylon Observer of January 25. It is expected that additional vehicles will be used for the transportation of refuse and other commercial work, provided the cost of electric power is reduced. The use of motor vehicles is steadily increasing in Ceylon, the total number at the end of 1922 being 5,942. New registrations during 1922 totaled 985, as compared with 762 in 1921; 492 of these were registered in Colombo and 583 in out stations.

Mexico—Vera Cruz a Market for Trucks and Accessories.

Estimates place sales of cars and trucks in the Vera Cruz district at 200 during 1922; the outlook for 1923 promises a steady demand for trucks to be used in productive enterprises. American accessory manufacturers will find an increasing market in this section for headlight bulbs, searchlights, dashboard lights, ornamental radiator caps, tire-repair outfits, dusters, slip-over covers, and automobile paints and enamels. Cars require painting about every six months, owing

to the action of salt air on the metal parts. Enamel is used quite regularly in touching up cars. All labels and instructions should be in Spanish. A list of automotive dealers and importers in Vera Cruz may be obtained from the Automotive Division of the Bureau of Foreign and Domestic Commerce by requesting trade list No. LA30002–A. (Vice Consul Willys A. Myers, Vera Cruz, February 15.)

Belgium—Mercedes Uses Turbine Device.

An article entitled "The Belgian Automotive Market and Brussels Show," appearing in COMMERCE REPORTS, March 19, states that the Austro-Daimler was equipped with a new turbine motor regarded as a marked advance in technic. This is an error, the turbine being a Mercedes-Daimler device placed on the Mercedes 10-horsepower car. Recent reports show that it is impractical for use on the ordinary motor, and all models equipped with this device have been withdrawn from the market. (Commercial Attaché S. H. Cross, Brussels, February 28.)

Germany—Tropfen Auto Rights Acquired by American Concern.

The patent rights for the United States on the Rumpler "Tropfen Auto" have been acquired by an American-German concern which has large interests in both Germany and the United States. [The Tropfen Auto, distinguished by a wide departure in design and construction from the average motor vehicle, is fully described, with accompanying specifications, in Miscellaneous Exhibit No. 284, published in COMMERCE REPORTS December 4; the exhibit is still available to interested parties.] (Consul E. Verne Richarnson, Berlin, February 16.)

Mexico—Tampico to Establish Modern Fire Department.

The Governor of the State of Tamaulipas has agreed to provide 100,000 pesos (approximately $50,000 U. S. currency) for the purchase and installation of modern fire-fighting equipment and for an ample water supply to the city of Tampico. [See Automotive Special Circular No. 169.] The local American Chamber of Commerce will support a paid fire department after the equipment is installed. Manufacturers who are interested should correspond with this body, which will select the equipment needed, in cooperation with the city council. (Consul James B. Stewart, Tampico, February 14.)

Sweden—Closed Cars to Become Popular.

The Swedish Automobile Dealers Association is extensively advertising the advantages of closed cars as more practicable for the Swedish climate. Two "closed-car weeks" were held on February 4 to 18, during which period electric signs, attractive placards, and press advertisements were used to inform the public about closed cars as well as to direct attention to 1923 models. Heretofore the closed car has not been popular except for taxicab purposes, and it is believed that this advertising will increase the use of motor vehicles by private owners. (Consul General D. I. Murphy, Stockholm, February 5.)

Australia—Majority of Taxicabs Are of Fiat Make.

Australian taxicabs are very pretentious and luxurious. The majority of them are Fiats, with a medium-priced American car as close second. The rate varies from 1s. 3d. to 1s. 6d. per mile and is charged both ways, whether the passenger makes the return trip or not. These rates are not considered unreasonable, since motor cars, gasoline, and oil cost at least twice as much in Australia as in the United States. In Sydney and Melbourne, the largest cab company supplies regular patrons with metal disks, numbered and registered in their office, which allows the patron to call and dismiss cabs by numbers and to pay for the service monthly on receipt of bill. (Trade Commissioner J. W. Sanger, Melbourne, January 23.)

Foreign Assemblies of American Cars.

Nonofficial figures concerning foreign assemblies of one low-priced American car, as published in COMMERCE REPORTS, March 5, page 611, should be superseded by the following figures, which cover sales of cars and trucks of this low-priced make from foreign assembly plants during 1922: England, 27,194; Argentina, 11,871; Denmark, 10,552; France, 10,548; Spain, 5,331; Brazil, 3,362. The correction concerning assemblies in England should also be noted in connection with an article published in COMMERCE REPORTS of March 12, page 663, entitled "Review of British automotive conditions in 1922."

Italy—Fiat Not Seeking Foreign Capital.

Recent rumors that the Fiat Co. was seeking foreign capital for the purpose of enlarging its enterprises are denied by the Auto Italiana of January 21. [See Special Circular 199 of the Automotive Division.] The capacity of the plant at Lingotto, which is now turning out 65 cars per day, will soon be increased to 200 cars. The plant is five stories high, and the assembling of the chassis progresses upward until completed on the top floor. A testing track encircles the roof of the entire plant. Of the machine tools used, 50 per cent are of American manufacture, 40 per cent are made by the Fiat Co. itself, and 10 per cent come from France, Great Britain, and other countries. Approximately 30 per cent of the Fiat Co.'s products is sold as chassis, in order that purchasers may secure custom-built bodies. (Trade Commissioner A. A. Osborne, Rome, February 17,)

China—Motor-Vehicle Sales Show Improvement.

Passenger-car sales in Shanghai during the past 60 days have shown a decided improvement, business during the last quarter having increased 400 per cent as compared with the preceding quarter. The registration in Shanghai (French and International Settlements combined) on January 1 totaled 3,071 private passenger cars, 702 public cars (taxicabs, busses, etc.), 48 delivery trucks, 557 heavy trucks, and 286 motor cycles—an increase of 11 per cent over 1921. The "better roads" movement is still slow, but it is less retarded than people not in touch with the situation might believe. A road is now building north and south through Chekiang Province, soldiers being employed on the construction work. Every road brings new buyers into the motor-vehicle market, and China is destined to become a large consumer of light American cars. (Trade Commissioner Lansing W. Hoyt, Shanghai, February 6.)

EXHIBITS AVAILABLE.

Interested parties may obtain the following exhibits from the Automotive Division, or through the proper district and cooperative offices of the Bureau of Foreign and Domestic Commerce, by requesting the exhibit number in each case:

7614.—Taxicab fares in Spain. List of standard taxicab fares levied in Madrid and Barcelona, with details on French

competition in Barcelona, and comparative gasoline consumption figures of French, Italian, British, and American cars. (Commercial Attaché C. A. Cunningham, Madrid, February 24.)

74432.—Proposed Belgian annual tax on automotive products. Report covering proposed revision of tax on motor vehicles and launches, to be retroactive from January 1, 1923. (Acting Commercial Attaché S. H. Cross, Brussels, February 10.)

82378.—The automotive industry in Canada in 1921. Report from the Dominion Bureau of Statistics, covering the Canadian production, importation, and exportation of motor vehicles; employment conditions, financial statistics, etc. (Vice Consul Gilson G. Blake, jr., Ottawa, January 11.)

Additional information regarding automotive products appears in this issue under the following sections:

Cable review, Latin America: Brazilian imports of automobiles and airplanes.

Cable review, Far East: Automotive market for the Straits Settlements.

Transportation—railways: Motor trains in New South Wales reduce operating costs.

Foreign trade opportunities Nos. 5892, 5901, 5902, 5903, 5904, 5905, 5912.

RUBBER PRODUCTS

E. G. Holt, Acting Chief, Rubber Division

RUBBER RESTRICTION NOTES.

Duties Applicable to Excess Exports in Limited Periods.

Export restriction enactments have thus far been passed in Ceylon, the Straits Settlements, the Federated Malay States, and the Non-Federated Malay States of Johore and Kedah. One point that does not seem to have been clearly understood by Americans is that the graduated export tax levied on shipments in excess of the prescribed percentage of one-quarter of standard production during any quarter is applicable only to the exports during that quarter. For example, if an exporter shipped only the prescribed percentage (60 per cent) in the November 1, 1922–January 31, 1923, quarter and shipped up to 5 per cent in excess of the prescribed percentage during the succeeding quarter, the export duty (14 cents per pound for excess of not over 5 per cent) would apply to every pound of rubber exported during the second quarter, but would not relate back to shipments during the first quarter. This is true for exports from each restricted area except Ceylon. There the duty applicable in case of excess shipments applies only to the rubber exported during the month in which the prescribed percentage was exceeded.

Duties Not Prohibitive in Case of High Prices.

An official letter of the British Colonial Office, published in the India Rubber Journal, states that while the export duties are prohibitive in effect so long as rubber is at a reasonable level, they will cease to act as a deterrent if rubber reaches an excessive price at which it will be profitable to estates to pay the higher duties over the whole amount of their exports, and not confine themselves to exporting only the limited amount of rubber that was permissible on the minimum duty.

Lower Duty Favors Exports of Liquid Latex.

It is pointed out in the Malayan Tin and Rubber Journal that the shipment of liquid latex is encouraged by the provision that the rubber content per gallon of latex shall be taken as 3 pounds. The actual rubber content of latex from old estates approximates 4 pounds per gallon. The duty collected per gallon (at the minimum rate) is therefore only 6 cents (Straits currency), while on the rubber content at, say, 3.75 pounds per gallon, the duty should be 7½ cents. Furthermore, estates shipping rubber in latex form can export 25 per cent more rubber than estates shipping dry rubber, owing to the interpretation, which is uniform in all the enactments.

Estates Not Restricting Production.

An analysis of rubber production figures for British-owned estates in various districts, compiled from Rickinsons' January Rubber Companies' Position and L'Exportateur-Importateur Belge of February 11, indicates that the total production on these estates (which include all estates for which December figures are available) was not greatly affected during the first two months under export restrictions. A considerably increased output is noted for estates in the Dutch East Indies, sufficient to balance the slightly decreased outputs in other districts. In the Federated Malay States, Straits Settlements, and Ceylon, December production increased over that for November. Whether the excess production over amounts exportable at the minimum rate is being held in stock, or exported subject to the excess duties, can not be stated. Included in the statistical compilation were 11 estates located in the Dutch East Indies, with a total "standard production" of 13,086,314 pounds; 5 estates in the Straits Settlements, with standard production of 8,260,098 pounds; 29 estates in the Federated Malay States, with standard production of 26,243,786 pounds; and 4 estates in Ceylon, with standard production of 1,945,620 pounds.

For the four Ceylon estates the monthly export allowance at the minimum rate in the first quarter is fixed at 97,328 pounds. The following table shows the amounts exportable at the minimum rate in the first quarter under restriction and the monthly outputs in the August–December period of 1922:

Sources.	First quarter allowance.	Prior to restriction.			Under restriction.	
		August.	September.	October.	November.	December.
	Pounds.	*Pounds.*	*Pounds.*	*Pounds.*	*Pounds.*	*Pounds.*
Dutch East Indies	1,962,947	876,692	886,630	979,703	1,064,917	1,061,827
Straits Settlements	1,239,015	548,566	533,755	553,825	481,484	564,853
Federated Malay States	3,936,553	1,835,248	1,831,609	1,769,318	1,621,578	1,702,137
Ceylon	291,843	188,374	180,640	178,300	135,503	146,760
Total	7,430,358	3,448,880	3,432,634	3,481,146	3,303,482	3,475,577

Production in Excess of Export Allowances to be Regulated.

The office of the Undersecretary, Federated Malay States, has issued a communique stating:

It having been brought to the notice of the Government (*a*) that many estates are not restricting production and are storing rubber in excess of the quantity which they are allowed to export as a speculation and not merely as a reserve against the period of wintering; (*b*) that rubber is being bought on a large scale without coupons or export license, with a view to its being

stored until restriction ceases, notice is hereby given that legislation is being prepared to deal with the subject generally.

Notice is also given that after January 1, 1923, licensed dealers in rubber will be required by rule made under the Rubber Dealers' Enactment to furnish monthly returns of the stock of rubber and export licenses or coupons in their possession, and that a census will be taken on May 1, 1923, of all rubber in the possession of producers.

Such regulation will probably not allow estates to indulge in full tapping during one period, store excess production, and export it in a succeeding period while the estates are being rested. Thus one possible means of lowering production may be eliminated. One argument offered in support of such regulation is that labor forces would be disorganized if estates generally adopted a policy of full tapping followed by a period of absolute restriction.

Regulation of Production.

The contemplated effect of the proposed regulations in Malaya is to limit the output of rubber. Direct regulation of production was not recommended by the Stevenson Committee, and the alternative scheme of graduated export taxes was adopted. It is stated that the only effect of unrestricted production will be to transfer ultimately the surplus stocks from England to producing countries—to take it from the hands of London speculators and put it in the hands of producers. There it would be subject to export taxes, and while it would constitute a reservoir safeguarding consumers against speculation in the market, it would be no menace to the planters. The requirement of monthly reports of stocks should serve as a sufficient check against possible smuggling. Labor forces will be more adversely affected by compulsory restriction of tapping, which will necessitate the discharge of employees, than by allowing estates to maintain practically normal outputs, and store excess production in Malaya. It is said that while much latent dissatisfaction with the interference in the economic laws of supply and demand exists among the planters, they have been silent because of the initial success of the scheme in raising prices.

Export Restriction in Kelantan.

The question was raised in the English House of Commons as to whether the export restriction legislation, which has been passed by the Government of Kelantan—one of the non-Federated Malay States—imposing a varying scale of duty on raw rubber exports, violates a clause in the leases held by certain plantation companies. It was stated that the High Commissioner was being requested to ascertain from the Government of Kelantan whether this conflict arose. It was added that the Secretary of State trusted that the Government in question would continue to adhere to the general policy of the Malayan governments in the matter, so that it is evidently expected that an alternative system of regulation will be found practicable, if it be the case that the new export law is in conflict with guaranties already given. (The India Rubber Journal, London, February 24.)

Liberality in Fixing Standard Production.

The official figure for "standard production" in British Malaya (270,000 tons) is about 34 per cent higher than the exports of rubber from Malaya in the calendar year 1920. During the visit of delegates from the Rubber Growers' Association to the United States they estimated the standard production of all areas, subject to either voluntary or compulsory restriction, as approximately 350,000 tons. The Stevenson Committee estimated the total plantation production during 1920 as 335,000 tons. Much liberality has seemingly been practiced in determining standard production. The net result is that Malayan exports have been restricted to 60 per cent of 134 per cent of 1920 exports; in other words, only a 20 per cent restriction was called for.

February Exports from British Malaya.

Total exports of rubber from British Malaya in February, 1923, amounted to 19,910 long tons, as compared with 22,871 tons in January, 18,427 tons in December, 1922, and 21,642 tons in November, 1922. (Cable from Commercial Attaché Walter S. Tower, London, March 17.)

Plantation Rubber in British North Borneo.

At the end of 1921, 58,300 acres in British North Borneo were planted to rubber, about 30,000 acres of which were in tapping. In 1920, 4,105 tons of rubber were exported and in 1921, 3,125 tons. During the first half of 1922, 1,633 tons were imported, 793 tons to the United Kingdom, 821 tons to Singapore, and the balance to the United States and Japan. At present there is no organized restriction in North Borneo, where the companies already established are free from export duty until 1955. To what extent they may voluntarily restrict output in cooperation with Malaya and Ceylon is not known. (Malayan Tin and Rubber Journal, December 15, 1922.)

Japanese-Owned Estates Abandon Appeal for Loan.

Japanese-owned rubber estates, which have been in considerable distress, have been encouraged by the rise in price of crude rubber and have decided to abandon their appeal to the Government for a 10,000,000 yen loan at a low rate of interest. It is understood that the Bank of Japan previously advanced them 10,000,000 yen, and it is believed the Oriental Colonization Bank has taken over that loan. (Commercial Attaché James F. Abbott, Tokyo, February 12.)

Exports of Balata from Peru Increasing.

Early in 1920 small trial shipments of balata from the quinilla trees in Peru were sent to England and the United States. These samples were well received and now balata exports from the Iquitos district are becoming of considerable importance. During 1920, 699,000 kilos were exported. In 1921 shipments were interrupted by a local insurrection at Iquitos, which led to the closing of the port for several months, and only 151,567 kilos were exported. In 1922 approximately 1,000,000 kilos were exported. Further expansion in the industry will probably take place. During the last three months of 1922, 308,871 kilos of white balata and 22,929 kilos of pink balata were exported, the United Kingdom taking 241,471 kilos of the former and 19,558 kilos of the latter. (Acting Commercial Attaché W. E. Dunn, Lima, February 23.)

Rubber Trade Notes.

Bergen Market for Overshoes.

The Bergen climate is continuously wet, and there is perhaps no city of 100,000 population in the world where rubber footwear, especially overshoes, is more in demand. Rubber overshoes and boots of American,

British, Swedish, and Norwegian origin are on sale. The quality of the Swedish product is offset by its high cost; the Norwegian product is inferior; American and British makes have the largest sales, men's rubbers retailing at 7.50 to 9.50 crowns per pair, and women's rubbers at 4.50 to 6.50 crowns. Most merchandise imported into Bergen is purchased through commission agents, and it is difficult for a firm without a local representative to transact business with dealers except through such an agent. Agents visit importers regularly, take their orders, and attend to all correspondence. Orders and shipping documents are forwarded to the principal, who pays the shipper direct. The usual commission is from 2 to 4 per cent, according to whether agent or purchaser pays postage and cable charges. (Consul George N. Ifft, Bergen, February 14.)

Locally Made Rubber Heels Popular in Sweden.

The imports of rubber heels into Sweden during 1921 are estimated at 8,000 kilos, representing a value of about $10,000. Dealers in leather and shoe-repair supplies are the principal importers, such firms acting as distributers. Skandinaviska Gummiaktiebolaget, located at Viskafors, dominates the market in western Sweden. Their wholesale prices vary between 1.50 and 1.60 crowns per pair, while retailers sell at 2 crowns per pair. British-made heels are quoted to retailers at about 1 crown per pair, the retail price being from 1.25 to 1.50 crowns. In spite of the difference in price the local product sells better than the English makes, probably because of its extensive advertising. (Consul Walter H. Sholes, Goteborg, January 30.)

January Rubber Exports from Brazil and Peru.

During January, 1923, the exports of rubber from Para and Manaos totaled 5,819,429 pounds, 4,030,787 pounds being destined for the United States and 1,788,642 pounds for Europe. Exports in December, 1922, were 5,458,748 pounds and in November 3,938,964 pounds. January exports from Iquitos, Peru, totaled 199,107 pounds, of which 149,686 pounds were shipped to the United States, as compared with 25,109 pounds shipped in December and 27,895 pounds in November, 1922. (Consul Geo. H. Pickerell, Para, February 12.)

Additional information regarding rubber products appears in this issue under the following sections:

Cable review, Latin America: Brazilian imports of tires and inner tubes.
Latin America: Conditions in the State of Para, Brazil.
Tariffs and trade regulations:
Increased export duty on balata in Peru.
Mexican export duty on chilte.
Extension of time for enforcement of Spanish marking requirements for tires and tubes.
Foreign trade opportunities Nos. 5906, 5907.

FOODSTUFFS

Edward G. Montgomery, Chief, Foodstuffs Division

COFFEE SHIPMENTS FROM MEXICO.

Vice Consul George E. Seltzer, Salina Cruz.

The declared exports of coffee from Salina Cruz during the last quarter of 1922 amounted to 830,884 kilos (1,831,766 pounds), valued at 634,600 pesos, as compared with 454,732 kilos (1,002,502 pounds), valued at 286,062 pesos during the corresponding period of 1921. Of this amount 830,032 kilos (1,829,889 pounds) were shipped to the United States in 1922, and 451,609 kilos (995,617 pounds) in 1921.

The following table shows the quantity and value of the coffee shipped through the port of Salina Cruz during the years 1921 and 1922, by countries of destination:

Mexican coffee exports from Salina Cruz during 1921 and 1922.

Countries of destination.	1921		1922	
	Pounds.	Value.[1]	Pounds.	Value.[1]
United States	10,561,736	$2,724,125	8,183,352	$2,507,160
Germany	369,661	88,460	1,251,611	342,674
France			326,700	92,709
Canada			59,260	18,835

Japan	16,453	5,662	20,397	8,640
Netherlands			4,938	1,366
Total	10,947,850	2,818,247	9,882,766	2,983,300

[1] Values are given in Mexican currency.

CHICLE INDUSTRY IN BRITISH HONDURAS.

Consul W. W. Early, Belize.

Chicle is a crude gum used as the base in the manufacture of chewing gum. The best quality of chicle is produced in the States of Yucatan and Campeche in Mexico, in Guatemala, and in the northern half of British Honduras. This gum is derived from the sapodilla trees which grow in the mahogany forests. The average yield is from 2 to 6 pounds per tree, the maximum yield for certain regions having been stated at 25 pounds, but in Mexico and in British Honduras the yield of gum per tree is reported to have reached as high as 61 pounds.

The chicle season extends from the first of July to the end of June. In July, the beginning of the rainy season, the trees are tapped for the gum, which is then boiled, kneaded, and molded into blocks weighing 30 pounds each, and sent to the port of shipment. Practically all of the chicle from the three principal producing countries is shipped from the port of Belize in British Honduras. The first shipment of chicle to the United States from British Honduras was in 1892, and within a few years the industry in British Honduras had assumed important proportions and has continued to develop to such an extent that it now holds first place in respect to the value of exports and as a source of revenue to the Government on account of the export duty. In 1896, 925,199 pounds of chicle were exported from British Honduras, and in 1922 exports amounted to 2,032,102 pounds. The highest peak in the interval

was reached in 1920, when 3,690,641 pounds were exported.

A number of the larger American manufacturers of chewing gum have established agencies in Belize in order to buy, test, and ship the gum to the United States. The price of chicle has dropped from an average of $0.70 per pound in 1920 to an average of $0.45 in 1922. The quality of the gum, however, has improved notwithstanding the decrease in price. During the war and immediately thereafter, owing to the high prices asked for chicle, many of the manufacturers of chewing gum experimented with other ingredients in the hope of finding a satisfactory substitute for chicle. A cheaper gum from the Far East was used with a degree of success, but no substitute has been found which equals chicle in value.

Consumption of Staple Food Products in Belgium.

Leigh W. Hunt, secretary to American trade commissioner, Brussels.

Despite the fact that consumption of staple foodstuffs in Belgium has rapidly increased since the termination of the war, the country has not yet returned wholly to a normal basis, especially in the consumption of wheat, and to a lesser extent in the consumption of rye. Other grains, such as corn, do not enter into consideration as food for human use in Belgium, and therefore are not included in this report. The consumption of meat is rapidly approaching the pre-war level, while the use of sugar and potatoes considerably exceeds the pre-war rate.

Per Capita Consumption of Potatoes.

The estimated per capita consumption of potatoes in Belgium in 1922 was 1,155 pounds as compared to 916 pounds in 1912. This increased consumption can not be charged entirely to an enlarged human use of potatoes, as the quantities entering into animal feed are indeterminate. During 1922 large quantities were fed to cattle because potatoes were plentiful and forage scarce. This situation was the reverse of that obtaining in 1919, 1920, and 1921 when potatoes were much less plentiful and more highly priced.

Consumption of Wheat and Rye.

The consumption of wheat in Belgium (359 pounds per capita in 1922) still shows a notable decrease compared to that of 1912 (574 pounds per capita). The fall in the per capita consumption of wheat in 1922 is explained by the small wheat crop of that year combined with the large supply of potatoes, the latter food advantageously replacing wheat.

Rye consumption in Belgium has followed the general trend of wheat consumption. Rye is used for animal as well as for human consumption, and it is impossible to determine just what proportion of this grain goes to each use. The per capita consumption of rye in 1912 was 188 pounds, and by 1922 this rate had dropped to 135 pounds per capita.

Sugar Per Capita Consumption.

The individual consumption of sugar in Belgium in 1912 was much below the amount consumed in 1922, being 28 pounds per capita in the former year and 42 pounds in the latter. In the absence of official figures, the consumption figures for 1922 have been estimated from the import, export, and production figures for sugar. While these figures are not final, they may be used for comparative purposes. The figures do not include the sugar used industrially nor that consumed in the preserving industry.

The increase in the use of sugar for human consumption since the war is attributable to the fact that home preserving of fruits is now much more general in Belgium than in the pre-war years, as preserved fruit and jams are at present exceedingly economical foods and adequately replace the more expensive foodstuffs.

Sugar Industry in British and Dutch Guiana.

Consul Chester W. Davis, Georgetown, British Guiana.

The average acreage under sugar cultivation in British Guiana from 1914 to 1918, inclusive, was 76,672 acres. In 1919 there were 73,565 acres planted to sugar, 69,532 acres in 1920, and 65,420 acres in 1921.

The production of sugar in British and Dutch Guiana from 1912 to 1921 is shown in the following table. The estimated production of sugar in British Guiana for 1922 is also given.

Sugar production in British and Dutch Guiana.

Years.	British Guiana.	Dutch Guiana.	Years.	British Guiana.	Dutch Guiana.
	Long tons.	*Long tons.*		*Long tons.*	*Long tons.*
1912	86,410	9,789	1918	107,560	12,280
1913	106,211	13,457	1919	86,971	7,702
1914	116,622	15,263	1920	[1] 90,000	10,253
1915	119,091	14,984	1921	[1] 115,000	11,309
1916	114,292	13,241	1922	[1] 106,000	([2])
1917	108,181	14,590			

[1] Estimated. [2] Data not available.

Plantation Labor in British Guiana.

The plantations in British Guiana are staffed for the most part by Europeans. African labor is employed for the mechanical work, as well as for the performance of the heavier tasks in the sugar fields. The majority of all plantation labor is East Indian. According to the census of 1921, out of a total population of all ages on the sugar estates in British Guiana, which was 66,517 persons, 52,090 were East Indians. The total East Indian population of all ages in the entire colony in 1921 was 124,938 persons.

Notes on Food Products.

Agricultural Conditions in Manchuria.

The cultivated land in the two northern Provinces of Manchuria yielded approximately 9,520,000 tons of cereals in the last two years, including 1,270,000 tons of wheat. Agricultural production has been increasing rapidly and constantly. (Consul G. C. Hanson, Harbin, China.)

Market for American Wheat in Mexico.

There has been for some time a shortage of native wheat in the Saltillo district of Mexico, and although there is a prospect of a good crop of the native grain after July of this year, there should be a present demand for American wheat, as the duty on flour from the United States has been increased recently. (Consul Fred R. Robinson, Saltillo.)

Cost of Wheat in India.

The price of wheat in India has fallen to the equivalent of $1 per bushel. It is the custom in the wheat-producing sections of India to keep about a year's supply of wheat in stock in order to prevent a repetition

of the famines of the past. It is believed that if the year's crops are good some of the old wheat may be exported. (Trade Commissioner C. C. Batchelder, Calcutta.)

Honey Production in New Zealand.

A detailed report on the progress of the honey industry in Auckland, New Zealand, has been submitted by Consul Karl de G. MacVitty. This report may be examined by those interested upon application to the Foodstuffs Division or to the bureau's district or cooperative offices. Refer to file No. 80646.

Vanilla Crops in British and French East Africa.

The official estimates of the vanilla production of 1922 in the islands of the south Indian Ocean were as follows: Madagascar and dependencies, 563,937 pounds; Mauritius, 1,543 pounds; Reunion, 110,230 pounds; and Seychelles, 3,210 pounds, making a total production of 678,920 pounds. (Consul Alfred T. Burri, Tananarive, Madagascar.)

Wheat Conservation in France.

From an investigation made by the French Minister of Agriculture, it is estimated that the wheat production in France in 1922 was over 6,600,000 metric tons. The decree requiring the incorporation of a certain percentage of wheat substitute in the milling of flour is to be strictly enforced in order to avoid the necessity of importing wheat into France. (Eugene A. Masuret, clerk to trade commissioner, Paris.)

Hungary Plans Exportation of Wheat Flour.

It is reported that the Hungarian Government is considering the approval of the exportation of some 55,000 metric tons of wheat flour, of which 25,000 tons are now in the warehouse ready for shipment. The Ministry of Agriculture proposes to inspect and approve all export shipments in order that only the best qualities of flour shall be exported. (Trade Commissioner H. Lawrence Groves, Prague.)

Austrian Grain and Flour.

Imports of grain and flour into Austria during November, 1922, were 47,305 metric tons, of which the amount imported from the United States was reasonably large. In the same month, bread grains were costing 18,558 times their pre-war price. The total wheat area sown in 1922, inclusive of the Burgenland Province, was 183,594 hectares (hectare=2.47 acres), rye, 336,236 hectares; and barley, 125,068 hectares. (Assistant Trade Commissioner F. W. Allport, Vienna.)

Netherlands Grain Trade.

A reduction in the volume of grain trade in the Dutch ports was noted during 1922, resulting from the high cost of handling the product as compared with the cost in German and Belgian ports. The arrivals of grain in Rotterdam and Amsterdam in 1922 amounted to 3,540,620 metric tons, as compared with 3,648,168 metric tons in 1921. The imports of grain for Dutch consumption show a gain in 1922 over those of 1921. (Consul General George E. Anderson, Rotterdam.)

Consumption of Potatoes in France.

The average annual per capita consumption of potatoes in France from 1911 to 1913 was about 759 pounds. From 1919 to 1921 it was but 535 pounds, or 29 per cent below the average of the pre-war period. The favorable potato crop of 1922 indicates that present consumption approximates the pre-war rate. Foreign trade in potatoes is not important in France. Imports and exports roughly balance, and neither reaches 5 per cent of local production even in the years of a poor crop. (Commercial Attaché Chester Lloyd Jones, Paris.)

American Agency Desired for Products from Ceylon.

The Colonial Traders' Agency Co. of Colombo, Ceylon, desires to establish American connections for the exportation of tea and cocoa, according to a report from the American consul at Colombia. The address of the agents may be obtained by those firms that may be interested, upon application to the Foodstuffs Division of the Bureau of Foreign and Domestic, or to its district or cooperative offices. Refer to file No. 81296.

Market for American Molasses in Greece.

An opportunity is indicated for increasing the sales of American molasses in the Patras district in Greece by direct shipments to Patras in tank steamers. It is estimated that nearly 9,000 tons of molasses for use in the manufacture of alcohol could be sold through Patras to its industrial district, provided the question of freights could be solved. At present most of the molasses purchased in the district is arriving in drums of 200 pounds each at $20 per ton. It is believed, however, that direct importations of molasses in tank steamers would cut this price by 25 per cent, and if this method were successfully carried out it would give marked impetus to the sale of American molasses here. No duty is imposed on imported molasses when intended for the manufacture of alcohol. The introduction of foreign molasses is encouraged by the Greek Government, owing to the heavy internal revenue taxes due on the alcohol after manufacture. (Consul George K. Stiles, Patras.)

[A list of houses which might be interested in the importation of molasses is on file in the Bureau of Foreign and Domestic Commerce and its district and cooperative offices, and may be obtained upon application by those interested. Refer to file CI-54.]

TOBACCO

THE DUTCH CIGAR AND CIGARETTE TRADE.

Consul General George E. Anderson.

The duties on cigars, cigarettes, and manufactured tobacco were increased early in 1922 to serve as a protection to this industry in the Netherlands against the tremendous inflow of cigars made in Germany.

The returns of the year's trade, however, indicate that in spite of the increased duties the imports of cigars from Germany show a marked increase, which makes evident that the increase in duties did not equalize the difference between labor costs in Germany and in the Netherlands. On the other hand, the protection all but completely eliminated the importation of cigarettes.

Trade in Tobacco in 1921 and 1922.

The following table shows the value of imports of cigars, cigarettes, and manufactured tobacco for 1921 and 1922:

Imports of tobacco into the Netherlands in 1921 and 1922.

Countries.	1921			1922		
	Cigars.	Cigarettes.	Manufactured tobacco.	Cigars.	Cigarettes.	Manufactured tobacco.
Great Britain	$41,616	$2,007,270	$189,595	$20,520	$66,880	.....
United States	46,600	267,493	18,729	.....	.....	.....
Germany	299,738	312,299	.....	1,174,960	36,100	.....
Cuba	49,003	.....	.....	.....	.....	.....
Dutch East Indies	57,330	.....	.....	13,680	.....	.....
Poland	77,800	.....	.....	.....	.....	.....
Egypt	.....	268,939	.....	.....	163,780	.....
Belgium	.....	306,063	.....	.....	11,020	.....
Other countries	137,873	152,823	65,997	61,180	47,500	$30,780
Total	709,960	3,314,887	274,321	1,270,340	325,280	30,780

In spite of German competitors and the demoralization of the industry, the exports of Dutch cigars during 1922 exceeded those of 1921 in value. A considerable portion of these exports, however, have been the result of the special efforts on the part of the Dutch Government and municipalities in granting subventions to factories to enable them to execute certain contracts and to prevent a further increase in unemployment.

The exports of manufactured tobacco from the Netherlands amounted to $2,468,480 in 1922, as compared with $2,425,784 in 1921; those of cigars, $1,342,160 in 1922, as compared with $1,324,838 in 1921; and those of cigarettes, $191,520 in 1922, as compared with $1,353,202 in 1921. Thirty-eight per cent of the exports of cigars went to the Dutch East Indies and 30 per cent to Spain.

DOMINICAN TOBACCO CROP.

Consul W. A. Bickers, Puerto Plata, Dominican Republic, February 24.

The growing crop of tobacco, which consists of about 80,000 acres and which under favorable conditions would yield approximately 50,000,000 pounds, has been materially damaged by the excessive rains during the latter part of January and the early part of February to the extent that a yield comparable to that of 1919 and 1920, which was approximately 40,000,000 pounds, will probably not be realized, but it is safe to estimate a yield of not less than 35,000,000 pounds if growing conditions continue favorable.

The unstable conditions which have obtained in the Dominican Republic during the past few years have been reflected in the tobacco industry, the result of which has been a decrease in exports and a decline in prices, and the accumulation of large warehouse stocks from the 1919 and 1920 crops. These stocks were owned to a great extent by the Government. About 7,000,000 pounds of this tobacco was sold recently to European firms for about 5½ cents per pound f. o. b. Puerta Plata, at which price the Government will lose approximately 3 cents per pound.

The Government has now disposed of the bulk of its large holdings of tobacco, and it is likely that an effort will be made to dispose of the remainder before the new crop enters the market in June.

1922 Tobacco Production in the Province of Ontario.

Consul General Alfred A. Winslow, Windsor, Ontario, Canada, February 16.

Practically all of the tobacco grown in Canada during the season of 1922 was produced in the Province of Ontario. The crop amounted to 5,854,000 pounds, grown on 7,509 acres. Of this, 5,559,000 pounds were grown on 6,741 acres in Essex and Kent Counties, in the extreme southwestern portion of the Province. What is usually termed here as "Virginia" tobacco amounted to 2,750,000 pounds, grown on 3,500 acres; the remainder is known as White Burley tobacco.

The price of the "flue-cured" tobacco varied from 35 to 50 cents per pound at the beginning of the sale season, while most of this grade of tobacco sold from 40 to 50 cents per pound; the price of White Burley tobacco ranged from 16 to 18 cents per pound, and it was not in great demand even at these figures.

Tobacco growers of Essex and Kent Counties are putting up a strong fight against what they term the excessive excise tax imposed on cigarettes, which is claimed to interfere materially with prices of the raw tobacco.

Tobacco Market Quiet in Belgium.

The Belgian tobacco market was somewhat quieter in January, with good demand for Burley and Kentucky Darks and low grades of Mexican tobacco, according to reports from Acting Commercial Attaché S. H. Cross, at Brussels. There was little demand for Bright Virginia. A decrease in consumption of tobacco in Belgium is expected on account of the recent increase of 100 per cent in duties on imports of tobacco into Belgium.

Additional information regarding tobacco appears in this issue under the following sections:

Cable review, western Europe: Danish import duty on tobacco.

CHEMICALS

Charles C. Concannon, Acting Chief, Chemical Division

GERMAN POTASH INDUSTRY IN 1922.

Consul F. T. F. Dumont, Frankfort-on-Main, February 7.

The 1913 German pre-war record of an output of 1,110,500 metric tons of pure potash was surpassed in 1922 by about 200,000 metric tons; that is to say, the production was about 1,311,500. In judging these statistics the output of Alsatian potash—no longer German—must be considered. This output in 1921 was 111,000 metric tons. Statistics for the years 1913 to 1921 show the following development:

Year.	Total output of pure potash.	Total value.	Average value per ton.
	Metric tons.	*Paper marks.*	*Paper marks.*
1913	1,110,500	185,466,000	167
1914	903,900	150,603,000	167
1915	679,700	102,011,000	150
1916	883,900	157,369,000	178
1917	1,004,200	218,460,000	217
1918	1,001,600	278,677,000	278
1919	812,000	1,260,301,000	1,552
1920	923,600	1,517,865,000	1,626
1921	921,146	2,072,101,000	2,250

At the beginning of 1923 the price of potash to German consumers, measured in paper marks, was about 800 times that of pre-war times.

Progress Last Year.

Extensive reconstruction was undertaken during 1922 and much preparatory work accomplished. Further, the consolidation movement made considerable progress; the Salzdetfurth concern was formed, and the mining company, Wintershall, enlarged its sphere of interest.

The quotations of German potash mining shares failed to keep pace during the year with the rise in the value of the dollar. The total value at the beginning of the year of 72 mining shares (taken for comparison) was $34,921,000, or about 6,460,000,000 paper marks, as compared with $20,199,000, or 164,901,000,000 paper marks, at the end of the year. The value of the shares measured in dollars had decreased by $14,722,000, although the value measured in paper marks increased by 158,441,000,000 marks.

The world's consumption of pure potash increased from 1,100,000 metric tons in 1913 to about 1,600,000 metric tons in 1922. Of the latter amount, 1,300,000 metric tons were of German origin.

Germany's Exports in 1922.

Germany's exports of crude potash salts and of potassium sulphate and potassium muriate, with countries of destination so far as given in the preliminary official returns, for 1922 reached the following amounts:

	Tons.
Carnalite, 9 to 12 per cent K_2O	153
Crude salts, 12 to 18 per cent K_2O	401,185
United States	117,222
Netherlands	94,771
Fertilizer salts, 18 to 42 per cent K_2O	501,011
United States	157,799
Netherlands	140,961
Other crude salts	10,751
Great Britain	9,751
Sulphate of potash	85,220
United States	53,314
Great Britain	8,823
Japan	4,883
Muriate of potash	160,647
United States	113,510
Czechoslovakia	6,543
Great Britain	19,175
Netherlands	2,086
Spain	5,691

Indigo Imports at Shanghai in 1922.

Trade Commissioner Lansing W. Hoyt, Shanghai, China, January 26.

Arrivals of indigo at Shanghai in 1922 amounted to 211,895 piculs (picul=133⅓ pounds), 156,122 piculs of which came from Germany, 37,822 piculs from Switzerland, 12,637 piculs from the United States, 250 from France, 85 from the United Kingdom, 40 from Japan, and 4,939 piculs via Hongkong. As German agents merchandized not only the German product but that of Switzerland as well, more than 90 per cent of the year's business passed through their hands. The United States share was a scant 6 per cent.

During 1921 the price of indigo dropped from a high of 90 taels per picul to a low of 60 taels. During 1922 there was a further drop to an extreme low of 45 taels, with a reaction or firming up in price during the last two months of the year to 50 taels per picul. At the present time American indigo is going into consumption in China at the rate of about 1,500 piculs per month.

China is probably the greatest market Germany now has for the disposal of indigo.

Possible Development of Spanish Phosphate.

Assistant Trade Commissioner O. S. Payne, Madrid, February 15.

A process is reported to have been perfected for the manufacture of superphosphates of high concentration from phosphates of weak concentration. Experiments carried on at Caceres produced superphosphates containing 20 to 30 per cent of water-soluble phosphoric acid from phosphate deposits that ordinarily have yielded but 8 to 9 per cent of phosphoric acid. Tests on an industrial scale are to be made soon, and if they bear out the results of the laboratory experiments several million tons of weak phosphates in the center of the Iberian Peninsula will be turned to the profit of Spanish industry and agriculture.

Moroccan Phosphate Rock Exports.

Vice Consul Charles A. Bay, Casablanca, January 9.

The register of the customs collector at Casablanca shows exports of phosphatic rock from Morocco during the year 1922 amounting to 80,549 tons, distributed as follows: France, 25,454 tons; Spain, 22,625 tons; Portugal, 2,640 tons; Belgium, 3,225 tons; Netherlands,

14,910 tons; Italy, 750 tons; England, 8,170 tons; Switzerland, 525 tons; Sweden, 2,250 tons.

The American consulate has been informed by local agents of navigation companies that offerings of phosphatic rock or similar material in bulk shipments to Marseille or Bordeaux will be accepted at the rate of 25 francs per ton, and to Antwerp at the rate of 30 francs per ton for large cargoes. Shipments of phosphatic rock to Bordeaux have actually been accepted by one company, in cargoes of 10,000 tons, at the rate of 22 francs per ton.

Chemical Trade Notes.

Copper Sulphate in Italy.

The market for copper sulphate in Italy is experiencing a greater activity on account of domestic demand as well as demand from Germany and Austria. (Consul H. Earle Russell, Rome, January 13.)

Rise in French Arsenic Prices.

Due to increased American demands, a metric ton of white arsenic is now selling in the French market at 4,000 francs, although the price three months ago was but 2,300 francs. (Consul Edward A. Dow, Algiers, Algeria, January 27.)

Indian Crude Drugs Offered.

An exporter in India has informed Consul Avra M. Warren, Karachi, of his desire to communicate with American firms interested in importing crude drugs, including nux vomica, cassia pods, and myrrh. Further information may be obtained from the Chemical Division, Bureau of Foreign and Domestic Commerce, Washington, D. C.

Saponaria Radix for Sale.

Mr. Milan Mishkovitch, a chemist of Belgrade whose street address is Sarajevska ulica 70, wishes to secure a market for the root *Saponaria radix*, of which he can supply 5,000 metric tons yearly, at an offered price of 4 to 5 dinars (4 to 5 cents at present exchange) per kilo f. o. b. station, or 6 to 6.50 dinars (6 to 6.50 cents) f. o. b. Trieste, Saloniki, or Ragusa. Samples may be had from Mr. Mishkovitch if desired. (Vice Consul Henry R. Brown, Belgrade, Yugoslavia, February 8.)

China's Match Imports.

China's imports of Japanese matches have shrunk rapidly during the last 10 years. In 1912 China and Hongkong took 9,015,300 gross of Japanese matches, but returns for 1921 show only 2,435,900 gross imported. This shrinkage is due primarily to the increase in match production in China and to the fact that for a long time the entire far eastern market was flooded by an excess stock of matches, said to have been at least 500,000 cases. (Trade Commissioner Lansing W. Hoyt, Shanghai, February 6.)

Additional information regarding chemicals appears in this issue under the following sections:

Cable review, Far East: Indian shellac and linseed markets.
Cable review, Latin America:
Fair demand for drugs and chemicals in Brazil.
Argentine market for dyestuffs dull.

Foreign trade opportunities Nos. 5908, 5909.

PETROLEUM

Henry C. Morris, Chief, Petroleum Division

CANADIAN PETROLEUM TRADE DURING 1922.

Canada's imports for domestic consumption of petroleum and petroleum products, including asphalt, during the calendar year 1922 were valued at $37,390,703, as compared with $37,487,807 in 1921, and represented about 5 per cent of the total merchandise imported in each year. While the value of petroleum imports during 1922 registered a slight decline from the figure for the preceding year, due to lower prices, the quantity of all principal products except illuminating oil increased. Quantity receipts of crude oil for refining rose about 10 per cent, lubricating oils 40 per cent, and gasoline 4½ per cent. The total imports of mineral oils thus showed a gain of about 7 per cent, although there was a decrease of some 7,000,000 gallons in illuminating oil receipts, as well as a large decline in the imports of paraffin wax and candles and in the classification of "other mineral oils."

About two-thirds of the crude oil imported into Canada for refining comes from the United States, and the remainder chiefly from Mexico and Peru. Increased imports of this class of oil were received during 1922 from each of these countries. Refined products are supplied principally from the United States, with smaller amounts from Mexico, Peru, the United Kingdom, and the East Indies. Total imports of all petroleum products from the United States during 1922 were valued at $28,900,774, a decline of about $1,250,000 from the 1921 figure, and representing slightly less than 6 per cent of all merchandise imports into Canada from the United States. The following table, compiled from official Canadian statistics, shows the quantity of the principal petroleum products imported by that country during 1922 and a comparison with 1921:

Canadian imports of petroleum products.

Products.	1921	1922
	Imperial gallons.[1]	*Imperial gallons.*[1]
Crude pertoleum for refining	380,384,732	419,559,962
Other crude petroleum and fuel and gas oil	61,416,693	72,822,681
Illuminating oil	10,664,597	3,772,731
Lubricating oils	5,040,456	7,110,054
Gasoline	40,264,707	42,112,248
All other mineral oils	13,170,754	1,175,097
Paraffin wax and candles	[2] 1,567,094	[2] 1,070,326

[1] One imperial gallon equals 1.2 United States gallons.
[2] Pounds.

Canadian Exports Show Large Increase.

Although the production of crude petroleum in Canada during 1922 totaled only about 165,000 barrels, and petroleum products for domestic consumption are supplied chiefly from other countries, the exportation of these products during the past year amounted to 11,640,683 imperial gallons, valued at $1,187,844, showing an increase of 3,902,759 gallons and $346,662 over

the 1921 exports. The quantity of the exports during the last two years was as follows: Illuminating oil (chiefly unrefined), 8,508,574 imperial gallons in 1922 and 6,851,173 gallons in 1921; gasoline and naphthas, 1,976,244 gallons in 1922 and 762,080 gallons in 1921; other mineral oils, 1,155,865 gallons in 1922 and 124,671 gallons in 1921; mineral wax, 1,561,500 pounds in 1922 and 5,573 pounds in 1921.

Shipments from United States Steady.

Exports of refined petroleum products from the United States to Canada show comparatively little change from year to year, but shipments of crude oil show a steady growth. Exports of crude during 1922 were nearly three times as large as in 1913, and indicate the growth of the Canadian refining industry. Shipments of American illuminating oil to Canada have declined during recent years, while lubricating oil exports show some gains.

Comparative figures for the past three years and 1913, compiled from United States official statistics, are given in the following table. In comparing the figures with the Canadian statistics, it should be noted that the former are in United States gallons and the latter in imperial gallons, and also that the classifications do not exactly correspond.

United States exports of petroleum products to Canada.

Products.	1913	1920	1921	1922
	U. S. gals.	*U. S. gals.*	*U. S. gals.*	*U. S. gals.*
Crude petroleum	124,720,045	271,829,570	301,008,795	**344,151,775**
Gasoline, naphtha, and other light products	53,767,377	54,636,556	43,872,029	**44,681,154**
Illuminating oil	16,912,615	21,844,788	16,621,675	**5,079,995**
Gas and fuel oil	58,043,963	187,420,449	105,790,495	**123,157,908**

Petroleum Shipments from Tampico District During January.

Edgar K. Burton, clerk in American consulate, Tampico, Mexico, February 28.

Shipments of petroleum by water from the Tampico district during January totaled 11,780,244 barrels, a decrease of 4.6 per cent from the December shipments and included 10,151,933 barrels from Tampico, 1,366,354 barrels from Port Lobos, and 261,957 barrels from Tuxpam. The movement to the United States averaged 289,125 barrels per day, as compared with a daily average of 373,325 barrels for the year 1922, although the shipments to the United States for the month were nearly 500,000 barrels above those for December. January exports to all countries except the United States and Cuba were below the general average for these countries during the last few months, the total movement to countries other than the United States being less by 1,041,713 barrels than that of December.

Of the shipments of oil to the United States Atlantic coast ports received 4,683,010 barrels and Gulf coast ports 4,129,168 barrels, while 150,703 barrels went to the Canal Zone and Porto Rico. Bunker oil to the amount of 456,859 barrels was shipped at Tampico, 39,147 barrels at Port Lobos, and 14,977 barrels at Tuxpam.

Bunker Oil Supplied at Principal United States Ports.

The quantity of bunker or fuel oil supplied to vessels engaged in foreign trade at United States ports has more than doubled during the last four years, increasing from 14,031,356 barrels in 1919 to 31,692,201 barrels in 1922. At some ports the growth has been in much larger proportion than the total, the increases at New York, New Orleans, Boston, Mobile, Seattle, and Galveston ranging from 300 to 700 per cent. Decreased shipments of bunker oil during 1922 as compared with 1919 are noted at Philadelphia, Sabine, and some minor ports. The following table shows the quantity of bunker oil laden on vessels in the foreign trade in principal customs districts of the United States during the last four years, figures for the individual ports not being available:

Bunker oil laden on vessels engaged in foreign trade, by principal United States customs districts.

Customs districts.	1919	1920	1921	1922
	Barrels.	*Barrels.*	*Barrels.*	*Barrels.*
Massachusetts	138,548	473,315	681,532	677,763
New York	4,718,859	9,201,406	10,388,444	15,000,731
Philadelphia	1,599,457	2,232,498	1,478,737	1,159,903
Maryland	641,647	1,990,425	1,985,253	982,011
Virginia	1,167,318	2,709,608	1,467,993	1,420,440

Other ports	871,550	1,581,984	1,920,445	1,603,757
Total	14,031,356	26,334,883	27,076,138	31,692,201

Petroleum Notes.

Crude Production of Taiwan.

The crude petroleum production of Taiwan for the first half of 1922 has been announced as 6,218 barrels (of 42 gallons each), which is an increase of 2,724 barrels over the corresponding period of 1921. This gain is attributed to the dredging of oil wells and to an increased flow from one of the principal producers since December, 1921. (Taiwan Nichi Nichi Shimpo.)

Regulation Regarding Mexican Oil Imports.

Oil companies importing refined petroleum products into Mexico are required to report during the first days of each month full details of their imports of such products during the preceding month, according to a recent order of the Department of Hacienda. (Assistant Trade Commissioner H. Bentley MacKenzie, February 17.)

Japanese Crude Production.

Totals recently announced by the Japanese Department of Agriculture and Commerce give the production of crude petroleum for November, 1922, as 150,660 barrels (of 42 gallons each), against 170,830 barrels for the same month in 1921. The 11 months' total through November, 1922, is 1,710,066 barrels, compared with 2,007,451 barrels for the 1921 period, or a loss of 14.8 per cent. (The Japan Chronicle for January 18.)

New Oil Companies in Argentina.

The formation of two new petroleum companies in Argentina, organized for the exploration and exploitation of oil lands in that country, was recently reported by the Argentine press. These companies are La Dia-

dema Argentina and the Cia. Petrolifera Argentina Solano, both with headquarters in Buenos Aires. They are said to have been organized during the latter part of 1922.

Italian Imports of Mineral Oils.

Imports of mineral oils into Italy by sea during 1922 totaled 437,661 metric tons as compared with 412,011 tons during 1921, an increase of approximately 6 per cent. Receipts of petroleum products from the United States during the past year showed a general decrease, however, particularly in gas and fuel oil and illuminating oil, although gasoline shipments increased considerably. (Commercial Attaché H. C. MacLean, Rome, January 30.)

Drilling Operations in Prince Edward Island.

It is reported that oil-drilling operations in Prince Edward Island will begin this fall, providing the present investigations prove satisfactory. Representatives of oil interests are now in Charlottetown with a view toward development of the oil and gas concessions made by the provincial government some time ago. Work was discontinued about two years ago because of a drop in the price of oil products. (Vice Consul Arthur B. Giroux, Charlottetown, February 15.)

Petroleum in South Africa.

The high price of motor fuel has caused the Government of South Africa to be greatly interested in the possibility of a domestic oil industry, and an oil fuel committee has been apopinted to consider means for developing the production of various oils suitable for motor fuel. It is reported that indications favorable to the finding of petroleum have been discovered in the Kuruman district of the Kalahari Desert, and it has been stated that test drilling would be started shortly in that area. (Consul G. K. Donald, Johannesburg, January 23.)

Fuel Oil Regulations in Jamaica.

Regulations for the landing of fuel oil and the storage of fuel oil in bulk in Jamaica were made by the governor on February 3 and published in the Jamaica Gazette of February 8. Of interest to American exporters of oil are the paragraphs making it compulsory for the master of a ship or any other person desiring to land fuel oil in bulk first to secure the necessary permit from the proper customs officer. Detailed storage regulations are also included, which appear to be designed particularly to minimize the danger of explosion and fire. (Consul Charles L. Latham, Kingston, February 10.)

New Product from Esthonian Oil Shale.

Experiments are being conducted in Esthonia in order to discover what by-products can be extracted from the oil shale mined in that country, and comparatively satisfactory results are being obtained. New machinery has been secured, and construction of large plants for the development and extraction of oil from the shale on a large scale will soon be completed. It is expected to place on the market in the near future a lubricating oil obtained from oil shale. Final experiments are now being made on this product. The demand for by-products of oil shale is greater than the supply. (Esthonian Consulate, New York, March 9.)

Drilling in Orange Free State.

At the first annual general meeting of the Bethlehem Oils (Ltd.) held recently in Johannesburg, the chairman gave the following official information, according to a report from Consul G. K. Donald, Johannesburg, dated January 2.

The contract for boring for oil in the Bethlehem district, Orange Free State, was given in March, 1922, to the McNamara Shot Drills (Ltd.), which undertook to drill to a depth of 2,000 feet. Actual drilling was started on March 8, and on November 25 the drill had reached 1,705 feet. It was hoped to reach the contracted depth by the end of the year.

Sales Decrease in Austria.

Prices of petroleum products in Austria were firm during January, with some rising tendency, notwithstanding the fact that present stocks are ample and that the demand is slackening with the advanced season. Prices are relatively high and consumption is somewhat under the average. It has become apparent that no general downward movement of prices is possible in view of the impossibility of effecting a substantial reduction of wages. By moderate price increases manufacturers and dealers seek to stimulate buying. (Assistant Trade Commissioner F. W. Allpart, Vienna, February 5.)

Increased Sales in Belgium.

The petroleum situation in general is unchanged in Belgium, with gasoline and kerosene prices remaining steady and other petroleum products advancing, according to a cable report from Leigh W. Hunt, secretary to the trade commissioner at Brussels, dated March 19. The demand for lubricants is said to be increasing. Consul G. S. Messersmith reports that the demand for gasoline at Antwerp continued heavy through January, as consumers were accumulating as large stocks as possible, owing to the low prices, which remained unchanged from the December figure of 0.60 franc per liter (about 14 cents per gallon at the rate of exchange prevailing January 15). January is always a good month for sales of kerosene, and trade during the past January was slightly larger than usual because of the lower prices. The demand for fuel oils, lubricating oils, and other products was normal during the month.

Petroleum Imports Into Tangier.

The petroleum products imported during 1922 into the consular district of Tangier, which includes the city and international zone of Tangier and the Spanish zone of Morocco, show an appreciable increase over those for the preceding year. Imports of lubricating oils more than doubled, totaling 599,565 kilos, as compared with 204,892 kilos in 1921. Gasoline receipts showed a slight increase, from 333,808 kilos in 1921 to 341,058 kilos in 1922, while imports of kerosene declined from 306,808 kilos in 1921 to 279,096 kilos during the past year. The United States is the chief source of supply for petroleum imports into Tangier, with smaller quantities coming from France, Spain, Belgium, and England. All products are shipped in containers and are imported principally through the city of Tangier and through Tetuan and Larache in the Spanish zone.

Additional information regarding petroleum appears in this issue under the following sections:

Cable review, Latin America:
February exports of petroleum from Mexico.
Petroleum development stimulates Venezuelan business.
Argentine imports of petroleum.
Foreign trade opportunities Nos. 5912, 5919.

COAL

COAL SITUATION IN THE NETHERLANDS.

Consul General George E. Anderson, Rotterdam, January 31.

The coal situation in the Netherlands during the past year has been one of remarkable complications. There has been a notable increase in imports of coal, a still more notable increase in exports, and an even more important increase in the domestic production.

The key to the situation lies in the deliveries of German coal, which have been made since May, 1920, in accordance with the terms of an agreement between the Dutch and German Governments, whereby the Netherlands extended to Germany a credit for the purchase of food and raw materials aggregating 200,000,000 guilders and Germany agreed to deliver to the Netherlands 100,000 tons of coal per month during the period covered by the contract. Usually the imports of coal from Germany were much in excess of this amount. During the earlier part of the period covered by the contract Germany was able to deliver the amount of coal agreed upon without difficulty, in 1921 it exceeded that amount by about 79,000 tons, and during 1922 it adhered to the deliveries fairly well.

Increasing Import of British Coal.

However, the shortage of coal in Germany itself, by reason of the demands of industry, became so marked during the latter part of last year that German railways were compelled at times to fall back upon a supply of coke. This naturally did not prove satisfactory, and arrangements were made for the import into Germany of certain amounts of British coal, both direct to German ports and by way of the Netherlands. This led to an increase in imports of British coal into the Netherlands and also led to a certain increase in Dutch exports of coal.

The failing supply of German coal made it necessary for Dutch industries also to import British coal, since the domestic coal is not suitable for their purposes. This had the effect of further increasing the Dutch imports of British coal, and the result has been the complete dominance of the import coal market in the Netherlands by British coal.

Dutch Domestic Production Increasing.

On the other hand, there has been a rather extraordinary increase in the production of coal in the Dutch mines in Limburg. During and immediately after the war the use of the Limburg coal was controlled by what was known as the equalization system—i. e., the Limburg coal was mixed with higher-grade imported coal and the trade was compelled to use the mixture whenever possible. The price of this mixture was fixed by the Government so low that the Limburg mines received little or no profits. Production naturally was not pushed very greatly during this period of control.

At the end of 1921, however, Government control ceased and the administration of the Dutch mines was able to cast about for better prices and a new market. In view of the shortage of coal in the country, as a result of the failure of the supply from Germany and the comparatively high prices charged for British coal, there has been a good demand for the Dutch coal for household purposes. The shortage of fuel in Belgium, France, and portions of Germany near the Limburg mines also led to a strong demand from these markets.

With this improved demand the Dutch mines have been able to increase their sales and to advance prices materially, and under this stimulus the production of the mines has been greatly increased. Dutch production of coal in 1918, when it first exceeded 3,000,000 metric tons, was 3,399,000 tons; in 1919 it increased to 3,401,000 tons and in 1920 to 3,940,000 tons. In 1921, under adverse circumstances, it fell back to 3,927,000 tons, but in 1922 it advanced to a little over 4,500,000 metric tons. In the last three months of the year coal was being produced in the Limburg mines at the rate of 400,000 metric tons per month, or 4,800,000 metric tons per year.

Dutch Mines Establish Sales Offices.

This general change in the course of the trade has also involved a considerable change in the retail trade. Previous to 1922 the Dutch mines had practically no sales organization. The German producers were still placing their coal with retail dealers through the organization maintained by the Westphalia syndicate before the war, while the British interests also maintained an organization. The Dutch mines were able to place their coal in the retail trade only as a supplementary supply.

In 1922, however, the Dutch mines established a sales office of their own, divided the country into districts served by district offices, got into direct touch with large consumers and made supply contracts with the larger retail dealers. This has gone far toward increasing the use of Dutch coal in the country and has also served to a considerable extent to break the strong hold of the German and British organizations on the coal trade of the country.

Course of Import and Export Trade.

The result of this situation is that while the imports of coal into the country by reason of the general coal shortage increased last year over the previous year by about 1,400,000 metric tons, the exports increased to about half that amount so that the net increase in imports has been less than might at first appear. The general course of the import and export trade of the country appears in the following table:

Coal trade of the Netherlands.

Countries of origin and destination.	1921		1922	
	Metric tons.	Value.	Metric tons.	Value.
IMPORTS.

Possiblity of Demand for American Coal.

From the trader's standpoint the year was very unsatisfactory, largely because of price fluctuations and changing market conditions, which made it impossible for consumers to rely upon either supplies or prices. The fact is that the entire trade depends largely upon the coal deliveries from Germany. Conditions in the British coal-mining industry are such that it is unlikely that British production and export can be materially increased. It is freely stated in this market that British production can be increased only by increasing the number of hours in the working day. If German deliveries are stopped entirely and working hours in Great Britain are not increased, American coal can again be sold in the Dutch market.

At present there are unusually large stocks available in the Netherlands, so that any sudden change in the conditions of the market is unlikely.

COAL IMPORTS INTO CEYLON DURING 1922.

Consul Marshall M. Vance, Colombo, January 22.

Coal imports into Ceylon from all sources totaled 465,664 tons during 1922, and were the lowest for many years, except during 1917 and 1918. Usual imports have been between 600,000 and 800,000 tons annually. Practically all coal imported into Ceylon is used for bunkering steamers. The use of fuel oil on steamers has caused the marked reduction in coal imports, and it is doubtful if they will again reach the quantity of previous years.

South Africa Supersedes India in Ceylon Market.

Prior to 1921 Ceylon obtained practically all of its coal from British India. In April, 1921, an embargo was placed on the Indian product and South Africa took first rank as a coal supplier to Ceylon, followed by India and the United Kingdom. Australia and Japan also sent small shipments. The year 1922 saw a still larger proportion of imports coming from South Africa and the United Kingdom; 234,927 tons were received from the former and 208,347 tons from the latter. Imports from India fell to 10,165 tons, all of which were on contracts for the Ceylon Government Railway and the Colombo Electric Tramways & Lighting Co. Only 12,215 tons were imported from Australia and Japan.

The Government of India has recently decided provisionally to remove the embargo on coal exports. The price of Indian coal is high, and South African producers are able to underquote Indian exporters, hence it is doubtful if a heavy resumption of imports from India occurs.

Stocks and Prices.

Notwithstanding the small imports during 1922 the stocks on hand at the end of the year were larger than they have been since before the war. On December 31 there were held in Colombo 44,800 tons of Welsh coal, 56,400 tons of South African, and 3,700 tons of Japanese.

The price on bunker coal of all descriptions dropped appreciably during the year. On January 1, 1922, the average price was 51 shillings 6 pence; on December 31 South African coal was quoted at 38 shillings and Welsh coal at 43 to 44 shillings. American coal has never entered the Ceylon market, and in view of the decreased local prices and long carry from Atlantic ports it is doubtful if this market would prove a paying one.

Active Scotch Coal Trade.

Commercial Attaché Walter S. Tower, London, February 21.

Under the influence of export demand the Scotch coal trade sees good prospects for active business for several weeks to come. Domestic requirements remain

about the same, but enough export orders have been booked to keep most of the collieries fully occupied to the end of March. As a result, prices are strong for prompt deliveries, and it is stated that forward contracts are being quoted at prices higher than those now prevailing. Producers naturally are encouraged by the increased activity at better prices, but industrial interests, notably steel producers and shipbuilders, express some anxiety as to the likely effects of dearer coal on their own costs of operation and on the revival of general business which most of them believe to be under way.

On February 15 it was reported that 94 vessels were loading, or were waiting their turn for loading, in the chief coal shipping ports of Scotland; of these 70 were at east coast ports, reflecting the influence of continental demand. Congestion at the docks, however, is said to be interfering seriously with the traffic there, vessels being compelled to wait several days for a turn at the loading tipples, while the collieries themselves are inconvenienced by scarcity of wagons. The only remedy for the situation seems to be extension of the hours of working at the docks.

Additional information regarding coal appears in this issue under the following sections:

Cable review, Latin America:
Argentine imports of coal in February.
Brazilian imports of coal in March.
Tariffs and trade regulations: Removal of export prohibition on coal in British India.

MINERALS AND METALS

Luther Becker, Chief, Iron and Steel Division

RISING PRICES MARK BRITISH METAL TRADE.

Assistant Trade Commissioner H. B. Allin Smith, London, March 5.

The month just closed (February) has seen a general alteration in the stability of the British iron and steel trades. Scarcity of coke and pig iron has been accentuated as the weeks passed, so that basic industries, although gaining in productive activity, can not take the full confidence in the future that encourages them to make forward commitments. Rapidly rising prices of fuel and of raw and semifinished metal have, therefore, seriously strained the market position. There is not now the same steady optimism that opened the year for British iron and steel circles.

Meanwhile, however, output increases generally and is quickly absorbed. At the week's Birmingham exchange producers were said to be more intent on avoiding their customers than on adding to their commitments. An unfortunate feature of that market is that nearly all specifications are for prompt delivery, no one being disposed to enter forward contracts. The results of the British Industries Fair (Birmingham section) are said to be gratifying to the majority of metal firms there exhibiting.

The Northeast coast (Cleveland) is finding it practically impossible to expand home iron and steel industries to take advantage of Continental withdrawal, because the demand from abroad for foundry coke is absorbing supplies at high prices, even to the neglect of home contracts. The export price on coke, which was about 30s. on January 1, is now 70s. a ton. Merchants are saying that they anticipate a possible 100s. price. Average quality coke brings 37s. in the Cleveland blast-furnace area. Foreign iron ore is stronger at 25s. 6d. c. i. f. Tees for best Bilboa rubio.

Sheffield Busier—Welsh Tin Plate Booming.

Sheffield steel trades are progressively busier. The first effect of Ruhr occupation has been to divert trade to this area. Fair demands are reported from the Near East and Far East and South America, including railway and general structural materials. Railway-wagon (freight-car) plants are "choked with work." Prices for 10-ton wagons, which reached over £400 each in the post-war boom, are now only £130, and many thousands have been ordered. The London & North-Eastern Railway group is building 10 "Pacific" type locomotives, the heaviest and largest used on home railways.

Welsh tin plate is booming, with makers booked into the present quarter. Most gratifying to them is an increase in trade from Canada, America, and the Far East. The S. S. *Astronomer* is carying 3,000 tons to Vancouver from Swansea. Certain manufacturers are endeavoring to cover their tin-plate bar requirements to August, but steel makers, adhering to the extension of the stabilization scheme until July 16, are not quoting ahead of that date.

Rise in Nonferrous Metals Also.

The nonferrous metals are getting dearer week by week. The exhaustion of the large stocks of scrap accumulated in the war has brought about a state of tension, consequently big consumers are anxious to provide for their future requirements. Another advance of £2 in strong copper sheets has taken the price to £102. Four or five weeks ago it was £96. An advance of ¼d. in brass wire, the second in eight days, has made the price 10⅜d. per pound. Rolled brass is likewise up a farthing to 10d., and solid drawn copper tubes are increased from 1s. 1¼d. to 1s. 2d. per pound.

Strong copper has advanced £4 per ton; this makes the basis price £104 per ton. The price of cold-rolled and bobbin brass also has been advanced ¼d. per pound. This makes the basis price of cold-rolled brass: Birmingham, 10d. per pound; England and Wales, 10¼d. per pound; Scotland and Ireland, 10⅜d. per pound; and the basis price of bobbin brass 11d. per pound delivered Nottingham. Friday's market brought the price of standard tin above the £200 mark, where, however, like copper, it is yet somewhat short of a comparable level of general prices as related to pre-war.

Spelter quotations have shown an advancing tendency, a rise of 10s. being recorded last week, whilst so far this week prices are up by 17s. 6d. to £37 2s. 6d.

Rising Prices on Japanese Iron Market.

Commercial Attaché James F. Abbott, Tokyo, February 21.

A rather promising trade in iron and steel between Germany and Japan that had been getting under way with the development of improved communications between the two countries has suffered a severe setback on

account of disturbed political conditions in the former country. As a result, the market in Japan has reacted sharply. Pig iron in Japan that was quoted at $33 a ton in January has risen (February 20) to $40. At the same time there has been a rather rapid decrease in stocks on hand. The iron in stock at the beginning of the year was reported to be about 153,000 tons. This amount was reduced by 13,000 tons during the month of January. The Yawata works, it is said, will shortly increase its selling prices.

Prices on iron products are rising in sympathy. Rods and black sheets are 40 per cent to 60 per cent higher in February than they were in January. Corrugated iron also is in active demand, with prices stiffening.

Output of Pig Iron and Steel in the Saar.

Journee Industrielle, February 17.

There was a noticeable improvement in the metallurgical production of the Saar during the year 1922, when 1,154,638 metric tons of basic pig iron, 981,336 tons of Thomas steel, 274,278 tons of open-hearth steel, and 6,424 tons of electric-furnace steel were produced. The output of basic pig, which increased steadily from month to month, reached in June the monthly average of 1912, which amounted to 92,260 tons, rising suddenly by 10,000 tons in July to a figure slightly in excess of the monthly average of 1913, which was 101,917 tons.

The results were less favorable for steel. Although the production of Thomas steel showed an increase of about 10,000 tons during 1922, it was still, in December, 58,000 tons smaller than the average monthly production of 1913, which was 143,260 tons. Output of open-hearth steel and electric-furnace steel has remained stationary.

Greek Emery-Ore Output to be Doubled.

Consul General W. L. Lowrie, Athens, January 23.

Important works are contemplated for doubling the production of Naxos emery ore, according to the Greek press. As the result of recommendations made by the Minister of National Economy, it has been decided to make important constructional works at Naxos to facilitate the mining of emery ore and expedite its transportation to the ports of that island whence it can be exported. This will necessitate the construction of an aerial cableway and of special narrow-gauge lines for the transportation of the ore. Some £25,000 to £30,000 must be spent for these constructions. As the State has at present no funds available for carrying out this enterprise, it will be undertaken by the National Bank of Greece, by agreement.

To pay off the loan which will be granted to the State by the bank the former will collect £1 per ton of ore sold. The price of emery ore will hereafter be fixed in pounds sterling instead of in drachmas.

As the result of the additional mining works, which, according to careful estimates, will take about one year to complete, the annual production of emery ore will be increased to approximately 20,000 tons. In the future the exploitation of the Naxos emery ore will be allowed only to recognized companies.

MARKET FOR AMERICAN CEMENT IN CUBA.

Ben B. Sampselle, clerk in American consulate general, Habana, March 6.

Importation of cement from the United States into Cuba in 1922 showed a decrease of 65 per cent in quantity and of 53 per cent in value as compared with 1920. A large percentage of this decrease was no doubt due to the suspension of practically all construction work during the financial depression through which Cuba has just passed, the total consumption of cement in the island having decreased 47 per cent during this period. Shipments of cement from the United States to Cuba during the past four years have been: 1922—443,391 barrels; 1921—447,706 barrels; 1920—1,275,169 barrels; 1919—1,061,786 barrels. In 1920 (the latest year for which figures of imports from all countries are available) the remainder of the imports of cement into Cuba came mostly from Canada (40,507 barrels), with the Netherlands, France, Belgium, and other countries making small contributions.

A higher rate of duty levied on imports from countries other than the United States and slightly higher ocean freight rates have served to offset any price advantage that European exporters might have had through cheapness of labor. While several European countries have previously enjoyed a share in the cement trade, the greatest competition of the present and future is furnished by local manufacturers. The domestic product, which is manufactured by the "wet" process, and is equal in quality to that imported, amounted to 500,000 barrels in 1922, 435,000 barrels in 1921, 460,000 barrels in 1920, and 310,000 barrels in 1919. An advantage is had by American exporters over the local manufacturers in that the combined steamship and railroad freight charges on cement exported from New York destined for the central or eastern interior of Cuba are from 10 to 20 per cent less than the railroad freight charges from Habana, notwithstanding the local producer is allowed a small preferential rate by the local railways.

An extensive advertising campaign is now being carried on by a local factory, no doubt in view of the fact that the economic situation has improved considerably in the past six months and that a large amount of construction work will take place this year. It has been unofficially stated that work will be resumed in the near future on a number of Government projects which were suspended during the financial depression. In this event the consumption of cement for 1923 would be greatly increased.

Manufacture of Tin Plate in India.

Vice Consul Harold Shantz, Calcutta, January 25.

The Tinplate Co. of India (Ltd.), which is said to have one of the most modernly equipped plants of its kind in existence, commenced operations in its factory at Golmuri near Jamshedpur during December. The company expects to supply sheets for the manufacture of kerosene, cigarette, and other tins for which there is a big demand in India. Plates will be rolled ranging in thickness from one-eighth inch to one-quarter inch and in widths up to approximately 96 inches. The mill has a capacity of 3,000 tons per month on an eight-hour day and will come into full commission as soon as the new open-hearth furnace of the Tata Co. is ready to supply steel ingots for rolling.

Mineral and Metal Items.

Mexican Output of Gold and Silver in 1922.

The department of mines reports the production of silver in Mexico in 1922 as 2,521,832 kilos; this is an increase over 1921 of 516,289 kilos, or 25 per cent. The gold output is given as 23,276 kilos, an increase over the previous year of 2,001 kilos, or 9.4 per cent. (Assistant Trade Commissioner H. Bentley MacKenzie, Mexico City, February 28.)

Spanish Firm Desires to Sell Minerals.

A Spanish firm is offering for sale fluorite, silica, china clay, and mica, according to a report from Consul H. M. Wolcott, Bilbao. Interested firms may obtain the name and address of the Spanish concern and other details upon request to the Iron and Steel Division, Bureau of Foreign and Domestic Commerce, Washington. Mention should be made of file No. 85689.

Opportunity to Purchase Ores.

A proprietor of mines in the Dominican Republic is prepared to export nickel, manganese, copper, and chromium ores in large quantities. Interested persons or firms may obtain the name and address of this mine owner and other details upon application to the Iron and Steel Division, Bureau of Foreign and Domestic Commerce, Washington. Mention should be made of file No. 86585.

Swiss Imports of Iron and Steel.

Considerable improvement is shown in the importation of iron and steel into Switzerland during 1922 as compared with 1921. Receipts of the more important foreign products in 1922, with figures for 1921 in parentheses, were: Pig iron and crude steel, 84,798 metric tons (31,430 tons); rails and ties, 14,305 (4,066); iron and steel sheets, black, coated, tinned, corrugated, etc., 39,838 tons (25,561 tons).

Belgian Iron and Steel Output for Two Months.

The total production of Belgian iron and steel for the first two months of 1923 was, in metric tons: January—pig iron, 165,210; raw steel, 169,300; rough castings, 9,260; finished steel, 154,870; finished iron, 19,150; February—pig iron, 151,340; raw steel, 148,790; rough castings, 8,410; finished steel, 142,730; finished iron, 16,950. (Cable from Leigh W. Hunt, secretary to commercial attaché, Brussels, March 20.)

Gold Output in New South Wales.

Although the yield of gold in 1922 for the entire Commonwealth of Australia was the highest since 1903, the production in New South Wales was only 25,222 fine ounces, valued at £107,139, compared with 31,173 fine ounces, valued at £217,370, for 1921. This is undoubtedly due to the gradual exhaustion of the mines and the increased cost of mining. The month of December, 1922, showed a heavy decrease, the yield being 1,550 crude ounces, equal to 1,431 fine ounces, as compared with 3,455 crude ounces, equal to 2,987 fine ounces, for the corresponding month of 1921. (Consul Romeyn Wormuth, Sydney, New South Wales, Australia, January 12.)

South African Mining Statistics Available.

A copy of the 1922–23 edition of the Year Book of the South African Mining and Engineering Journal, Johannesburg, has been received in the Bureau of Foreign and Domestic Commerce and will be held in the Washington office for inspection by interested persons. In the introductory and brief descriptive articles, the statistical tables, and the detailed reports segregated under the different groups and companies is collated a mass of valuable information relative to mining in the Union of South Africa. Considerable attention has been devoted also to the mines and associated industries of Southern Rhodesia, Northern Rhodesia, Portuguese East Africa, and the Belgian Kongo.

Howrah Bridge to be of Cantilever Type.

The long uncertainty regarding the bridge over the Hooghly between the business section of Calcutta and the railway station at Howrah has been terminated by a letter from the Government of Bengal to the Calcutta corporation stating that the committee of engineers had recommended unanimously that the bridge should be of the cantilever type, at an estimated cost of £2,000,000, exclusive of the land, thus rejecting the plan so strongly urged that a floating bridge should be constructed in order to save expense and also because it was doubtful whether proper foundations could be built in the deep silt of the Ganges delta. A competent consulting engineer will be instructed to prepare specifications and to call for tenders from reliable firms. (Trade Commissioner C. C. Batchelder, Calcutta, India, January 8.)

Market Conditions at Sao Paulo.

The feature of the month in iron and steel importation into Sao Paulo was that while there was an increase in tonnage over November from the United States, Europe shipped about 50 per cent more than the United States. Germany supplied 50 per cent of the European tonnage, and fully half of the German shipments was barbed wire, according to Assistant Trade Commissioner Richard M. Connell at Sao Paulo. European competition has been keener, the Germans, Belgians, and British having underquoted American manufacturers on every article. In railroad spikes their prices have been more than 30 per cent below the American. The British, in addition to terms which provide the purchaser with about eight months' credit, are said to be offering current-account credits to relatively small importers.

The Cia. Electro Metallurgia Brazileira has opened an office in Sao Paulo under the name of the Soc. Commercial e Constructora (Ltda.). It has been offering bars and has accepted, it is reported, enough tonnage, at a price about 10 per cent below quotations on foreign bars, to fill its books for about a year. It has so far rolled about 20 tons of round and square bars per day, mostly from scrap iron and some pig iron.

Additional information regarding minerals and metals appears in this issue under the following sections:

Cable review, Latin America:
Venezuelan cement market.
Brazilian imports of iron and steel products.
Far East: Increase in Queensland's gold production.
Latin America: Mining activities in Mexico. (See Economic conditions in Mexico.)
Tariffs and trade regulations:
Italian modification of export regulations on metals.
Increased Swiss export duties on iron and copper scrap.
Costa Rican import duty on cement tile coloring powder.
Imposition of duty on certain metal imports into Canada.
Increased export duty on silver in Bolivia.

ELECTRICAL EQUIPMENT

R. A. Lundquist, Chief, Electrical Equipment Division

AUXILIARY STEAM PLANTS NEEDED IN JAPAN.

Commercial Attaché James F. Abbott, Tokyo, February 21.

Steam-power plant equipment should find a good market in Japan at the present time, since hydroelectric companies have but recently awakened to the fact that their present systems are inadequate to meet the demand at all times without auxiliary steam-power stations.

The past winter has been an exceptionally dry one, with much less rain in the autumn than usual. As a consequence, the streams and lakes upon which the various hydroelectric companies depend for power are very low. This is especially true of eastern Japan. The Katsuragawa and the Kinugawa electric-power companies, which supply the greater part of Tokyo with current, have been quite unable to meet demands, and therefore the Tokyo Electric Light Co. has had to have recourse to the power from the steam plants in Asakusa, which have been going at full capacity. In the early part of February the newspapers carried reports to the effect that Tokyo might be without electric-light or street-car service in a very short time, owing to the lack of hydroelectric power. Fortunately, a thaw released the snows on the adjacent mountains and relieved the crisis.

The same difficulties have been experienced in the Kobe-Osaka district. The Nippon Electric Co. is reported to have been compelled to shut down its Ibigawa plant, and the Ujigawa Electric Co., which has a contract for 5,000 kilowatts from this company, has had to turn to the Fukizaki. The Daido Hydroelectric, which gets its power from the Kiso River and supplies the Osaka Electric Light Co., has had its capacity reduced from 9,000 to 3,000 kilowatts. The Daido company is contemplating the building of a large reservoir at the source of the Otaki River, in order to relieve the intermittent shortage of water, but the construction of reservoirs as a general policy is likely to call for more capital than can be raised in the immediate future.

Shortage of water has become an annual problem, due to the fact that Japanese streams are quite short, and the seasonal flow under any circumstances shows wide limits of variation. For this reason it is being recognized that an auxiliary steam-power plant is absolutely necessary for practically all hydroelectric plants if the companies are to be able to fulfill their contracts.

Market for Electrical Equipment in Aguascalientes.

Consul Lee R. Blohm, Aguascalientes, Mexico, March 7.

Within the past three years there has been a gradually growing market for electrical apparatus in the Aguascalientes district of central Mexico. Improvement in electric-power facilities in the cities of Aguascalientes and Zacatecas and the extension of the electric-lighting system to nearby towns has aided greatly in the expansion of the trade in the cheaper electric household devices. Electric irons, hot plates, toasters, and similar articles are coming into more common use as electric power becomes cheaper.

Local dealers prefer to secure their stocks from jobbers in Mexico City, and it would be advisable for American exporters and manufacturers to cover this district through an agent in that city, who can come in person to this district with samples. Personal calls on retailers are far more profitable than the mailing of unsolicited catalogues.

Although electrical goods are now coming into this district from Germany via Mexico City, American stocks predominate on the shelves of local retailers. The latter report considerable difficulty in securing supplies promptly from Europe and express satisfaction in the quality of the American article. The local lighting company, although controlled by German capital and German citizens, was obliged to secure a recent large order of street-lighting fixtures from the United States. Prompt service is a controlling factor in this trade, especially where special items are needed in small quantities, and manufacturers in the United States may work to good advantage through jobbers in Mexico City and American cities on the border.

Cheaper Current in Melbourne Increases Apparatus Demand.

Consul General Thomas Sammons, Melbourne, Australia, January 18.

It is anticipated that there will be an increased demand for electric supplies in Melbourne, Australia, as a result of the completion of a new electric-power-generating plant and consequent cheaper electric current. All kinds of heating, cooking, and lighting apparatus will be in greater demand.

The Electric Supply Department (address, Town Hall, Melbourne, Australia) announces that in the future it will give greater attention to the supply of apparatus for domestic cooking and, in order to popularize the use of electric appliances for domestic purposes, the Electric Supply Committee has decided to expend £1,000 ($4,650 at present exchange) for the purchase from abroad of a number of electric cookers and other apparatus, to be placed on exhibition at the town hall. At the same time a company is being organized here for the purpose of manufacturing electric cookers and other domestic electric apparatus.

Growing Electrical Activity in Belfast.

Vice Consul George H. Barringer, Belfast, Ireland, February 12.

As a user of electricity, Belfast is considerably behind other industrial centers in the British Isles. In 1922 only 42.7 kilowatt hours were sold per inhabitant, as compared with 146.8 for Manchester, 139.8 for Bradford, and 141 for Bolton. The figure is low, considering the number of shipbuilding firms, linen manufacturers, and engineering concerns operating in Belfast.

At present the city of Belfast operates two stations—one of 6,000-kilowatt capacity and the other (temporary in character) of 12,000-kilowatt capacity—but it has in course of construction a new station which, when completed, will contain one 12,500-kilowatt unit and the two 6,000-kilowatt units now in the temporary

building. This will make a total capacity of 30,500 kilowatts available in May, 1923. However, the ultimate capacity of the new plant is 100,000 kilowatts, and it is expected that power demands will make it necessary to install an additional 12,500-kilowatt unit in either 1924 or 1925.

In the past the high cost of power was a considerable handicap, but with the present improved machinery installed it is expected that the rates can be reduced considerably.

Electrical Notes from Brazil.

Assistant Trade Commissioner M. A. Cremer, Rio de Janeiro, February 21.

Radio Communication Between Sao Paulo and Rio de Janeiro.

Communication by means of radio telephony has been established between Sao Paulo and Rio de Janeiro, following earlier unsuccessful attempts, which were said to have failed on account of atmospheric difficulties.

New Hydroelectric Concession.

Current for light and power will be supplied to the city of Sao Sebastiao, State of Sao Paulo, under a contract recently made with a local company. Electricity for the neighboring port of Caraguatatuba is included in the agreement.

Bids Called for Municipal Light and Power Concession.

A municipality in the State of Rio Grande do Sul is calling for bids on the franchise for supplying electric light and power. The concession will be granted for 30 years, the municipality having the right to purchase the concessionaires property at the end of 15 years. Bidders must agree to the use of a specific water power and to the supplying of service at 120 volts. They must also state the power and light rates, both to the municipality and to individuals for the first 10 years.

New Light and Power Company Formed.

A company with a capital of 400,000 milreis (1 milreis=$0.5462 at normal exchange) is being formed to supply the light and power for two cities in the State of Minas Geraes.

Electrical Trade Notes.

New Electricity Supply Plan for London.

Centralization of London's electricity supply is provided for in a bill to come before the next session of Parliament. It is proposed that power shall be supplied through a body composed of various local authorities by acquiring the generating centers of any supplying body. Profits made are to be applied toward a reduction in the charges for electricity.

Iloilo Plans Electric System.

Electric lights for the city of Iloilo, Philippine Islands, are to be provided by a new plant which the Philippine Engineering Co. is installing. A project is also being considered for the establishment of a trolley system. Plans are well under way, the approximate cost being $500,000. (Manila Daily Bulletin, January 11.)

Personal Efforts Sell Lighting Plants.

Articles of electrical equipment which at first thought appear to be unsalable can often be sold and a market opened up through the personal efforts of a competent and aggressive representative. Recently the sale and introduction of self-contained lighting outfits into one of the important island markets was effected by an American manufacturer through the personal efforts of his representative, who was able to cover the ground properly and appoint subagents in the different commercial centers.

Consumption of Electricity in British Cities.

The city of Birmingham, during the fiscal year 1922, used an average of 90.5 kilowatt hours per capita, according to current press reports. This is low, compared with other British industrial cities, such as Coventry and Wolverhampton, where the consumption is reported as 175.5 and 130.1 kilowatt hours, respectively, per inhabitant. (Consul John F. Jewell, Birmingham, January 15.)

Danes Listening In on England and Germany.

Various Danish newspapers have commenced advertising the wave length and time when music, news, etc., is being broadcasted from British and German wireless stations. This enables Danish amateur receiving-set operators to take advantage of matter being transmitted from broadcasting stations outside their own country. (Consul General Marion Letcher, Copenhagen, February 6.)

American-Controlled Company Takes Utilities of Victoria, Brazil.

Operation of the public utilities of Victoria (the capital of the State of Espirito Santo, Brazil) has been turned over by lease to the Servicos Reunidos de Victoria, S. A.—a company capitalized at 1,000,000 milreis and controlled and managed by George A. Hodge, who is an American. The lease runs for 40 years, with the company's option of renewal for another 40 years, and covers the operation of a hydroelectric-power station, the furnishing of electric light and power, and the operation of the tramways, telephone system, water supply and sewage system, and several launches used as ferries. (Assistant Trade Commissioner M. A. Cremer, Rio de Janeiro.)

Electrical Manufacturing Conditions in Switzerland.

The Swiss electrical industry was subject to very unfavorable conditions in 1922. A reduction of costs of production was hindered by the high cost of living, short working hours, and the reduced purchasing power of some foreign customers. Consequently deliveries were greatly lessened in 1922, and the number of employees was nearly everywhere reduced 25 to 50 per cent. Selling prices were so unsatisfactory that they provided little or no margin for profit. Private initiative in carrying out certain electric construction work stimulated the industry considerably by furnishing it employment, but under present conditions the only real hope for this industry lies in the intensive continuance by the Swiss Government of the electrification of its railways. (Consul General George H. Murphy, Zurich, January 19.)

Additional information regarding electrical equipment appears in this issue under the following sections:

Cable review, Latin America:
Normal sales of agricultural implements in Brazil.
Brazilian demand for electrical goods continues strong.
Foreign trade opportunities Nos. 5890, 5893, 5901, 5912, 5917, 5918.

SHOES AND LEATHER MANUFACTURES

A. B. Butman, Chief, Boot and Shoe Division

CONDITIONS IN THE GERMAN SHOE INDUSTRY.

Consul E. Verne Richardson, Berlin, February 26.

Because so large a portion of the material used in German shoe manufacturing is of foreign origin, for which payments must under existing regulations be made in foreign currency, it was agreed some time ago to fix a basic price for both the raw material and the finished article. The equivalent of the dollar was placed at 5,000 marks, and the result of this arbitrary procedure was that when the dollar increased in value to about 40,000 marks after the beginning of the year, local prices of hides and skins, and, sympathetically, shoes, increased also until they exceeded prices in the world's markets and became luxuries quite beyond the means of any but the well-to-do. At present the mark having appreciated to about 20,000 to the dollar, manufacturers are finding foreign goods more profitably purchasable, and to meet this condition have decided to reduce prices of domestic stock.

At the middle of February a pair of box-calf shoes cost from 100,000 to 120,000 marks, wholesale; toward the end of the month they were freely offered at 80,000 to 100,000 marks, and further reductions were probable. The shoe industry has passed through a most critical period during recent months, the market having suffered seriously from diminished demand. On this account many factories have been obliged to reduce working hours. Reliable published statements show that 81 per cent of the shoe factories of Germany have cut down weekly hours from 47 to 34. Current wages in this industry are relatively high, averaging about 1,312 marks an hour, but even so the reduction in working hours has reacted disastrously upon the workers. To obviate this unfortunate situation some of the principal factories are granting bonuses.

Slipper Trade of the United States.

The slipper trade of the United States with foreign countries during 1922 reached the volume peak in November, with 19,349 pairs exported, and the lowest mark in February, with 5,424 pairs. During the first six months of the year 42,067 pairs of slippers were exported and during the July–December period 86,204 pairs. The decided and continued increase in trade after the month of July would seem to indicate a return to pre-war conditions rather than a seasonal demand for slippers.

The countries receiving more than 1,000 pairs of slippers during 1922 were: Bermuda, 1,224 pairs; British South Africa, 1,820 pairs; Canada, 32,072 pairs (Maritime Provinces, 1,504 pairs; Quebec and Ontario, 27,282 pairs; Prairie Provinces, 2,775 pairs; and British Columbia and Yukon, 511 pairs); China, 1,381 pairs; Cuba, 33,955 pairs; Denmark, 2,552 pairs; Dominican Republic, 2,644 pairs; Jamaica, 3,055 pairs; Mexico, 5,829 pairs; New Zealand, 1,291 pairs; Newfoundland and Labrador, 12,504 pairs; Panama, 3,259 pairs; Peru, 1,512 pairs; Scotland, 13,085 pairs: Spain, 1,224 pairs; and Germany, 1,100 pairs.

During the month of January, 1923, the exports of slippers, 10,497 pairs, were consigned as follows: Canada, 1,722 pairs; Honduras, 432 pairs; Panama, 324 pairs; Mexico, 2,731 pairs; Newfoundland and Labrador, 6 pairs; Bermuda, 73 pairs; Cuba, 4,085 pairs; and Australia, 1,124 pairs.

Shoe Manufacturing in Cuba.

Acting Commercial Attaché Paul L. Edwards, Habana, March 10.

There are reported to be 45 footwear factories in Cuba, exclusive of a number of quite small ones scarcely worthy of mention. With one exception, none of these factories makes canvas or rubber footwear. Of the 45, 38 make women's and children's shoes, some turning out footwear which is as good in appearance as American or European made shoes. American patterns are copied extensively. The tariff protection afforded Cuban manufacturers places women's and children's shoes of domestic manufacture on a competitive basis in Cuba with American-made shoes, the price being the principal factor in determining sales. Cuban-made women's shoes are especially adapted to this market.

The remaining seven factories make men's shoes only. Six of these factories turn out very low grade shoes, using native materials principally, and there appears to be no competition from the United States in this particular grade, which is sold mainly in the interior of the island among the sugar and tobacco plantations. One of these factories produces shoes principally for the Cuban Army. In general it may be said that except for the very lowest grade of shoes the American manufacturers hold the Cuban market for men's footwear. Cuban manufacturers have been unable to compete with American in the higher grades of men's shoes, apparently on account of greater cost of production.

The German Boot and Shoe Export Trade.

Boot and shoe exports from Germany have been constantly decreasing and at the present time are about 6 per cent of the total production, states the Leather Trades' Review, London, February 28. Adjacent countries, especially the Netherlands and Denmark, are making great efforts to limit German shoe imports. The Dutch shoe manufacturers are even demanding the prohibition of the import of German footwear. Of the total exports of German boots and shoes, 43 per cent has been going to the Netherlands and 19 per cent to Denmark. The Danish Government is severely cutting down the German imports, allowing only up to the quantity imported in 1920, and is considering an increase of the import duty by 7 per cent.

At the last meeting of the German Shoe Manufacturers' Syndicate the manufacturers admitted that certain firms had been exporting at undesirably low prices. A Dutch calculation shows the German boots to be far cheaper than the British. The Netherlands imported 3,017 tons of footwear in the first nine months of 1922, of which 2,433 came from Germany

and 324 tons from England. The value of the German imports was 7,496,000 guilders and of the English 1,576,000, so that the average cost of a ton of German shoes was 3,199 guilders and of English, 4,879.

The German Government has reduced the export duty on shoes from 5 per cent to 4, but manufacturers are demanding the abolition of the tax, claiming that otherwise the industry can not compete with foreign production.

Items of Interest to the Trade.

Finland's Import and Export Trade in Boots and Shoes.

The imports of boots and shoes into Finland have greatly decreased as compared with normal times, amounting to only 20,719 kilos in 1922, compared with 131,623 kilos in 1913. The imports show an increase, however, compared with 1921, when the amount was only 10,917 kilos. Imports in 1920 amounted to 84,013 kilos, of which 71,869 kilos came from the United States. The exports of shoes from Finland has become an item of importance since 1913, the total in 1922, amounting to 15,038 kilos, compared with 432 kilos in 1913. The shoe shipments in 1921 amounted to 25,135 kilos, of which 10,835 kilos went to Sweden. This market was, however, apparently lost for Finland in 1922, as the bulk of the boot and shoe exports for that year went to Esthonia. (Consul Leslie A. Davis, Helsingfors, February 24.)

Sweden's Shoe Import Trade.

The imports of leather shoes into Sweden in 1921 (the latest available figures) amounted to 203,463 kilos, representing a value of $1,190,000, according to Swedish customs statistics. Approximately one-third of these shoes was imported from the United States, about one-third from Great Britain, and the remainder from Germany, Denmark, and other countries. At present the retail price range of American shoes in this market varies from 17.50 to 33 crowns ($4.65 to $9). (Consul Walter H. Sholes, Goteborg, February 23.)

The French Glove Industry.

Conditions in the French glove industry continue difficult. Exports to the United States, however, are active but are confined almost entirely to long gloves as there is very little call for short gloves. (Commercial Attaché Chester Lloyd Jones, Paris, March 8.)

Trunk and Valise Industry of the United States.

There were 504 establishments in the United States manufacturing trunks and bags each of which had an annual production of $5,000 or over in1921. The total value of the output of these establishments was $46,549,000, they employed an average of 8,712 workers, and paid $10,260,000 in wages. New York was the leading State in this industry with 136 establishments, Illinois ranked second with 63, and Pennsylvania third with 61.

United States Production of Lasts.

The 1921 preliminary statistics of the United States show that 67 establishments, with an annual individual production of $5,000 or over, produced lasts, trees, stretchers, and display forms for boots and shoes worth $12,377,000. It is noted that 35 of the 67 establishments were located in Massachusetts; 10 in New York; and 4 each in New Jersey and Pennsylvania; 2 each in Missouri, New Hampshire, Ohio, and Wisconsin; 1 each in Connecticut, Illinois, Indiana, Maine, Michigan, and Vermont.

Canadian Trunk, Bag, and Valise Industry.

The 13 establishments engaged in the trunk, bag, and valise industry in Canada during 1920 had a capital investment of $2,459,046, an increase of nearly $1,000,000 over 1919. The industry employed 876 people, mostly men, whose salaries amounted to $888,912. The value of the products, including manufacturer's profit, was $4,818,487. The production included trunks to the value of $1,317,552; valises and suit cases, $1,016,398; club bags, hand bags, and satchels, $701,895; purses, bill folds, etc., $2,961. (Vice Consul Clarke Vyse, Ottawa, February 23.)

American Shoes in Favor in Italy.

American shoes are continuing to find favor in Italy. Although the country's total imports in 1922 show a reduction of nearly 30 per cent, the United States supplied 48,200 pairs as compared with 55,896 pairs in 1921, which is a reduction of only 12 per cent. Germany was the closest competitor, with 26,662 pairs, followed by Austria, with 26,403 pairs. Switzerland, which occupied a position almost equal to that of the United States in 1921, has dropped to fourth place. (Commercial Attaché H. C. MacLean, Rome, February 2.)

Conditions in the Swiss Boot and Shoe Industry.

The general improvement experienced by the Swiss shoe industry in 1922 was largely due to Swiss import restrictions, aimed especially against shoes from Germany and from other low value countries. On account of this improvement in the industry it was possible to reemploy some of the workmen who were discharged in 1921; although there are still difficulties to be overcome, it is believed that better times are now in sight. (Consul General George H. Murphy, Zurich, January 23.)

Employment in the British Boot and Shoe Industry.

Employment in the British boot and shoe industry continued slack during January. Short time was still prevalent at nearly all the principal centers. The percentage of workpeople unemployed in the industry, as indicated by the books of the employment exchanges, was 8.8 on January 22, 1923, as compared with 8.3 on December 18. Returns received from firms employing 31,500 workpeople showed about 34 per cent on short time at the end of the month to the extent of about 10½ hours per week. At the end of the previous month about 38 per cent of the number covered by returns then received was on short time to the extent of about 13 hours a week. (British Ministry of Labor Gazette, February.)

Shoe Industry and Trade in Yunnanfu, China.

Leather boots and shoes are manufactured by hand in Yunnanfu, China. The market for these goods is restricted, although growing from year to year, as a vast majority of the population were straw sandals or cloth shoes with leather soles. The cheapest grade of locally made shoe sells for about $2 per pair. 8he price of the better grade shoes, which are made entirely of imported leather, ranges between $3 and $5.25 per pair. The prospects of creating a demand for American shoes in this market are not bright. The local industry is expanding and improving its output and will continue to supply a large part of the trade. The demand from the foreign community is small and is readily supplied by mail orders. (Consul M. S. Myers, Yunnanfu, China.)

Present Status of the French Shoe Trade.

The restriction of sales of footwear in France during the last months of 1922 has had the result of diminishing orders for new stocks on the part of the retail houses. Retailers have decided not to increase their stocks for the present, although they are evidently low. Orders for the spring and summer are also small. On this account some manufacturers have been working slowly since November and they fear a period of unemployment. This applies particularly to the medium-sized establishments which produce fancy and novelty footwear almost exclusively. On the other hand, manufacturers producing good low-priced articles are actively occupied and are assured that this activity will continue until April at least.

Exportation of shoes has not increased during the past year on account of the exchange situation. A quantity of shoes de luxe, made of gold and silver cloth, has, however, been sold to foreign countries. (Consul Philip Adams, Paris, March 6.)

Additional information regarding shoes and leather manufactures appears in this issue under the following sections:

Cable review, western Europe: Danish import duty on shoes increased.
Foreign trade opportunities No. 5900.

HIDES AND LEATHER

Wilber J. Page, Chief, Hide and Leather Division

FINNISH LEATHER INDUSTRY IN 1922.

Consul Leslie A. Davis, Helsingfors, February 19.

The leather markets in Finland during 1922 were in general variable. There were signs of a rising tendency at the beginning of the year, but toward the spring, owing to the negotiations for the pound loan and the sharp fluctuations of the Finnish mark caused thereby, the markets became very uncertain. In the fall again when the Finnish mark acquired more stability there was a noticeable improvement in the situation, and even the sharp rise in the value of the mark at the end of the year caused only a momentary disturbance in the leather markets.

The sole-leather markets were brisk, especially during the latter part of the year. This was due principally to the large sales to Russia, which, it is thought, will continue in some measure throughout 1923. The prices of sole leather, however, had to be decreased twice during the year, so that at the end of the year they were about 15 per cent lower than at the beginning, the minimum price having been about 35 marks. A slight increase in prices occurred at the end of the year because of the advance in prices of raw materials.

The upper-leather industry, on the other hand, worked under serious difficulties, owing to the fact that many bankruptcies occurred in this branch abroad, and that the sale of part of the bankrupt stocks in Finland caused a very great decrease in prices. Germany has been a keen competitor on the Finnish markets, having had the advantage of a depreciated currency and low-priced chemicals and colors. Germany has, therefore, been able to sell goods in Finland at prices defying all competition. The result has been that the upper-leather industry in Finland has been practically at a standstill, being only about 15 per cent of what it was two or three years ago.

Trade in Hides and Skins Improves.

Imports of raw hides and skins almost reached the level of normal times, amounting in 1922 to 5,505,816 kilos, valued at $1,956,244 (converted at 45 Finnish marks to the dollar, the average rate of exchange for 1922), compared with 5,843,614 kilos in 1913, valued at $2,438,996 (converted at par, 5.18 marks to the dollar), while the imports during both 1920 and 1921 were considerably smaller, amounting to 1,976,154 kilos and 2,887,083 kilos, respectively. With regard to the countries of origin, Germany has held by far the most prominent place except during 1920, when Argentina appeared as the chief supplier. The share of Germany was 74 per cent of the total imports in 1913, 46 per cent in 1921, and 65 per cent in 1922.

The exports of raw hides and skins amounted to 1,544,249 kilos, showing an increase of about 300,000 kilos as compared with 1921, and 1,000,000 kilos as compared with 1920, but a decrease of 2,100,000 kilos compared with 1913. Germany is the principal market for these skins, but the United States also took large quantities in the past two years. The exports of prepared hides in 1922 improved greatly as compared with 1921, but still show a decline of about 700,000 kilos compared with 1913. The bulk of these exports went to Russia, which took 311,745 kilos out of a total of 312,024 kilos in 1922 and 31,000 kilos out of a total of 33,746 kilos in the preceding year. Russia also took most of these products in 1913.

HIDE AND LEATHER SITUATION IN GERMANY.

Consul E. Verne Richardson, Berlin, February 26.

A curious situation has lately developed in the German hide and leather industry because of the unwillingness of suppliers of raw hides to accept prices for their product which are commensurable with current money values.

Germany's leather industry is dependent for approximately two-thirds of its raw materials on imports; the remainder is derived from local sources. The hides are sold at auctions held periodically at such important centers of distribution as Berlin, Dusseldorf, and Leipzig. Of late it has frequently happened at these auctions that offerings have been withdrawn by holders of stocks because prices tendered were not thought to be sufficiently attractive. Concrete instances of this occurred at Berlin on February 16, when the hide auction was abruptly closed after only two-thirds of the hides and none of the calfskins had been sold. The same thing occurred three days later at Dusseldorf, and a control commission organized by the buying interests was unable to interfere in a practical way. At Leipzig a similar commission, however, was more suc-

cessful, actually taking charge of the stocks offered, notwithstanding imminent withdrawal, and subsequently offering them for sale at more reasonable prices.

In consequence of the potential injury to an important industry by these attempts to restrict domestic supplies of raw materials the Reichstag is seriously considering a proposal, which if adopted, as seems entirely probable, will empower the appropriate authorities to exert direct control over auction sales, and thus prevent repetition of happenings such as are here noted. It was interesting to observe that at the hide auction held in Berlin on February 23 sales were effected at prices materially lower than those ruling the week before.

Hide and Leather Trade Notes.

Czechoslovakian Leather Prices Firm.

The prices of leather in Czechoslovakia have become very firm, owing to advances in the price of raw hides during the last week of January. The increased hide prices have been attributable in part to an increased demand from the tanneries which are making leather for domestic purposes. Other economic conditions have also materially affected the situation. (Trade Commissioner H. Lawrence Groves, Prague, February 7.)

Raw Stock Continues High in France.

Hides and skins in France continue high, and tanners are buying very little. The prices of leather have shown increases also. The retail trade continues very dull, many dealers barely covering expenses. Orders are slow, and the same may be said of deliveries. Apparently production has been reduced or stocks are accumulating. Export orders have shown some increases. (Commercial Attaché Chester Lloyd Jones, Paris, March 8.)

Upward Tendency in Austrian Market.

Austrian hide and leather prices increased during January as a result of increases in other markets and, to a certain extent, of local conditions. The recent stagnation in the upper and sole leather markets appears to have passed. During the month the quotations for tanning products have also shown rising tendencies. (Assistant Trade Commissioner F. W. Allport, Vienna, February 5.)

Chamois-Skin Industry in Niort, France.

Consul William W. Brunswick, La Rochelle, February 18.

The year 1922 witnessed a strong revival of the chamois-skin industry of the Niort region, which is closely allied with the glove industry. The estimated production amounted to 120,000 dozens of chamois skins. The Niort glove industry consumed the greater part of these skins, having on hand large orders for domestic delivery, for the French colonies, and for foreign countries. During the past year there has been a constant increase in the cost of raw materials and manufactured products, but it did not seem to lessen the demand for the finished goods.

In 1922 there were 2,888 dozen chamois skins, valued at $68,172, exported from this district to the United States, as compared with 5,562 dozen skins, valued at $77,099, in 1921, and 470 dozen skins, valued at $16,250, in 1920.

Additional information regarding hides and leather appears in this issue under the following sections:

Cable review, Latin America: Argentine exports of hides and skins in January and February.
Foreign trade opportunities No. 5900.
Tariffs and trade regulations:
Reduced Mexican export duty on shark skins.
Reduced export duty on hides from British India.

CONSTRUCTION NEWS

[Further information pertaining to the following items may be obtained from the Bureau of Foreign and Domestic Commerce, or its district and cooperative offices, by referring to the reference numbers given. Where no reference number is given further information is not available.]

Formosa.—It is reported that the waterworks at Keelung and Taichu will be extended, the work commencing from the beginning of the fiscal year (April 1, 1923) and continuing at Keelung for three years and at Taichu for two years. The cost of extension at these two points is estimated at 830,000 yen and 150,000 yen, respectively, 1 yen being equal to $0.4985. (Consul H. T. Goodier, Taihoku, Taiwan).

Bolivia.—In connection with the plans of the Atocha–Villazon Railway, which is to extend from Atocha, in the southern part of Bolivia, to La Quiaca, on the Argentine border, it is reported that while construction has been going forward since 1921, 205 kilometers (127.4 miles) of meter-gauge single track remain to be constructed within the next two years. The entire line is to be completed in 1925. (Consul Dayle C. McDonough, La Paz).

Spain.—Specifications have been issued and bids will be received until June 29, 1923, for equipment for the electric railway which is to be constructed to connect Vigo with the towns and villages of Redondela, Canido, Panjon, Ramallosa, Bayona, and Gondomar. Seventeen kilometers (10.5 miles) of new lines will be laid on existing wagon roads, and another 17 kilometers will run across country on roadbed that must be constructed. Reference No. 87402. (Consul Henry T. Wilcox, Vigo.)

Canada.—It is reported that a company located at Port Arthur, Ontario, is about to call for tenders for the construction of two storage elevators at that point, one of 500,000 bushels capacity and another of 2,000,000 bushels capacity. Bids will be received until noon, April 17, 1923. Reference No. 87468. (Consul Dudley G. Dwyre, Port Arthur.)

Canada.—It is reported that a financial institution in Montreal is to finance a 10-story office building to be erected shortly in the financial district of Montreal. Reference No. 87099. (Consul General Albert Halstead, Montreal.)

Japan.—The Imperial Railway Department has sanctioned the construction of the proposed railway between the cities of Nagoya and Uji-Yamada. The company in charge of this work proposes to construct

a double track line, starting from Makino-cho and terminating at Uji-Yamada, and also to establish several pleasure resorts at certain favorable places along the water front. The road will be built in three stages—from Nagoya to Yokkaichi, Yokkaichi to Tsu, and Tsu to Uji-Yamada. The work will involve the construction of bridges across the Ibi and Kiso Rivers, which will necessitate an estimated expenditure of 700,000 yen. Reference No. 86635. (Consul H. F. Hawel, Nagoya.)

INDUSTRIAL MACHINERY

W. H. Rastall, Chief, Industrial Machinery Division

MACHINE TOOLS AND MACHINERY IN THE NETHERLANDS.

Consul General George E. Anderson, Rotterdam.

Germany again controlled the trade of the Netherlands in machine tools and machinery during 1922, as in 1921. American machine tools, which in other years were the standard equipment in Dutch industrial concerns, have fallen away to a small part of the imports. In spite of the fact that in the first half of 1922 the prices of American machine tools were the lowest they had been for years, the prices of German machines were still lower, and while the difference in quality is well understood, the difference in price was too great to be overcome.

There has been a large decrease in the Dutch imports of machinery and machine tools. The financial and industrial depression of the country has made it necessary for all such purchases to be kept as low as possible, with the result that not only have imports been smaller in volume, but at the same time they have been of the cheapest machines available. All these conditions have made it almost inevitable that German manufacturers should secure the bulk of the trade. For the present there is little trade in American goods of this sort and little is promised. American equipment is salable at the present time only on the basis of very high quality, and in some cases on the basis of quick deliveries. A difference in price of from 20 to 40 per cent is difficult to overcome on either basis.

Aside from this general tendency and the dominance of Germany in the trade, the machinery imports of the year are without special feature. The imports for 1921 and 1922 are shown in the following table:

Imports of machinery into the Netherlands in 1921 and 1922.

Item.	1921		1922	
	Metric tons.	Value.	Metric tons.	Value.
Steam boilers	9,518	$2,845,988	5,934	$1,296,940
Factory locomotives, etc., and parts	770	152,788	625	110,580
Steam engines and parts	5,355	2,644,686	4,303	1,980,940
Internal-combustion engines and parts	4,758	2,287,727	4,832	2,104,440
Power machines, wind and water turbines, etc	239	48,373	294	48,260
Machine tools and power-driven labor-saving machines	27,674	9,551,599	22,629	7,047,860
Other machine tools, etc	3,166	845,585	3,314	764,560
Loading and unloading machinery, etc.:				
Power-driven	7,951	1,963,914	7,638	1,244,880
Man or animal driven	714	138,518	621	105,260
Compressors, ventilators, air pumps, etc	3,846	1,675,970	2,948	1,140,000
Sugar-factory installations	4,660	1,175,456	858	228,760
Distillery and brewing machinery	522	200,341	459	150,480
Sewing machines, etc	2,520	1,682,619	2,644	2,095,700
Textile machinery	8,008	2,941,672	5,517	2,221,480
Refrigerating machinery	553	201,004	895	229,140
All other items	15,406	4,181,157	15,016	3,755,540
Total	95,660	32,537,397	78,527	24,524,820

The decline in the imports of steam boilers is in keeping with the general decrease in industrial-machinery imports.

Origin of Machinery Imports.

As in previous years, the bulk of the imports in 1922 came from Germany, which increased its lead during the year, although Great Britain continued to send a few special boilers for steamships. Germany supplies almost all of the factory and similar locomotives and in 1922 furnished 62 per cent of the steam engines and parts, Great Britain furnished 27 per cent, and Belgium and Switzerland the balance.

There was an increase in the imports of internal-combustion engines, of which Germany furnished 80 per cent in 1922, as compared with 75 per cent in 1921. Great Britain had most of the balance of the trade, but the United States, Sweden, and Switzerland furnished a small percentage.

Germany furnished most of the turbines of all sorts, nearly 90 per cent of the machine tools and power-driven labor-saving machinery and five-sixths of the loading and unloading machinery. It also furnished 68 per cent of the compressors, ventilators, and similar machines, the United States, Great Britain, and Belgium dividing the balance of the trade in about equal portions. Sugar factory machinery also came almost entirely from Germany.

There was a decrease in the imports of textile machinery during 1922 which affected Germany more than Great Britain (its chief competitor), the German proportion in 1921 being 60 per cent of the total, which in 1922 fell to 48 per cent.

Germany furnished 73 per cent of the refrigerating machinery and over two-thirds of the miscellaneous machinery imported.

Exports of Machinery.

Exports of machinery from the Netherlands in 1922, especially during the earlier months, held up much better than might have been anticipated, although the trade on the whole declined considerably. The exports included a considerable quantity of machinery imported from Germany and re-exported chiefly to the Dutch East Indies, which took about two-thirds of the total exports in this line. Much of the machinery manufactured in the Netherlands was exported at a loss, its manufacture representing the necessity of clearing stocks of materials on hand and the necessity of keeping the Dutch engineering establishments going as long as possible.

The following table shows the exports of industrial machinery from the Netherlands in 1921 and 1922:

Exports of machinery from the Netherlands.

Item.	1921		1922	
	Metric tons.	Value.	Metric tons.	Value.
Steam boilers	1,959	$676,333	2,445	$649,420
Factory locomotives, etc., and parts	143	36,333	90	21,660
Steam engines and parts	1,153	546,000	1,144	585,200
Internal-combustion engines and parts	1,304	849,666	1,096	632,320
Power machines, wind and water turbines, etc	6	3,666	24	13,300
Machine tools and power-driven labor-saving machines	4,444	1,906,333	4,009	1,571,680
Other machine tools, etc	494	406,000	935	773,300
Loading and unloading machinery, etc.:				
Power-driven	2,117	914,333	1,943	644,860
Man or animal driven	114	26,000	67	15,580
Compressors, ventilators, air pumps, etc.	1,961	1,019,000	1,140	559,360
Sugar-factory installations	12,989	4,393,333	5,890	1,795,500
Distillery and brewery machinery	70	33,333	41	18,620
Sewing machines, etc	74	38,000	97	59,280
Textile machinery	472	248,000	442	193,040
Refrigerating machinery	326	129,000	249	96,520
All other items	2,640	1,052,666	2,156	723,140
Total	30,266	12,277,996	21,818	8,352,780

Destination of Exports in 1922.

The Dutch East Indies took 80 per cent of the steam boilers and about the same proportion of the steam engines exported in 1922, as well as 54 per cent of the internal-combustion engines. Germany imported some of each of the above items, and a portion of the shipments went to the Far East and South America. One-third of the machine tools were exported to Germany, with the Dutch East Indies, Belgium, Great Britain, and France taking most of the balance, in the order named. The East Indies imported 60 per cent of the unloading and loading machinery, Great Britain and France taking most of the remainder. The Dutch East Indies and Malacca took practically all the pumps and compressors and the East Indies imported most of the sugar-factory machinery, Surinam (Dutch Guiana) taking practically all of the rest. Most of the textile machinery was exported to Great Britain and Germany.

In all lines of machinery export values show great reductions in 1922, particularly the principal items on the list.

The machinery works of the Netherlands have been severely affected by German competition. Unemployment in the engineering trades is large, with little prospect of improvement, although most authorities seem to feel that the crisis in the industry is past and that some improvement in trade may be anticipated during 1923.

Indian Laws Regulating Steam Boilers.

The legislative assembly of India passed a new bill in January amending the laws relating to the construction and operation of steam boilers and providing a single law that will apply throughout the entire country. Copies are not yet available here, but have been requested. Manufacturers and exporters shipping steam boilers to India should be careful to see that they comply with these new requirements in order that there be no disappointment upon delivery at destination.

The Bureau of Foreign and Domestic Commerce endeavors to maintain a complete collection of the steam-boiler laws of all foreign countries, and interested parties can ordinarily secure needed information by communicating with the Industrial Machinery Division.

Opportunity for Abattoir Equipment in Honduras.

There is a possible market in Honduras for machinery and equipment to be used in small abattoirs, according to information received from Consul Robert L. Keiser, Tegucigalpa, under date of February 8, who suggests that interested manufacturers forward catalogues in duplicate to the Tegucigalpa consulate.

Additional information regarding industrial machinery appears in this issue under the following sections:

Cable review, Latin America: Argentine market for industrial machinery dull.

Foreign trade opportunities Nos. 5886, 5887, 5888, 5889, 5890, 5891, 5892, 5893, 5894.

AGRICULTURAL IMPLEMENTS

George B. Bell, Chief, Agricultural Implements Division

KRUPP TO SELL AGRICULTURAL MACHINERY IN RUSSIA.

The Russian concession to the German Krupp company, which was described in COMMERCE REPORTS No. 6 (issue of February 5), page 385, possessed features designed to promote the sale of large quantities of German agricultural implements in Russia, says the European Commercial (a Vienna weekly published in English) in its issue of January 20. The article states that agricultural machinery was one of the chief lines to which the Krupp company turned its attention after it had been obliged to discontinue the manufacture of war material, and it was felt that the great field for disposing of such machinery lay in Russia.

Since the present-day Russian has neither the knowledge nor the necessary capital for using modern farming machinery, according to the article referred to, the Krupp company decided to start experimental stations along modern lines, using their own machines, worked on a profit-sharing basis, and to be sold finally to the peasants operating them. It was intended to use steam plows, steam harrows, steam harvesters, steam threshing machines, etc. By repeated use of the same capital for starting new stations after the successful ones had been sold, it was expected that these new methods would become general; that Russia's food-producing capacity would be increased; and that German industry would become well established in a new market.

As a result of the continued decreases in the value of the mark, however, the company was unable to find the necessary capital for the venture until it succeeded in inducing an English group to finance the scheme. The ratification of the agreement by the Soviet Government will now enable the scheme to be exploited, provided, of course, that the occupation of the Ruhr district, in which the Krupp works are situated, does not introduce new complications.

Cooperative Purchases of Farm Machinery in Italy.

The joint purchase of agricultural supplies and farm equipment is carried on in Italy by different types of societies, of which the agricultural consortiums are the most important. The development of these consortiums has been very closely related to the increased use of farm machinery and chemical fertilizers. They are organized in the form of cooperative societies with limited liability, usually with an area of operations restricted to a single district (circondario). In order to insure more effective action than was possible with the various consortiums acting only in their restricted fields, they were grouped into a central organization, known as the Italian Federation of Agricultural Consortiums, with headquarters at Piacenza. This was organized in 1892 with 56 affiliated associations, and in 1920 the number had increased to 909.

The federation has a business department, which consists of two offices, one of which (the machinery office) deals in agricultural machinery and implements. This office has an extensive organization comprising a staff of technicians, a despatching office, and a depot for machines and implements.

Sale of Agricultural Machinery.

The activity of the federation in regard to the trade in agricultural machinery dates back to 1900. It supplies every kind of machine to agricultural consortiums, chiefly plows imported from abroad or made in Italy, seed drills, reapers and binders, spare parts, and accessories. An extensive propaganda campaign is carried on with a view to spreading by every possible means the employment of agricultural machinery. In the eight years from 1909 to 1916 sales of agricultural machinery varied between 2,100,000 and 3,150,000 lire (1 lira=$0.193 at normal and $0.0478 at present exchange). In 1917 sales reached 6,000,000 lire, or more than double the sales of the previous year, which had amounted to 2,900,000 lire. In 1918 sales totaled 15,400,000 lire; in 1919, 10,250,000 lire; and in 1920 (the last year for which figures are available), 25,100,000 lire. It appears from these figures that, while there was no decrease in sales during the war, the normal expansion was considerably curtailed, as is evidenced by the greatly increased sales for the last four years shown. Sales for 1920 may be considered as abnormally large, but, on the other hand, it is not likely that there will be a reversion to the pre-war level of sales.

Implement and Tractor Notes.

Implement Industry in Frankfort District.

Business in the agricultural implements industry in the Frankfort district of Germany is slack. It is stated that the export trade is greatly restricted by high export duties and by the high protective tariffs of countries which are important to the implement trade. Domestic business was slack during the midwinter season, and prices of all sorts of agricultural implements were from 60 to 90 per cent higher in December than in November. (Consul F. T. F. Dumont, Frankfort-on-Main.)

Implement Market in Brazil Improving.

The market for agricultural implements in Brazil was good during January, and was expected to continue so during February. Dealers who have been holding off waiting for better prices and exchange improvement have been required to send in new orders. The market for plows and light tractors has been particularly good, although heavy tractors have been finding very poor sale. Competition among dealers is very strong. (Commercial Attaché W. L. Schurz, Rio de Janeiro.)

Tractors Being Introduced into Mauritius.

The opening up of a market for American tractors in Mauritius has been an interesting development of recent months. Two tractors were imported in 1921 for trial purposes, with the result that 73 were sold to various sugar estates in 1922. This has been largely the result of good salesmanship on the part of the local agents; but, at the same time, it emphasizes the keen reception accorded to modern methods in Mauritius, resulting partly from the labor shortage. (Trade Commissioner P. J. Stevenson, Johannesburg.)

Improvement in Agricultural Machinery Outlook in Austria.

The condition of the Austrian agricultural-implement industry has assumed a more favorable aspect. There have been substantial advances over the low prices of December and, as present prices are still below the former high level, further increases are expected. Sales showed an improvement during January, partly because of the general recognition that a further decrease in prices was not to be expected, and partly because of the beginning of the customary spring buying. (Assistant Trade Commissioner F. W. Allport, Vienna.)

Factors Affecting Tractor Use in Egypt.

Tractors are being introduced into Egypt in increasing numbers and their advantages are generally recognized, but nevertheless there are certain factors which tend to retard their more widespread introduction. The initial investment required is greater than the average farmer can afford, even though the acquisition of a tractor might prove distinctly profitable. There are not yet sufficient data available regarding costs of operation under Egyptian conditions, and repair facilities are far from sufficient. In lower Egypt there is an added handicap in that the close network of irrigation canals creates conditions that make power farming difficult.

Canadian Combined Harvesters Being Sold in Yaqui Valley.

Ten combined harvesters have been recently sold to American farmers in the Yaqui Valley of Mexico by a Canadian at a price of 4,900 pesos ($2,450) each. The machine has a 12-foot cut and is built low on the ground. It is adapted to the rough ground incidental to irrigated land. It is intended for harvesting wheat and has not been tried out on rice. Heretofore the Yaqui Valley farmers have used combined harvesters manufactured in the United States which sold at about $2,200. There have been complaints that satisfactory service was not furnished by the agency of the American manufacturer. (Consul Bartley F. Yost, Guaymas, Sonora.)

Exportation of Implements from Czechoslovakia.

Practically no farm machinery has been exported from Czechoslovakia during the past six months. Manufacturers have been unable to compete against German, Swedish, French, and other European manufacturers. The price of material and labor has advanced to such an extent that farm machinery is now seven and one-half times pre-war prices and the cost of labor is ten times pre-war cost, while there have been large increases in the cost of the various items

entering into the manufacture of implements. Czecho-Slovak manufacturers will have considerable difficulty in competing in foreign markets until the prices are lowered and taxes on business are modified. (Trade Commissioner H. Lawrence Groves, Prague.)

The Ferrum Farm Tractor Awarded Prize at Prague.

At an exhibition of small motor tractors held at Prague under the auspices of the Czechoslovakian Ministry of Agriculture during the latter part of 1922, the small farm tractor entered by the Ferrum Iron Co. of Prague took second prize among 21 competing models. This tractor appears to be very practical in construction, and it is possible that American tractor manufacturers may be interested in a more detailed description of it. Descriptive literature has been obtained from the manufacturer. Only one copy is available, which will be loaned to interested manufacturers on request made to the Agricultural Implements Division. This information is in German. (Consul C. S. Winans, Prague.)

Tractors in Bulgaria.

The Bulgarian Government has displayed great interest in tractors in the past two years. Two tractor competitions have been held, one in 1920 and one in 1921. In the former 5 tractors competed and in the latter about 20. An American tractor took first place in each trial, although not the same tractor in both years. It was expected that the Government would purchase 50 tractors as a result of this competition, but the fall of Bulgarian exchange prevented this plan being carried out. However, several tractors were sold by one American firm to private parties as a result of the competitions. The main difficulty in the sale of tractors is the scarcity of money and the low exchange value of Bulgarian currency. In the matter of price, some of the cheaper American tractors can compete on even terms with tractors made in countries having depreciated currencies.

Interest in Power Farming in New South Wales.

A desire for a better knowledge of power farming has been expressed by farmers of New South Wales. Members of the Power Farming Association have spent much money experimenting with tractors and are willing to cooperate in taking steps to increase the knowledge of them. A request has been made to have power farming taught in the high schools and agricultural colleges, in the belief that a more thorough education in farming might not only increase the boy's interest in his work but also help to keep him longer on the farm. The great interest manifested in the tractor trials at Trangie, New South Wales, gave proof of a genuine desire to know more of power farming, and an investigation is being made as to the cost of equipping a traveling school in the hope that education in regard to tractors may be continuous. (Consular Clerk H. Peter, Sydney, Australia.)

Tractors Used in Bavaria.

Bavaria is more predominantly agricultural than any of the other States of Germany, but the sale of tractors is still very small. Approximately 75 are sold annually. The most popular tractors in Bavaria are the M. A. N., Pohl, Stock, and Neumeyer—all manufactured in Germany. There is also a strong demand for two American makes of tractors, some of which have been brought in from the occupied regions. However, American tractors can not be imported at the present time, because import licenses can not be obtained. The M. A. N. and the Neumeyer are both Bavarian tractors, the first being manufactured by the Maschinenfabrik Augsburg-Nurnberg, at Nuremberg, and the second by Fritz Neumeyer, A. G., at Munich. The latter is a subsidiary of the Krupp concern at Essen and recently the sale of the Neumeyer tractor has been pushed energetically. (Vice Consul Albert Halstead, jr., Munich.)

Additional information regarding agricultural implements appears in this issue under the following section:

Cable review, Latin America: Argentine demand for agricultural implements.

PAPER

John Matthews, jr., Chief, Paper Division

CONDITIONS IN THE PHILIPPINE PAPER MARKET.

Cable from Trade Commissioner John A. Fowler, Manila, March 22.

Paper stocks in the Philippine Islands are reported to be ample, with a decreased demand for most grades, excepting old newspapers, stocks of which are very low and which are being found very difficult of replacement from the Pacific coast. There is also a good demand for cheap sulphite bonds, in spite of the fact that large stocks are on hand. The demand for 42-pound book stock, however, is under normal, prices in some cases being below replacement, and it is reported that the Japanese are making deliveries of better qualities than formerly, at competitive prices. Copy-book stocks are heavy, with a light demand on account of the approaching school holidays, and the unloading of speculative stocks has depressed the market for flat news. The demand for toilet papers, of which stocks are ample, is also reduced.

Side Runs of the Paper Trade.

Paper Prices in Germany Still Rising.

A recent cable from the commercial attaché at Berlin reports that paper prices in Germany continue to rise, with a consequent slackening in sales.

Austrian Wrapping-Paper Exports to United States.

Exports of wrapping paper from Austria to the United States during 1922 amounted to 6,443,388 pounds, valued at $229,539—a gain of 2,711,545 pounds in quantity and $81,104 in value over the previous year. (Consul Carol H. Foster, Vienna.)

Argentine Mint Requests Bids.

The Federal mint of Argentina has requested tenders up to July 2 on stamped paper and paper for printing postage, fiscal, and revenue stamps, lottery tickets, etc., totaling 13,500 reams and 35,000 pounds. One of the conditions is that the tenderer must have an authorized representative in Buenos Aires.

Norwegian Paper Exports Show Gain During 1922.

Statistics of Norwegian foreign trade, published by the Statistical Central Bureau, show exports of paper to the value of 250,000,000 crowns ($43,968,500, at average rate of exchange) during the year 1922. This is over four times the value of the paper exports for 1921, which amounted to 65,959,400 crowns ($9,834,546), and is even considerably above 1920 exports, which were valued at 228,770,900 crowns ($37,815,830).

Additional information regarding paper appears in this issue under the following section:

Cable review, Latin America: Argentine paper imports coming mostly from Europe.

FINANCE

Grosvenor M. Jones, Chief, Finance and Investment Division

MARKET POSITION AND YIELD OF BELGIAN GOVERNMENT BONDS.

Acting Commercial Attaché Samuel H. Cross, Brussels, February 26.

Of a total amount of all Belgian domestic security issues, estimated at 37,500,000,000 francs, Government loans or issues guaranteed by the treasury constitute 16,750,000,000 francs, or approximately 45 per cent. A brief description of these loans may aid toward a clear understanding of the Belgian public debt.

The oldest section of the debt, the 2½ per cent "rentes," resulted from the convention of November 5, 1842, between Belgium and the Netherlands for the apportionment of the joint national debt under the treaty of 1831. The original capital was 389,417,632 francs, now reduced to 219,959,632 francs. No special appropriation for a sinking fund exists, though it is provided by law that portions of the sinking funds of the 3 per cents, 5 per cent national restoration, and 6 per cent consolidations which could not be used for redemption purposes on these issues on account of the high market value could be employed during the next half year for redemption of 2½ per cents at the market. The market price on the three issues cited has never been so high as to make this procedure possible. At the present rate of 48.45 francs the net income from the 2½ per cents is 5.05 per cent.

Amortization—Effect of Franc Depreciation.

For the amortization of the three series of franc 3 per cents (the fourth series was issued in sterling at London in 1914) an appropriation of 30 centimes per 1,000 francs of issue is provided annually on the budget of the public debt, plus the interest of previously amortized capital. This should permit the extinction of the debt in 81 years providing redemption takes place at par. In case the market price of the 5 per cent national restorations and the 6 per cent consolidations just referred to should exceed par, and amortization by purchase should thereby become impossible, the appropriations thus made available from these issues can be used for the redemption of 3 per cents. With the present market rate of 60.25 the net yield on these issues is 4.88 per cent.

It is to be observed in connection with the pre-war debts that, while contracted at par of the franc, they are automatically converted by the depreciation of the latter into paper debts, and their redemption at 60 at present costs the Belgian Government only 19.8 centimes on the original normal franc borrowed. In view of the large increase in the paper receipts of the treasury, the continued redemption of these pre-war issues appears exceedingly advantageous.

Post-War Internal Issues.

The first of the post-war internal issues is the 5 per cent national restoration of April, 1919, originally amounting to 1,700,000,000 francs, included under the law of March 16, 1919, authorizing the Government to borrow 3,500,000,000 francs at home or abroad. An appropriation of 50 centimes per 1,000 francs of issue is provided for amortization by repurchase, plus the interest of previously amortized capital. In case the market value exceeds par, the repurchase is suspended; but if the 6 per cent consolidations should go above par while this 5 per cent should not, the appropriation for the former can be applied to the latter. Repurchase at par can not occur before June 1, 1934, and holders are guaranteed against conversion until that date. Being actually quoted at 86, these bonds give a net yield of 5.81.

The 5 per cent tax-exempt premiums of February-March, 1920, were included under the same legislative authorization as the national restorations and were issued at 499. Amortization takes place by annual drawings covering a period of 75 years, and the bonds drawn are redeemed at 750 per bond of 500 francs face value. No anticipatory redemption can take place before 1940; and if the Government then avails itself of this right, the bonds still in circulation will be redeemed plus a bonus representing the average value of the premiums still to be paid up to the amortization date originally planned, discounted at 5 per cent. At the present market of 459.50 francs, the net yield of this issue is 5.44 per cent.

The coupons of the 6 per cent consolidation loan of October, 1921, are subject to the usual 2 per cent tax on personal income. The amortization of this issue is provided by an annual appropriation of 35 centimes per 1,000 francs of outstanding capital, but redemption by purchase will be suspended if the market goes above par. The bonds of this category will be accepted at their issue price (99) plus interest in payment for any bonds of other consolidated issues marketed before July 1, 1926. As this loan is at par its present net yield is 5.88 per cent.

Short-Term Notes.

In addition to these long-term issues, there are several classes of short-term notes in the market. Upon the maturity of the monetary restoration bonds in December, 1921, holdings on which redemption was not demanded within a fixed time were converted into five-year 5 per cent treasury bills. The tax on the yield of

these bills is also limited to 2 per cent. As in the case of the consolidation loan of 1921, these notes will be accepted at their issue rate (95) in payment for bonds of any consolidated loan issued prior to July 1, 1926. At their present market value of 99.10, their net yield is 4.94 per cent. Apart from this five-year issue, 770,000,000 francs worth of 10-year 5 per cents was issued in September, 1922, at 99, redeemable at 102.50 at maturity. These notes are now quoted at 96.50 and thus yield 5.08 per cent net after deduction of the 2 per cent tax.

The current expenses of the Government are largely covered by the issue of six-month treasury bills, now yielding 4½ per cent. This interest is deducted at purchase, so that the net issue price is 97.75; the notes are tax free. When not having over 90 days to run they can be presented for redemption at the Banque Nationale at face value minus the remaining interest figured at the bank's discount rate. This category of bills is frequently renewed by purchasers and thus practically represents long-term borrowing. It is reported, however, that 4½ per cent is not proving sufficiently attractive, and that this rate will shortly be raised to 5 per cent.

Loans Guaranteed by the Government.

The Federation of Cooperatives for War Damages has also issued two long-term lottery loans, the interest and amortization charges of which figure on the national budget. Both loans were nominally for a capital of 1,000,000,000 francs each, and coupons (but not premiums) are tax free. The first (February, 1921) was made up of 4 per cent 250-franc bonds issued at 200. This loan is now marketed at 210.50, giving a net yield of 4.75 per cent. The second loan (1922) was a net 5 per cent issue at 247.50—face value, 250 francs—redeemable at 300. The present market value of this issue is 264, giving a net yield of 4.73 per cent.

COMMERCIAL LAW

A. J. Wolfe, Chief, Division of Commercial Laws

ARGENTINE DECISION ON D/P CONTRACTS.

Commercial Attaché Edward F. Feely, Buenos Aires, February 10.

The Argentine Commercial Court has recently held that on a time draft, when the merchandise has already arrived, the buyer has the right to inspect the goods. According to the contract on which the suit was based the seller was to draw a draft at 20 days from date of bill of lading, "so that," to quote the trial judge, "once the draft was accepted it was only at its due date and against payment thereof that the seller had to deliver the corresponding documents. From this it may be assumed that after the acceptance of the draft and before its due date the defendants had the right to demand inspection as provided by law."

This decision was rendered in Henry W. Peabody & Co. *v.* Bargueno Bros., of Buenos Aires, wherein the plaintiffs sued to recover $6,201, being the value of a D/P (documents against payment) shipment which was refused by the consignees on the ground, among others, that they were not allowed to inspect the merchandise. In deciding the case the judge admitted that the general rule is that the buyer should pay a draft at its due date, without inspecting the merchandise, and that Argentine jurisprudence is in accord with this view, but he was also of the opinion that this principle is subject to exception when the merchandise is already at the port of destination.

After passing over the other defenses, the court took up the discussion of this latter point and established that in every contract of purchase and sale the buyer has the inherent right to inspect the merchandise he has purchased because the right of exacting payment only comes into being after the buyer has made use of that right (of inspection) (Art. 465, Commercial Code).

Right of Inspection.

"The right to demand the value of the merchandise without inspection exists as a general rule in maritime D/P sales. But when on the presentation of the documentary draft the merchandise has already arrived at the port of the buyer the reasons which give rise to that interpretation no longer exist and the right of inspection on the part of the purchaser again comes into being; and he may in the meantime defer payment or acceptance of the draft, for the reason that immediate inspection of the merchandise can be undertaken without prejudice to the holder of the draft." Continuing, the court said:

> The clause which we are analyzing was created in the interest of commerce generally in order to avoid a situation in which the holder of the draft, on presenting it for payment to the purchaser, would be met with the statement on the part of the latter that the value of the draft would not be paid without previous inspection accorded by the law, which would imply the obligation to the former of awaiting the arrival of the merchandise, with a consequent delay in transactions on merchandise already in transit, and especially on documentary credit, which has reached such a large development in recent times. But when the right of inspection may be carried out without affecting in the least the right of the holder or prejudicing the rapidity of mercantile operations, it must be held that the adoption of this clause is not equivalent to a waiver of the rights of inspection which the law allows the buyer in a commercial transaction when the merchandise has already arrived at the port at which the buyer is located. (Ramella A: El Derecho Maritimo, numero de abril de 1922, pag. 1, fallos de los Tribunales de Genova, Rouen, Havre, y Hamburgo.)
>
> In the case under discussion the draft was protested while the merchandise was in the customhouse deposit, so that when the purchaser demanded inspection the shipment had already arrived at the port. This shows that the defendants in demanding previous inspection took advantage of the right granted them by the said article 465.

Other Features of the Case.

> There is, in addition, another circumstance. The buyer under a D/P contract may defer acceptance of or refuse the draft if he has reason to believe that the merchandise is different from that which has been ordered, or of an inferior quality (Ramella "La Venta en el derecho moderno," 1920, numero 314, y Moraglia en Rev. Der. Com., 38.807 y 240). It has been proven in the case under discussion that the defendants had reasons to believe that the goods were not of the quality agreed upon.

It should also be borne in mind that the defendants did not obligate themselves under the terms of the contract to accept the draft. While the clause in the contract is equivalent to a promise of acceptance, this implied promise is always subordinate to the legal requirement that the merchandise be in accordance with the contract—such accordance, as has been said, to be obtained by inspection. Article 643, which prohibits conditional acceptance, refers to acceptance properly so called; the simple promise to accept constitutes quite a different question since it is nothing more than an obligation of common law to which the exceptional rule established for the bill of exchange would not be applicable (Lyon-Caen et Renault T IV No. 204).

If to these features of the case we add the fact that the defendants have proven by evidence submitted the scope of the meaning which the commercial usage of the Buenos Aires market has given to the clause in the sense in which it appears in the contract, and if it be borne in mind that the usages and practices of the place in which the contract is to be executed take precedence over any other contrary interpretation of the words (art. 218, par. 6, Commercial Code), the conclusion must be drawn that the plaintiffs have not complied with their legal obligation to put the merchandise at the disposition of the buyer so that he, by inspection, might assure himself of its quality. Consequently the plaintiffs are without the right to exact compliance with the terms of the contract, especially if it be borne in mind that on the trial it has not been proven that the goods were of the quality agreed upon (art. 1201, Commercial Code). The failure of the plaintiffs to comply with the contract has given the defendants the right to ask for cancellation of the contract, and decision should be so rendered, because of plaintiffs' refusal as provided for by article 216 of the Commercial Code.

The complaint was dismissed and the contract declared cancelled. An appeal to the higher court has been taken by the plaintiffs.

PURCHASE OF INTEREST IN CZECHO-SLOVAK COMPANIES BY FOREIGNERS.

Trade Commissioner H. Lawrence Groves, Prague, February 15.

According to a decision handed down by the Czecho-Slovak Supreme Court, sitting at Brunn on January 24, foreign commercial companies can not purchase an interest (became partners) in a Czecho-Slovak limited-liability company without permit from the Ministry of the Interior ratified by the Ministry of Finance; further, managers of a domestic limited-liability company must reside in Czechoslovakia.

Under the old Austrian law of November, 1865, No. 127, now effective in Czechoslovakia, foreign stock companies and "commandit" stock companies are required to obtain a license to carry on business within the country only when it is intended to carry on such business under the company's own name. This law does not cover the case, however, where the foreign company wishes to become a partner or member of a domestic company. This latter contingency was covered by a decree of the Czecho-Slovak Ministry of the Interior dated March 4, 1919 (No. 618), which provides that foreign stock companies and "commandit" stock companies must obtain a special permit not only as provided in the Austrian Government decree of November, 1865, but also in the case where it is desired to become partners in a limited-liability company or participate in the establishment of such a company in the Czecho-Slovak Republic.

Joint-Stock Companies not Affected.

I have made special inquiry at the Ministry of the Interior relative to the scope of the above decision, and in particular to learn whether it affects the purchase of shares in Czecho-Slovak joint-stock companies (Actien Gesellschaften) or in partnerships (Offene Gessellschaften). I am advised by the Ministry that the decision does not affect the purchase by foreigners of interests in either of these last-named forms of company organization. In other words, foreigners, either individually or as companies, may purchase shares in Czecho-Slovak joint-stock companies or interest in partnerships (Offene Gesellschaften) without special permission of the Czecho-Slovak Government.

Further, since the court decision above referred to requires that a permit of the Czecho-Slovak Government be obtained only when foreign commercial companies are concerned in purchasing an interest in Czecho-Slovak limited-liability companies, it is possible for foreigners as individuals to purchase an interest in even these companies without permit of the Government. In case, however, the purchase by a foreign individual of an interest in a Czecho-Slovak limited-liability company results in an increase in the capitalization of this company, this increase must be approved by the Ministries of the Interior and of Finance, and a Government control is therefore established in this sense.

NEW ZEALAND COMPANIES' AMENDMENT ACT OF 1922.

Vice Consul John E. Moran, Wellington, January 18.

During the closing days of the last session of Parliament an act known as the companies' amendment act of 1922 was passed, by the terms of which the question of compromises with creditors by companies in financial difficulties was vested in the courts. This law was enacted for the purpose of attempting to keep some of the large companies out of involuntary bankruptcy during the life of the act: that is, until December 31, 1923. Considerable discussion has taken place because of the fact that the courts are very much overworked at the present time and the provisions of this act are bound to cause greater congestion.

The act provides that if it appears to the court that any company is financially embarrassed and that it would be contrary to the interests of the creditors of such company as a whole or of any class thereof, or contrary to the public interest, to have such company wound up, the court may, on the application of the company or any creditor or shareholder thereof or of its own motion, direct a meeting to be held of the creditors of the company or any class of such creditors for the purpose of considering the expediency of making some arrangement or compromise with the company. This meeting is to be held in the manner and at the time and place directed by the court, and the court may give such directions as it thinks proper concerning the person to convene or preside at the meeting, the procedure to be observed, etc.

Meeting's Action May be Binding.

If any arrangement or compromise is agreed to by a majority in number representing three-fourths in value of the creditors or class of creditors present either in person or by proxy at this meeting, the court may, if it thinks fit, order that such arrangement or compromise shall be binding upon the whole of the creditors of the company or the whole of the class of creditors of the company (as the case may be) entitled to attend the meeting.

Application to the court to exercise the jurisdiction conferred by this new law may be by petition or, if any proceedings have been commenced with a view to the winding up of the company by or under the

supervision of the court, by motion in such proceedings.

The court has jurisdiction to stay, on such terms as it thinks fit, any action, suit, petition, or proceeding against a company if it considers it proper so to do in the interests of the creditors or any class of creditors of the company.

Consignment Laws in Java.

Consul Parker W. Buhrman, Soerabaya, January 17.

The laws of Netherlands India are based on the French law, or Code Napoleon. The local laws do not contain special rules relative to conditional sales. This question is treated of under powers of attorney or authorizations and custody. The owner of the merchandise authorizes the consignee to sell the goods at the time he places them in the latter's custody.

In the eyes of the law the ownership of movable property is in the person who possesses it, and in the event of the custodian's bankruptcy the liquidating agency will consider all the goods found as the property of the bankrupt. The burden is on the American shipper to prove his ownership. This may be established by proofs submitted by the owner or his custodian. Letters, testimony, and documents are acceptable as proof of the status of the custodian as such. Thus it may be seen that in the absence of the shipper or his accredited representative his interests will go entirely unprotected unless the custodian acts in perfect good faith. A custodian acting in bad faith may grant a lien on consigned merchandise, but on the establishment of ownership in the shipper it could not be executed.

Under the law the agent is personally responsible for his acts. There is no relation between the third party and the principal; each must pursue his remedy against the agent. In the event of the agent misusing his authority, the only recourse of the principal or the third party is against the agent. Therefore, if the custodian disposes of a part or all of the merchandise, and in so doing fails to pay the consignor, his act gives the principal no recourse against the purchaser. He can proceed only against the custodian.

Ontario's New Anti-Combine Bill Receives First Reading.

Consul Felix S. S. Johnson, Kingston, Ontario, Canada, February 23, supplementing article in COMMERCE REPORTS for March 19.

A bill, cited as the commercial agreements act, has been given its first reading in the Ontario Legislature. This bill provides that an action may be brought by the attorney general of Ontario in the supreme court for an injunction, mandatory order, or other relief upon a declaration that an agreement exists which:

(*a*) Constitutes a conspiracy in restraint of trade as being an agreement between two or more persons to do or procure to be done an unlawful act in restraint of trade;

(*b*) Is an agreement to unduly limit the transporting, producing, manufacturing, supplying, storing, or dealing in any article or commodity which may be a subject of trade or commerce;

(*c*) Is an agreement to restrain or injure trade or commerce in relation to any such article or commodity;

(*d*) Is an agreement to unduly limit or restrain the manufacture or production of any such article or commodity or to unreasonably enhance the price thereof;

(*e*) In an agreement to unduly prevent or lessen competition in the production, manufacture, purchase, barter, sale, transportation, or supply of any article or commodity.

If the court finds that the agreement comes within any of these clauses it is empowered to declare the agreement unlawful and void to all intents and purposes, and to make such order with respect to past and future dealings, rights and obligations of the parties as may be deemed just and expedient, having in view the course of business between the parties, the degree of good faith manifested by them in entering into, acting under, or carrying out such agreement, and the protection of the public interest. In addition, the court is authorized to make such further order as circumstances require to prevent the carrying out of this or any similar agreement.

Insurance Companies in Japan.

Consul M. D. Kirjassoff, Yokohama, February 5.

According to investigations made by the Department of Agriculture and Commerce insurance companies operating in Japan at the end of last year were as follows:

	Number.	Capital.
Life insurance	33	$16,490,000
Mutual life insurance	7	1,013,650
Conscription insurance	3	1,843,000
Damage insurance	52	136,527,500
Fire	9	14,065,000
Marine	1	970,000
Engine and boiler	1	242,500
Fire and marine	12	17,217,500
Fire, marine, and transportation	23	20,370,000
Fire, marine, transportation, and credit	1	6,062,500
Fire, marine, transportation, and accident	2	7,275,000
Fire, marine, transportation, and motor car	2	16,975,000
Fire, marine, theft, and accident	1	4,850,000

Besides these there were 2 life-insurance companies in course of liquidation and 36 foreign firms which were carrying on insurance business in Japan—4 life and 32 damage insurance companies. Of these 32, 12 were engaged in fire insurance, 2 in marine, 15 in fire and marine, 1 in fire and motor-car, and 2 in fire, marine, and motor-car insurance.

New Greek Tax on Profits.

Cable from Chargé d'Affaires Jefferson Caffery, Athens, March 17.

The Greek authorities have published a royal decree which levies a provisional supplementary tax on the annual profits realized in Greece by foreign joint-stock companies. The tax is retroactive to January 1, 1921, and ranges from 20 per cent on profits of more than 6 per cent and less than 10 per cent to 50 per cent on profits greater than 100 per cent. The decree stipulates that the working fund of foreign joint-stock companies is considered the capital available for their operation in Greece.

American Consular Officers on Leave.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of venue.	Address.
Savage, John M.....	Southampton, England.	May 16	Care of Manhattan Club, Madison Avenue and Twenty-sixth Street, New York City.
Strother, Shelby F....	Guadeloupe, West Indies.	May 12	First and Burnett Streets, Louisville, Ky.

TRANSPORTATION

E. S. Gregg, Chief, Transportation Division

SHIPPING.

JAPANESE SHIPPING SUBSIDIES FOR 1923.

E. T. Chamberlain, Transportation Division.

The Japanese Government has presented to the Diet its program for steamship subsidies and ocean mail payments for the fiscal year beginning April 1, 1923. The policy of economy in expenditures adopted last year is to be carried out through the coming year. For reasons stated in an article on Japanese shipping in COMMERCE REPORTS, September 25, 1922, page 839, the method of mail pay is to be continued, and the estimate for this purpose will remain at 1,450,000 yen. This was the amount applied during the year just ending, although the Government was authorized to expend 3,217,000 yen on the lines to North and South America.

Comparison of Subsidies for 1922 and 1923.

According to a report from Mr. James F. Abbott, commercial attaché at Tokyo, dated February 19, 1923, the amounts for the past fiscal year and for the coming fiscal year may be summarized as follows, in yen (50 cents):

Japanese subsidies to navigation and ocean-mail payments for the fiscal year beginning April 1, 1923.

Items.	1922	1923
	Yen.	*Yen.*
Ocean-mail payments	1,450,000	1,450,000
Subsidies to—		
North America	950,317	902,804
South America	1,478,140	1,249,627
South Seas (Java, Siam, etc.)	370,000	430,000
China	1,151,090	1,351,000
Tsingtao		140,000
Japanese islands, Korea, Vladivostok, Nikolaievsk, etc.	1,027,896	1,022,396
Total	6,430,353	6,545,827

The new subsidy to Tsingtao (Shantung) and the increase of 200,000 yen in the subsidies to the various lines to Chinese ports are in part offset by reductions in the subsidies to North and South America, although it is understood that part of the ocean-mail appropriation is applicable to the expense of carrying the mails to the Americas and to Europe. The total amount voted for subsidies is comparable with 7,677,000 yen voted for these purposes in 1914.

Ship Construction.

Various projects to apply public funds to the building of merchant ships, as a substitute for the shipbuilding and general navigation bounty law which has been suspended since 1918, have been discussed in the Japanese press, but the Government has not thus far committed itself to any of them. Ships launched in Japan in 1922 aggregated 83,419 gross tons, according to Lloyd's returns, as against 227,425 gross tons in 1921. Last year's launchings may be compared with the 85,861 gross tons in 1914, the largest Japanese pre-war output.

ASSIGNMENT OF SHIPPING BOARD TONNAGE TO TRADE ROUTES.

The United States Shipping Board Emergency Fleet Corporation has announced the following assignment of Shipping Board tonnage to trades for the month ended February 28, 1923:

Trade routes.	Number of vessels.	Dead-weight tons.
Europe	225	1,913,360
Far East [1]	79	791,335
Africa	11	95,989
South America	42	355,487
West Indies and Caribbean	8	33,397
Coastwise [2]	12	90,269
Foreign (tramp)	10	42,732
United States Army	1	10,013
Total	388	3,333,132

[1] Includes 7 vessels of 66,318 tons to British India.
[2] Includes 1 vessel of 12,350 tons to Hawaii.

This schedule does not include 873 vessels of 5,551,743 dead-weight tons, which are tied up, 15 vessels of 56,827 tons chartered to independent companies, 87 tankers of 777,232 tons, and 13 miscellaneous ships of 110,566 tons. The grand total of vessels under the control of the Shipping Board is thus 1,376 vessels of 9,829,508 dead-weight tons.

In connection with the offering of these services, reference is made to an article appearing in COMMERCE REPORTS for March 19, 1923, page 763, entitled "Shipping Board services will continue uninterrupted."

Shipments to Austria via Trieste.

Consul Carol H. Foster, Vienna, Austria, February 1.

As a result of a 15 per cent reduction in freight rates from Trieste to Austria, effective January 1, 1923, the cost of transportation by that route is now less than from Hamburg to Vienna.

For example, on January 30 the rate per 100 kilos on grain in carload lots from Hamburg to the Austrian frontier was 7,519 marks ($0.2792); from the frontier to Vienna, 15,300 crowns ($0.2144); or a total of $0.4936. Compared with this, the rate on the same shipment from Trieste to Vienna was 24,828 crowns ($0.3479) per 100 kilos. (Conversions are made on the basis of 71,350 Austrian crowns to the dollar and 2.65 crowns to the mark.)

In addition to the advantage of lower freight rates, Trieste is favored by a consolidated tariff, which is not continually changing; this gives a more reliable basis for calculation than the German tariff, which is governed by the fluctuation of the mark, and has, therefore, been known to vary 100 per cent within a few days.

The only drawbacks to the Trieste route are the less frequent steamship service and the length of the journey from the United States to that port.

CURRENT AMERICAN SHIPBUILDING.

On March 1, 1923, American shipyards were building or under contract to build for private shipowners 242 steel vessels of 280,278 gross tons, compared with 235 steel vessels of 302,047 gross tons on February 1, 1923. These figures do not include Government ships or ships building or contracted for by the United States Shipping Board.

Following is a summary of reports of shipyards to the Bureau of Navigation, Department of Commerce, showing the number and gross tonnage of steel vessels under construction or contract for private owners on March 1, 1923:

Companies.	Number.	Gross tonnage.
American Bridge Co., Ambridge, Pa.	103	45,740
American Car & Foundry Co., Wilmington, Del.	77	3,350
American Shipbuilding Co., Cleveland, Ohio.	7	51,600
Bath Iron Works, Bath, Me.	1	800
Bethlehem Shipbuilding Corporation (Ltd.):		
Baltimore Dry Docks plant, Baltimore, Md.	1	920
Harlan plant, Wilmington, Del.	5	2,626
Sparrows Point plant, Sparrows Point, Md.	4	11,650
Union plant, San Francisco, Calif.	3	26,700
Chas. Ward Engineering Works, Charleston, W. Va.	5	1,240
Dravo Contracting Co., Pittsburgh, Pa.	18	10,330
Dubuque Boat & Boiler Works, Dubuque, Iowa.	1	125
Federal Shipbuilding Co., Newark, N. J.	6	15,000
Geo. Lawley & Son Corporation, Neponset, Mass.	1	300
Great Lakes Engineering Works, Ashtabula, Ohio.	2	3,200
Great Lakes Engineering Works, River Rouge, Mich.	2	8,550
Herreshoff Manufacturing Co., Bristol, R. I.	1	.....
Howard Shipyards Co., Jeffersonville, Ind.	2	995
James Rees & Sons Co., Pittsburgh, Pa.	1	175
Johnson Iron Works, Dry Dock & Shipbuilding Co., New Orleans, La.	3	1,000
Kyle & Purdy (Inc.), City Island, N. Y.	2	710
Los Angeles Shipbuilding & Dry Dock Corporation, Los Angeles, Calif.	4	3,982
Manitowoc Shipbuilding Corporation, Manitowoc, Wis.	1	175
Marietta Manufacturing Co., Point Pleasant, W. Va.	14	5,538
Nashville Bridge Co., Nashville, Tenn.	2	500
Newport News Shipbuilding & Dry Dock Co., Newport News, Va.	2	13,000
New York Shipbuilding Corporation, Camden, N. J.	3	20,195
Pusey & Jones Co., Wilmington, Del.	5	4,990
Riter-Conley Co., Pittsburgh, Pa.	10	9,000
Staten Island Shipbuilding Co., Mariners Harbor, N. Y.	4	1,200
Sun Shipbuilding Co., Chester, Pa.	11	16,599
Todd Dry Dock & Construction Corporation, Tacoma, Wash.	1	3,000
Tebo Yacht Basin Co., Brooklyn, N. Y.	4	888
Toledo Shipbuilding Co., Toledo, Ohio.	2	13,000
Wm. Cramp & Sons Ship & Engine Building Co., Philadelphia, Pa.	3	2,100
Union Construction Co., Oakland, Calif.	1	1,100
Total	242	280,278

Details of New Contracts.

Following are the particulars of new contracts entered into during the month of February, 1923:

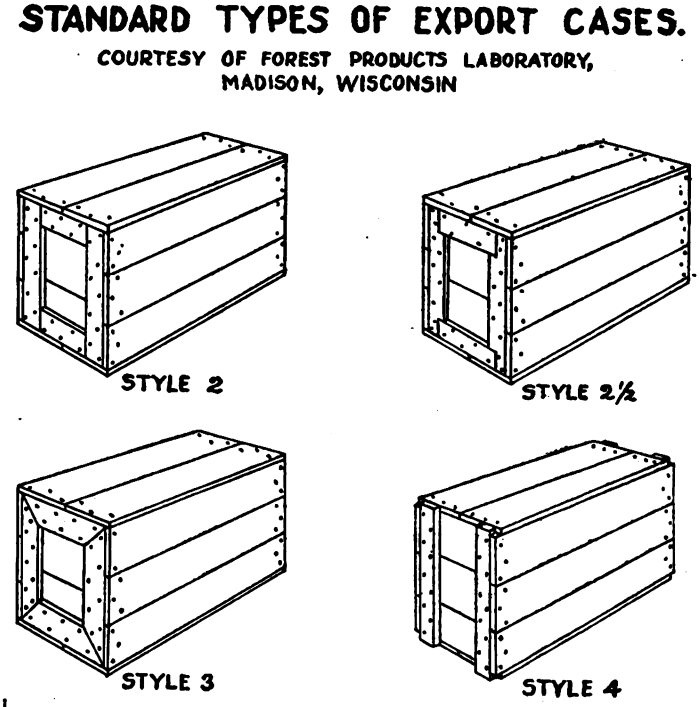
Vessel.	Gross tonnage.	Speed.	Owner.	Trade.	Probable date of launch.
American Car & Foundry Co., Wilmington, Del.: Hull No. 570.	(1)	(1)	International Elevating Co.	Grain elevating.	May, 1923.
Charles Ward Engineering Works, Charleston, W. Va.: Hull No. 32...	400	9	Cincinnati-Pomeroy & Charleston Packet Co.	Passenger...	August, 1923.
Geo. Lawley & Son Corporation, Neponset, Mass.: Hull No. 940..	300	14	W. S. Eaton.....	Yacht.....	May, 1924.
Los Angeles Shipbuilding & Dry Dock Co., San Pedro, Calif.: Hull No. 39..	225	(2)	Union Oil Co. of California.	Harbor.....	March, 1923.
Hull No. 40..	235	(2)	Associated Oil Co..	.....do.....	Do.

[1] Not given. [2] No power.

Vessels Completed in February.

Following are the particulars of the new steel vessels completed during February, 1923, for private owners:

Vessel.	Gross tonnage.	Speed.	Owner.	Trade.
Bethlehem Shipbuilding Corporation (Ltd.), Sparrows Point plant, Sparrows Point, Md.: Cornish.	1,827	(1)	Eastern Steamship Co.....	Cargo.
New York Shipbuilding Corporation, Camden, N. J.: Eurana.	6,651	11	Builder's account.....	Bulk oil.
Brooklyn Eastern District Terminal No. 21.	1,166	(1)	Brooklyn Eastern District Terminal.	Car float.
Sun Shipbuilding Co., Chester, Pa.: Pennsylvania Sun..	8,862	12	Atlantic, Gulf & West Indies Steamship Co.	Bulk oil.
Tebo Yacht Basin Co., Brooklyn, N. Y.: New York Central No. 30.	235	12	New York Central R. R. Co.	(1)



[1] Not given.

STANDARD TYPES OF EXPORT CASES.

J. F. Keeley, Transportation Division.

Below are shown four of the standard types of export boxes, illustrating the cases in general use by the majority of American exporters.

Styles 2 and 2½ have double-cleated ends, and are used for large boxes with heavy contents. Their strength is obtained from the cleats and the double nailing of sides, top, and bottom to both cleats and ends.

Style 3 is a similar case, with mitered cleats and heavier nailing; it also is used for large boxes containing heavy shipments.

Style 4 has single-cleated ends and is customarily used for boxes of medium size and weight of contents. It will be noted that the sides have double nailing, into

both cleats and ends; but the top and bottom have single nailing, into the ends only.

It must be understood that box strapping is required on all export cases. In succeeding issues of COMMERCE REPORTS information as to box strapping and nailing will be published.

Vessels Broken Up During Third Quarter, 1922.

During the quarter ended September 30, 1922, 29 steam or motor vessels, totaling 67,478 gross tons, were broken up or dismantled in the shipyards of the world, according to Lloyd's Register of Shipping. This total compares with 26 vessels of 72,623 gross tons broken up during the second quarter of 1922, and 2 vessels of 543 gross tons during the first quarter. (See COMMERCE REPORTS, February 5, 1923, p. 372.)

Among the vessels broken up during the third quarter of the year were the *Royal George*, 11,146 gross tons, built in 1907, formerly operated by the Cunard Steamship Co.; the *Divona*, 6,484 gross tons, built in 1886, operated by the Cie. de Navigation Sud Atlantique; the *Equateur*, 3,854 gross tons, built in 1875, part of the fleet of the Messagerie Maritimes; and the *Präsident*, built in 1900, formerly in the service of the German East Africa Line.

Additional information regarding shipping appears in this issue under the following sections:

Cable review, western Europe: Danish shipping situation.
Cable review, Latin America: Reduced rate on coffee from Brazil to New Orleans.

RAILWAYS.

Additions to Rolling Stock of Finnish Railways.

Consul Leslie A. Davis, Helsingfors, January 22.

During 1923 the rolling stock of Finnish State railways will be increased by 18 new locomotives and 1,200 car units, according to the new building program of the Railway Administration. Whether the locomotives will be built in Finland or purchased abroad has not been decided. Five combined second and third class sleeping cars, 10 combined second and third class large day coaches, 5 baggage cars, 25 cabooses, and 200 30-ton open freight cars will constitute part of the additional equipment which will be built in Finland. The open cars are planned to provide for the increasing needs of the timber export trade. Each of the 30-ton cars is counted as two units.

The shortage of cars which occurred during the war has not been overcome, despite the great numbers built in Finland since that time. During the first nine months of 1922, 448 covered freight cars were built, and the rebuilding of a number of Russian cars was completed, thus providing a total of 1,200 cars.

After some discussion, it has been decided to retain the Westinghouse air-brake system in preference to the Kuntze-Knorr system.

[An article entitled "Shortage of Rolling Stock on Finnish Railways" appeared in COMMERCE REPORTS, June 5, 1922, page 633.]

Through Traffic Agreement between Germany and Russia.

American Minister F. W. B. Coleman, Riga, Latvia, February 17.

A conference on through traffic between Germany and Russia, via Lithuania, Latvia, and Esthonia, held in Berlin January 15 to 26, 1923, attained partial results, according to the Moscow Economic Life of February 6.

The Russian, Lithuanian, Esthonian, and Latvian delegates refused the mark as a currency unit on account of its fluctuating value. Germany found it impossible to accept gold dollars, so it was agreed to issue through tickets to passengers as far as the German-Lithuanian border station only, figuring the rate in gold dollars. For through traffic the rules of the tariff agreement for German-Lithuanian-Russian passenger and freight transit traffic via Latvia and Esthonia remain in force. The through traffic is to start May 1, 1923, and at first only second and third class tickets will be sold to passengers. Russian railways are not operating first-class cars, and extra charges will be made for first class in the other countries. For freight traffic it was decided to adhere to the separate divided-tariff and collection system.

Danzig Shipyard and Car Plant Leased.

Acting Commercial Attaché H. B. Smith, Warsaw, Poland, January 30.

Negotiations which have been in progress for many months were successfully concluded this week for leasing for operation to foreign corporations of the Werft (former German Navy Yard) and the Haupt Werkstatte (former German car-building plant) at Danzig.

The properties were allocated jointly to Poland and the free city of Danzig; an agreement was signed with a French company for operation of the car plant, and with a British company for operation of the former navy yard. Both Poland and Danzig have a share interest in the operation and profits of each plant, but the control and administration is held by the foreign companies.

Motor Trains in New South Wales Reduce Operating Cost.

Vice Consul P. Harley Moseley, Sydney, December 11.

A train equipped with a six-cylinder 150-horsepower motor has proved so successful that 30 more will be put in operation on the New South Wales railway lines. High speed and low cost of operation are essential on the back country lines, where daily passenger and mixed trains are operating at a loss, and the new train has met both requirements.

Additional information regarding railways appears in this issue under the following sections:

Cable review, Latin America: Brazilian purchases of railway equipment.

COMMUNICATIONS.

Postal News of Commercial Interest.

Domestic Rates on Mails from Argentina.

Beginning January 31, the domestic rate of postage was made applicable to all mail originating in Argentina, addressed to the following countries composing the Pan American Postal Union: Bolivia, Brazil, Chile, Colombia, Costa Rico, Cuba, Dominican Republic, Ecuador, El Salvador, United States of America, Guatemala, Mexico, Nicaragua, Panama, Paraguay, Peru, Uruguay, and Venezuela. (Commercial Attaché Edward F. Feeley, Buenos Aires, January 31.)

Parcel Post Service to Fiume.

Effective at once, unregistered parcel-post packages mailed in the United States, addressed for delivery in the State of Fiume, will be accepted up to a weight limit of 11 pounds, when prepaid at the postage rate of 12 cents a pound or fraction of a pound plus the following transit charges: 1 pound or 2 pounds, $0.78; 3, 4, 5, 6, or 7 pounds, $0.90; 8, 9, 10, or 11 pounds, $1.02. Both postage rates and transit charges are to be prepaid at the time of mailing by postage stamps affixed to the parcel. All such parcels will be sent to the exchange office of New York for transmission to England, which country will act as intermediary in their dispatch. (Postal Bulletin, March 3.)

New Currency Rates for European Postage.

The unit rates for mail matter in Germany, Austria, Italy, Portugal, and Greece recently have been increased on a currency basis to the approximate amounts specified in the convention of the Universal Postal Union. These rates, as given in numerous consular reports of recent date, vary from a 150 per cent to a 300 per cent increase over the previous charges. Owing to the rapid fluctuations in exchange and to frequent changes made in postal charges in these countries, it is not believed that the publication of detailed values serves any useful purpose at present. Readers of COMMERCE REPORTS who are interested in such data may obtain full information from the Division of Transportation and Communications.

Reply-Paid Coupons in Spain.

The Spanish Post Office Department has taken over from the Tobacco Monopoly the sale of reply-paid coupons. This service, effective February 1, is to be handled in accordance with the convention of the Universal Postal Union of 1920, which fixes the price of the coupons at 50 centimos gold ($0.0965). The Spanish currency equivalent has been fixed at 60 centimos of a peseta for coupons issued after January 1, 1922, and 30 centimos for those issued before that date.

The number of coupons sold or exchanged by one person is limited to 10 per day and exchange must be made within the second month following the month the coupons were issue. The coupons are printed by the Universal Postal Union and supplied to the administrations of the Union. Coupons proceeding from a foreign country, which are issued after January 1, 1922, must be exchanged for postage stamps to the value of 40 centimos. Coupons issued before that date must be exchanged for stamps to the value of 20 centimos. This service should facilitate the importation into Spain of foreign catalogues, printed matter, and merchandise articles of no salable value. (Commercial Attaché C. H. Cunningham, Madrid, January 29.)

WESTERN EUROPE

Charles E. Lyon, Acting Chief, Western European Division

The British Industries Fair, 1923.

The Ninth British Industries Fair held in London (White City) and in Birmingham (Castle Bromwich Aerodrome) from February 19 to March 2, 1923, was characterized by the British Board of Trade Journal as the most successful of the whole series. The London section was organized directly by the Department of Overseas Trade, while the Birmingham section was organized by the Birmingham municipality and the Birmingham Chamber of Commerce. It was not merely an exhibition, but rather a trade fair, to which bona fide trade buyers could resort for the purpose of purchasing goods. Admission was by invitation. Participation is confined to British manufacturing firms, and exhibitors may not display goods other than those which they actually manufacture. The fair is financially self-supporting.

Overseas orders considerably exceeded those received for 1922, although the number of overseas visitors showed no increase. This is explained to some extent by the fact that most of this year's attendance came from countries whose exchange was favorable to transacting business. The Balkan States were scarcely represented this year, whereas the Netherlands, Spain, Denmark, Switzerland, and Norway all showed an increased attendance.

United States Heavy Buyer.

Probably the largest individual purchasing nation was the United States, whose buyers were busy in almost every section of the fair, chiefly in fancy goods, toys, china, leather goods, printing, and stationery. Buyers were present also from Mexico, Guatemala, Brazil, Uruguay, Argentina, Chile, Peru, and Colombia. Of the Dominions, Canada probably placed the heaviest orders, while Australia, New Zealand, and South Africa also purchased extensively. Nearly 50 buyers were sent by India.

Business was more brisk during the second week of the fair, especially in the chemical section, whose variety and extent of exhibits markedly indicated the progress made by British manufacturers of chemicals and dyes.

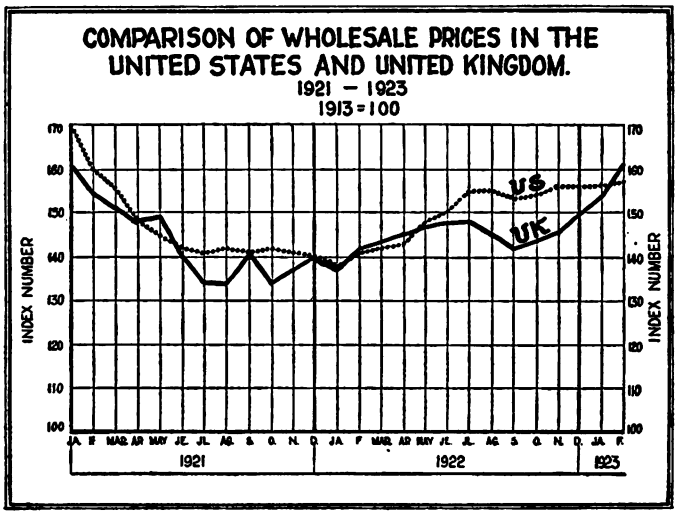
High Prices Hurt Activity at Leipzig Fair.

Based on cable from Commercial Attaché C. E. Herring, Berlin, March 13.

The Leipzig Spring Fair has shown a record attendance with many foreign buyers. Over 13,000 exhibitors displayed their goods, among whom were 600 foreigners. Purchasers at the fair were discouraged by high prices, which in most lines exceeded the world market figures. Satisfactory buying was reported from only certain technical branches and textiles. The comparative activity in textiles is said to be in anticipation of an advance in prices on account of the rise in American raw cotton. Although bargaining usually resulted in reductions, these did not have the effect of enlivening business to any great extent. The excessive prices apparently resulted from the anxiety of manufacturers regarding a probable rise in all production costs, especially labor and coal.

Almost all export prices, except for toys, were quoted, as heretofore, in high exchange currencies. Business is apparently still being planned in anticipation of falling mark exchange.

Uncertainties arising out of export licenses and price supplements have resulted in an increasing tendency among buyers to conclude no transactions except for goods immediately deliverable and not calling for advance payments. The practice of quoting export prices in a graduated scale is in evidence, the highest quotations being used in the case of countries of high exchange, notably the United States, and the lowest in the case of Austria. This results in much selling through intermediate agents in low-exchange countries who reship to high-exchange countries.



Slight Spread Between American and British Export Prices.

Prepared in Western European Division.

In discussing the effect upon American price level of gold imports into the United States, the following statement recently appeared: "The effect of sending the product of the South African gold mines to us by way of payments upon the British debt will be to raise our price level above England's and turn back to her the foreign trade which we have gained in recent years." This statement ought to be considered in the light of the fact that such shipments of gold from British sources tend to raise sterling exchange and thus increase the export price level of British goods. During the calendar year 1922 the net imports of gold and silver amounted to $246,000,000, as compared with $679,000,000 in 1921. Even such reduced importation of precious metals might increase American prices if we allow it to be used as a basis of credit expansion, but in so far as these shipments are placed to British credit they directly increase sterling exchange.

The accompanying chart shows that Britsh wholesale prices when reduced to a gold basis are running very close to American prices, using 1913 figures as a base. American prices are represented by the Department of Labor index of 404 commodities, British figures by the Economist index of 44 commodities reduced to the gold basis by application of the percentage depreciation of the pound sterling as shown in the Survey of Current Business.

If it be assumed that Great Britain and the United States were on level terms as competitors in the export market in 1913, these figures show that neither country has any great advantage at the present time on account of lower domestic price levels. Although British prices expressed in pounds sterling showed a decline up to within a few months, yet the substantial increase in the value of the pound has brought the British price level above our own in the month of February. Probably, the increased continental demand for coal and coke, as well as iron and steel products was more quickly felt in Great Britain than in this country. At any rate, there is no cause for American exporters to be alarmed because of present price increases in this country.

British Fiduciary Currency.

The British Government issued an order in council during the month of February permitting the Bank of England to increase its fiduciary note issue to £19,750,000, or a little less than $100,000,000. At the time of the bank act in 1844 the Bank of England was allowed a fiduciary issue of £14,000,000, plus two-thirds of any forfeited note issues of private banks in England and Wales. The note issues of all such private banks have finally lapsed, and the Bank of England now has the sole privilege of note issue in England and Wales. Scotch and Irish bank notes circulate in England at a slight discount, generally one English penny in the pound.

This unbacked bank-note issue, which stands at less than $100,000,000, was before the war the only point of elasticity in the monetary system, but now the currency notes of £1 and 10 shillings amount to about £280,000,000, of which £250,000,000 is fiduciary. It is interesting to observe that as the currency notes are slowly decreasing—they stood at £301,000,000 on January 1, and have fallen £21,000,000 in two months—provision is made for an increase in Bank of England notes. This is in line with the British policy of two years ago when gold held in the joint-stock banks was transferred to the Bank of England to the extent of

£40,000,000 and bank notes issued against the sum. This was done at that time in order to prevent fresh currency note inflation.

Except for the £19,750,000 fiduciary issue, Bank of England notes are backed by a 100 per cent gold reserve. It has been a point of pride to maintain Bank of England notes "as good as gold." As a result of this policy, these bank notes often command a premium above the ordinary rate of exchange in continental Europe. Bank of England notes now aggregate £120,000,000 and currency notes £280,000,000, a total of £400,000,000, and a little more than £20,000,000 of bank notes are held as reserve against currency notes, leaving a net circulation of £380,000,000, including gold in the Bank of England and gold in the currency note reserve. This gives an average 40 per cent gold backing to all British paper money in circulation. Under these circumstances it is not surprising to see the pound sterling maintaining an upward tone in the exchange market.

Additional information regarding western Europe appears in this issue under the following sections:

Chemicals: German potash industry in 1922.
Finance: Market position and yield of Belgian Government bonds.
Commercial law: Purchase of interest in Czecho-Slovak companies.
Tariffs and trade regulations:
Increased consumption taxes in Madagascar.
Conclusion of commercial treaty by Czechoslovakia and Holland.
Establishment of customs barrier by the Irish Free State.

EASTERN EUROPE AND LEVANT

E. Dana Durand, Chief, Eastern European and Levantine Division

FINLAND'S FOREIGN TRADE IN 1922.

Based on a report from Consul Leslie A. Davis, Helsingfors, and on information from the Finnish press.

Finland's foreign trade during 1922 shows the strong economic position attained by that country. The total value of exports was 4,461,000,000 Finnish marks, or $95,600,000 at the average exchange rate of 46.7 Finnish marks to the dollar; imports amounted to 3,953,000,000 Finnish marks, or $84,700,000. The favorable balance of 508,000,000 marks, or $10,900,000, was the first recorded in the history of Finnish trade statistics. In 1913 imports were valued at 495,400,000 marks and exports at 404,800,000 marks, or $96,600,000 and $78,100,000, respectively (conversion at par, 1 mark=19.3 cents).

The favorable balance of 1922 contrasts also with an unfavorable balance of 196,000,000 marks in 1921 and of 700,000,000 marks in 1920. If prices of 1913 be applied to the 1922 exports and imports, it will be found that exports were 93.4 per cent of those in 1913, or nearly normal, while imports were smaller, reaching only 74.4 per cent of the 1913 imports.

Commodities that Effected a Favorable Trade Balance.

As compared with 1913, the total volume of foodstuff imports in 1922 had decreased considerably, particularly in the more expensive articles, such as wheat flour and rye flour, although imports of rye grain increased more than 33 per cent. Imports of rice and coffee remained the same, but sugar increased nearly 25 per cent. Coal imports decreased nearly 60 per cent, as a result of the high prices prevailing during 1922, which made it cheaper to substitute local wood. With the return of coal prices to a more normal level, coal imports into Finland may be expected to increase. Imports of other raw materials, such as cotton and rawhides, were practically the same as in 1913, but oil cakes and petroleum decreased considerably.

Exports, on the other hand, fell much less below the volume in 1913 than did imports; certain exports increased, notably pulp. These changes were important factors in bringing about the favorable trade balance; but another contributing cause was the fact that, generally speaking, prices of certain exported goods increased more from 1913 to 1922 than did prices of most imported goods; this was especially true of pulp and paper.

Values of Chief Imports and Exports.

The most important import values were: Textiles, finished and partly finished, 862,200,000 Finnish marks; cereals, 703,400,000 marks; colonial products, 551,500,000 marks; metals and metal goods, 403,600,000 marks; machinery, 203,900,000 marks; oils and fats, 177,500,000 marks; stone and earthenware, 139,600,000 marks; drugs and chemicals, 121,211,000 marks; asphalt, tar, and resin, 77,700,000 marks; and fertilizers, 72,800,000 marks.

The values of the most important exports in 1922 were: Timber, 2,292,700,000 Finnish marks; pulp, cardboard, and paper, 1,430,300,000 marks; animal products, mostly butter, 435,700,000 marks; and hides, skins, and leather goods, 76,900,000 marks.

Important Imports and Exports, by Quantity.

The most important items of export and import in 1913 and 1922 are listed, by quantity, in the following table:

Finland's principal imports and exports, 1913 and 1922.

Principal commodities.	1913	1922[1]	Principal commodities.	1913	1922[1]
IMPORTS.	*Metric tons.*	*Metric tons.*	EXPORTS.	*Metric tons.*	*Metric tons.*
Rye	65,610.4	100,660.6	Fresh meat, except pork	1,964.9	3,190.6
Wheat	368.3	662.1	Butter	12,640.3	8,334.2
Flour and grain	118,401.8	79,590.0	Cheese	1,224.1	2,716.5
Rye flour	196,030.3	17,852.5	Rawhides	3,685.4	1,544.2
Rice	12,416.5	12,898.3	Unsawn timber (all kinds except fuel)	[2] 3,162.9	2,139.8
Oats	7,403.0	2,642.4	Fuel (wood)	[2] 1,066.4	582.1
Coffee	12,866.9	13,845.4	Sawn timber (all kinds)	[3] 903.0	847.7
Sugar (refined and unrefined)	47,665.4	59,942.5	Plywood	[4] 12,890.1	20,059.3
Raw tobacco	3,760.5	1,948.9	Matches	38.6	2,127.2
Raw cotton	8,454.1	7,517.0	Bobbins	11,822.0	5,669.0
Wool	866.4	1,835.5	Mechanical pulp [5]	44,915.4	51,516.7
Oil cakes	11,581.7	7,124.5	Chemical pulp [5]	75,479.0	183,945.6
Rawhides	5,843.6	5,505.8	Cardboard	53,751.3	24,689.6
Coal	585,613.7	243,096.8	Paper (all kinds except newsprint)	145,634.6	192,141.2
Petroleum	36,071.3	20,620.0	Newsprint paper	70,866.1	130,082.6

[1] 1922 figures are preliminary and subject to minor alterations.
[2] In thousand meters.
[3] In thousand standards.
[4] Year 1920.
[5] Dry weight.

Principal Markets—Trade with United States.

As to the countries from which Finnish imports came in 1922, Germany held first place, supplying 33.3 per cent; Great Britain stood next, with 21.6 per cent. These countries furnished the bulk of the textiles, coal, metals and metal goods, and machinery which Finland imported, and a considerable portion of the colonial goods. Great Britain was the largest buyer of Finnish goods, taking 37 per cent of all exports.

The United States ranked third as a source of supply to Finland, selling goods valued at a total of 609,100,000 Finnish marks, or $13,043,000. These constituted 15.4 per cent of Finnish imports in 1922, and included practically all the pork, lard, fat, and cereals brought into that country.

Finland exported to the United States goods valued at 291,000,000 Finnish marks, or $6,233,300, constituting 6.5 per cent of all exports. According to the declared export returns filed with the American consulate in Helsingfors, the main items shipped to the American market comprised: Pulp, valued at $3,468,000; printing paper, $2,070,000; other paper, $411,000; matches, $164,000; hides and skins, $327,000; and furs (practically all squirrel), $179,000.

Exports Declared from Esthonia to United States.

Vice Consul E. L. Packer, Reval.

The value of exports declared from Esthonia through the American consulate at Reval in 1922 was $813.193, nearly four and one-half times as great as in 1921, when the value amounted to $180,194.

The greater part of this increase was represented by larger shipments of platinum ($597,953, as against $118,629), silver ($20,891, as against $3,376), and undressed furs ($97,977, as against $4,897). Nearly 10 per cent of the increase is credited to calfskins ($68,186), which, along with paper ($18,148) and various other goods, were not listed at all in 1921.

Shipments of smaller value in 1922 than in 1921 took place only in the case of rugs and carpets ($3,316 in 1922 and $50,222 in 1921) and dried mushrooms ($55 and $233, respectively). Appearing in 1921, but not in 1922, were caviar, $117; fur coat and muff, $69; and fusel oil, $2,651.

Exports Declared from Danzig to United States.

Consul Charles H. Albrecht, Danzig.

Declared exports from Danzig to the United States in 1922 were nearly triple in value those of 1921. The greatest increases occurred in exports of bristles, furs, flax, galalith and bakelite, and dried mushrooms. Decreases occurred in amber and calfskins. The greater number of lesser articles appearing in 1922 were not listed at all in 1921.

A considerable part of the exports from Danzig represent not products of the free city of Danzig but those of Poland, eastern Germany, and Lithuania, especially Poland. In the foreign-trade statistics of the United States, the free city of Danzig is combined with Poland.

Declared exports from Danzig to the United States, 1921 and 1922.

BALKANS AND LEVANT.

James A. Robertson, Chief, Levantine Section.

ECONOMIC AND TRADE NOTES FROM SYRIA.

The New Budget.

The Administrative Council of the Syrian Federation has just completed the new budget of expenditures, embodying a reduction of 85,000 Syrian pounds over the first project. The Syrian pound on October 11, 1922, the latest quotation available, was equivalent to $1.49. Compared with the figures for 1922, the expenditures for 1923 indicate a reduction of about 36 per cent, the total expenditures for 1922 and 1923 being 1,420,981 and 1,041,652 Syrian pounds, respectively. The percentages under the different headings of the new budget are as follows: Pensions, 6 per cent; General Administration, Finances, Justice, Interior, 29 per cent; Public Works, 26 per cent; Public Security, 25 per cent; Assistance and Information, 13 per cent; and Unforeseen, 1 per cent. (Consul J. B. Jackson, Aleppo, Syria, January 16.)

Declared Exports from Aleppo to United States.

Declared exports from the consular district of Aleppo, Syria, to the United States during the calendar year 1922 show a considerable increase as compared with 1921. This increase is particularly noticeable in the case of guts, handkerchiefs, pistachio nuts, and wool. Returned American goods (shoes) amounted to $1,584 during 1922; no American goods were returned during 1921. (Consul J. B. Jackson, Aleppo.)

Declared exports from Aleppo, Syria, to the United States, 1921 and 1922.

[1] Including in 1922: Almonds, sheep butter, cheese, clothing, confections, cotton, embroideries, henna, helva, kilim rugs, laces, mahleb, mint, molasses, chick-peas, raisins, salep, melon seeds, sumac, thyme powder, and violet flowers.

Declared Exports from Alexandretta.

The value of exports declared from the consular district of Alexandretta to the United States advanced from $17,253 in the calendar year 1921 to $661,322 during 1922. This advance is accounted for mainly by the increased exports of licorice root ($520,605) and pistachio nuts ($80,984), and by the exportation (not appearing in 1921) of washed wool to the amount of $51,301. (Consular Agent John T. Peristiany, Alexandretta.)

Declared Exports from Damascus.

Declared exports from the consular district of Damascus to the United States during the calendar year 1922 were valued at $397,722, as compared with $18,198 during 1921. The increase resulted largely from exportations in 1922 (not declared in 1921) of guts to the value of $30,707 and 1,279,947 pounds of wool, valued at $319,961. Other articles exported during both years included bazaar goods, embroideries, provisions, and rugs. Returned American goods amounted to $2,485 during 1921; no American goods were returned during 1922. (Consul Charles E. Allen, Damascus.)

LATIN AMERICA

J. R. McKey, Acting Chief, Latin American Division

ECONOMIC CONDITIONS IN MEXICO.

Limited Importations into Acapulco.

Commercial conditions in the Acapulco consular district, comprising the Pacific coast State of Guerrero, showed a slight improvement during the first six weeks of 1923, according to a report from Consul George A. Bucklin, Acapulco, dated February 17. Imports, however, have dropped back from the abnormal holiday receipts and consist chiefly of flour, textiles, and other necessities. About four-fifths come from the United States.

The sesame crop is abundant and estimated at about 3,000 metric tons of seed, but producers are holding for higher prices. The local textile mill took what cotton was produced, damage by the boll weevil having been severe. Practically no activity exists in American mining interests in the State, although reopening of one copper mine is being considered.

Construction of the Acapulco-Chilpancingo highway is progressing slowly, and work is projected on a canal to open up the rich agricultural lagoon region along the coast just north of Acapulco.

Prospects for Improvement in Southern Sonora.

General economic conditions in the Guayamas consular district of northwestern Mexico, including Hermosillo (capital of the State of Sonora), have undergone but little improvement in the last four years, reports Consul Bartley F. Yost from Guaymas, under date of March 4. Many industries remain practically paralyzed, and there has been a great exodus of laborers on account of shortage of work.

Mining is now showing evidences of prospective resumption, provided the recent increase in prices of metals holds. Old and new properties are being investigated with a view to reopening.

There has been considerable activity recently in colonization schemes for the fertile west-coast river valleys, but Mexican land laws have had the effect of retarding extensive investment.

Foreign Competition through the Port of Manzanillo.

While exporters in the United States have no real competition as yet in the Mexican import trade passing through the west-coast port of Manzanillo and destined largely to the sections in and around Guadalajara and Colima, shipments from other countries seem to be increasing, according to information from Vice Consul Stephen E. Aguirre, at Manzanillo. France, Great Britain, Germany, and Japan, in the order named, are sending more goods to these markets. Last fall a Japanese steamship line changed its Mexican port of call from Salina Cruz to Manzanillo, and since that time imports from Japan have been consistently increasing through this port.

Trade through the Nogales District.

Various animal, vegetable, and mineral exports from Mexico to the United States through the border port of Nogales, Sonora, increased during February, 1923, although the total value of exports for that month was only 70 per cent of the value of the exports in the corresponding month of 1922. The reduction in the total value was due chiefly to a relative decrease of over $500,000 in shipments of sugar from the State of Sinaloa, as shown in a report from Consul Henry C. A. Damm, at Nogales. The increase was principally in other farm products, especially tomatoes and winter vegetables from Sinaloa and Nayarit. Profits on some shipments from the increased acreage in these States were small on account of glutted markets.

Extended production in the State of Sonora was manifested by an advance in the values of mineral exports and a resumption of shipments of green hides and live hogs.

Better Economic Outlook in Saltillo District.

Some improvement in purchasing power throughout the Saltillo consular district, in the southern part of the State of Coahuila and the upper portion of the

State of Zacatecas, is anticipated from the first good crop prospects since 1919, according to a report submitted by Consul Fred R. Robinson, at Saltillo, dated March 6. Farmers are optimistic, and feel that the clear, mild weather, which has succeeded a month of continuous light rains, will bring crops of wheat and corn sufficient to effect an economic revival. It will, however, take more than one good year to offset the burden which producers have sustained in financing themselves through the past seven poor years.

Competition and Credits in San Luis Potosi.

Active rivalry from American manufacturers and shippers already represented by agencies familiar with Mexican trade is what the newcomer into the San Luis Potosi market will encounter chiefly, and not European or other foreign competition, states Walter F. Boyle, the American consul at San Luis Potosi, in reports dated March 5 and 12.

Credit conditions in this consular district are poor, due to the long period of economic depression and a financial situation almost approaching a crisis, after the bank failures of last fall. Some of the more responsible houses command credit for as much as 60 and in some rare cases 90 days, but most all business has been reduced to a basis of cash against documents.

No improvement was noted during February, the situation being illustrated by a petition from the local chamber of commerce to the municipal authorities requesting revocation of the license granted a small circus on the ground that this was obtaining the little money in circulation and ruining local business.

The mining industry of this district is at a very low ebb and only enough work to keep the properties open is done in the mines located in the immediate vicinity of the city.

Conditions in the State of Para, Brazil.

Based on report from Assistant Trade Commissioner Bernard H. Noll, Rio de Janeiro.

The State of Para, which is situated in northeastern Brazil, has an area of 443,789 square miles, being nearly twice as large as Texas. It is a vast area of tropical vegetation, with a few low mountains, from which numerous rivers flow into the Amazon. Most of the region is unexplored. The climate is hot and humid, rains are frequent, and, with the great river systems, the land is extremely fertile.

According to the 1920 census, the State had a population of 983,507 inhabitants, 236,402 of whom live in the capital—Belem. This city is located at the mouth of the Amazon and is one of the important ports of Brazil, being the outlet for the exports of the States of the Amazon Valley. The products of Para include rubber, oil nuts, tobacco, hides, cacao, rice, and cotton.

Condition of the Rubber Industry.

For many years the rubber industry was the chief source of the wealth of Para and all other economic developments were neglected. To-day, with the competition of oriental plantation rubber and with other products being substituted for rubber, Para is experiencing one of the most critical periods in its economic history. Since 1912, which was the peak of Brazilian rubber production, rubber prices have gradually decreased. In 1919 Para shipped 17,763 tons, valued at 53,854,000 milreis, and in 1921, 7,258 tons, valued at 13,994,000 milreis. With its best year showing a production of 20,363 tons and with the production of plantation rubber averaging about 300,000 tons annually, Para has little chance to compete, especially as Para rubber is much more difficult and costly to harvest than plantation rubber.

The Brazil-Nut Industry—Other Exports.

The second most important agricultural product of Para is the Brazil nut (castanha). The importance of this crop is gradually increasing, and in 1921 Para exported 10,651,511 kilos, valued at 10,102,109 milreis. These nuts are shipped to the United States and Great Britain.

Other products shipped from Para in 1921 included timber and lumber valued at 3,586,491 milreis; cacao worth 2,187,145 milreis; mandioca meal amounting to 2,084,342 milreis; and rice to the value of 1,328,980 milreis (1 milreis=$0.3244 at normal and $0.11 at present exchange).

Lack of Labor Hinders Industrial Development.

The industrial development of Para has been neglected because of the lack of labor, which was drawn by the large profits derived from rubber. A few factories have been started in the capital on a small scale for the manufacture of biscuits, beer, shoes, hats, furniture, and other articles. The State also has some tanneries, vegetable-oil nut establishments, and others for cleaning cotton, cereals, etc.

Financial Situation.

Para has been financially crippled during the last few years owing, it is claimed, to the reduction in revenues resulting from the falling off of the rubber industry. However, even in the best years of the rubber industry, the State was spending more than its revenues, covering the deficit by internal and external loans. Notwithstanding efforts of the new governor to reduce expenditures, there was a deficit of 948,625 milreis in 1921.

The 1922 budget estimated revenues at 9,829,000 milreis, but only 4,291,764 milreis were collected during the first half of the year. Expenditures for the year were fixed at 9,654,757 milreis in the budget, and amounted to 4,296,722 in the first six months of the year.

[The full report, from which the foregoing article has been extracted, may be examined by applying to the Latin American Division.]

Conditions in Guatemala Show Little Change.

Consul Arthur C. Frost, Guatemala City, March 1.

General business conditions in Guatemala have undergone little if any change during January and February, 1923. January shipments of coffee were large, due to the late crop and to the desire of exporters to realize on their product as soon as possible. Probability of the successful termination of the Government's negotiations for a foreign loan is the question uppermost in the minds of all local business men. Representatives of a New York firm spent some time during February investigating local financial conditions as a basis for these negotiations, and returned to the United States without making public the result.

Exports of coffee during January totaled approximately 11,750,000 pounds, and sugar 1,300,000 pounds. The United States took about 9,200,000 pounds of coffee, valued at over $1,300,000 (as against $546,000 for January, 1922), and 420,000 pounds of sugar. Germany was a strong second among the foreign markets for Guatemala's coffee, taking about 2,250,000

pounds, and also took practically all the hides and skins, and over half the honey. Great Britain was first among the purchasers of sugar in this country and a poor third in coffee purchases. Banana shipments (all to the United States) were about 30 per cent over January, 1922. Puerto Barrios shipments of coffee to the United States are reported as twenty-one times as great as during the corresponding period of the previous year.

Dominican Prospects Better.

Consul W. A. Bickers, Puerto Plata, February 10.

One of the most satisfactory phases of the present economic situation in the northern section of the Dominican Republic is supplied by the prospects for a record cacao crop. Current estimates place the production of this district for the present crop at 50,000,000 pounds, as a result of favorable weather conditions.

The prospects for the crops of foodstuffs, which are for the most part consumed locally, are excellent this year. The corn crop is progressing favorably and it is thought that there will be a moderate surplus suitable for exporting after local needs have been satisfied. The bean crop promises to be unusually large and is expected to prove ample for all local requirements, leaving possibly a small surplus for export, notwithstanding the fact that it is almost always necessary to import supplies of this staple to supplement the Dominican crop. Free cotton seed is being distributed to the farmers in the Cibao by the chamber of commerce of Santiago in order to encourage the cultivation of cotton in the country.

Unfavorable Trade Balance.

Imports through the port of Puerto Plata during 1922 were valued at $2,355,416—a marked decline from the 1921 value of $3,134,838. Exports for 1922 amounted to $2,198,941, as compared with $2,599,692 in the preceding year. This unfavorable balance would be more adverse still if it were possible to include the invisible factors, such as banking, insurance, and shipping companies owned and controlled outside the country. Foreign trade continues dull in the northern district, but it is thought that the movement of the cacao crop will bring about an improvement in the situation.

American Flour Mill to be Established.

An American resident in Puerto Plata has purchased a 50-barrel, short-process flour mill in the United States and intends to establish the mill in this city as soon as possible. Arrangements for grain and other supplies have been made in New York—the only American port with regular steamer service to Dominican ports. The result of this venture is awaited with interest, as this will be the first flour mill in the country and is expected to prove a success on account of the heavy import duty on flour, coincident with duty-free grain imports.

Produce Exports Benefit Venezuelan Situation.

Vice Consul S. J. Fletcher, La Guaira, February 21.

Declared exports to the United States from La Guaira for January amounted to more than twice as much as the total for December, 1922. This sudden increase from $70,263 to $157,080 was almost entirely due to the entrance into the market of important quantities of coffee and cacao.

Heavier Coffee Shipments.

Coffee exports from La Guaira reached a total of 424,242 pounds, valued at $72,461, for the month of January; and exports of cacao amounted to 604,793 pounds, valued at $79,356.

First-quality Caracas "descerezado" coffee was quoted at from 84 to 90 bolivars (1 bolivar at par equals $0.193) per bag of 46 kilos during the month. A larger percentage than usual was shipped to the United States, due to the rise in prices on the New York market. As a rule, the best of the Caracas "descerezado" coffee is shipped to Europe, where a steady demand exists.

Cacao Prices Higher.

It is practically certain that the present cacao crop will not be up to that of normal years, largely because of the lack of moisture during the early growing season and the excessive rainfall during the harvest, but a very fair crop is expected. The price obtained for first-quality cacao during the first part of January was 54 bolivars per bag of 50 kilos, but the market developed strength during January and closed at 58 bolivars per bag.

Dollar Exchange Improves.

The depression in dollar exchange, which existed during December and which was attributed to the payment of approximately $1,000,000 to the Federal Government by an oil company in connection with a concession transaction, has been relieved, as local demand has absorbed the money. On January 5, 1923, the dollar was quoted at 5.21 bolivars and rose steadily until on January 21 it was quoted at 5.24 bolivars.

BOLIVIAN REVENUES AND EXPENDITURES IN 1922.

Consul Dayle C. McDonough, La Paz.

The 1924 budget of the Bolivian Government, recently made public, shows a total calculated revenue of 23,854,705 bolivianos and expenditures of 40,015,022 bolivianos (1 boliviano=$0.3893 at par; at current rate it is worth $0.317). By applying the 12,000,000 bolivianos from the loan recently secured in New York, the estimated deficit left unprovided for is 4,160,167 bolivianos.

Neither the actual income nor expenditures of the Government for 1922 are yet definitely known, but the income for the first six months amounted to only 9,945,617 bolivianos, and it is probable that the total for the year will be between 16,000,000 and 20,000,000 bolivianos. He adds that, of the total present revenues of the Bolivian Government, amounting to 20,000,000 bolivianos, 13,000,000 are necessary for the service on the external debt, 3,000,000 on the internal debt, and 5,000,000 for the service on customhouse warrants, leaving nothing for the ordinary current expenses of the Government.

Among the principal sources of revenue in 1922, according to the budget estimate, were the following:

	Bolivianos.
Import duties	6,390,000
Export duty on tin ore	3,000,000
Tax on alcohol	1,500,000
Dividends on National Bank stock	1,147,387
Consular invoices	1,000,000
Tax on net profits of mines	1,000,000
Income from tobacco monopoly	800,000

The following figures from the 1922 report of the Minister of Finance show the relation between the expenditures and the public revenue for the years 1917 to 1921, inclusive, and for the first six months of 1922:

Expenditures and revenue of the Bolivian Government.

Years.	Expenditures.	Revenues.	Deficit.
	Bolivianos.	*Bolivianos.*	*Bolivianos.*
1917	17,101,042	19,104,721	[1] 2,003,678
1918	32,586,886	29,966,030	2,620,856
1919	31,328,767	24,976,525	6,352,242
1920	49,470,475	27,786,770	21,683,705
1921	31,819,452	23,047,274	8,772,178
1922 [2]	17,927,353	9,945,617	7,981,736

[1] Surplus. [2] First six months.

Cuban Exports to the United States.

Based on report from Consul General Carlton B. Hurst, Habana, February 12.

The total value of merchandise declared for export to the United States from various ports of Cuba during 1922 amounted to $245,719,563—an increase of nearly $25,000,000 over the exports in 1921. From this figure, and from import statistics now available, it seems practically certain that Cuba holds fourth place among the countries of the world as regards total value of exports to the United States during 1922, the first three being Canada, the United Kingdom, and Japan, in the order named.

About one-third of the Cuban exports to the United States were shipped from Habana, while Nuevitas (the most important sugar port on the island) ranked second.

Declared exports for 1922 reveal an unusually large amount of returned American goods, amounting to more than $4,000,000, as compared with about $2,500,000 in 1921. This increase was largely due to the inability of Cuban importers to make good their commitments, especially with regard to consignments of textiles, and it was deemed advisable by American exporters to recall these goods rather than burden the market with excessively heavy stocks.

Additional information regarding Latin America appears in this issue under the following sections:

Commercial law: Argentine decision of the D/P contracts.

FAR EAST

F. R. Eldridge, Chief, Far Eastern Division

THE CHINESE COMPRADOR.

Based on report from Consul General Stuart J. Fuller, Tientsin.

The comprador is the medium of dealing between foreign firms and Chinese merchants and dealers, and is one of the most important factors in China's foreign-trade relations. Ever since the beginning of foreign intercourse in China the comprador in a foreign firm has been indispensable. Barriers of language and social customs made the employment of the comprador a necessity and, as he has become virtually the manager of the foreign firm, his responsibilities and duties have increased. Formerly the character and probity of the comprador was unquestioned and he occupied a unique position in trade circles. The word of a comprador was accepted and defaulters were seldom encountered. However, exploitation of Chinese credit and money by unscrupulous foreigners, with the consequent loss to the comprador, has tended to increase the number of defaulting Chinese. Where formerly oral contracts served, legal documents and bonds are now in practice.

Compradors must possess capital, a knowledge of business, and an extended acquaintanceship among the Chinese. There are two main classes of compradors—bank and merchandise compradors—whose functions are quite similar. The duties of the bank comprador are to transact business for the bank; to look after all monetary matters, such as the receipt and payment of money and the collection of checks, drafts, and notes; to offer advice to the bank regarding the condition of the local market; to compile commercial information; and to recommend, control, and guarantee the Chinese staff of the bank. The merchandise comprador must guarantee the firm's Chinese customers, advise as to market conditions, assist in obtaining business, and, in general, act as a go-between and as the Chinese manager for the firm in its relations with the Chinese business public. The contract of the comprador generally allows him one-half of 1 per cent commission on all business done, based on the c. i. f. value of the goods sold. If the volume of business is exceptionally large, the commission is only one-fourth of 1 per cent.

The comprador system has its advantages and also its drawbacks, but for the present the comprador is an indispensable factor in the foreign trade of China. The longer a firm has been doing business in China, the less it should be obliged to depend upon the comprador. However, practically every foreign firm in China employs native salesmen, who to all intents and purposes are compradors. The written contract which is now in vogue is based on the principle that the comprador must guarantee the commercial and financial standing of all Chinese firms introduced by him to the foreign firm, which is practically the same as the old verbal contract. But the legal protection afforded by the written contract and the sense of security obtained have done much to standardize the position of the comprador and to prevent misunderstandings detrimental to trade relations. In the development of the foreign trade of the new China the comprador will be a greater factor than in the past. The American business man should work with this comprador rather than apart from him, learn to know him and his methods, utilize his services, teach him to understand American methods and salesmanship, with the object of training a responsible Chinese staff under a competent and responsible Chinese head.

TRADE OF CHEFOO IN 1922.

Consul Stuart Lupton, Chefoo, China.

Uniformly good crops and freedom from political disturbances and brigandage resulted in a comparatively prosperous year for Chefoo during 1922. While the foreign trade for the port showed a decrease in value from 1921, the total tonnage increased. The total trade for 1922 was 18,477,867 haikwan taels—a decrease of 2,605,609 haikwan taels from the preceding year. (1 haikwan tael=$0.8463.) Chefoo's leading customers, in order of importance, are the United States, Hongkong, Chosen, Australia and New Zealand, and Great Britain.

In 1922 the United States again took the largest portion of the hair nets shipped from Chefoo, the value of these exports to the United States being $3,319,322, which represents a decrease of 37½ per cent from 1921. The greater portion were the double nets, due to the fact that the American market was overstocked with single nets. An export duty on hair nets was made effective in September, 1922. This duty is expected to improve the quality of the nets and increase exports.

The opening of the Chefoo-Weihsin road, which is almost completed, extending through the principal straw-braid producing center of the district, is expected to revive this industry, which has almost disappeared because of poor communications with the interior.

Improvement in Australian Trade and Economic Conditions.

Vice Consul William A. Dunlap, Melbourne, January 15; Consul Romeyn Wormuth, Sydney, January 17; and Board of Trade Journal, February 1.

The present large volume of Australia's oversea trade is indicative of recovery from the slump of 1921, which has involved the liquidation of large stocks of high-priced merchandise in a falling market. The value of Australia's imports during January, 1923, was about £5,000,000 more than in January, 1922, while exports increased by about £2,000,000. Imports led exports by only a small margin, and with the new wheat crop ready to move overseas, and wool shipments going forward in large volume, it is thought that exports may gain the ascendency.

Manufacturing returns show an increased turnover, with an expansion of profits. Wages are reported to be about 2 per cent higher than they were a year ago, while the cost of raw materials is from 5 to 6 per cent lower.

Increase in Manufacturing in Victoria.

Figures recently compiled by the government statistician, relating to the manufacturing industries of Victoria, Australia, show that there were 221 more manufacturing establishments in that State at the close of the year 1921–22 than at the close of the previous year, there having been 6,532 in the earlier period and 6,753 in the later. Of these 6.753, clothing and textile factories accounted for 1,818. The number of workers, male and female, in 1921–22 was 144,876—an increase of 4,133 over 1920–21. Machinery, plant, land, and buildings were valued at £40,992,280, or £5,499,545 more than their valuation in the previous year. Wages paid amounted to £23,846,495 (males, £19,497,451; females, £4,349,044)—an increase of £2,469,279.

Decreased Gold Production in New South Wales.

New South Wales is the only one of the Australian States showing a decrease in the production of gold last year. The total Australian yield for 1922 was the highest since 1903. Owing to the increased cost of production and to the gradual working out of the mines of that State, reports on the gold yield of New South Wales for December, 1922, show production to have fallen to 1,431 ounces fine, valued at £6,082, as compared with 2,987 ounces fine, valued at £12,688, for the corresponding month in 1921. For the full year 1922 the figures show a decrease of 5,951 ounces fine from the 31,173 ounces fine produced in 1921, representing a falling off of £110,231 in value in the last 12 months.

Harbin Business Conditions.

Consul G. C. Hanson, Harbin, China.

Business in northern Manchuria was at a standstill during January. The Russian Christmas holidays at the beginning of the month and the Chinese preparations for their New Year settlements interfered with normal business activities. A decrease in cereal prices and several financial factors caused an unhealthy condition in the grain market, which had a marked effect on business.

The total number of business enterprises in Harbin on January 1, as announced by the Harbin municipal council was 3,521. The list comprises 1,667 Chinese, 1,347 Russian, 387 Japanese, 26 American, 23 French, 21 British, 8 German, 8 Greek, 3 Italian, 2 Swiss, 1 Danish, and 1 Belgian.

Decreased Cost of Living in India.

The main feature in the cost-of-living index for India during 1922, as reviewed in the Labor Gazette of January, 1923, published under the authority of the director of information, Bombay, was its steadiness, compared with the somewhat violent fluctuations which characterized each of the three years previous. Conditions are slowly but surely becoming more normal. There has been a more decided drop in the price of nonfood and imported articles like cotton piece goods, however, than in food articles.

In Bombay the tendency in the cost-of-living index was steadily downward, from 173 for January to 161 for December, 1922 (1914=100), with the average for the year at 164—a decrease of 9 points from the average for 1921; 19 points from that of 1920; and 15 per cent lower than the high-water mark of October, 1920. The average for December, 1922, was the lowest recorded since 1918.

The average wholesale prices in Bombay declined 17 points during the year, closing at 173—the lowest level for the year and lower than any since the beginning of 1918. The fall in December prices was due chiefly to the reduction in the cost of food grains, which continued steadily from July. The average for the year (184½ points) is 52½ points less than for 1918.

Retail prices for food grains fell continuously during the year, varying from 24 to 53 points. However, there was an increase in the price of salt and sugar. Fuel and lighting fell 5 points and clothing 36 points. Thus the appreciable and persistent rise in the general average toward the end of the year, which marked 1920 and 1921, was entirely absent during 1922.

Owing to the housing difficulty of the industrial classes in Bombay, there was no fall in the rents paid by them during the year.

Far Eastern Trade and Economic Notes.

Trade between Australia and Hongkong.

The 1922 report of the Melbourne Bureau of Commerce and Industry gives the value of trade between Australia and Hongkong for 1921 as £910,412, of which amount £498,801 represents exports from Australia. The principal commodities exported were bêche-de-mer, butter, leather (sole and upper), sandalwood, condensed milk, wheat flour, beef, coal, and pig iron. Imports from Hongkong, the value of which was £411,611, included white rice, tea, ginger, silk piece goods, Chinese medicines, firecrackers, peanuts and peanut oil, and rattan. (Finance and Commerce, February 14.)

Labor Regulations Recommended by Chinese Chamber of Commerce.

The Chinese chamber of commerce in Shanghai has recently approved a set of regulations providing that there shall be no employment of children under 12 years of age; that one day of rest shall be granted in every seven; and that the health of the workers shall be safeguarded by limiting the working hours, improving sanitary conditions, and installing safety devices for machinery. All firms and factories have been urged by the chamber to cooperate in the enforcement of these regulations.

Increase in Queensland's Gold Yield.

Gold production in Queensland, Australia, has been on the increase for some months past, and the January, 1923, issue of the Queensland Government Mining Journal reports a gold revival. The December, 1922, yield (10,443 fine ounces, valued at £44,359) was nearly three times as large as that of December, 1921, while for the 12 months ended December 31, 1922, the yield was 79,332 fine ounces, valued at £336,980, or more than twice that of the year 1921. (Vice Consul W. T. Costello, Newcastle, New South Wales.)

Canadian Sales Promotion in China.

Salesrooms for a varied assortment of manufactured and agricultural products of Canada have been officially opened in Shanghai by the Canadian Government for the purpose of fostering Canadian trade in China. The sales organization operates in conjunction with display rooms, which contain large show cases with suitably arranged samples of over 75 Canadian manufacturers. The various lines exhibited include hardware, machinery, phonographs, leather goods, vacuum cleaners, rubber goods, butcher-shop accessories, tinned fruits, candies, footwear, feminine lingerie, and toilet articles. The Canadian commercial exhibit is the second permanent Government exhibit to be instituted in Shanghai. The Australian Government has had sample display rooms for about a year and a half. These rooms are merely for display purposes and no sales or orders are solicited or taken.

Additional information regarding the Far East appears in this issue under the following sections:

Commercial law:
Consignment laws in Java.
New Zealand companies' amendment act of 1922.
Automotive products: Japanese automotive imports will increase in 1923.
Transportation—shipping: Japanese shipping subsidies for 1923.

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

COMMERCIAL TREATIES.

Consul C. S. Winans, Prague, February 12.

CZECHOSLOVAKIA–NETHERLANDS.

Conclusion of Commercial Treaty.

A treaty of commerce was signed on January 20, 1923, between representatives of the Czecho-Slovak Republic and the Netherlands. The new treaty is based upon the most-favored-nation clause and has been concluded with a validity for one year. It contains special provisions designed to assist business men of either country in obtaining the permits necessary to carry on their affairs when sojourning in the territory of the other.

GENERAL TARIFF CHANGES.

IRISH FREE STATE.

Consul William P. Kent, Belfast, February 21.

Establishment of Customs Barrier Against the United Kingdom.

The Commissioners of Customs and Excise for Great Britain announce that from April 1, 1923, traffic with the Irish Free State, whether by sea or across the land boundary between the Free State and Northern Ireland, will be subject to the customs laws and regulations applicable to overseas trade. Certain temporary arrangements have been made by agreement with the Free State customs authorities to facilitate the treatment of dutiable goods. It is also temporarily arranged that the Irish Free State will make the same concessions in respect of goods imported from Great Britain or Northern Ireland.

Ships trading between the United Kingdom and the Free State will be required to furnish reports of cargo on arrival and manifests on departure. Importers and exporters must make arrangements similar to those which they make when trading with foreign countries, including the opening of packages for customs examination. Trade between Great Britain and Northern Ireland, however, is not affected and will continue to be on the same coastwise system as in the past.

MADEIRA.

Consul Stillman W. Wells, Funchal, February 21.

New Local Import and Export Duties.

A tax of 2 per cent on duties collected on all imports into Madeira and an export tax of 3 per cent on all exportations from Madeira have recently been established. These duties are local and are in addition to all existing duties.

POLAND.

Acting Commercial Attaché Elbert Baldwin, Warsaw, February 17.

Additional Items in Luxury List.

By a joint decree of the Polish Ministries of Finance, Industry, and Commerce, dated February 1, and effective on the seventh day after publication, the following items have been transferred from the list of goods subject to a coefficient of 1,000 and added to the items to which a coefficient of 1,500 is applied:

(Item ex-21) cigarettes; (item ex-62) cut flowers, bouquets, and wreaths made of flowers, leaves, and other parts of plants; (item ex-172) catgut strings (musical); (item ex-202) power belts made of camel's hair; (item ex-210) hats made of animal down.

The present decree will not apply to goods in transit directly to Poland on the day preceding the day upon which this decree was issued; in transit indirectly to consignees in Poland on the day of publication of the decree; or in storage on the day when this decree came into force; provided that clearance is obtained within one month.

According to the decree effective February 9, 1923, the above-mentioned articles are now subject to the increased coefficient of 3,000.

Acting Commercial Attaché Elbert Baldwin, Warsaw, February 17.

Doubling of General and Luxury Duty Coefficients.

The general duty coefficient has been raised from 1,000 to 2,000 and the luxury coefficient has been raised from 1,500 to 3,000 by a Polish decree effective February 9, 1923. The special coefficients of 10, 50, and 150 remain unchanged.

This decree will not apply to goods in transit on the day preceding the date of coming into force of the order or to goods in storage on the date of coming into force of the order, provided that clearance is obtained within one month.

[Announcements of former increases in the above coefficients and the classes of commodities to which they apply appeared in COMMERCE REPORTS for January 22, 1922, and January 29, 1923.]

IMPORT AND EXPORT RESTRICTIONS.

BRITISH INDIA.

Vice Consul Harold Shantz, Calcutta, January 25.

Coal May Now be Exported.

The order of April 6, 1922, prohibiting the exportation of coal from British India has been canceled from January 1, 1923.

Restrictions on Exportation of Opium Derivatives.

The exportation from British India of the derivatives of opium, such as medicinal opium, morphine, cocaine, and their respective salts, and heroin, is restricted to cases in which the consignment to be exported is covered by a certificate issued under the authority of the Government of the country of destination. This order was made under authority of section 19 of the Sea Customs Act (VIII of 1878) and became effective January 1.

ITALY.

Commercial Attaché H. C. MacLean, Rome, February 10.

Modification of Export Regulations on Metals.

The Italian Ministry of Finance has revoked the authorization granted to customs authorities to permit the exportation of copper, brass, bronze, and other alloys containing a majority of copper, including remnants of said metals procured through the destruction of munitions and other war material, whatever their destination. The custom authorities are, however, authorized to allow the exportation of nonferrous metal scrap, except that of copper and copper alloys containing a major part of copper.

POLAND.

Acting Commercial Attaché Elbert Baldwin, Warsaw, February 17.

Prohibition of Exportation of Lumber and Timber.

Due to the alleged excessive exploitation of Polish timber reserves, the Agricultural Committee of the Diet has ordered the suspension of further exports of lumber and timber until a new policy of exploitation and export has been formulated by the Diet.

A large number of foreign companies, including American interests, operating lumber concessions in Poland and holding export permits proportional to domestic deliveries will be affected by the order.

[See COMMERCE REPORTS for March 19, 1923, for export prohibition on aspen wood.]

SWITZERLAND.

Recueil des Lois Fédérales, Berne, February 21.

Removal of Import Restrictions on Certain Articles.

By a decision of the Swiss Federal Department of Public Economy, dated February 20, 1923, and effective on February 26, licenses are no longer required for the importation of the following articles over all frontiers: (Item 230), wood for building and cabinetmakers' wood, rough, resinous; (item 241), veneers of all kinds; (item 289), fibrous materials for the manufacture of paper, obtained by mechanical processes (wood pulp, saw dust) wet or dry; rags in pulp; (item ex-290), fibrous materials for the manufacture of paper, obtained by chemical processes (cellulose) wet or dry, with the exception of cellulose prepared with sulphurous acid; (item 300), paper, of one color, weighing from 45 to 55 grams per square meter, containing wood (paper for newspaper printing); (item 305), ruled paper and cardboard; (items 537, 540, and 543), gloves; (item 541), socks and stockings of silk; (item ex-714), round iron 30 mm. or less in diameter; (item 715), iron for making wire in coils; more than 5 and less than 13 mm. in diameter; (item ex-718b), flat iron and square iron having in section a maximum dimension of 30 mm. or less; (item ex-721), special-shaped iron having in section a maximum dimension of 30 mm.; (item ex-730b), sheet iron from 1 to less than 3 mm. in thickness, in standard sizes of 1 by 2 m. and of 1.25 by 2.5 m.; (item 774), wire nails and tacks; (items 894c and d and M 6), woodworking machines, weighing more than 10,000 kilos each.

Renewal of Import Restriction on Mathematical Cases.

By the same decree licenses are again required for the importation of mathematical cases (item 942a) into Switzerland.

Vice Consul William H. Mathee, Zurich, February 27.

Restriction on the Exportation of Gruyère Cheese.

From February 4, 1923, the exportation of Gruyère cheese from Switzerland in quantities of more than 5 kilos is subject to license, according to the local press of February, 1923. The license tax will be fixed in each case, but in general will amount to 20 francs per 100 kilos.

Recueil des Lois Fédérales, Berne, February 28.

Import Restriction on Certain Plants.

By a decree of the Federal Council of February 23, 1923, effective March 1, the following plants are subject to license upon importation into Switzerland: (Item ex-208b), trees, shrubs, and other living plants, in tubs or pots, with the exception of phoenix, kentias, cocos, arecas, cycas, chamerops, pandanus, and other palms, heathers, ericas, and coniferous plants, young plants for hedges, evergreens, and laurel; (item 210), trees, shrubs, and other living plants, not in tubs or pots, with earth ball adhering to the roots, with the exception of coniferous plants, young plants for hedges, evergreens, and laurel.

By a decision of the Federal Department of Public Economy of the same date and effective also on March 1, 1923, the licenses are not required for the articles mentioned above when imported over the French and Italian frontiers.

TARIFF CHANGES ON SPECIFIC ARTICLES.

AFGHANISTAN.

Trade Commissioner C. C. Batchelder, Calcutta, January 26.

Imposition of Export Duty on Samar Khel Wood.

A duty of 85 per cent ad valorem has been imposed on Samar Khel wood exported from Afghanistan.

Trade Commissioner C. C. Batchelder, Calcutta, January 26.

Establishment of Import Duty on Salt.

The Afghan Government has imposed a duty of 10 per cent ad valorem on all imported salt.

AUSTRALIA.

Commonwealth Gazette, Melbourne, January 18.

Removal of Dumping Duty on Portland Cement.

A notice issued by the Australian Minister for Trade and Customs on December 21, 1922, removed the "dumping" duty which had been levied on British Portland cement since November 11, 1922. This dumping duty as levied on cement was the sum representing the difference between the export price and the fair market price of the goods at the time of shipment.

BELGIUM.

Moniteur Belge, Brussels, March 2.

Establishment of Surtax on Imported Glucose.

An import surtax of 20 francs per 100 kilos is established on glucose of foreign origin, according to a Belgian decree of February 22, 1923, effective March 1.

[By a decree of February 6, 1923, full details of which appear in COMMERCE REPORTS for March 26, the Government was authorized to establish a surtax not exceeding 20 francs per 100 kilos on sugars imported from foreign countries.]

BOLIVIA.

Consul Doyle C. McDonough, La Paz, February 12.

Increased Export Duties on Silver.

Exported silver has become dutiable at a higher rate through a recent executive order, effective from February 15, 1923, and subject to the sanction of the Bolivian Congress. The former and new duties both vary according to the London quotation on silver, but there is a very large increase in the new rates for the higher silver values, as shown by the comparison in the table below.

Provision is made for a system of licensing and sampling of all silver and silver ore exports in order to insure payment of the export duty on the full value of the fine silver content.

NOTE.—1 boliviano equals $0.3893 at par; 1 kilo equals 2.2046 pounds avoirdupois.

BRAZIL.

Cable from Commercial Attaché S. H. Schurz, Rio de Janeiro, March 23.

Continued Exemption of Argentine Fresh Fruits from Import Duty.

Fresh fruits from Argentina will continue through 1923 to be exempt from Brazilian import duties, according to a decree of the President, acting upon the authorization conferred upon him by the budget law for 1923.

BRITISH INDIA.

Consul Harold Shantz, Calcutta, March 20.

Reduction in Export Duty on Hides.

The Government of British India has reduced the export duty on hides shipped to foreign countries from 15 per cent to 5 per cent ad valorem. By this action the preferential advantage formerly enjoyed by the United Kingdom is abolished, since the rate of 5 per cent ad valorem formerly applying only to exports to the United Kingdom is now in effect on all exports alike.

CANADA.

Appraiser's Bulletin No. 2733, Canadian Department of Customs and Excise, Ottawa, February 27.

Certain Metal Products no Longer Free of Duty.

Under authority granted to the Commissioner of Customs by the law for the protection of Canadian manufacturers the following articles, hitherto admitted free as goods not manufactured in Canada, are declared dutiable, since Canadian industries are now supplying similar products:

Copper in sheets up to 60 inches wide; in rolls three thirty-seconds inch to 20 inches wide and .005 inch to .125 inch thick; or wire.

Brass, bronze, gilding, and nickel silver in sheets, strips, plates, rolls, and circles three thirty-seconds inch to 48 inches wide and .005 inch to .625 inch thick.

Brass, bronze, and nickel silver alloys in round, hexagonal, square, rectangular, and special shaped rods .09 inch to 3½ inches in diameter.

Seamless brass and copper tubing (not including condenser tubes) up to and including 1 inch outside diameter.

The following items are not at present manufactured in Canada and are therefore declared free of duty: Condenser tubes, copper rods.

COSTA RICA.

Consul Henry S. Waterman, San José, March 3.

Classification and Duty of Coloring Powders for Cement.

Coloring powders for cement, intended solely for the manufacture of tiles, are hereafter to be classified un-

der article 3 of the import tariff, dutiable at 10 colones ($1=4.30 colones) per gross kilo, according to a Costa Rican decree of February 27, 1923, published in La Gaceta for March 1.

DENMARK.

Cablegram from Assistant Trade Commissioner Harry Sorensen, Copenhagen.

Continued Restriction on Footwear and Tobacco—Proposed Increased Duties.

The Danish restriction on the importation of boots and shoes and tobacco products has been continued until April 1, 1923. It is also proposed to increase permanently the duties on these commodities as follows:

Item.	Article.	Rate of duty.	
		Present, crowns per kilo.	Proposed, crowns per kilo.
236	Leather footwear	0.60	4.00
	Plus ad valorem	7½%	7½%
	Tobacco and substitutes:		
254	Stalks or leaf	1.00	6.00
255	Cigars	2.80	6.00
256	Cigarettes	1.00	6.00
	Plus ad valorem 30 per cent.		
257	Other tobacco products	1.20	6.00

[The first announcement of the restriction of the importation of these commodities was published in COMMERCE REPORTS for August 14, 1922.]

MEXICO.

Assistant Trade Commissioner H. Bentley MacKenzie, Mexico City, March 20.

Change in Export Duties on Chilte and Shark Hides.

A Mexican decree, effective March 19, classifies chilte (a kind of gutta-percha) under item 159–A of the export tariff with a duty of 0.50 peso per hundred gross kilos and places shark hides under item 28–C of the export tariff at 0.02 peso per gross kilo, instead of, as formerly, under "skins not specified," at 0.15 peso per gross kilo.

NEWFOUNDLAND.

Telegram from Consul James S. Benedict, St. Johns, March 18.

Abolition of the Special War Surtax.

The customs war surtax of 25 per cent formerly levied upon Newfoundland import duties has been abolished for all commodities except wine.

Abolition of Export Duties on Sealskins, Dried Fish, and Certain Oils.

The Newfoundland export duties on dried fish—fish, seal, and whale oils—and sealskins have also been abolished.

[The former export duties on these products were as follows: Cod, haddock, hake, ling, pollock, and halibut, fresh or dried or otherwise preserved, per quintal (112 pounds), $0.20; fish oils, viz. cod, cod liver, seal, whale, and other fish oils (per gallon), $0.02; sealskins (each), $0.20.]

PERU.

Provisional Increase of Export Duty on Balata.

The export tax on balata has been increased from 2 per cent to 5 per cent ad valorem at Iquitos (Department of Loreto), according to a cablegram from Acting Commercial Attaché W. E. Dunn, Lima, March 24. The 5 per cent rate of duty is to apply until the pending law is definitely passed.

The former rate of 2 per cent was established by a decree of February 15, 1922. (See COMMERCE REPORTS April 3, 1922.)

SWITZERLAND.

Recueil des Lois Fédérales, Berne, February 28.

Increased Export Duties on Certain Iron and Copper Scrap.

A decree of the Federal Council, dated February 23, 1923, and effective March 1, increases the duties on certain goods exported from Switzerland as follows: (Export tariff item 2a), scrap iron, filings, and other waste from iron manufacture (except turnings from cast iron) not tinned or galvanized, 1.20 francs (formerly 0.40 franc) per 100 kilos; (item 2b), waste from new copper and new brass—cuttings of sheets, bars, threads, waste from stamping and turning—not tinned, and cartridge cases and brass from boilers, 8 francs (formerly 3 francs) per 100 kilos.

CUSTOMS REGULATIONS.

FRANCE.

Ambassador Myron T. Herrick, Paris, February 24.

Regulations on Importation of Antismallpox Serums.

For every consignment of foreign antismallpox serum shipped into France a declaration stating the origin, the nature, and the quantity of the serum imported, together with the destination of the serum in France, must be presented at the Institut Supérieur de Vaccine de L'Académie de Médicine at Paris, according to a decree of December 2, 1922, published in the Journal Officiel for December 29. Every tube imported must also contain the address of both consignor and consignee and the date of the limit of utilization of the serum (30 days) counting from the time of manufacture.

GUATEMALA.

Consul A. C. Frost, Guatemala City, February 8.

Number of Commercial Invoices Required on Shipments.

In view of the misunderstandings which have arisen in regard to the number of commercial invoices required on shipments into Guatemala, the following information is given: In addition to the consular invoices and bills of lading required, three copies of the commercial invoice have been required since November 8, 1922. Carbon copies are acceptable. One of these copies is sent to the consignee, one to the Guatemalan Foreign Office, and the third to the Director General of Customs of Guatemala. The object in increasing the number of copies of commercial invoices—formerly a single copy was required—was to better control the values declared in the consular invoices.

ITALY.

Commercial Attaché H. C. MacLean, Rome, February 13.

Weekly Change of Customs Conversion Rate.

The Minister of Finance empowered the Director General of the Treasury to fix every week, instead of every half month, as heretofore, the exchange coefficient for the conversion of gold duties, by a decree published in the Gazzetta Ufficiale of February 8, 1923. Weekly publication of the exchange coefficient began on February 12.

MEXICO.

Documentation of Parcel-Post Shipments.

All parcel-post shipments to Mexico are required to have a commercial invoice visaed by the consul having jurisdiction over the place of origin, in order that a certified statement of value shall be available at the

time of clearance into Mexico, for use in the assessment of duty, according to the interpretation of a recent order secured from Mexico City by the Mexican Embassy at Washington.

The fees paid for the visa of commercial invoices are the same as those provided for freight shipments, namely: For merchandise under $5 in value, no charge; if valued from $5 to $50, the fee is $1; invoices covering shipments over $50 in value pay the full fee of $2 for the consular visa.

While visaed commercial invoices are now required on all parcel-post shipments, irrespective of value or origin, such shipments continue to be exempt from the necessity of a consular invoice and the payment of the 5 per cent fee for its certification, these requirements applying only to freight shipments.

Vice Consul de Carrière Willard L. Beaulac, Tampico, February 9.

Proper Invoicing of Shipments to Mexico.

In view of the many misunderstandings, delays and fines which have been caused from lack of clearness in invoicing shipments to Mexico, the following suggestions are considered advisable: The shipments to Mexico should be invoiced in Spanish. However, the Mexican law permits the use of English, if provision is made for a translation by the agent in Mexico, and American shippers who can not list their merchandise in good Spanish should take advantage of this offer. Merchandise should be described simply but sufficiently in detail to permit of correct classification. Technical and trade names should be avoided as much as possible.

Proper Declaration of Machine Parts.

Machinery is admitted into Mexico free of duty, but machine parts, when shipped separately from the machinery with which they are to be used, should be listed with special care, for unless it is proved that such articles are not capable of use except as machine parts they are not exempt from duty. Thus, valves, bolts, etc., although intended for use on machinery should be manifested under their own names when shipped separately, and not as machinery.

SPAIN.

Ambassador Cyrus E. Woods, Madrid, February 26.

Further Extension of Period for Compliance with Marking Requirements on Imports of Tires and Tubes.

The period granted for compliance with the Spanish decree of January 13, 1923, requiring that invoices accompanying shipments of tires and tubes shall bear the serial number of each tire or tube, has been further extended from March 9 to April 22, according to a decree of February 20 published in the Gaceta de Madrid for February 24. This further period of grace is also granted for compliance with all the other provisions of the decree of January 13—i. e., that owners of tires and tubes in Spain present proof of legal ownership and also that they make sworn declaration showing the amount of their stocks and giving the factory number of each tire and tube.

[Full details of the decree of January 13 appeared in COMMERCE REPORTS for February 5 and March 5, 1923.]

PATENTS AND TRADE-MARKS.

OPPORTUNITY FOR ACQUIRING RIGHTS TO FOREIGN INVENTION.

The bureau has been informed through an American consul in the United Kingdom that a foreign inventor desires to dispose of his American patent rights to an invention for a pocket pencil sharpener. The invention is covered by two United States patents of recent date, and transfer may be arranged on a cash basis.

[While the Bureau can not assume responsibility, further details in regard to the number of the United States patents, address of patentee, and references will be furnished upon request to firms listed on the Exporters' Index.]

INTERNAL REGULATIONS AFFECTING TRADE.

MADAGASCAR.

Consul Alfred T. Burri, Tananarive, January 24.

Upward Revision of Consumption Taxes.

The schedule of consumption taxes of Madagascar, as revised by an order of the Governor General of the Colony on December 29, 1921, and in effect since January 11, 1921, has been further revised by an order of January 8, 1923, published in the Journal Officiel of Madagascar for January 13, and effective from January 12.

Many new commodities are added to the list of goods subject to the consumption taxes, and the former rates of taxation are increased; in many cases the increase being considerable.

[Information in regard to taxes on specific articles will be furnished by the Division of Foreign Tariffs upon request.]

POLAND.

Acting Commercial Attaché H. B. Smith, Warsaw, February 16.

Increase in Excise Tax on Matches.

The excise tax on matches has been increased from 2 to 6 Polish marks per box of not more than 60 matches.

UNION OF SOUTH AFRICA.

Trade Commissioner P. J. Stevenson, Johannesburg, February 6.

New Weights and Measures Act.

An act consolidating and amending the laws in force in the several Provinces of the Union of South Africa relating to weights and measures will probably be brought into force about April 1. It will be administered by the Secretary for Mines and Industries. In anticipation of the contemplated change, the Commissioner of Customs has ordered that the expression "cwt." in connection with imported goods cleared through the customs should be discontinued and the word "cental" (100 pounds avoirdupois) or the abbreviation "ctl." used in place thereof.

Of particular interest to exporters is paragraph 46 of the act, published in the official Union Gazette, of South Africa, February 1, 1922, which provides, in effect, that nothing in the act shall prohibit the sale of an article in a container the capacity of which is not of a denomination authorized by the act, provided that such container is not represented as a measure. A person may possess such container, if it is shown that it is not used as a measure, provided that the contents, if required to be sold by measure or weight, shall be measured out with an assized measure or weighing instrument.

The United States gallon and its subdivisions are not legal units in South Africa, and the imperial gallon (approximately 20 per cent larger), with its subdivisions, must be used.

[It is understood that sufficient time will be given for the requirements of this act to become generally known, and that the law will be executed with leniency during the first few months after it becomes operative.]

TRADE-MARKS.

GREECE.

La Propriété Industrielle, Berne, January 31.

Proposed Modification of Trade-Mark Rules.

By a royal decree of October 16, 1922, the trade-mark regulations were amended to allow filing of applications with the chief of the industrial property section, Ministry of National Economy, an office created by Law No. 2880 of July 18, 1922. In addition to changes in administrative procedure, the present decree raises the trade-mark registration fee from 60 to 200 drachmas. The old fee, however, will be collected on trade-marks filed within six months following the date on which this decree became effective.

These changes are to go into effect upon the issue of an enabling decree by the ministries concerned.

Additional information regarding tariffs and trade regulations appears in this issue under the following section:

Cable review, western Europe: Danish import regulations on boots, shoes, and tobacco products.

BOOK NOTES

With a view to increasing the usefulness of its weekly COMMERCE REPORTS, the Bureau of Foreign and Domestic Commerce presents herewith a Department of Book Notes, for the purpose of informing the readers of COMMERCE REPORTS about current books and other publications dealing with foreign trade and related subjects coming within the sphere of the bureau's activities. These notes are to be restricted to a description of the scope of the publication in question and they will not contain any criticism, favorable or adverse. The bureau will reserve the right to omit mentioning publications which do not come up to the generally accepted standards for such works.

ALL ABOUT COFFEE, by William H. Ukers; 796 pages. New York: Tea and Coffee Trade Journal Co. $15.

A comprehensive and pretentious treatise on coffee, covering not only the purely technical and economic features like production and trade, but also the more picturesque phases, such as the early introduction of coffee into European and American countries, the early coffee houses, coffee in literature, coffee in its relation to the fine arts, early coffee manners and customs, etc. There are also chapters on the botany and microscopy of coffee. The volume is well printed and profusely illustrated.

FOREIGN COMMERCIAL CREDITS, by George W. Edwards; 240 pages. New York: McGraw-Hill Book Co. $2.50.

The author, formerly of the Division of Analysis and Research of the Federal Reserve Board, has endeavored to set forth the practical and legal principles underlying the letter of credit, and has given a careful and lucid review of the operations of the letter of credit with a study of American acceptance practice and the decisions of American courts. That rather elusive instrument, the authority to purchase, is also reviewed. British, German, Japanese and Continental practices are carefully compared with American usage. A chapter is devoted to the trust receipt. The book is provided with a series of specimens.

TECHNICAL PROCEDURE IN EXPORTING AND IMPORTING, by Morris S. Rosenthal; 312 pages. New York: McGraw-Hill Book Co. $3.

This work, as its name indicates, deals almost entirely with technical procedure. It is a handbook of export technique and documentation. The forms used in exporting and importing, including those used in invoicing, drawing on the customer, insuring shipments and filing claims are shown, and the use of each form is carefully explained and illustrated. The definitions of terms and quotations, as well as suggestions for packing and marking, make the book of value to the novice in exporting. The discussion of marine insurance and customs procedure, both in the United States and abroad, is of interest to the export executive. The four chapters on financing import and export shipments give a full treatment of the subject, especially as regards documents used in transactions.

War Department Sales for April, 1923.

The Director of Sales announces the following program of sales for the month of April, 1923, subject to change:

April 3, Washington, D. C.: Sealed bids, railway equipment, Camp Lee, Va.

April 5, Washington, D. C.: Auction, quartermaster supplies.

April 5, Fort Oglethorpe, Ga.: Sealed bids, buildings.

April 7, Savanna, Ill.: Sealed bids, salvage material.

April 10, Philadelphia, Pa.: Sealed bids, shells and components.

April 10, Chicago, Ill.: Sealed bids, miscellaneous quartermaster supplies.

April 10, Camp Funston, Kans.: Auction sales, buildings and improvements.

April 10, Watervliet, N. Y.: Sealed bids, power-plant equipment.

April 10, Schenectady, N. Y.: Auction, quartermaster supplies.

April 12, Boston, Mass.: Auction, quartermaster supplies.

April 17, Philadelphia, Pa.: Auction, quartermaster supplies.

April 17, Camp Eustis, Va.: Sealed bids, buildings and improvements.

April 19, New Cumberland, Pa.: Auction, quartermaster supplies.

April 20, Washington, D. C.: Sealed bids, Charleston quartermaster depot.

April 24, Camp Jackson, S. C.: Auction, quartermaster supplies.

April 27, New Orleans, La.: Auction, quartermaster supplies.

The foregoing schedule includes only the more important sales of property which has been declared surplus and available for sale.

For full information and catalogues, address: Chief, Sales Promotion Section, Office of the Director of Sales, Room 2515, Munitions Building, Washington, D. C.

FOREIGN TRADE OPPORTUNITIES.

Reserved information may be obtained from the Bureau and its district and cooperative offices by duly registered firms and individuals upon written request by opportunity number. The Bureau does not furnish credit ratings or assume responsibility as to the standing of foreign inquirers; the usual precautions should be taken in all cases, and where no references are offered it does not necessarily imply that satisfactory references could not be given. Correspondence may be in English unless otherwise stated. Symbols: * Reported by American consular officers; † Reported by commercial attachés and trade commissioners; ‡ Direct inquiries received by the Bureau.

American manufacturers and exporters in following up "Foreign Trade Opportunities" submitted by foreign representatives of the United States Government should not fail to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters, as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.

5886.*—A cement mixer of one-half to 1½ cubic yards capacity, to be operated by gasoline motor, and cement brick-making machine, portable, hand-operated—MEXICO. Purchase. Quotations, c. i. f. Mexican port. Terms: Cash with order. Correspondence, Spanish.

5887.†—Machinery for handling, ginning, and pressing of cotton—SOUTH AFRICA. Purchase and agency. Quotations, f. o. b. New York.

5888.*—Automatic machine for attaching snap buttons on cards or cardboard, size of buttons, 5, 7, 8, and 10 millimeters—SWITZERLAND. Purchase. Terms: Payment on receipt of machine or in advance. Correspondence, French.

5889.†—Hand devices or machines for making carpets with knitting wools—URUGUAY. Purchase. Payment, letter of credit on New York bank.

5890.*—Small modern plant for the manufacture of paper bags for grocers, to be driven by electricity, and include a suitable printing press and type for printing the bags—Natal, SOUTH AFRICA. Quotations, c. i. f. South African port. Terms: Cash against documents.

5891.‡—Machines for enameling and coating papers on the reel and machines for pasting several sheets together—ENGLAND. Purchase. Quotations, f. o. b. New York.

5892.‡—Machinery and appliances for contractors and general construction work, particularly a truck or wagon used in carrying, in one lot, the aggregates used for concrete—ENGLAND. Purchase and agency.

5893.*—Clay mills capable of pulverizing clay into fine flour-like paste for pottery purposes, capacity to be about 2 tons of clay per 48 hours, to be operated by electric power—CHINA. Purchase. Quotations, c. i. f. Chinese port. Terms: Cash against documents, in gold.

5894.*—Machinery for making machine-glazed tissue and wrapping papers, including beaters, digesters, and calenders, to make paper 210 centimeters wide, with a basic weight of 14 to 40 grams per square meter, capacity of 6 tons per eight-hour day; complete machinery for grey news board-making plant, without dryers, to produce 3 tons of board per eight-hour day, size 72 by 102 centimeters, thickness to vary from 0.10 to 0.40 gauge, raw materials to be used being old news and waste paper; and a sulphite pulp plant, complete, to manufacture about 5 tons of raw sulphite pulp per eight-hour day out of cotton-plant stalks—BRAZIL. Purchase. Quotations, f. o. b. American port.

5895.*—Cotton fishing nets and cotton net thread or twine, sizes 30/9, 30/6, 30/12, 40/6, and 40/9—SPAIN. Purchase. Quotations, c. i. f. Spanish port. Terms: Payment against documents on arrival of goods. Correspondence, Spanish. A sample of the kind of nets desired was forwarded and may be examined at the Bureau or its district offices. (Refer to file No. 86379.)

5896.‡—Textiles, including cotton and fancy staples—BRITISH WEST INDIES. Agency.

5897.*—Cotton—FINLAND. Agency and purchase. Quotations, c. i. f. all Finland ports. Terms: Net cash against documents.

5898.*—Fishing lines of all sizes and qualities and wrapping twine—SOUTH AFRICA. Purchase and agency from manufacturers. Quotations, f. o. b. American port.

5899.†—Cotton—MEXICO. Representation of southern cotton firms.

5900.*—Woolen and cotton piece goods, haberdashery, automobile hood cloth, imitation leather, oilcloth, hosiery, finished leathers, and shoe laces—INDIA. Purchase and agency. Quotations, c. i. f. port of India.

5901.*—Tire-inflation equipment, including 200-pound pressure air tank, 1-horsepower electric motor, and a 2-cylinder pump—MEXICO. Purchase. Quotations, c. i. f. El Paso, Tex. Terms: Cash.

5902.*—Automobile accessories of all kinds and spare parts for motor cars—DUTCH EAST INDIES. Purchase. Quotations, c. i. f. East Indies port. Terms: Cash against documents.

5903.*—Automobile accessories, bicycles, and musical instruments, such as harmoniums, phonographs, and small organs—INDIA. Purchase. Quotations, c. i. f. Tuticorin, transshipment from Colombo. Payment, by letter of credit against documents.

5904.*—Materials and furnishings for automobile bodies—SWITZERLAND. Quotations, c. i. f. Antwerp or Marseille. Correspondence, French.

5905.*—Automobile trucks and accessories—CANADA. Agency. Quotations, c. i. f. Canadian port.

5906.*—Ebonite (hard rubber)—SWITZERLAND. Purchase. Quotations, c. i. f. Havre and Antwerp. Terms: Payment against documents. Correspondence, French.

5907.*—Automobile tires—AUSTRIA. Agency. Quotations, f. o. b. New York.

5908.*—Sulphate of ammonia and fertilizer—CHINA. Purchase. Quotations, c. i. f. Chinese port.

5909.*—Rosin of good quality, 50 barrels monthly; 25 medium-sized drums each of caustic soda, silicate of soda, and soda ash monthly; and 200 sacks of 200 pounds each of silicate of magnesia every three months—CUBA. Purchase. Quotations, f. o. b. American port. Terms: Cash against documents.

5910.*—Linseed cakes, corn, oats, barley, rye, flour, and all kinds of oil cakes—NETHERLANDS. Purchase and agency. Quotations, c. i. f. Netherlands ports. Terms: Cash against documents at port of destination.

5911.*—Crude rice in quantity of 500 sacks of 50 kilos each—MEXICO. Purchase. Quotations, c. i. f. Mexican port. Correspondence, Spanish or French. Sample is requested.

5912.‡—Textiles, confectionery, motor accessories, lubricants, electrical goods, novelties, etc.—Punjab, INDIA. Agency.

5913.*—Flour, 0 and 00 qualities (equivalent to good patent flour), in 10-ton lots—SYRIA. Quotations, c. i. f. Tripoli and Alexandretta. Terms: Half cash with order, balance against documents. Samples of 1 pound of each grade of flour desired by parcel post. Correspondence, French.

5914.†—Eggs, lard, and other packing-house products—MEXICO. Purchase and agency. Quotations, f. o. b. American port. Terms: Payment against documents. Correspondence, Spanish.

5915.*—Canned beef, canned stew, and hard-tack, in very large quantities—SERBIA. Purchase. Quotations, c. i. f. Gruz and Bakar. Terms: Cash.

5916.*—Glucose and starch for bakers, confectioners, and laun-
struction—MEXICO. Purchase or agency. Quotations, f. o. b. factory.
Natal port. Terms: Cash against documents.

5917.*—Electric iron, 110 volts, of 6 pounds, costing about $3; electric stoves with two or three hot plates, carrying about 1,000 watts; and similar electrical apparatus of cheap construction—MEXICO. Purchase or agency. Quotations, f. o. b. factory.

5918.*—Motors and accessories to generate electric light in 10 different towns in CHINA. Capacity ranging from 11 to 110 kilowatts. Agency. Price lists, descriptive catalogues, and detailed description of capacity of motors, amount of fuel consumed, etc., requested.

5919.*—Lubricating oils of all grades—INDIA. Purchase or agency. Quotations, f. o. b. New York. Terms: Payment against documents.

The Commodity Divisions Are at Your Service.

The bureau is prepared to furnish expert information concerning many products entering into our export trade, and special divisions for the following commodities have been organized: Agricultural implements, automotive products, chemicals, coal, electrical apparatus and equipment, foodstuffs, hides and leather, industrial machinery, iron and steel, textiles, lumber, paper and paper products, petroleum, rubber and rubber goods, shoes and manufactured leather goods, transportation equipment, and specialties, which include musical instruments, jewelry, amusement devices, hardware, scientific instruments, etc.

Each commodity division is headed by a man with practical experience in the sale of those products abroad and with first-hand knowledge of the problems confronting American exporters in foreign markets. The commodity divisions secure for the trade the kind of information which it wants and help to disseminate it as rapidly and widely as possible.

Each division is in close contact and cooperates with the principal trade associations in its particular field and is guided largely by these associations in determining the nature of the information and service which would be of most benefit to the trade as a whole.

COMMERCE REPORTS

A WEEKLY SURVEY OF FOREIGN TRADE

HERBERT HOOVER, SECRETARY OF COMMERCE — JULIUS KLEIN DIRECTOR BUREAU OF FOREIGN AND DOMESTIC COMMERCE

Export Advertising.

American export journals have been described as the pioneers in the building up of American foreign trade. At a time when export activity was regarded by many as a hazardous venture and was undertaken by only a few persons as a serious business enterprise, it required both farsightedness and good sportsmanship to advertise in American export periodicals.

Many export magazines have been compelled to discontinue publication, but those that have adhered to rational principles and have combined intelligent management with energy, patience, and the financial strength to weather periods of depression are now the great American export journals, with a clientele in all parts of the world.

These export publications have become, one may say, the "shop windows of America." True, they are by no means the sole sales outlet for American foreign trade, but they have established a secure position of concrete usefulness in a definite field.

Following the trend of the times, the publishers of these papers have established an association for the protection of their interests by improving their service through interchange of experience.

It is a matter of distinct pride and gratification for one to feel sure that the vast majority of the products advertised in American export papers, and of the American standard articles shipped to foreign countries, are made by reputable concerns and sold on honor.

The great moral progress exemplified in the "Better advertising" slogan finds its counterpart in export publications, and a number of conferences have recently been held by export publishers in order to arrive at some definite means of eliminating the possibility of unfair advertisements creeping into the export papers unawares. Export publishers, before accepting new business, will exercise special caution when dealing with:

1. Applicants with high-sounding names unknown to publishers.
2. Advertisers whose addresses are obviously in residential or obscure sections.
3. Advertisers giving post-office box addresses only.
4. Advertisers, new and unknown to publishers, whose products obviously require unusual equipment, such as bridge and construction companies, steel works, etc. These must show actual location of works.
5. New and unknown firms offering secondhand products.
6. Concerns that are known to be weak financially.
7. Experimental concerns arising in the wake of new inventions, such as radio improvements, etc.

The careful investigation of new advertisers will prove a measure of protection not only to the foreign buyer but also to the old-established advertiser and to the honorable new firms starting a campaign for foreign trade.

All complaints regarding unfair practices will be investigated, and assistance will be rendered to officials of the United States Department of Commerce and the Federal Trade Commission in protecting honorable merchants against unfair competitors.

The Value of Window Displays.

American exporters should carefully consider the possibilities of window displays in foreign countries where this is possible. That these form, in lines adapted to purposes of display, a ready aid to the sale of American goods in foreign markets is indicated by the attention which such window displays attract among passers-by. For example, it is stated that crowds of Japanese stand spellbound before window displays of occidental wares. Whether or not many potential purchasers are numbered among them, this is an excellent and comparatively inexpensive method of bringing a line of merchandise to the attention of large numbers of people who may not be reached by any other means.

Window displays of the proper kind can not, however, be arranged except through close cooperation

with the exporter's agent or dealer abroad. Often the selling value of such displays has to be brought home to him. The proper material, such as backgrounds and cut-outs, has to be sent to the agent or dealer with instructions as to its use. If a firm has a foreign salesman in the field, he should devote some portion of his time with the firm's foreign connections "selling" the idea of the value of window displays and, when necessary, actually assisting in their arrangement. In all cases where the line permits, the export manager should consider the possibilities of window displays as an integral part of his selling plans.

The chief obstacle in the path of foreign window displays is that even in many of the larger cities of such markets as Latin America and the Orient only a few of the most modern stores have windows in which proper displays can be made. The custom of covering up the windows at noon and night with heavy iron shutters further limits the advertising effectiveness of these. However, at least half the cities in which the average exporter does business offer window-display possibilities that are well worth cultivating.

Illustrative Cuts in Foreign Periodicals.

When illustrative cuts form an integral part of the advertising copy prepared by American exporters for foreign advertising media, it is well for the man in charge of such advertising to see sample copies of the journal in which the advertisement is to be placed. The quality of paper in some foreign periodicals and newspapers is so poor that any detail work in illustrative cuts becomes blurred beyond recognition. The matter becomes particularly serious if a trade-mark or slogan is to be "sold" to the foreign reader. For example, an American exporter of a certain trade-marked brand of tobacco recently advertised extensively in foreign publications. The main feature of his advertisement was a cut of the package with the brand and trade-mark clearly stamped on it. Unfortunately, in a number of publications the cut was so blurred that neither brand nor trade-mark could be read. A manufacturer of household appliances who featured his slogan in all advertising copy had a similar experience. In each case the advertisement in those publications was a waste of money.

The fact that certain foreign publications use paper of poor quality does not mean that these are not valuable advertising media. For this condition is sometimes true of newspapers with circulations running into the hundreds of thousands. What the advertiser can do in a case like this is to provide cuts that contain sharp outlines in silhouette with little lettering.

Another point worth noting is that certain foreign dailies using poor paper have weekly supplements printed on far better paper. For these supplements illustrative cuts might well be used, and consequently the American exporter could prepare two types of copy, each adapted to the type of paper on which it is to be printed.

American Consular Officers on Leave.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of venue.	Address.
Savage, John M.....	Southampton, England.	May 16	Care of Manhattan Club, Madison Avenue and Twenty-sixth Street, New York City.
Strother, Shelby F....	Guadeloupe, West Indies.	May 12	First and Burnett Streets, Louisville, Ky.
Huddle, J. Klahr.....	Hamburg, Germany	May 25	Shawhan Hotel, Tiffin, Ohio.

NAMES FROM BUREAU FILES BRING ORDERS.

A motor-vehicle corporation in New York State mentions the following practical results from the service of the Bureau of Foreign and Domestic Commerce:

This inquiry and order [from Adelaide, Australia] came as a result of our circularizing the Australia names furnished to us by your department.

Would also advise that, as a result of names you gave us for Santo Domingo, we have closed with [dealers in that city] and have their order for 10 machines for immediate shipment.

We have also been successful in closing agencies in South China, Java, and Siam as a result of the cooperation of your department and are now in correspondence with a number of other firms, which we trust will develop into distributers.

A letter of much the same purport comes from another New York firm, which writes:

We have already made several valuable connections through the names obtained through your file, and can not overestimate the value and importance which the Bureau has been to us.

MONTHLY CABLE REVIEWS

WESTERN EUROPE.

Charles E. Lyon, Acting Chief, Western European Division.

ITALIAN GOVERNMENT CONTINUES REFORM POLICY.

Based on cable from Commercial Attaché H. C. MacLean, Rome, March 30.

[The results of the policies enunciated by the Mussolini Government last fall are beginning to become apparent. Progress is being made toward balancing the budget, economies are being effected in the operation of Government departments, and tax reforms tending to simplify and reduce taxes on business are being introduced. Italian industry is fairly strong, but not active. High prices of raw materials are damaging the textile industries, and the metal industries are uncertain. The automobile industry, however, is active, with production increasing. Business failures continue to increase in number. Imports by ocean, as shown by February statistics, continue to consist principally of coal, grain, cotton, and mineral oil. Imports of German coal are declining.]

Government Activities.

Progress is being made toward the balancing of the Italian budget, although the many difficulties encountered make it impossible to foresee an early accomplishment of this end. The Minister of Finance reports that the budget for the Department of Finance, formed by the consolidation of the former Ministry of the Treasury and the Ministry of Finance, has been reduced by 251,000,000 lire, and that the budget for the Ministry of the Interior has been reduced by 160,000,000 lire, making a total of 411,000,000 lire. It is claimed that in spite of the radical reorganization which has been made, including the suppression of several bureaus, no reduction of efficiency has been involved. The deficit for the operation of posts, telegraphs, and railways is being materially reduced.

The match monopoly has been abolished, and the abolition of the life insurance monopoly has been decided upon. The insurance field will be opened to private companies, both local and foreign. Insurance companies will be obliged to reinsure 40 per cent of the risks with the National Insurance Institute.

Tax Reforms.

A new decree has been issued simplifying and reducing business taxes which have long been burdensome and uncertain. A reform of the present complicated system of direct taxes is also expected. It is proposed to levy a single income tax which will not only take the place of the Federal income tax, but will also do away with the existing provincial and communal taxes. Under the new system, a determined percentage of the total amount collected by the State will be alloted to the Provinces and communes. Inheritance taxes are also heavy and conflicting, and therefore reforms of these taxes are projected. It was pointed out by the Parliamentary Economic Alliance that in some cases taxes on an inheritance might amount to 105 per cent.

The Financial Situation of the Government.

On the basis of returns for eight months, it is estimated that revenues for the fiscal year ending June 30 will exceed budgetary estimates by 1,600,000,000 lire, and approximately equal revenues in the past fiscal year.

The statement of the Treasury for February 29 showed a gain of 750,000,000 lire in cash holdings during the month. At the same time the debit balance increased by 417,000,000 lire, and short-term notes showed an increase of 609,000,000 lire. The combined statement of the issue banks on January 31 gave metallic reserves as 1,241,800,000 lire; discounts, 5,983,000,000 lire, against 6,178,000,000 lire on December 31; and circulation, 17,446,000,000 lire, a reduction of 566,000,000 lire since December 31.

During March the securities market was active. Government issues were particularly strong, demonstrating the confidence of the public in the work of the present administration. The consolidated 5 per cents are now selling at 88.50, a higher price than that at which the securities were issued.

Projects in Southern Italy and Sicily.

For some time the Government has been promising to aid in the development of the resources of southern Italy, which claimed that its welfare had been neglected for that of the northern Provinces. In answer to this criticism, the Government is now arranging for a loan of 65,000,000 lire to bring to completion a group of hydroelectric plants in the Sila Mountains in Calabria. This is the first of a number of projects for developing the water power resources of southern Italy and Sicily.

Contracts have been signed for the building of a narrow-gauge railway in Sicily. American construction companies will participate in the development of this road. Sicilian interests are elated over the conclusion of the agreement with American sulphur interests, which is expected to be of considerable benefit to Sicily.

Textile Industries Encounter Difficulties — Automotives Strong.

Business failures in January, as reported by the Milan Chamber of Commerce, numbered 392. This is larger than any previous month since the war, continuing the upward trend of 1922. The reason for the increase is not clear, for, while the Italian industry is not in a notably flourishing condition, the situation has undoubtedly improved in the past year.

Partial stagnation is being felt by the textile industries chiefly because of increasing production costs not accompanied by rising prices for the output. The high price of American cotton is affecting the demand; imports are being reduced, and increasing quantities of Egyptian and Indian cotton are being substituted. The woolen mills are moderately active on summer goods, but domestic demand for yarns is limited and export trade is dull. The leading feature of the silk situation

is the speculation in cocoons, which has disturbed the market considerably. Demand for silk is limited, and it is expected that production will be reduced.

The automobile industry at present is in a flourishing condition. The export demand is excellent, and it is stated that Fiat production is approachng 100 cars daily. Building construction is reviving because of the removal of restrictions on leases and new provisions for exemption from taxation.

Labor Conditions Improve—Wheat Acreage.

Labor conditions in 1922 were good compared with previous years; the number of strikes declined 48 per cent compared with 1921, while the number of strikers involved declined 32 per cent. A bill establishing a working day of eight hours has just been approved.

The condition of crops is good. Wheat acreage this year amounts to 11,614,000, an increase of 1 per cent over last year.

Ocean Imports in February.

Statistics of ocean imports in February show continued large receipts of coal, with the percentage of German coal decreasing. Of the total imports of 778,000 tons of coal in February, Great Britain supplied 667,000 tons, while Germany furnished 105,000 tons compared with 191,000 tons in January. Grain imports amounted to 300,000 tons compared with 233,000 tons in January; cotton imports, to 16,000 tons compared with 8,303 tons; and mineral oils, to 44,000 tons compared with 37,000 tons.

Prices of coal are advancing to the level where American competition is possible. Prices of iron and steel are also rising, and wheat is higher. The active competition of local vegetable oils is reducing imports.

ENORMOUS BUDGET SURPLUS IN GREAT BRITAIN.

Based on cable from Commercial Attaché Walter S. Tower, London, March 29.

[The British budget surplus of more than £100,000,000 for the fiscal year just ended has been quietly received in the financial market. New issues of capital featured the end of March. Rising prices continue in the metal and textile trades. The minimum wage agitation carried on by the coal miners has not affected weekly coal output, which now exceeds 5,700,000 tons. A tone of uneasiness prevails because of the uncertainty of the Franco-German situation and rising prices which are hampering production in some lines.]

Agitation for Lower Taxation.

A year ago the Chancellor of the Exchequer estimated annual expenditures and revenues at £910,000,000 each. At the close of the fiscal year, March 31, revenues amounted to £914,012,452, expenditures to £812,496,604, leaving a surplus of £101,515,848. This surplus, which is larger than had been expected a few weeks ago, is available for debt reduction. The chief interest of the business man lies in the effect of this surplus upon next year's taxation. Preliminary estimates of expenditures for the coming fiscal year are £122,000,000 for the army, navy, and air services, a reduction of 12 per cent, and £314,000,000 for the civil departments, a reduction of 22 per cent. If the consolidated fund services, which mainly consist of the interest on the national debt, approximate the figure for last year (£363,000,000) a total expenditure of about £800,000,000 seems reasonable. This is a figure about 10 per cent below the estimate of last year.

In some quarters it is desired to maintain existing rates of taxation and apply the results of the surplus to debt reduction. The Federation of British Industries succeeded last year in reducing the income tax by 1 shilling in the pound sterling. They are now strongly urging a further cut in this tax and the abolition of the corporation profits tax. Labor members of Parliament are advocating a reduction in the duty on beer in order that the retail price can be lowered 1 pence per pint, also a cut in the taxes on sugar and tobacco. Even if the present scale of taxation is maintained, next year's budget receipts will fall about £80,000,000 below this year's figure owing to the absence of the excess profits duty and the fact that the income tax will be collected on the average of the three years 1920, 1921, and 1922, while the three year average income paid on last year covered the boom period of 1919.

After allowing for this drop in revenue, however, there still remains £30,000,000 to £40,000,000 which may be used for debt redemption or lowering of taxes. A cut of 6 pence in the pound sterling on the income tax means a loss of £25,000,000; the elimination of the corporation profits tax, £15,000,000; the reduction in the beer duty, £22,000,000; the reduction of sugar and tobacco taxes, £10,000,000 to £20,000,000. It is obvious that not all parties can be satisfied, but at any rate next year's budget can be comfortably balanced. There is little probability of alteration in motor taxation as the committee studying that subject will not report in time for their findings to be included in the new budget.

Industries Active.

The Coal Miners' Federation Conference in London decided on March 28 to refer back to the local miners' union the question of abolition of the profit-sharing plan, meanwhile asking the miners' executives to renew negotiations with the mine owners for raising minimum wages. The British output of coal for the week ended March 17 was 5,721,000 tons. No crisis in the coal trade is anticipated for some weeks.

The iron and steel trade reports increasing orders. A spirit of caution exists due to the Ruhr situation and higher prices. The scarcity of material is retarding new business. Railway supply manufacturers are acting on home and colonial contracts. Conditions on the Continent are retarding improvement in shipping and engineering trades.

Declining cotton prices are causing a stagnation in Manchester yarn and piece goods. The London woolen market was firm at the close of March auctions. There was a decided improvement since the opening of the auctions, especially in merinos. The overseas demand for woolen goods continues to set the pace, resulting in discomfort to home manufacturers whose domestic trade is quiet.

Number of Unemployed Declines.

The crisis in the building trades has been postponed until the middle of this month. Some settlement seems possible in the meantime, although labor refuses to arbitrate. The situation in the farm workers' strike is unchanged. The total number of registered unemployed on March 19 was 1,260,000, a substantial reduction from 1,340,000 on February 19.

CZECHO-SLOVAK ECONOMIC SITUATION UNCHANGED.

Based on cable from Trade Commissioner H. Lawrence Groves, Prague, March 31.

[The industrial situation in Czechoslovakia during March was seriously affected by a two weeks' strike in the coal industry. The export demand for iron, coal, and coke continued. Decreased unemployment and commercial failures and increased exports would indicate slight improvement in conditions. Public finance continued strong as reflected by a steady note circulation and exchange rate, together with an increase of foreign credit holdings. Bank clearings declined while savings deposits continued to rise. The Bohemian Bank, one of Czechoslovakia's principal financial institutions, failed during the month.]

Circulation and Exchange Steady—Bank Clearings and Saving Deposits.

On March 23 the note circulation of Czechoslovakia totaled 8,580,000,000 crowns (1,680,000,000 crowns below the legal limit), as compared with 8,550,000,000 crowns on February 23. The metallic reserve amounted to 826,000,000 crowns against 822,000,000 crowns on February 23; total reserves, consisting of the metallic reserves, commercial paper, foreign securities, etc., amounted to 3,270,000,000 crowns as compared with 3,100,000,000 crowns. Foreign credit holdings increasd to 533,000,000 crowns as compared with 453,000,000 crowns during the previous month. Capital levy payments on March 23 amounted to 2,500,000,000 crowns, showing a continued increase from 2,360,000,000 crowns on February 23.

The crown was quoted on the Prague exchange on March 1 at 34.10 to the dollar. The New York cable rate for one crown was $0.0296 on March 1 and the same on March 30.

Prague bank clearings from February 23 to March 23 amounted to 5,140,000,000 crowns against 6,500,000,000 crowns during the previous period. February saving deposits were over 9,100,000,000 crowns, a month's increase of 114,000,000 crowns.

Coal Production Affected by Strike—Industrial Situation.

The export demand for Czechoslovak iron, coal, and coke continued during March, but producers feel that this emergency demand will largely disappear with any settlement of the Ruhr problem and hesitate to enlarge the present production scale. A two weeks' strike affecting 45,000 coal and coke laborers in the Ostrava districts ended March 26 with the continuation of the present wage scale, which averages 46 crowns per day, until July 30; a compromise had been made on other phases of the dispute. The production has been estimated at only 430,000 tons of coal, valued at 97,000,000 crowns, during the month on account of the strike. Production of coke is estimated at 50,000 tons valued at 17,000,000 crowns, with a wage loss of about 25,000,000 crowns. During January the output of bituminous coal amounted to 912,000 metric tons and of lignite, 1,580,000 metric tons. Coke production amounted to 74,000 metric tons.

During March the Bohemian Bank failed with an estimated loss of 45,000,000 crowns; its associated industrial companies include the Epiag Porcelain Co. Increasing failures in the Slovak lumber industry are reported owing to trade conditions. The Prague Spring Fair developed a moderate demand for agricultural machinery, textiles, leather, and glassware.

Sugar Production.

Sugar production from October, 1922, to February, 1923, amounted to 52,000 metric tons of raw and 587,000 metric tons of refined. Exports of raw sugar totaled 10,000 metric tons and of refined, 164,000 metric tons, chiefly to England, Austria, France, and Italy. Domestic consumption amounted to 177,000 metric tons of raw sugar.

Unemployment and Commercial Failures Decrease.

On February 15 there were 200,000 unemployed receiving Government benefits. Unemployment is expected to decrease during March by about 20,000, chiefly on account of better employment of the textile and building industries. The number of unemployed at the beginning of the year was about 420,000.

Commercial failures during February numbered 426 against 616 for January, with approximate resources of 87,000,000 crowns and liabilities of 184,000,000 crowns, as compared with January figures of 97,000,000 crowns and 236,000,000 crowns, respectively.

Cost of Living—Bank and Industrial Shares.

The February retail index for Group I (covering 23 necessities such as foodstuffs, fuel, etc.) decreased to 934 from 940 for January, according to the Statistical Bureau. Group II (covering textiles, shoes, and men's hats) increased to 1,064 from 1,057 for the previous month. The February wholesale price index for Group A (covering foodstuffs and comestibles) increased to 927 from 894 for January, while Group B (covering industrial materials and products) stood at 1,145 against 1,129 for January. (These figures are based on 100 for July, 1914.)

On March 31 the bank share index, based on quotations of 13 bank stocks averaging about 500 crowns a share on December 31, 1921, was 65.1, as compared with 63.7 at the end of February. The index for industrial shares, based on 16 quotations averaging 590 crowns on December 31, 1921, was 46.2 against 46 at the end of the previous month.

Foreign Trade Increases During February.

Total February imports amounted to 200,000 tons, valued at 591,200,000 crowns, or an increase of 42,000 tons and 160,400,000 crowns over January. Total February exports amounted to 900,000 tons, valued at 873,400,000 crowns, or 187,000 tons and 97,200,000 crowns more than in January.

FAR EAST.

F. R. Eldridge, Chief, Far Eastern Division

GENERAL IMPROVEMENT MAINTAINED IN PHILIPPINES.

Cable from Trade Commissioner John A. Fowler, Manila, March 19.

[Improvement in the general economic situation of the Philippine Islands during December and January was fairly well maintained in the month of February, rendering the outlook at the close of the first two months of this year considerably more encouraging than for the same period of 1922.]

Favorable Trade Balance.

Theforeign trade of the islands for February reversed the unfavorable balance of January to a favorable balance of approximately 7,000,000 pesos (1 peso =$0.50), compared with an adverse trade balance at the end of February, 1922. Bankers, however, urge that a conservative view of the situation should still be taken, as improvement will have to continue for some time before conditions reach normal. In general, stocks are fairly well closed out and sales are being made at a profit on the laid-down costs. The acceleration in the movement of local stocks should result in a considerable amount of business for replacement. Importers' collections on staples have shown some improvement. No large increases in purchases except of necessities can be expected, however, until some of the indebtedness to the banks has been liquidated.

The favorable trade balance of February was largely due to the seasonal shipments of sugar, which amounted to 7,673,000 pesos, against 2,845,000 pesos in the previous month. Abaca exports for February also increased, but coconut oil and copra showed decreases of 1,900,000 pesos and 400,000 pesos, respectively. Total exports for the month were valued at 20,000,000 pesos, compared with 14,500,000 pesos for January and only 9,000,000 pesos in February of last year. The February, 1923, figure represents the largest value of exports from the islands since April, 1922.

Imports into the Philippines in February amounted to 11,000,000 pesos—a decrease from the 16,400,000 pesos in January, and only a slight increase over the 10,700,000 pesos of February, 1922. The principal decline was in cotton and cotton cloths.

The favorable relation of exports to imports for February established a credit balance of 9,000,000 pesos—the largest monthly balance since April, 1922. This feature in the trade of the islands is considered most encouraging.

Crop and Market Conditions.

The consensus is that this year's sugar crop will equal the December estimate of 285,000 long tons. Mill returns are good and planting is progressing favorably. It is probable that a large amount of sugar machinery will be purchased by the Philippine National Bank in connection with plans for the much-needed repairs to sugar centrals.

The general status of the textile market is better by reason of improved collections. Buying is generally conservative but greater activity is reported in the provincial markets.

There is a good demand for low-priced passenger cars, but practically no demand for expensive automobiles, while the motor-accessory trade is dull, with considerable overstocks.

Building and Development Projects.

Building permits for heavy construction were issued in Manila in February to the value of 837,000 pesos, against 810,000 pesos in January and 500,000 pesos in December. Recent plans for the construction of additional storage capacity for water for the city of Manila and for the development of irrigation in the vicinity of this reservoir (see COMMERCE REPORTS of December 25, 1922, page 805), called for the issuance of bonds to the amount of 12,000,000 pesos, of which the Metropolitan Water District of Manila is to issue 2,000,000 pesos in the near future. The issue of bonds amounting to 5,400,000 pesos for public works and irrigation, recently authorized, has been approved by the secretary of finance.

Sales Tax Increased—Finances.

The bill increasing the Philippine sales tax from 1 to 1½ per cent has been signed by the Governor General, but the measure exempting reexports from the tax has not been acted upon by the legislature. This is one of the measures designed to aid in the development of Manila as an entrepôt for American trade in the Orient. There has been no action yet on additional tax legislation proposing levies on certain articles classed as luxuries, including automobiles, pianos, jewelry, perfumes, firearms, and articles manufactured from silk. This involves an annual tax of 20 pesos, plus a special merchandising tax of 5 per cent, in lieu of the sales tax of 1½ per cent.

The heavy seasonal export movement requiring payments in Manila caused telegraphic transfers on New York to stand a three-fourths discount at the end of the month. There has been no change from the banks' interest rate of 9 per cent.

FOREIGN TRADE OF JAPAN DURING FEBRUARY.

Cable from Commercial Attaché James F. Abbott, Tokyo, April 2.

Japan's trade with the United States during February showed a favorable balance of 25,000,000 yen, as compared with an unfavorable balance of 5,000,000 yen during January (1 yen=$0.4985). Exports from Japan to the United States during February totaled 64,000,000 yen, as compared with 40,000,000 yen during the preceding month. This advance was mainly due to the large increase in raw-silk exports during the month, almost all of which went to the United States.

Japan imported from the United States during February goods valued at 39,000,000 yen—a decrease of 6,000,000 yen from the January total. There was a notable increase in the total value of machinery and parts imported into Japan from the United States in the month of February, which totaled 5,100,000 yen, as compared with 3,800,000 yen during January—an increase of more than 25 per cent.

The leading commodities entering into Japan's foreign trade during January and February, according to preliminary figures, are shown in the following table. The quantity basis is used where possible.

Principal items imported and exported by Japan during January and February, 1923.

Items and countries of origin and destination.		January.	February.
IMPORTS INTO JAPAN.			
Raw cotton:			
United States	piculs[1]	360,000	270,000
India	do	390,000	550,000
China	do	100,000	70,000
Other countries	do	30,000	3,000
Total	do	880,000	893,000
Pig iron, ingots, and slabs:			
China	do	30,000	80,000
India	do	150,000	310,000
United States	do	10,000	.....
Other countries	do	80,000	140,000
Total	do	270,000	530,000
Bar iron, rods, plates, and sheets:			
United States	do	140,000	160,000
Great Britain	do	180,000	220,000
Other countries	do	180,000	290,000
Total	do	500,000	670,000
Machinery and parts:			
United States	yen	3,800,000	5,100,000

[1] 1 picul =133.33 pounds.
[2] Negligible.

SOUTH AFRICA.

INCREASED BUSINESS ACTIVITY.

Based on cable from Trade Commissioner Perry J. Stevenson, Johannesburg, March 30.

[The improving tendency in South African business conditions continues. A satisfactory showing was made by the gold-mining industry. Diamond properties are showing renewed vigor, and sales of stones are increasing. Money is more easily obtainable. Commercial failures have been reduced. The building trade is well employed. Less unemployment is in evidence. Iron and steel prices have advanced. The volume of agricultural implements sales has improved. Excellent crops of maize and cotton are in prospect. The new budget carries an increased customs tariff.]

General Situation Improved—Value of Import Trade.

Trade and financial conditions in the Union of South Africa brightened considerably during February. Commercial failures decreased. Of the 2,470 insolvencies during 1922, 1,000 were in the Transvaal and were due in a large measure to the Rand strike of a year ago. Good progress has been made in railway construction work and unemployment is diminishing. The timber and building trades are well employed. The wool market has improved. The new weights and measures act went into effect on April 1.

Imports into the Union during the month of February were approximately £3,360,000 and exports £5,608,000, including exports of native gold amounting to £3,327,000. Owing to increased prices in the United States and the lack of outbound freight offerings imports of cotton goods are chiefly of English and German manufacture. Some Natal coal is being shipped to Germany.

Increase in Daily Average of Rand Gold Production.

Returns from the Rand show that the gold production during February was 704,970 fine ounces, as compared with 764,469 fine ounces in January. The decrease was due to the fact that February had three less working days, as the average daily output during February of 25,177 ounces was better than that of the preceding month. February's output was declared at the standard price of gold, 85 shillings, the total value for the month being £2,996,122, a reduction of £291,094 from the January figures. In all probability the realization price of gold will be better than 85 shillings, resulting in additional profits. Native labor in the mines is plentiful, the number employed at the end of February being 182,983, an increase of 1,000 over January.

Higher Yields of Cotton and Maize Expected.

The agricultural outlook is most favorable, and abundant rains are insuring a record maize crop and winter feed for stock. Sales of agricultural implements have increased during the month. Important reductions in railway rates on maize and cattle have been announced. The yield of cotton and corn is estimated at about 35 per cent above that of 1922. The tobacco crop will show a 25 per cent decrease. Good rains have fallen in Rhodesia and the yield of mealies is estimated at 1,500,000 bags, of which 1,000,000 will be available for export.

Tariff Increases in New Budget—Meat Subsidy Proposed.

The Transvaal-Mozambique convention lapsed April 1. A temporary customs arrangement for one year has been effected between the Union and Portuguese authorities. Pending the conclusion of a new convention, transit trade through Mozambique will be continued as at present. American trade is unaffected. Shippers to

South Africa are cautioned to use the new invoices which have been prescribed. The new 1924 budget carries a number of tariff changes, all effective immediately. Boots and shoes, automobile tires, and condensed milk are among the items increased. Premier Smuts recently announced in the House of Assembly that the Government intends to introduce legislation immediately, giving a subsidy of one-half pence per pound on beef for export and one-fourth pence on live stock, in order to aid the stock farmer.

The Union Government plans to amend the banking act of 1920, and will issue notes secured by South African or English treasury bills, not to exceed 35 per cent of the total note issue or 40 per cent of commercial paper.

METHODS OF MEASURING PORT ACTIVITY.

Marjorie Sheets, Transportation Division.

There has been considerable discussion regarding the rank of various United States ports in the water-borne commerce of the country, and many differences of opinion have arisen over the relative position of several of the leading ports. This diversity in conclusions has been due to the fact that the various persons and organizations interested in making such comparisons have used different data upon which to base their conclusions.

There are many angles from which to view the commercial activity of a great port. For each of these angles there is a corresponding set of figures which, if compiled, may be presented to show the picture from that angle. It is obvious, however, that the question of rank of the several ports can not conclusively be decided on the basis of a survey from any one standpoint alone. This is true particularly because of certain limitations in the scope of the statistics that are available. Accordingly, it seems worth while to enumerate the various statistical methods of measuring port activity and to point out the limitations to which each of these methods is subject.

Vessel Tonnage Figures, Based on Customs Districts.

The Bureau of Foreign and Domestic Commerce compiles and publishes figures showing the net registered tonnage of vessels entering and clearing United States ports in foreign trade. In the annual report entitled "Foreign Commerce and Navigation of the United States," data of this kind for the calendar year are published in great detail. The number and net tonnage of American and of foreign vessels with cargo and in ballast, by country from which entered or to which cleared, is shown in the figures of entrances and clearances for each United States customs district.

While such figures give a general idea of the shipping activity in the areas which they cover, they can not, by themselves, establish the relative importance in foreign trade of the different ports. In the first place, they are by customs districts and not by individual ports. While some customs districts, like Los Angeles and New Orleans, include practically nothing outside the main port which gives title to the district, other customs districts, like Massachusetts, Florida, and Washington, include, in addition to the principal port of the district, a number of fairly active ports for which separate data of entrances and clearances are not shown. Furthermore, many vessels engaged in foreign trade include in their United States itineraries more than one port of call. In order to avoid counting the same vessel more than once on any one trip, each ship is included only in the figures of entrances at the customs district of its first United States port of call, and in the figures of clearances from the customs district of its last United States port of call. Thus a vessel may, because of its route, be credited to the commerce of a customs district to which and from which it carries only a small part of its cargo.

Foreign-Trade Values, by Customs Districts.

On the basis of the actual customs district of loading for exports, and of discharge for imports, the Bureau of Foreign and Domestic Commerce also collects figures showing the commodities entering into our foreign trade. In the annual report, "Foreign Commerce and Navigation of the United States," details are given by articles and customs district and by countries and customs district. A summary table gives the total value of the imports and exports for each United States customs district. While these figures show the value of the cargo actually loaded and unloaded for the district they do not show it by individual ports within the district, nor are such figures compiled. It must also be pointed out that for certain purposes the value of the foreign trade of a port is not a correct index of the extent of its shipping activity. For example, Boston, whose exports are mainly highly manufactured goods and whose imports include raw materials of relatively great value, ranks considerably higher on the basis of the value of its foreign trade than it does on the basis of volume. For purposes of comparison from year to year, figures in value are sometimes misleading by reason of changes in price levels. This limitation does not, of course, obtain as between ports for similar periods, but only in comparing one period with another.

Customs Receipts an Insufficient Index.

Another method of measuring the foreign-trade activity of ports is by the amount of customs receipts. The limitations to this method are obvious. Besides being compiled, as are the figures above, on the basis of customs districts, they refer only to imports, which

constitute widely varying proportions of the total foreign trade of the different districts. In addition, such figures do not take account of the differences in character of imports into the various ports. A port which receives large quantities of raw materials and other goods on the free list will not appear very important on the basis of customs receipts, although its commerce may be very great.

Volume of Trade Determines Shipping Routes.

Shipowners and ship operators are interested in foreign-trade statistics of the several ports because of the bearing which such data have on the maintenance of profitable steamship services. Figures in value do not translate themselves readily into terms of ship's carrying capacity, nor do statistics of entrances and clearances throw more than an indirect light on the question of the volume of cargo moving over any route. Accordingly, there has been widespread demand for figures of imports and exports in terms of long tons, a kind of information which was, for this country at least, almost nonexistent before the war.

In response to this need, figures on the volume of our foreign trade have been prepared by the Shipping Board, by the Bureau of Foreign and Domestic Commerce, and by the United States Army Engineers. A certain amount of data of this sort has been collected by the Engineers office for many years. Both the period covered and the method of compilation differ in these sources of information.

Shipping Board, Foreign-Trade Volume by Ports.

For the years ended June 30, 1921 and 1922, the Shipping Board has compiled figures showing the tonnage of cargo movement at all of the ports of the United States having any appreciable volume of traffic. These figures differ from those of the Bureau of Foreign and Domestic Commerce in that they are for individual ports. The Shipping Board statistics are compiled from reports collected under a regulation based on the authority granted by section 21 of the shipping act of 1916, which provides that the master of every vessel of over 500 gross tons, engaged in foreign trade, upon entering and clearing shall file a return showing the amount in long tons of import and export cargo on board. Because these reports did not record individual shipments, it has not been possible, where ships took on and discharged cargo at various ports, to separate the cargo in accordance with the actual port of origin and port of discharge. The same method of tabulation was followed, therefore, as is used by the Bureau of Foreign and Domestic Commerce in compiling entrance and clearance figures for vessels engaged in foreign trade; that is, cargo on board an outbound vessel is tabulated as exports from the last United States port of call of that vessel, regardless of the actual port of loading, and cargo on board an incoming ship is recorded as being imported into the first port of call of the ship.

For the fiscal year 1922, however, the Shipping Board has also compiled, and is in the process of publishing, statistics showing the actual tonnage of import and export cargo handled at each port, the amount and character of the principal commodities, and the foreign ports of destination and origin of the goods exported and imported. From the shipping viewpoint, these figures, when published, will be the most complete data obtainable regarding the foreign trade activity of our ports.

Department of Commerce, Foreign-Trade Volume by Districts.

As mentioned earlier, the Bureau of Foreign and Domestic Commerce compiles figures showing in detail the commodities exported from and imported into the various customs districts, by country of destination and origin. Practically all of these commodities are reported in some quantity unit which may, with reasonable accuracy, be converted into weight. Accordingly, for the calendar years 1920 and 1921 these quantity items have been converted into long tons. They form the basis for a study, not only of the volume, but of the character and direction of the foreign trade of each of the coastal customs districts in the United States.

Statistics of imports and exports overland have not been included in the conversion; and, like all other figures based on customs districts, details for individual ports are not available. The figures showing countries of destination and origin do not constitute an entirely accurate index to the routes over which the goods travel; but they present, on the whole, a significant picture, from the shipping standpoint, of our country's foreign trade.

U. S. Army Engineers, Foreign and Domestic Trade Data.

The various statistical methods of measuring port activity so far discussed have included only foreign-trade data. While international trade is a very important part of the total commerce handled at our ports, in most of the more important ones it does not constitute as much as half of the aggregate volume of water-borne commerce. This is particularly true since the opening of the Panama Canal, which has brought about a steadily increasing domestic intercoastal trade. An entirely comprehensive picture of the relative size of our ports should take into consideration, therefore, not only foreign but domestic trade activity. Unfortunately, however, the collection of domestic trade statistics has not, in the past, been pursued with any degree of completeness. For many years the Board of Engineers for Rivers and Harbors, in connection with the engineering projects under its jurisdiction, has collected a certain amount of commercial statistics of both foreign and domestic trade. Since 1919 the scope of its work along this line has been extended and systematized so that figures are now published showing the tonnage, in short tons, and the value of foreign and domestic trade at practically every port in the United States on both the seacoast and the Great Lakes, irrespective of whether the port is under improvement by the Federal Government. Details by commodities are also given, although no information as to the destination or origin of the cargo is included.

Local Agencies' Figures Seldom Comparable.

In addition to the official figures compiled by various Government departments, many of the local port organizations collect statistics of one sort and another on the shipping activity of their respective ports. Since there is little or no uniformity in the bases on which they are compiled, they usually do not furnish practicable data for drawing satisfactory comparisons between the ports, and consequently are not discussed here.

HIDES AND LEATHER

Wilber J. Page, Chief, Hide and Leather Division

RECENT TENDENCIES IN QUEBRACHO INDUSTRY AND TRADE.

H. M. Hoar, Research Division.

[Quebracho stands to-day the world's richest source of tannin. Despite the concentrated efforts of technical experts during a score of years to discover new and more valuable tanning materials, quebracho still holds its premier position because of its high tannin content and the unrivaled excellence of its extract as a tanning agent for sole and strap leather.]

The quebracho tree, which is a natural monopoly of South America, is one of the hardest and heaviest woods known. It is so hard that it will break the teeth of a circular saw, and its density is so great that it sinks in water—1 cubic foot weighing about 78 pounds. These characteristics have specially adapted it for railway sleepers, poles, fencing posts, etc. Owing to the density and compactness of its fiber, impermeability to water, rich reddish color, and the high polish it takes, it is in great demand in Argentina for cabinetmaking and for decorative purposes in the building industry.

Varieties of Quebracho—Tannin Content.

There are three known varieties of quebracho—quebracho colorado, or red quebracho, quebracho blanco, or white quebracho, and quebracho macho, the male or strong quebracho. Quebracho colorado is by far the most important; it is preeminent as the source of the tannin extract of commerce, it outranks the others in quantity, and its timber is in great demand in the building industry. Quebracho blanco is used solely as timber; and quebracho macho, while ranking next to quebracho colorado in tannin content, is not found in quantities sufficient to defray expenses of exploitation.

The rich Chaco forests of Argentina and Paraguay, in which quebracho colorado most abounds, are now chiefly exploited for tannin woods. Contrary to the general rule obtaining in the realm of vegetable tannins, it is the rich, red heart of the tree—not the softer, lighter-colored outer section, nor yet the bark—that contains the highest percentage of tannin. Analyses of the quebracho tree for tannin content have, as a rule, resulted in the following: Heartwood, 20 to 24 per cent of tannin, sapwood (outer section) 3 to 4 per cent, and bark, 6 to 8 per cent. Only the heartwood is utilized, the sapwood and bark being wholly neglected as sources of tannin.

Liquid quebracho extract contains 35 per cent of tannin, and the solid extract varies from 63 to 65 per cent, according to the method of analysis to which it is submitted, the filtration method yielding 65 per cent, and the vibration method 63 per cent. The extracts are sold as untreated and chemically treated. The treatment effects considerable improvement in the color of the leather, and, moreover, adds to its mellowness.

Trend of Export Trade in Logs and Extracts.

The original phase of the quebracho industry was mainly the exportation of logs for the manufacture of extract abroad. This business was well established as far back as 1890, and developed rapidly during the next two decades, reaching its peak in 1911 with exports of 438,219 metric tons of logs. Since 1914, however, there has been a notable decrease in the shipment of logs, with a significant increase in the exportation of extract. This situation is evidently the direct result of transportation difficulties, and the prohibitive freight rates for shipping logs overseas during the war. The saving in freight rates through the conversion of logs into extract will be readily appreciated, when it is realized that it requires about 4¾ tons of logs to produce 1 ton of extract. These factors, together with the insistent demand for leather, and consequent pressing need for tannin, led to the erection of new factories, as close as possible to sources of supply, and thus the transformation of logs into extract began on a much larger scale than hitherto. Notwithstanding the commercial and financial depression of 1921, during which the principal extract factories were compelled to close down, 1922 witnessed great activity in this important industry in Argentina.

The following table shows the trend of Argentina's exports of logs and extract since 1901 (quantities expressed in metric tons of 2,204.6 pounds):

Total exports of quebracho logs and quebracho extract from Argentina, 1901–1922.

United States Leading Export Market.

Prior to 1915, Great Britain was the main purchaser of both logs and extract, but during the war period the United States took first place. France, Germany, Italy, Sweden, and Norway are other leading participants in the trade, though, of course, Germany was out of the market during the war years. Argentina's exports of quebracho to the countries named, from 1913 to 1922, were:

[1] Sweden only.

The revival of the trade in logs in 1922 is an interesting feature of this table. Germany's increased imports of logs, as well as of extract, were mainly due to the temporary activity in the German tanning industry, and, possibly, also to a desire to lay in stocks in anticipation of a further decline in the purchasing power of the mark.

Another important market in 1922 was Belgium, which took 4,356 tons of logs and 12,244 tons of extract, as against no logs and 6,473 tons of extract in 1921. Spain in 1922 importd 4,212 tons of extract and 102 tons of logs, compared with 1,528 tons of extract and no logs in 1921.

Price Fluctuations.

Prior to 1914 the price quoted for quebracho extract was 80 gold pesos per metric ton, but war needs brought about a marked increase. In 1915 there was constant fluctuation, quotations varying from 78 gold pesos per ton in January to 210 in December of that year. In 1916 the price rose to 245 in May, falling to 120 in October, and rising to 140 in December. The 1917 prices ranged from 125 to 170 pesos. In 1918 the price hovered around 90 pesos throughout the year. In 1919 prices ranged from 90 to 210 pesos. During the severe depression of 1921, owing to stagnation in the leather and tanning trades in overseas markets, large stocks accumulated, which represented a heavy tie-up of capital. A significant drop in prices followed, though quotations did not reach pre-war rates. As a consequence of the dissolution of the quebracho selling combination in September, 1922, all extract manufacturers are now offering their products in the open market. The lively competition created by this situation immediately resulted in the lowering of price from 115 to 110 gold pesos per ton.

Potential Production.

A minimum estimate of the potential production of extract factories now operating in Argentina and Paraguay is about 240,000 metric tons per annum. While considerable progress has been made in the tanning industry in Argentina—though not so great as might have been expected, considering that the raw materials (hides and extract) are staple products and exports of the country—it is not probable that the annual requirements of local tanneries will soon exceed 60,000 or 70,000 tons, leaving the remainder of capacity production available for export.

Hide and Leather Trade Notes.

Upward Trend in French Leather Market.

Prices of hides and skins continue high in France, and tanners are buying very little. It is feared that the prices for tanned products will soon be increased rather markedly. The demand for English leathers continues, but there are few sales owing to the high prices resulting from exchange. Sales of sole leather are slow because of slackness in shoe manufacturing and high prices. The poorer grades are selling best. (Trade Commissioner J. F. Butler, Paris, March 19.)

Additional information regarding hides and leather appears in this issue under the following sections:

Tariffs and trade regulations: Reduction of import duty on scrap leather and splits in Czechoslovakia.
Foreign trade opportunities No. 5958.

PAPER

John Matthews, jr., Chief, Paper Division

LATIN AMERICAN MARKETS FOR PAPER.

Realizing the growing interest in Latin American countries as markets for paper and the need for up-to-date and accurate information as to the possibility in these markets, a survey of each country has been instituted. Commercial attachés, trade commissioners, and consuls in the various districts are now gathering data as outlined in a questionnaire carefully prepared by the Paper Division. Their reports will be published in COMMERCE REPORTS or circulated in the form of trade information bulletins. It will take several months to complete this work, but, in the meantime, in order to meet the current demand for information, a brief outline of these markets is given below. The countries are given in the order of their importance from the standpoint of exports from the United States.

Cuba.—Practically 90 per cent of the paper consumed in Cuba is imported from the United States. This is due principally to a preferential tariff on goods purchased from the United States although cultivation of the market and constant solicitation for business by salesmen from the United States has added greatly to our success in the development of this market. The proximity of the island makes quick deliveries possible.

As in the case of most Latin American countries, the greatest demand is for printing papers. The most important item is newsprint for publication purposes, although some is used for wrapping. There is a good demand for machine-finish and super-calendered book, as well as for coated book and label for lithographic work. There is a very good market for wrapping papers, mainly of the cheaper grades. Paper boards is another important item and the demand in this line is for the cheaper grades, such as chipboard, newsboard, strawboard, etc. The statistics on writing-paper

imports from the United States do not indicate any great demand, but the figures are misleading as a number of lines of writing and bond papers are shipped as printing paper. There is a good demand for writings, bonds, and ledgers, principally in the grades made from sulphite, both watermarked and without watermark. The better grades are used to some extent but the high prices as compared with those for the sulphite papers limit the sale. Notwithstanding the fact that envelopes are made in Cuba, there is a good demand in this line, and also a fair demand for papeteries.

Argentina.—This is a very important market, but so far as American papers are concerned it has not been cultivated to any great extent. From the standpoint of consumption it is perhaps the best of all the Latin American markets, although competition with European manufacturers is very keen. Details in regard to this market were published in COMMERCE REPORTS No. 41 (issue of October 9, 1922).

Mexico.—This is a natural market for American products because of our facilities for communication and transportation. One drawback, however, is the fact that a well-organized local mill produces newsprint, wrapping, and the cheaper grades of writing and bond papers, and high duties prevent any active competition in these lines. Notwithstanding this, local demand exceeds production and, so far as importation is concerned, American papers have preference. Of the 35,000 tons consumed in 1921, the local mills supplied 20,000 tons and the imports from the United States amounted to about 12,000 tons. Newsprint is the most important item, with wrappings, book paper, and writings ranking next in importance.

Colombia and Venezuela.—While, from the standpoint of consumption, these two countries do not rank with those mentioned above, and while Brazil, Chile, and Peru can also be looked upon as larger markets, Colombia and Venezuela are important markets. We have good steamship connections from the United States and can give better service than our competitors abroad. Consequently, preference is given to American goods. Colombia is the more important of the two, with demand for newsprint ranking first, followed by book paper, wrapping, boards, and writing, in the order named. In Venezuela the principal item seems to be writing paper, although newsprint and book paper seem to be almost as important.

Brazil.—Among the South American countries Brazil ranks second in importance as a consumer of paper. Business there does not seem to have been cultivated to any great extent by paper manufacturers and exporters in the United States, probably because of the keen competition from Europe. The exchange situation has also been a drawback and has practically prohibited purchases from the United States. An improvement in exchange will undoubtedly tend to open up business between the two countries, and it would seem advisable to keep in touch with the buyers in order to be in a position to secure business when conditions become more favorable. Newsprint is an important item, but European qualities seem to have a hold on the market, and it would perhaps be more advantageous to direct efforts toward the sale of book papers and writings. Wrappings and boards are made by local mills and there is very little chance of securing any large business in those lines.

Salvador.—From statistics for last year Salvador ranks next in importance from the standpoint of exports from the United States. This goes to emphasize the fact that our manufacturers and exporters have not made serious attempts to develop the larger markets. One can only assume from this that our merchants seem content to wait for orders to come to them rather than to force business by intensive sales efforts in the larger markets, such as Peru, Chile, and Urugay. The smaller Latin-American markets, such as Salvador and the other Central American countries, naturally turn to us for their supplies. In Salvador the principal item is writing paper, followed by newsprint and boards. Wrapping does not appear to be very important, although newsprint is used for wrapping purposes to some extent.

Other Latin American Markets.

Following Salvador come Peru, the Dominican Republic, Uruguay, Panama, Chile, Guatemala, Costa Rica, Honduras, Nicaragua, Bolivia, and Ecuador. Among these, Chile and Peru might be said to rank next in importance to Argentina and Brazil as the best markets for paper. The order in which they appear above is another evidence of our failure to properly exploit the more important markets.

As a general rule the qualities in demand in the various markets are about the same. A general line of book papers, wrappings, coarse boards (such as newsboard, chipboard, and strawboard), bonds, ledgers, and writings in the cheaper grades made from sulphite will meet the requirements. The only country in which requirements differ to any extent is in Chile, where importers require book paper and also cheaper grades of writing, bond, and ledger to be made with a small percentage of ground wood. While the ground wood does not materially affect the quality or appearance of the sheet, it enables the importer to bring it in at a low rate of duty.

Methods of Packing.

The packing requirements are about the same all over the continent with the exception of Colombia and some of the Central American countries, where packing for mule-back transportation is necessary. The usual packing for ocean shipment will meet the needs of the other countries. At the same time it should be borne in mind that most of the customs houses levy duty on gross weight. For this reason packing should be as light as is consistent with safe transportation.

[This brief and very general treatment of the Latin American markets should not be considered in the light of a survey. It should, however, point out to paper manufacturers and exporters the opportunities that lie to the south and perhaps assist them in outlining their campaigns for the development of the trade.]

Paper Requirements of Japanese Tobacco Monopoly.

Trade Commissioner Hallock A. Butts, Tokio.

The Tobacco Monopoly Bureau owns and operates all the cigarette and tobacco factories in Japan. The total output is 23,000,000,000 cigarettes and 61,333,720 pounds of cut tobacco. This industry requires the use of very large quantities of paper and boxboard and it is the largest single purchaser and consumer of paper in the country. Purchases are not made direct but through the medium of certain local firms designated by the monopoly. These firms have the privilege of submitting bids for all supplies and contract with foreign suppliers. No sales are made direct to the mo-

nopoly. The central organization does, however, control the specifications for the various commodities, and through this control standard specifications are adopted for supplies for the various factories included in the monopoly. This arrangement, together with the large quantities required, would seem to make this very desirable business for American paper and board mills, because it gives them long runs on large sizes in satisfactory weights. The requirements are shown in the following paragraph.

Paper Used in Cigarette Factories.

There are two kinds of cigarettes made—one with paper mouthpiece representing about 88 per cent of production, and one without mouthpiece, for which a separate paper mouthpiece is made and packed with each box of cigarettes. There are two kinds of rice paper used—ribbed and plain. The total annual consumption is approximately 1,400,000 rolls, each of 1,560 meters (1,706 yards) in length and 30 millimeters (1.182 inches) in width. Two classes of paper are used for the mouthpiece, one of which is a fairly well-sized machine-finish book paper with a smooth finish and free from ground wood, and the other is a rough-finished, slack-sized book, containing a fairly large percentage of ground wood. The total annual consumption is approximately 9,300 short tons and the specifications are as follows: Free from ground wood, flat—30¾ x 45¾, 134½ pounds /500, 0.145 mm. thick; 39⅞ x 58⅞, 224½ pounds /500, 0.145 mm. thick; ground wood, flat—25 x 35⅞, 87 pounds /500, 0.15 mm. thick; ground wood, rolls—23⅛ inches wide, basis 25 x 38, 89 pounds /500, 0.16 mm. thick.

All cigarettes with mouthpiece, as well as cut tobacco, are put up in paper packets. The total annual consumption of stock for that purpose is approximately 7,700 tons. The paper used for the cigarettes is a medium-sized machine-finished book in sheets, free from ground wood, and the specifications are as follows: 34¾ x 49⅜, 116 pounds/500, 0.11 mm. thick; 32 x 48¾, 105 pounds/500, 0.11 mm. thick; 35⅛ x 52⅝, 125 pounds/500, 0.11 mm. thick; 39⅞ x 58⅞, 224½ pounds/500, 0.145 mm. thick.

The specifications for the tobacco-package paper are as follows, the first three items being for paper with a considerable portion of ground wood and the other two are free from ground wood; all are medium hard, sized: 29⅛ x 40⅝, 111 pounds/500, 0.145 mm. thick; 34 x 43½, 108 pounds/500, 0.12 mm. thick; 25½ x 43½, 104 pounds/500, 0.145 mm. thick; 25¾ x 38⅞, 78 pounds/500, 0.11 mm. thick; 34⅝ x 46, 81 pounds/500, 0.075 mm. thick.

All cigarettes without mouthpiece are put up in folded box-board cartons. The board used is a white patent coated manila back, and the annual consumption is approximately 2,000 tons. Specifications are as follows: Rolls, 19¾ inches wide, length 1,350 yards—0.138 inch thick, weight 385–420 pounds per roll; 0.13 inch thick, weight 385–420 pounds per roll; 0.148 inch thick, weight 390 pounds per roll. Flat—32¼ x 59¾, 802 pounds/1,000, 0.14 inch thick; 35¼ x 54½, 780 pounds/1,000, 0.13 inch thick.

The cigarettes are also wrapped in tissue paper and tinfoil, but the specifications for the tissue are not given. A light-weight sulphite sheet, similar to the sulphite waxing made in the United States, is used for small labels for tobacco packages. This is required in sheets 21⅞ by 33 inches, 23 pounds, 500 sheets.

Other Paper Items.

The other principle paper items are waxed tissue and strawboard, of which the annual consumption is 6,000 reams and 6,800 tons, respectively. Exact specifications on the strawboard have not been given, although samples have been submitted. They represent a white-lined board, and are used for the large cartons for both cigarettes and tobacco. Specifications on the waxed paper are as follows: Size, 20 by 30 inches, 31 pounds, 500 sheets; bursting strength, 22 pounds minimum; tearing strength, 4½ pounds minimum with grain; 11 pounds minimum against grain; melting point, 125° Fahrenheit.

The business is highly competitive, but American products have been used to some extent, especially the patent-coated box board and the waxed paper. However, notwithstanding the competition, the business is of such volume that it is worth while taking all items into consideration.

[An exhibit containing samples of all the principal items is on file in the Bureau, and these will be sent to any interested concern upon application to Washington or to any of our district and cooperative offices.]

Swedish Wood-Pulp Situation.

Consul Walter A. Leonard, Stockholm, March 8.

The deliveries of Swedish wood pulp are considerably behind orders, due to the continued strike and lockout effective since February 28, involving 17,000 workmen. The sawmill laborers, numbering about 24,000, have rejected the terms of settlement as recently submitted to them by the Government's arbiter. The general opinion seems to be that this rejection on the part of the sawmill workmen will make more difficult the settlement of the labor conflict at the wood-pulp mills.

Prevailing Prices of Wood Pulp.

There is a fairly constant demand for shipments of Swedish wood pulp at the following prevailing prices, c. i. f. British ports, Antwerp, or Rouen: Easy-bleaching sulphite, £15 5s. to £16; and strong sulphite, £14 5s. to £15.

Although there can not be said to be a Swedish market price of wood pulp, prices for sale in the Swedish market correspond in Swedish crowns (1 crown= $0.268) approximately as follows: For strong sulphite, first quality, 230 to 240 crowns; for strong sulphate, first quality, 230 to 235 crowns; for white ground wood, wet, first quality, 80 to 85 crowns.

Side Runs of the Paper Trade.

Canada's Exports of Pulp and Paper in January.

Canadian exports of paper, wood pulp, and pulp wood for January, 1923, according to the Dominion Bureau of Statistics, were valued at $11,494,129—an increase of $1,965,706 as compared with January, 1922, and an increase of $408,315 above similar exports for December, 1922. Exports of newsprint, which represent the largest item, amounted to 165,578 long tons, valued at $6,134,827. Pulp shipments reached 139,749 tons, valued at $3,693,268, of which mechanical pulp represented 59,784 tons, valued at $994,917. The remainder was fairly evenly divided as to quantity between sulphate and unbleached and bleached sulphite,

the value of the last-mentioned being given as $1,201,330. Pulp-wood exports amounted to 133,328 cords, valued at $1,195,886. The bulk of the paper and pulp exports came to the United States, shipments to this country reaching a value of $10,482,072. (Consul H. Merle Cochran, Montreal, February 26.)

Netherlands Paper Exports for January.

There was great activity in the Netherlands paper trade during the month of January. Exports of newsprint amounted to 2,535 metric tons, of which 964 tons went to Great Britain, 878 to the United States, and 381 tons to France. Exports of other printing paper amounted to 1,339 tons, South American countries being the best buyers. Exports of strawboard (the bulk of which goes to Great Britain) amounted to 15,473 tons, and exports of packing paper amounted to 586 tons. (Consul General G. E. Anderson, Rotterdam, February 24.)

Imports of Newsprint Into France During 1922.

Imports of newsprint and other papers weighing more than 30 grams per square meter (25 inches by 38 inches, 20/500) into France during 1922 amounted to 127,392 metric tons, valued at 134,537,000 francs ($8,824,627 at present rate of exchange). Countries of origin and imports from each were: Norway, 30,930 metric tons; Germany, 23,232 tons; Sweden, 19,904 tons; Finland, 11,561 tons; Belgium, 11,254 tons; Switzerland, 10,375 tons; the Netherlands, 7,631 tons; Great Britain, 4,849 tons; United States, 1,387 tons; and other countries, 2,264 tons. (Vice Consul Davis B. Levis, Cherbourg, March 6.)

Market for German Pulp Wood.

Demand at the beginning of February was very steady for coniferous pulp wood, domestic prices ranging from 38,000 to 47,000 marks per cubic meter at the forest. Efforts were made by Czechoslovakian dealers to do business with Germany, but without marked success, export prices for pulp wood being too high, although offers made from Czechoslovakia ranged from 130 to 135 crowns ($38.48 to $39.96 at present rate of exchange), or more than double the domestic price. (Consul F. T. F. Dumont, Frankfort-on-Main, February 23.)

Polish Paper Trade Dull.

The Polish paper trade is reported to be at a standstill, due mainly to substantial sales prior to the recent price advance. Wholesalers are reported to be offering goods cheaper than the prices quoted by the manufacturers. (Acting Commercial Attaché H. B. Smith, Warsaw, February 17.)

Norwegian Pulp and Paper Trade During 1922.

The total production of chemical pulp during 1922 was 70 per cent greater than in 1921, production of sulphite pulp reaching 177,000 metric tons and sulphate production totaling 15,000 metric tons, as compared with 106,000 and 7,000 tons, respectively, in the previous year. Exports of the different classes of pulp and paper during 1922 also show substantial increases as compared with 1921, the largest shipments being of mechanical pulp, which amounted to 399,559 metric tons, as compared with 282,395 tons during the preceding year. Exports of sulphite pulp amounted to 187,703 tons, and of sulphate to 17,072 tons. Paper exports aggregated 148,416 tons for printings, as against 61,431 tons during 1921, and 67,984 tons for wrappings, as against 20,205 tons during 1921. (Assistant Trade Commissioner H. Sorenson, Copenhagen, February 23.)

British Paper Trade.

The British paper trade is in a comparatively prosperous state, according to a report by Canadian Trade Commissioner J. E. Ray, published in the Commercial Intelligence Journal. Of the some 61,000 workmen engaged in the paper mills, the number drawing unemployment pay had declined to 4,391 by November, as compared with between 6,000 and 7,000 from January to April, 1922. Exports of paper of all kinds also showed gratifying increases, shipments in September and November reaching 13,332 and 15,350 long tons, respectively, as compared with only 7,345 tons in January, 1922.

Manchester paper manufacturers and merchants report keen competition from outside sources, although the expected competition from Germany has not developed. Imports of paper on the whole have increased rapidly, those for the last five months of 1922 averaging monthly 52,000 tons, which was only 3,000 tons per month less than the average for 1913. Canada and Newfoundland and the Scandinavian countries were the chief sources of supply for printing, writing, and wrapping papers during 1922, imports of newsprint and writing being fairly evenly divided between the Western Hemisphere and Norway and Sweden, while the latter countries retained the lead in wrapping and packing papers.

American Paper Exports in January.

The total value of exports of paper exclusive of printed matter during January, 1923, show an increase of about 14 per cent over those of January, 1922, but decreased about 9 per cent as compared with December of the same year. Book paper and wrapping paper maintain the same trend of decline from December but show an increase over the preceeding January. The increase in price of boards, which came between January and December, 1922, is reflected in the figures for paper board and strawboard. Evidently the domestic market is absorbing a steadily increasing quantity of newsprint for the exports of that commodity show a decline both in quantity and value.

Paper exports from United States.

Items.	January, 1922.		December, 1922.		January, 1923.	
	Pounds.	Value.	Pounds.	Value.	Pounds.	Value.

MINERALS AND METALS

Luther Becker, Chief, Iron and Steel Division

FOREIGN MARKETS FOR UNITED STATES IRON AND STEEL IN JANUARY.

In January Canada maintained its supremacy as the leading taker of United States iron and steel. Shipments to that country amounted to 57,221 tons, or nearly half of the month's total exports. Japan held its place as second with imports amounting to 9,964 tons, though Cuba made a strong bid for Japan's place by importing 8,352 tons. Mexico was fourth on the month's list of purchasers of United States iron and steel, taking 7,000 tons.

The countries to which over 500 tons of American iron and steel products were shipped during January, 1923, are shown in the following table:

United States exports of iron and steel to principal countries in January.

Countries.	Tons.	Countries.	Tons.
Canada	57,221	Argentina	2,170
Japan	9,964	Peru	2,119
Cuba	8,352	Chosen	1,890
Mexico	7,000	British India	1,787
United Kingdom	4,571	Philippine Islands	1,727
Australia	4,111	France	1,135
Honduras	2,989	British South Africa	804
Brazil	2,985	Venezuela	714
Colombia	2,983	Netherlands	572
China	2,418	Belgium	546
Chile	2,340	Dominican Republic	531

[The foregoing details supplement the analysis of January's exports of American iron and steel that appeared in COMMERCE REPORTS for March 26, 1923.]

GOLD PRODUCTION IN CANADA IN 1922.

Vice Consul Clarke Vyse, Ottawa, Ontario, March 15.

Canada's production of gold last year was 304,656 ounces, or 33 per cent, in excess of that for 1921. The preliminary report of the Dominion Bureau of Statistics gives the output as 1,230,985 fine ounces (value $25,446,717) for 1922, against 926,329 fine ounces (value $19,148,920) in the preceding year, the several Provinces contributing to these totals as follows:

Canada's gold production, 1921 and 1922.

Provinces.	1921	1922
	Fine ounces.	*Fine ounces.*
Ontario	708,213	999,848
British Columbia	150,592	175,558
Yukon Territory	65,994	54,370
Other [1]	1,530	1,209
Total	926,329	1,230,985

[1] Nova Scotia, Manitoba, and Alberta produced small quantities of gold bullion in 1921 and 1922, but Quebec, owing to the idleness of its sulphur-copper and lead mines, was not a producer last year.

Of the 1922 production 68,737 ounces, or 5.6 per cent of the total, were obtained by placer mining, 16,359 ounces, or 1.3 per cent, from lead bullion, blister copper, and other copper mattes, 1,017,566 ounces, or 82.7 per cent, in the form of bullion, and 128,323 ounces, or 10.4 per cent, from ore, concentrates, and other residues exported.

According to the Canadian Journal of Commerce for March 2, 1923, deposits of gold exist in certain sections of northern Ontario and northwestern Quebec. A test of the veins in this region is at present being made by stripping and diamond drilling under the supervision of independent prospectors. There is, as yet, no definite knowledge of the gold contents of these deposits. The Geological Survey of Ottawa, together with other Federal and provincial departments, is endeavoring to have available as soon as possible geological maps and reports on the existing conditions in these fields for those interested in this area. The mining laws of Quebec as well as those of other Provinces necessitate the preemption of land by those who contemplate prospecting.

Lorraine Iron-Ore Production Shows Increase for 1922.

Consul William J. Pike, Strasbourg, France, March 2.

The demoralized condition of the French metallurgical industry necessarily had an unfavorable influence on the iron-mining industry. On account of the entire cessation of exports to Germany as well as the smaller consumption by home factories the mines were compelled to reduce their output gradually to prevent an overaccumulation of stocks. Nevertheless the production of iron ore in Lorraine for 1922 shows an encouraging increase. From the following figures it will be seen that there has been steady progress since 1920, though the 1922 production was much below pre-war tonnage:

Districts.	1913	1920	1921	1922	1922 compared with—	
					1921	1913
	Tons.	*Tons.*	*Tons.*	*Tons.*	*Per cent.*	*Per cent.*
Metz-Thionville	21,136	8,074	7,817	10,909	+39.55	−48.38
Briey-Longwy	17,961	4,180	4,819	8,720	+80.95	−51.45
Nancy	1,916	816	605	553	−8.59	−71.13

Austria's Steel Industry Improves.

Assistant Trade Commissioner F. W. Allport, Vienna, February 24.

An improvement in the position of Austria's iron and steel industry, particularly in the rolling-mill branch, has been brought about by increased orders from Germany. It is stated that present orders are sufficient to keep the industry operating at reduced capacity for ten weeks. Should they continue it is probable that the Alpine Montangesellschaft will resume operation in the Zoltweg plant which has been closed down for some time. Some difficulty is caused in sales to German buyers by their demands for price quotations in English pounds, forcing Austrian sellers to assume exchange risks.

Asbestos in the Portuguese Market.

Vice Consul H. Tobey Mooers, Lisbon.

Asbestos is considered by the Portuguese to be the best material, after magnesium powder, for conserving heat and eliminating dangers of electrical wiring. It is used in various forms, from the refined powder to sheets. The powder is made into a thick paste and plastered on to the outside, and at times the inside, of furnaces and stoves. Now that Portugal is beginning to do considerable electrical wiring and insulating, the demand for asbestos has been somewhat augmented. One of the biggest increases in the demand for modern heating in the history of the Republic has been taking place during the past year.

A careful canvass of the leading asbestos users indicates that interest in American asbestos is general, and that its quality has been considered as above reproach. Whether or not the American exporter will be able, under present exchange conditions, to make his price as favorable as that of European competitors is, however, of prime importance. One manufacturer of tubing and hot-air piping states that he would be very glad to purchase American asbestos if the price compared favorably. Spanish asbestos, most of which comes from Barcelona, is said to be good. The German product is not well liked.

The Portuguese Government has granted three concessions for the working of asbestos mines situated at the base of Mount Portel, in the parish and municipality of Vidiqueira. The mineral occurs near the surface and in various forms; open workings are possible. Since the fibers of most of the asbestos found in Portugal are rather short on the average, it is doubtful if the mines, even if exploited, would yield satisfactory quantities. Little is being done at present to compete with the imported product.

FOODSTUFFS

Edward G. Montgomery, Chief, Foodstuffs Division

OLIVE CULTURE IN ITALY.

Consul H. Earle Russell, Rome.

Without considering new Provinces, Italy has a productive area of 26,371,000 hectares (1 hectare=2.47 acres), of which 2,303,340 hectares are devoted to olive culture. Of this latter area 584,000 hectares are intensively cultivated. It will be seen that the total area constitutes about 9 per cent of the total productive area of the Kingdom, including 20 Provinces in which there is not a single olive tree. This proportion rises to 12 per cent for all the Provinces where it is cultivated with more or less intensity. In the olive-producing Provinces the area devoted to its culture constitutes anywhere from 10.1 per cent of the total productive area, as in Padova, to 40 per cent, as in Bari.

The following statistics, given by the Giornale d'Italia Agricolo of January 21, show the geographical divisions of olive culture, the area planted, and the yield in hectoliters:

Olive-producing Provinces in Italy and yield of fruit per Province.

Province.	Area planted to olives.	Olives produced.
	Hectares.	*Hectoliters.*[1]
Liguria	59,000	81,000
Lombardy	5,200	3,100
Venetia	3,000	3,400
Emilia	6,900	4,400
Tuscany	285,440	175,500
Marches	172,700	13,100
Umbria	64,200	50,000
Latium	65,100	109,000
Abruzzi-Molise	271,200	105,000
Campania	230,300	147,000
Apulia	499,200	544,000
Basilicata	34,100	40,000
Calabria	256,700	267,000
Sicily	329,200	296,000
Sardinia	20,300	46,000
Total	2,302,540	1,884,500

[1] Hectoliter=2.84 bushels.

The region most intensely cultivated to the olive is Apulia. It has more than half of the total area of the Kingdom devoted to the specialized cultivation of the fruit (312,300 out of 584,000 hectares). The Provinces of Lecce and Bari alone, with their total of 452,800 hectares under olive cultivation, represent one-fifth of the total of such cultivation in the Kingdom, and with their 287,700 hectares of specialized cultivation represent almost half of this kind of olive culture in Italy.

Output, by Years.

Following is a schedule of production from 1879 to 1921, inclusive, the figures being quoted by the Giornale d'Italia Agricolo of January 28:

Annual average production of olives in Italy, 1879 to 1921.

Period.	Production.	Period.	Production.
	Hectoliters.		*Hectoliters.*
1879-1885	3,390,000	1901-1905	2,683,000
1886-1890	2,536,000	1906-1910	1,313,000
1891-1895	2,476,000	1911-1915	1,420,000
1896-1900	1,780,000	1916-1921	1,977,000

These figures show a decided decrease in the Italian production, notwithstanding a slight improvement in the last few years, due to accidental causes rather than to an effective and lasting revival. In order to obtain an estimate that would show the normal olive production in each region and Province, it is best to take the average of a long period, i. e., the 10 years from 1909 to 1920. During this period the average annual production for Italy amounted to 1,884,500 hectoliters, of which 943,600 hectoliters were attributed to the 1,761,799 hectares of promiscuous cultivation and 940,900 hectoliters to the 584,000 hectares of specialized cultivation.

Apulia the Principal Producing Province.

In area and production, Apulia ranks first. Out of a total annual average production of 1,884,500 hectoliters for the entire Kingdom Apulia's production of 544,000 hectoliters represents about 30 per cent of the whole; while out of the Italian total of 940,900 hectoliters, resulting from specialized cultivation, Apulia produces 467,600 hectoliters, or more than 43 per cent. This Province alone has a production equal to the combined productions of Campania, Abruzzi and Molise, and Umbria, or to that of Sicily and Calabria combined.

The varying conditions in different regions of Italy make a great difference in the yield per hectare, which is often less in regions of greater olive-producing areas than in those of less production. For example, Sicily has 72,000 hectares more of olive-producing area than Calabria (the region next in importance to Apulia), but the production of the two districts is about equal, consequently Calabria is of much greater relative importance. In Sicily, however, the Province of Catania has the greatest yield per hectare for promiscuous cultivation in all Italy, and is second only to the Province of Pisa in the yield for specialized cultivation. Sardinia ranks first with regard to the total yield (promiscuous and specialized cultivation) per hectare, being almost double that of Latium, which is considered next in importance from this aspect.

Yield of Olive Oil.

With regard to the production of olive oil and its importance in comparison with other important oil-producing countries, the following average figures in metric ton units are given by the Giornale d'Italia Agricolo of January 28:

Olive-oil production in principal producing countries.

Country.	1909–1913	1914–1918	1919–1921	10-year average, 1909–1921.	1921
	Metric tons.	*Metric tons.*	*Metric tons.*	*Metric tons.*	*Metric tons.*
Italy	163,190	185,328	148,197	168,245	170,000
Spain	219,697	284,806	331,033	270,432	339,740
Portugal	22,742	28,225	22,868	26,497	.....
Austria	4,274	2,094	.....	3,529	.....
Greece	.....	98,775	81,307	85,307	45,888
Algeria	29,974	.....	11,951	24,131	9,320
Tunisia	29,555	30,912	34,511	31,491	34,000

Yield of Other Countries.

French statistics show the annual average olive-oil production from 1909 to 1918 as 12,000 metric tons. The oil production of Asia Minor and of Cyprus is considerable, while that of California, Chile, Argentina, and Uruguay are constantly increasing.

While exact statistics are at present lacking, Italian producers realize that the production of the French Mediterranean colonies is increasing by leaps and bounds and that considerable trans-Atlantic competition is developing. The greatest competitor of all is Spain, which has, within a few years, secured from Italy the first place that it held for almost a thousand years. During the period from 1909 to 1921 Italy, with its olive-producing area of 2,303,340 hectares, produced an annual average of 168,345 metric tons of oil, while Spain, with its 1,559,226 hectares, produced 270,432 metric tons. This difference is thought to be due mainly to the greater care exercised by Spanish growers in olive cultivation, inasmuch as the proportion of promiscuously cultivated olive-producing areas to the total of all olive-producing areas is much greater than in Italy.

The Italian production of olive oil is steadily decreasing, while in all the other countries, especially in Asia Minor, it is increasing.

THE CEYLON TEA INDUSTRY IN 1922.

Consul Marshall M. Vance, Colombo.

The year 1922 was a most prosperous one for the Ceylon tea-planting industry. A continuation of the policy of fine plucking and careful manufacture, inaugurated in 1921, resulted in the maintenance of quality at the high level of that year, while the average prices obtained have been the highest in the history of this, Ceylon's most important, industry.

At the beginning of 1921 there were immense stocks of tea held in London and various other tea-marketing centers. By the beginning of 1922 these had been practically absorbed. The policy outlined above, coupled with general underproduction throughout the world, served to keep prices at new high levels for the entire year. This was in direct contrast to 1920, when many estates were on the verge of closing down because of low prices procured for their product. The increase in average prices obtained at the weekly Colombo tea auctions during the last three years were: 1920, 42.78 Ceylon cents per pound; 1921, 71.18 cents; and 1922, 85 cents. [These are estimates of the Ceylon Chamber of Commerce.]

Distribution of Exports.

The total exports of both black and green tea during 1922 were about 9,000,000 pounds larger than in 1921. The exports, however, were less than the average for the 10 years 1913–1922, which were 190,220,000 pounds annually.

The following table shows the export distribution of Ceylon tea for the years 1921 and 1922:

Exports of tea from Ceylon, 1921 and 1922.

Country.	1921	1922
	Pounds.	*Pounds.*
United Kingdom	111,203,300	117,281,922
United States	14,740,621	14,212,554
Australia	14,898,755	12,205,693
Canada	4,770,247	7,302,755
South Africa	5,618,542	6,440,862
New Zealand	4,756,935	5,490,303
Egypt	1,704,373	2,575,209
France	533,969	1,168,776
India	1,617,022	990,278
Straits Settlements	781,189	941,215
Mauritius	191,015	381,393
Japan	224,471	256,699
China	216,356	237,277
Netherlands	95,507	152,661
Germany	69,447	144,060
Other countries	916,556	1,609,127
Total	162,347,355	171,390,789

The United Kingdom was by far the largest buyer of Ceylon tea, purchasing 68 per cent of the total exports. Actual purchases in 1922 were slightly over 6,000,000 pounds above those of 1921, but the percentage of the total dropped slightly from the 68 per cent of 1921.

The United States purchased in 1922 over 500,000 pounds less than in 1921, but replaced Australia as

Ceylon's second-best customer, taking 8 per cent of the total, as against 9 per cent in 1921.

Exports to Australia fell appreciably during 1922, Australian purchasers turning more and more to the cheaper Java-grown tea, owing to the high price commanded by the Ceylon product.

Shipments to Canada, South Africa, New Zealand, Egypt, Straits Settlements, Mauritius, the Netherlands, and other countries showed substantial increases, while exports to France and Germany were more than double those of 1921. Turkey has reentered the market as a fairly important purchaser of Ceylon teas, but the continuance of the disturbed economic conditions in Russia has prevented the resumption of shipments to a country which before the World War was Ceylon's second-best customer.

Share of Exports to United States.

The total exports of Ceylon tea for the past 10 years, together with the amount sent to the United States, are given in the following table:

Exports of tea to all countries and to the United States, 10-year period, 1913 to 1922.

Year.	Total exports.	Exports to United States.	Year.	Tota exports.	Exports to United States.
	Pounds.	*Pounds.*		*Pounds.*	*Pounds.*
1913	192,176,160	8,896,386	1918	180,638,872	9,062,543
1914	195,216,419	10,667,008	1919	208,433,578	17,534,679
1915	211,629,777	10,250,652	1920	184,846,683	14,735,804
1916	202,482,959	7,225,813	1921	162,347,353	14,740,621
1917	193,033,962	22,475,152	1922	171,392,249	14,212,554

Vegetable-Oil Industry in Germany.

Consul J. Klahr Huddle, Hamburg, February 17.

For the first six months of 1922 Germany's imports of oleaginous materials were at the rate of 82,532 metric tons per month, copra being the most important with 26,609 metric tons, and rapeseed next with 13,071 metric tons. For the four-months period, August–November, 1922, the average rate decreased to 69,752 tons, while both copra and rapeseed decreased to 24,215 and 10,463 tons, respectively.

The quantities of raw materials used in the manufacture of vegetable oils, imported into Germany by chief countries of origin, for 11 months of 1922, are shown in the table which follows:

German imports of vegetable-oil materials.

Raw material.	Metric tons.	Chief countries of origin.
Copra	256,517	Dutch East Indies.
Rapeseed	120,280	British India.
Palm kernels	115,523	British West Africa, Belgian Congo, Dutch East Indies.
Linseed	98,757	Argentina, British India.
Soya beans	78,571	China.
Peanuts	67,075	British India, Tropical Africa.
Sesame seed	15,549	British India, China.
Cottonseed	13,327	Egypt.
Other oleaginous material.	8,602	
Total	774,201	

Imports of Vegetable Oils Into Germany.

The quantities of manufactured vegetable oils imported into Germany during the 11-month period ending November, 1922, and the chief countries of origin, are shown in the table which follows:

Imports of vegetable oils into Germany, 11 months, 1922.

Kinds of oil.	Metric tons.	Chief countries of origin.
Soya-bean oil	38,664	China.
Linseed oil	25,683	Netherlands.
Coconut oil	24,668	Do.
Palm oil	4,744	Do.
Castor oil	3,240	Great Britain.
Wood oil	3,043	China.
Palm-kernel oil	3,193	Netherlands.
Peanut oil	2,537	Do.
Cottonseed oil	2,096	Great Britain.
Rape and beet seed oil	1,197	Netherlands.
Lavat and sulphur oil	1,169	Italy, Great Britain.
Other oils	3,295	
Total	113,529	

Exports of Vegetable Oils from Germany.

The amount of vegetable oils and fats exported from Germany during the period January–November, 1922, and the countries of destination are given in the table following:

Exports of vegetable oils and fats from Germany, 11 months, 1922.

Fats and oils.	Metric tons.	Chief countries of destination.
Margarine, oleomargarine, etc	3,733	Saare Valley.
Peanut and sesame oils	2,308	Denmark, Sweden, Netherlands.
Palm-kernel oil	2,165	Denmark, Switzerland.
Linseed oil	1,508	Netherlands.
Coconut oil	705	Saare Valley.
Oleine (acidulous oil)	676	Do.
Rape and beet seed oils	658	Do.
Soya bean oil	478	Denmark.
Other oils	594	
Total	12,825	
Oilcake and oilcake meal	143,406	Denmark, Netherlands.

Additional information regarding foodstuffs appears in this issue under the following sections:

Cable review, Far East: Philippine sugar crop.
Cable review, South Africa: Agricultural outlook favorable.
Cable review, western Europe:
Wheat acreage in Italy increases.
Czechoslovakia's sugar production.
Latin America:
Increased price of Peruvian sugar.
Agricultural conditions in Mexico.
Tariffs and trade regulations:
Proposed additional restriction on the importation of hops in United Kingdom.
Reduction of Guatemalan import duty on rice.
Removal of French import prohibition on certain Danish animals and meats.
Correction of Belgian import duty on tobacco.
Reduced Greek export duty on olives.
Proposed Japanese export inspection of tea.
Definition of confectionery by British Indian customs authorities.
Foreign trade opportunities Nos. 5920, 5921, 5922, 5923, 5924, 5925, 5926, 5927, 5928, 5929, 5930, 5931, 5932, 5933, 5934, 5935.

TEXTILES

Edward T. Pickard, Chief, Textile Division

WORLD TEXTILE NEWS IN BRIEF.

Manila Hemp Production in Philippines.

The total Philippine production of abaca (manila hemp) during 1922 amounted to 1,209,088 bales, according to a report of the Philippine Department of Agriculture and Natural Resources.

Japanese Imports of Pony Hair.

Pony hair is imported from China and Chosen into Japan, where it is washed and bleached and afterwards used in the manufacture of brushes. This trade, which was developed during the war, continues to be active. (Consul E. R. Dickover, Kobe, February 15.)

New Brunswick Cotton Industry.

The most important industry in the St. Croix Valley is the manufacture of ginghams, shirtings, and dress goods. There are 1,548 looms and 55,000 spindles with 850 operatives and an annual output of $2,000,000 which is marketed in Canada. All the raw material, long staple cotton, is purchased in the United States. (Consul Alonzo B. Garrett, St. Stephen, New Brunswick, Canada, February 16.)

Port Elizabeth Wool Shipments.

Shipments of wool from Port Elizabeth to the United States during the month of January were 714,451 pounds of grease wool valued at $266,321, and 72,480 pounds of scoured wool valued at $41,202. This represents a large decrease from the December exports of 1,938,035 pounds of grease and 279,471 pounds of scoured. (Consul Monnett B. Davis, Port Elizabeth, Cape of Good Hope, South Africa, February 1.)

Manufacture of Cotton Knit Goods in Cuba.

The only factory that has ever undertaken the manufacture of cotton hosiery and undershirts in Cuba has now been idle for several months. The maximum normal production of this mill is reported to have been 200 dozen undershirts and 500 dozen pairs of hosiery per month. Discontinuance of operations is said to have been due principally to the pressure of foreign competition. (Acting Commercial Attaché Paul L. Edwards, Habana, March 11.)

Transcaucasian Market for American "Cabots."

Practically the only American cotton article figuring in the Transcaucasian markets has been "cabots," which have established an enviable reputation and created an active demand for themselves. Importers irrespective of nationality have been handling the American product. Most of the trade is carried on between Batum and Constantinople, but some of these goods find their way to Baku and thence into Persia after changing hands many times. (Assistant Trade Commissioner H. B. Barton, Constantinople, Turkey, January 23.)

British East African Market for Gray Sheetings.

The British East African market is becoming increasingly important, since the number of natives learning to use cotton goods, particularly gray sheetings, grows continually. The most satisfactory way to handle this trade is to establish a warehouse at Mombasa, or failing that, at a near-by port such as Aden, from which orders can be readily filled. An American firm bidding for this trade recently sent c. i. f. quotations Zanzibar, Tanga, and Mombasa. This move caused favorable comment from importers. (Consul William L. Jenkins, Nairobi, Kenya, January 6.)

Proposed Cotton Cultivation in Spain.

To encourage the cultivation of cotton in Spain it is proposed that the Government grant a subsidy to the amount of 25 centesimos per gross kilo, funds for which would be obtained by taking 75 per cent of the customs revenue on raw cotton and imposing a special tax of 5 pesetas per bale on imported cotton. It is claimed that there are 200,000 hectares (hectare=2.471 acres) adaptable for this purpose in Andalusia alone. Spanish imports of raw cotton in 1922 were at the rate of 350,000,000 pesetas for the year. (Assistant Trade Commissioner O. S. Payne, Madrid, February 27.)

Verviers Textile School.

The Verviers Textile School now has only 60 pupils, about one-third of the pre-war attendance, owing to the absence of its former French and Russian contingent. The laboratories and shops are extremely well equipped for so isolated an institution. They have types of the best-known machines, and all repairs are made by the students. [Booklets in French describing the industrial instruction furnished at Verviers will be loaned upon application to the Textile Division, Bureau of Foreign and Domestic Commerce, Washington.] (Acting Commercial Attaché S. H. Cross, Brussels, Belgium, February 17.)

Cotton Shipments from Recife.

The cotton shipped out of the port of Recife includes not only that produced in the State of Pernambuco, but much grown in the adjoining States of Parahyba do Norte and Rio Grande do Norte. The total domestic shipments during 1922 were 7,741 metric tons, compared with 9,119 tons in 1921. Exports to foreign countries amounted to 5,019 metric tons in 1922, against only 3,413 tons in 1921. Domestic shipments in January, 1923, totaled 1,030 tons and exports 623 tons, compared with 719 tons and 305 tons, respectively, in January, 1922. (Consul C. R. Cameron, Pernambuco, Brazil, February 15.)

Ecuador's Textile Industry.

The manufacture of thread and textiles, especially from cotton, has been developing in Ecuador for many years, and at present there are 11 thread and textile mills in Ecuador, all within the Quito district. One of these mills makes knit goods only. Their products are consumed in the country and also exported to southern Colombia. The industry is capitalized at approximately 20,000,000 sucres, employs about 10,000 persons, operates 15,000 spindles, and depends upon mountain streams for power. Its growth has caused the annual production of cotton to increase from 900,000 pounds to 4,000,000 pounds in the last six years. (Consul General Frederic W. Goding, Guayaquil, February 2.)

CHINESE LACE INDUSTRY EXPANDS.

Assistant Trade Commissioner A. Viola Smith, Shanghai.

China's lace trade, although still essentially a home industry, is becoming an important factor in the nation's commerce. Exports of Chinese lace have mounted from the negligible figure of 140,682 haikwan taels in 1914 to 5,230,284 haikwan taels in 1921, which latter value represents an increase of 95 per cent over the 1920 exports of 2,678,530 taels. The United States' share of this trade was 412 taels in 1914, 1,743,802 taels in 1920, and 4,195,494 taels in 1921. Australia ranks second, Great Britain third, and Canada fourth as buyers of lace.

Chefoo formerly led in exports of lace from China, but in 1919 Shanghai rose to first place with about three-quarters of the total shipments to its credit. Chefoo still holds second place, and small amounts are being shipped from Ningpo, Swatow, and Nanking.

Development of the Trade.

Silk torchon and Cluny laces were originally introduced into Chefoo (Shantung Province) by missionaries, who took this means of teaching the native women and girls a profitable home employment. In 1895 the industry was placed on a commercial basis by the establishment of the Chefoo Industrial Mission for the sale of these products. Chefoo's entrance into competition with European laces came during 1910, when thread laces were manufactured by using Belgian and French patterns. Up to this time Australia had taken the bulk of the torchon laces, while the silk Clunys found their way to America.

Sales of lace to the United States did not assume commercial importance, however, until the introduction of filet-lace making into China. During 1916 two American firms began buying filet laces, which at that time could only be obtained in small amounts by combing the interior towns and cities. Although the industry was started in Chefoo, the real centers to-day are Pootung (Shanghai's industrial district) and Wusih (about 70 miles north of Shanghai). The better grades of filet lace are made in the Wusih district, where the workers have had the advantage of the industrial-school training. The narrow widths (6 and 9 holes) are produced here. Pootung claims to have about 230 establishments, employing approximately 25,000 women workers. In this district, which manufactures the bulk of the wider filet (from 30 to 50 holes), the patterns are worked in by needle in what is known as running stitch, and are somewhat inferior to the Wusih product. The combined output of Pootung and Wusih is estimated at $1,500,000 annually. Most of the filet laces are produced by women and children, although there are some men workers, chiefly on the larger pieces, such as table covers and bedspreads.

During 1920 the Irish lace industry was introduced into Swatow and adjoining districts, and it is claimed that they are turning out a higher-class article than is produced in Ireland. One American firm has 18,000 workers employed in this district, with an annual output of about $1,250,000. A small amount of Venetian or mosaic laces is made in the Shanghai district.

Raw Materials.

The net or mesh which is used as the basis of filet lace is made entirely by hand, principally in the Ningpo district of Chekiang Province. It is collected by agents who bring it to the lace centers of Pootung and Wusih.

British thread has always held a dominant position in the industry, although during the war Japanese thread entered into competition with it. The Japanese thread is said to be defective in wearing qualities, the strands separating when the laces are washed, thereby rendering them loose and uneven. Recently a Chinese-made thread has entered the market which is a trifle better in quality than the Japanese. So far a very small amount has been available, but it is making itself felt in the trade. American threads have been imported in negligible quantities, but there seems to be no reason why they should not secure a place in this market if the American manufacturer is willing to meet British competition. A limited amount of French and Belgium thread is imported for the finest grades of laces.

The thread is furnished to the workers by native brokers, dealers, or buyers, who pay their wages upon delivery of the finished products. Workers are paid on the basis of a few copper cash per mesh hole per day. The Shanghai scale of wages ranges from 8 to 15 cents per day, the average wage being 10 cents silver.

Merchandising and Inspection.

Filet and other laces are usually bought up by scouts or native brokers touring the various lace districts. They are then brought into the markets, such as Shanghai, and sold to exporting concerns, in whose warehouses they are inspected for the following defects: (1) Torn borders, (2) rust, (3) broken holes, (4) soiled condition. Laces are usually graded into three classes, rejects being disposed of in job lots to Chinese peddlers.

Great difficulty is experienced in getting the Chinese lace workers to realize the importance of cleanliness. Often as high as one-third of a shipment must be classed as seconds owing to soiled condition. Rigid foreign supervision alone reduces this fault to a minimum, but where the laces are collected from Chinese homes it has been found impossible to inculcate the desirability of cleanliness.

After inspection the laces are measured, carded, and labeled preparatory for shipment, bolts running from 12 to 100 yards each. The lace is then packed in cardboard boxes holding 50 pounds of lace—usually 50 bolts. These boxes are then wrapped in oiled paper, covered with muslin, sewed, and stenciled for shipment, which is usually by parcel post.

[A list of lace exporters in Shanghai may be obtained upon application to the district and cooperative offices of the Bureau of Foreign and Domestic Commerce or to the Textile Division at Washington. Refer to file No. FE—13049–A. Detailed descriptions of the numbers and sizes of thread used in the lace industry may be obtained from the Textile Division by referring to file No. 7181.]

SPANISH COTTON INDUSTRY IN 1922.

Commercial Attaché Charles H. Cunningham, Madrid, January 11.

Catalonia, which has a population of 3,500,000 is the center of Spanish textile manufacturing. According to an official report there are 5 cotton carding establishments with an output valued at 6,000,000 pesetas, 266 spinning mills employing 55,353 operatives and producing 867,138,004 pesetas' worth of yarn and twist, 632 weaving mills with 48,639 operatives and a production valued at 1,086,654,200 pesetas, and 149 knitting mills with 7,163 employees and a total output of 78,404,400 pesetas in the four main Provinces of Barcelona, Tarragona, Lerida, and Gerona.

The weaving mills here constitute 95 per cent at least of the cotton-cloth manufacturing in Spain. While

it has been impossible to secure these figures for 1921 and 1922, it is believed the foregoing data can be used in estimating the probable production and employment during these years, production being said to be practically the same as in 1920. Unofficial sources, however, estimate that there are now approximately 30,000 persons engaged in spinning and 30,000 on the looms, making a present total of 60,000 operatives.

Spindles and Looms—Cloth Production.

The spinning mills of Spain have been working in two shifts of eight hours each since 1920, but because of antiquated machinery and the reactionary character of Spanish labor the actual efficiency is said to be only about 90 to 95 per cent of capacity production. Active spindles in all Spain number 1,790,476 and looms 65,004 (of which 58,085 are in Catalonia alone), which calculated on a 16-hour basis with two shifts of labor is equivalent to 3,580,952 spindles and 130,008 looms operating on an 8-hour basis.

Production of cotton cloth in Spain is estimated at 86,000,000 to 100,000,000 kilos annually and consumption at 75,000,000 to 85,000,000 kilos (kilo=2.2046 pounds). The cloth is classified according to the number of threads to the centimeter as coarse, medium, or fine, and the output comprises about 70 per cent of medium cloth, 15 per cent of coarse or ordinary cloth, and 15 per cent of fine.

Gradual Loss of War-Time Markets.

During the war Spain built up a very good export trade in cotton textiles in the Levant, southwestern Europe, and Latin America. Exports, which were only 5,986 metric tons (metric ton=2,204.6 pounds) in 1913, rose to 16,404 tons in 1918 and 17,207 tons in 1919, dropping to 10,078 tons in 1920 and to 5,678 tons in 1921. The greater part of these exports was destined for the Latin American countries, Argentina and Cuba being the leading buyers.

By the end of 1920 the reentry of the United Kingdom and the United States in their former textile markets had begun to restrict Spanish sales. However, the domestic market was short of supplies due to the lack of imports from Great Britain and the custom of local factories to produce extensively for foreign consumers. During the latter part of 1920 and 1921 and 1922 the textile industry was actively engaged in meeting home requirements. A high tariff imposed on textiles in December, 1920, enabled the Spanish industry to meet local British and American competition in 1921, and these duties were further increased in May, 1921, and in some cases were again increased in February, 1922.

Exports of Cotton Goods in 1922.

The most important exports of cotton manufactures during the first 11 months of 1922, with the principal countries of destination, were: 140,458 kilos of cotton thread, sent chiefly to Argentina, Uruguay, and Chile; 1,536,467 kilos of bleached and 1,005,969 kilos of dyed and printed cotton cloth to Argentina, Cuba, Panama, Uruguay, Melilla, and the Canaries; 338,377 kilos of knitted and netted fabrics and underwear to Argentina, Cuba, Panama, Uruguay, and Egypt; 60,396 kilos of knitted and netted fabrics in stockings, gloves, and other small articles to Argentina and Uruguay. It is understood that there has been a considerable decline in shipments to Latin America and that the Near Eastern trade has almost entirely ceased.

Although Spain succeeded in maintaining an export trade at the rate of 15 per cent of its textile output during the greater part of 1922, indications point to a reduction in both production and demand in 1923. Some of the factors contributing to this condition are: (1) Wages in Spanish textile mills are still paid at rates prevailing during the war and armistice periods. (2) Large stocks of wool have been thrown on the market at a considerable loss, and wool goods and wool mixtures are being offered at such low prices as noticeably to lessen the consumption of cotton cloth. (3) There is a possibility of a further decline in exports. (4) This contraction in shipments abroad, paralleling as it does decreases in domestic orders for spring amounting to 30 to 50 per cent, is causing the local market for cotton goods to become overstocked. Mills, however, are still running full time in the hope that buying may improve later in the season and enable them to dispose of their accumulations.

Buying and Selling Terms.

It has always been customary to sell raw cotton at 90 days, drawing drafts which were discounted here, but owing to the stringency of the money market and the falling value of cotton, importers have found it difficult during the past year to get accommodations from the banks. Some banks refused to touch cotton paper under any circumstances while others refused to advance more than 50 per cent. The situation, however, is now better, and there is a tendency toward the extension of longer credits in the cotton business.

During the last five years the percentage of direct sales of American cotton in Spain has increased considerably. Formerly 60 per cent of the cotton imports were financed through London, but at the present time only about 20 per cent of this financing is done by the British while 80 per cent is American, involving direct shipments of cotton purchased in dollars.

Practically all of the manufacturers, especially the larger ones, are considered to be in first-class financial condition. Some of these purchase their cotton on a cash basis; others are allowed as much as 90 days for payment. Spanish exports of cotton goods, particularly those going to Latin America, are sold on whatever terms can be secured, and exporters usually grant 90 days as a minimum and at times up to 6 months if necessary. Sales of textiles to Spain are usually made at 90 days.

United States Cotton Goods to Noncontiguous Territories.

Shipments of cotton cloths, hosiery, and knit goods from the United States to its noncontiguous Territories in January were: To Alaska—13,671 square yards of cotton cloth valued at $2,895, 170 dozen pairs of hosiery valued at $1,117, and 2,284 pounds of knit goods valued at $2,348; to Hawaii—903,412 square yards of cotton cloth valued at $157,417, 4,665 dozen pairs of hosiery valued at $14,886, and 25,365 pounds of knit goods valued at $23,834; to Porto Rico—4,455,855 square yards of cloth valued at $659,643, 20,289 dozen pairs of hosiery valued at $27,622, and 9,891 pounds of knit goods valued at $11,828.

Sales to Porto Rico included 2,332,868 square yards of unbleached cloth, 831,941 square yards of bleached, 401,798 square yards of printed, 538,869 square yards of piece-dyed, and 350,379 square yards of yarn or stock-dyed cloths. Shipments to Hawaii of cotton cloth comprised 75,432 square yards of unbleached,

402,282 square yards of bleached, 279,140 square yards of printed, 87,612 square yards of piece-dyed, and 58,946 square yards of yarn or stock-dyed cloths.

Italian Textile Industries Depressed.

Cable from Commercial Attaché H. C. MacLean, Rome, April 2.

Italian imports of raw cotton amounted to 16,000 metric tons (72,795 bales of 478 pounds) during February. The high price of American staple is affecting demand, and is resulting in reduced imports from the United States and the substitution of Indian and Egyptian cotton. The prices of yarns have not advanced with raw materials, and yarn production is being curtailed. American 12s are quoted at 19.65 lire per kilo (44.5 cents per pound). Sales of textiles are limited, as the buying public is holding off for lower prices.

Wool manufacturers are fairly active on summer goods, and the knitting mills are fully employed. A reduction in spinning activity is expected on account of lessened purchases of wool cloths. While production costs for yarn are increasing, prices remain stationary, the demand is limited, and export trade continues dull.

Active speculation in cocoons has disturbed the silk market, but the price of raw silk has not increased in proportion, and the market is very weak. The demand for raw silk is limited, and production will probably be reduced.

Additional information regarding textiles appears in this issue under the following sections:

Cable review, western Europe:
Cotton prices declining in United Kingdom.
British wool market firm.
Italian textile industries encounter difficulties.
Cable review, Far East: Improved status of Philippine textile market.
Far East: Outlook for the Indian piece-goods trade.
Latin America: Peruvian cotton production.
Tariffs and trade regulations: Reduced Mexican import duty on cotton from Lower California ginned in the United States.

AUTOMOTIVE PRODUCTS

M. H. Hoepli, Acting Chief, Automotive Division

BRITISH JANUARY AUTOMOTIVE IMPORTS BREAK ALL RECORDS.

Assistant Trade Commissioner William M. Park, London, March 8.

The belief that 1923 will offer a much better market in England for the sale of foreign-built motor cars than did either of the two proceding years seems to have been fully justified, if the import volume with which the year begins can be taken as an indication. Imports during January, comprising 2,025 passenger cars, 140 trucks, and 1,499 chassis, were the largest of their class that Great Britain has ever made in the first month of the year. This large volume shows a continuation of the unslackening demand during the greater part of 1922, which resulted in total imports for that year of 13,388 passenger cars, 973 trucks, 8,527 chassis, and parts valued at £1,885,171. January figures, as compared with those of December, show an increase of 60 per cent in the number of complete passenger cars and 100 per cent in the number of passenger-car chassis brought in; truck chassis totaled 460 in January, as compared with 48 in December.

The following table shows to what extent imports during January broke all previous records, even exceeding January of the boom year, 1920.

British automotive imports during January, 1923, compared with January in 1922, 1921, and 1920.

Date.	Passenger cars.		Commercial vehicles.		Chassis.	
	Number.	Value.	Number.	Value.	Number.	Value.
January, 1923	2,025	£325,690	140	£22,745	1,499	£205,564
December, 1922	1,211	211,732	194	29,018	582	89,639
January, 1922	655	116,462	35	12,108	684	140,750
January, 1921	513	137,278	1,095	179,808	364	124,882
January, 1920	1,816	566,181	270	78,412	911	359,762

The c. i. f. value of complete passenger cars imported into Great Britain has greatly decreased since January, 1920, when the value was £312. The average value in January, 1921, was £267; in January, 1922, £178; and in January, 1923, £160. These drastic reductions will undoubtedly mean heavier buying of American and other foreign-built motor cars in the British market, although it must be borne in mind that British manufacturers have endeavored to keep pace in reducing the price of their own products.

Canada Furnishes Majority of Passenger Cars.

Of the 2,025 passenger cars imported during January, Canada furnished 1,534, the United States 216, France 205, and Italy 49. France furnished 73 of the trucks imported, followed by the United States with 18, and Italy with 11. Italy supplied 374 of the 1,039 passenger-car chassis brough into Great Britain during January, France 351, Canada 284, and the United States 15. The United States led as a source for motor-truck chassis, having supplied 274 of the 460 brought in, followed by France with 99, Canada with 64, and Italy with 20. The average value of complete passenger cars imported from France was £144, as compared with £158 from Canada, £187 from the United States, and £285 from Italy.

British January Automotive Exports Increase Slightly.

Exports of automotive products from Great Britain during January totaled £288,588, an increase of almost 5 per cent over December shipments valued at £274,895. January exports were made up of 154 passenger cars valued at £69,067, 66 trucks valued at £55,707, 143 chassis valued at £63,372, and parts worth £100,434. These figures represent a considerable increase in number in all classes except trucks, which decreased slightly. The leading markets were the same as in previous months—Australia, New Zealand, British India, and the Channel Island taking the largest numbers. Ten trucks valued at £15,648 were sent to Spain.

GERMANY'S RECENT AUTOMOTIVE FOREIGN TRADE.

The first detailed and accurately classified statistics on Germany's foreign trade for 1920, 1921, and 1922—compiled by the German Federal Statistical Office at the request of C. E. Herring, American commercial attaché at Berlin—reveals to what extent Germany has limited imports of motor vehicles through import license regulations. There is revealed also the increased exports of motor trucks and motor cycles, as compared with 1913; passenger-car exports, however, have not equaled those of the pre-war year.

Shipments abroad in 1922, if compared in number with estimates for 1921 based on the eight months' figures made available, show only the slightest increase in passenger cars, an increase of 16 per cent in motor trucks, and a large increase of 101 per cent in motor cycles.

Germany's foreign trade in automotive vehicles during 1913, 1920, 1921, and 1922.

Classification and year.	Imports.			Exports.		
	Number.	Tons.	Value (in million marks).[1]	Number.	Tons.	Value (in million marks).[1]
Passenger cars and chassis:						
1913	1,830	1,913	12.2	7,862	9,732	71.1
1920	223	380	18.0	8,777	12,125	595.4
1921 (May–December)	361	479	36.8	3,960	5,229	421.5
1922	807	1,114	373.8	5,987	8,304	5,088.6
Motor trucks and chassis:						
1913	159	366	2.0	1,000	2,994	13.2

1922	69	8	8.7	5,822	439	729.5

[1] Values for 1913 in gold marks; for 1920, 1921, and 1922, in paper marks.

Post-War Passenger-Car Imports Largely from Austria.

Imports during 1913, according to class, originated in the following countries in the relative order of importance: Passenger cars—United States, France, Belgium, Great Britain, and Austria-Hungary; motor trucks—Switzerland and Great Britain; motor cycles—Great Britain and the United States. Since the war, however, imports of passenger cars have originated largely in Austria; the other sources for 1913 have furnished a small number of cars, which, it is understood, have been taken into Germany by individuals for their own use. Fifty of the motor trucks imported during 1920 came from Great Britain; from May to December, in 1921, that country furnished only 3. In 1922 Great Britain furnished only 5, while Switzerland supplied 22. Imports of motor cycles during the post-war years originated for the most part in Great Britain, the Netherlands, and the United States, in the order named.

Leading Export Markets Largely in Europe Since War.

The leading market for German motor vehicles of all classes during 1913 was Russia. Other leading markets were found mostly in Europe, except for some large shipments of passenger cars to Argentina and Brazil and of trucks to the latter country. In the post-war years the leading markets for all classes were found in Europe, with the Netherlands in the lead. Large shipments to countries outside of Europe are not found, with the exception of a considerable number of trucks sent to the Dutch East Indies in 1920.

[Full details, showing the exports and imports by destination and origin, will be furnished to American passenger-car, motor-truck, and motor-cycle manufacturers at an early date. Other persons interested may secure information, on request, from the Automotive Division of the Bureau of Foreign and Domestic Commerce.]

AUTOMOTIVE DIGEST.

Mexico—San Luis Potosi Sales Decreasing.

The commercial depression prevalent in the San Luis Potosi district was directly reflected in the falling demand for motor vehicles during February and the actual inability of local dealers to dispose of stocks on hand, except the very lowest-priced cars. (Consul Walter F. Boyle, San Luis Potosi, March 5.)

Brazil—Government Aid to Road Builders.

COMMERCE REPORTS of March 19, page 746, states that the Brazilian Federal Government will pay up to 2,000,000 milreis per kilometer in aid of road building, on stretches not less than 20 kilometers in length, for roads constructed by individuals, companies, states, or municipalities. The correct figure is 2,000 milreis per kilometer.

Great Britain—Antidazzle Light Bill to be Reported.

The Ministry of Transport is expected to report an antidazzle light bill into Parliament during the next session, which will prohibit the use of a lamp with a forward illumination exceeding 150 feet, unless it complies with antidazzle regulations requiring the main beam to be thrown below the vision of pedestrians and of drivers of other vehicles. (Vice Consul Howard Donovan, London, February 13.)

Japan—Tokyo Reduces Motor-Vehicle Taxes.

The Tokyo City Council on March 22 passed a ruling, effective April 1, reducing taxes on motor vehicles in the city as much as $35 on cars in private use and $18 on cars for hire. The taxes previously in effect for cars over 20-horsepower, under which category most American cars enter, totaled $393 a year for privately owned cars and $185 a year for public vehicles. (Cablegram, Commercial Attaché James F. Abbott, Tokyo, March 23.)

Canada—February Automotive Exports Increase.

Exports of Canadian automotive products during February, 1923, valued at $3,393,100, showed an increase of over 16 per cent, as compared with the January shipments valued at $2,896,486, and nearly reached the high mark established in December, 1922, when similar exports were valued at $3,550,680. Passenger-car shipments during February numbered 5,668, valued at $2,964,345, as against 4,666 in January and 2,719 in February, 1922. Exports of motor trucks totaled 438, valued at $152,587, as compared with 369 valued at $141,621 during January. Exports of parts valued at $196,168 showed a decrease of 14 per cent. The United Kingdom ranked as the leading market during February, 2,128 passenger cars having been shipped to that country as compared with 1,564 in January. Other leading markets were Australia, with 1,504; New Zealand, with 583; British South Africa, with 355; and Argentina, with 323. Australia took 270 trucks, while British India took 63, New Zealand 48, and Ceylon 24.

Canada—Automotive Prospects Favorable in Ontario.

Medium and higher-priced cars increased in popularity in northern Ontario during 1922, and a number of agencies for these classes of cars were established during the year. Prospects for 1923 are encouraging, although the lack of good roads is a deterrent to the sale of as many motor vehicles as the population can afford. Registration in northern Ontario during 1922 totaled 5,653 passenger cars, an increase of 1,342 over 1921; the 514 licensed trucks represented a gain of 100. Motor cycles registered totaled 104, a decrease of 13. (Vice Consul Harold S. Tewell, North Bay, March 15.)

COAL

GERMAN COAL OUTPUT AND TRADE IN 1922.

Consul John E. Kehl, Breslau, February 10.

The coal output of Germany in 1922 is officially given at 129,964,597 tons, as compared with 136,210,088 tons during 1921 and 190,109,440 tons for the year 1913. The decreased production of 60,144,843 tons during 1922, as compared with 1913, is attributed to: (1) The loss of rich coal areas in Upper Silesia which have been allocated to Poland. In 1913 these mines produced 32,500,000 tons of coal, which was equal to 17 per cent of the total national production during that year. (2) The loss of Alsace-Lorraine which in 1913 produced 4,790,000 tons of coal. (3) The loss of the Saar Basin and the Palatinate for a period of 15 years, at the end of which time a plebescite will determine the status of the sovereignty of these areas. These districts produced 12,223,000 tons of coal in 1913, 9,410,433 tons in 1920, and 9,574,602 tons in 1921. (4) Reduced hours of labor, coupled with a reduced average of productivity per man.

The loss of the coal sources above noted, using the represented annual output of 1913 as a basis, amounted to 49,512,000 tons. German inland requirements of bituminous coal for 1922 were estimated at 150,000,000 tons, or 17,000,000 tons less than the consumption credited to the country for the year 1913. In this connection it is of interest to note an increase of 50,000,000 tons in the production of brown coal in 1922 as compared with the output of 1913. The heating power of lignite is one-third that of bituminous coal.

Statistics of Production.

The following amounts of coal, coke, and briquets were produced in Germany in 1913, 1921, and 1922:

German coal production.

Districts.	Coal.		Coke.	Briquets.	
	Bituminous.	Lignite.		Bituminous	Lignite.
1913.	*Metric tons.*	*Metric tons.*	*Metric tons.*	*Metric tons.*	*Metric tons.*

Output of Principal Coal Districts.

The following table shows the monthly production in 1922 of bituminous in the principal coal districts of Germany:

German coal production in 1922, by months.

Months.	Ruhr.	Upper Silesia.	Lower Silesia.	Rest of Germany.	Total.
	Metric tons.	*Metric tons.*	*Metric tons.*	*Metric tons.*	*Metric tons.*
January	7,849,498	2,681,240	450,683	895,325	11,876,746
February	7,451,992	2,681,131	414,242	908,877	11,456,242
March	8,695,462	3,194,262	491,325	1,037,058	13,418,107
April	7,240,842	2,769,920	491,602	778,082	11,280,446
May	7,812,840	2,971,820	445,435	875,594	12,105,689
June	6,797,703	979,890	438,641	1,121,671	9,337,905
July	7,594,461	688,836	456,018	849,559	9,580,874
August	8,037,572	759,643	486,546	559,293	9,843,054
September	7,941,998	789,438	406,674	1,018,937	10,157,047
October	8,507,280	635,379	476,102	1,141,859	10,760,620
November	8,272,479	776,793	480,136	926,643	10,456,051
December	7,586,157	729,880	452,630	915,149	9,683,816
Total	93,788,284	19,658,232	5,490,034	11,028,047	129,964,597

In the foregoing tables the figures for 1913 are those of the German Empire in its entirety; for 1921 the production of the Saar Basin is not included: for 1922 the production of Upper Silesia after June 1 includes only the output of the mines remaining to Germany after the Upper Silesian plebescite.

Production of Lignite.

It is of interest to note that the 1922 production of lignite registers an increase of 57 per cent over that of 1913. This development is due to the necessity of re-

placing fuel for the lost bituminous coal areas and for the coal applying to the reparation deliveries. Lignite is far from being a satisfactory replace fuel because its heating qualities are only about one-third as great as bituminous coal, and it requires, when briquetted, about 50 per cent more shipping space.

However, it is used with good results for household heating purposes, and also by electrical plants; the glass, porcelain, and textile industries; chemical works, etc. Its greatest economic value lies in its consumption in the vicinity of place of production.

Imports Increase and Exports Decrease in 1922.

The post-war conditions under which the German coal industry has been operating have completely reversed the pre-war trade situation. In 1913 Germany exported 34,598,408 tons of coal, an excess of 24,058,339 tons over its imports. In 1922, on the other hand, the imports exceeded the exports by 8,458,888 tons.

The following table compares Germany's exports and imports of coal during 1913, 1921, and 1922:

Germany's imports and exports of coal.

[1] Austria-Hungary in 1913.

The import of English coal during 1922, at the year's average of $5.67 a ton, were valued at $43,755,667. The German production for the same period, at the average for the year of $3.18 a ton, was valued at $413,387,418.

Coal mining is the basic industry of Germany. Decreased production and the continually increasing cost reflect adversely on every phase of German economics. The cause of decreased production appears to be solely an internal condition not beyond remedying. The cause of the continually rising coal prices is in a measure beyond control of the mine operators.

THE FRENCH COAL MARKET IN 1922.

Consul Ernest L. Ives, Paris, January 20.

The production of coal in France during 1922 reached about 32,000,000 metric tons, according to available provisional figures, as compared with 28,240,000 tons in 1921, and 40,843,000 tons in 1913. The present normal needs of the country are estimated at 65,000,000 metric tons.

Total imports of coal during the past year were about 22,000,000 metric tons, including 12,000,000 tons from Great Britain, 3,600,000 tons from Germany, and 3,400,000 tons from Saar region. Exports of coal amounted to approximately 2,000,000 metric tons, thus leaving about 52,000,000 metric tons available for consumption in France.

French coke production during the year 1922 is estimated at 1,000,000 metric tons. Imports of coke totaled approximately 5,000,000 metric tons, including about 4,000,000 tons of German origin during the year, and exports were about 500,000 tons, which left 5,500,000 metric tons available for consumption in France. It is stated that the present needs of French metallurgical plants average about 8,500,000 metric tons annually.

Price Variations for Coke and Coal in 1922.

Prices quoted for blast-furnace coke, which are fixed by the S. C. O. F. (Society of Consumers of Blast Furnace Coke), constantly increased throughout the year, varying between 80 and 95 francs per ton. The higher grade coke was quoted at 138 francs per ton (on board car point of departure) at the beginning of 1922. It fell to 123 francs during the middle of the year and closed at 125 francs at the end of the year.

French mines endeavored to maintain their prices during the latter part of the year, the price for industrial coal of the "tout venant" grade varying only from 74 francs per ton (on board car point of departure) at the beginning of 1922 to 70 francs at the end of the year.

General Market Situation.

From the point of view of the French mines the situation during 1922 was in general favorable on account of the great demand for coal on the home market. French mine owners benefited by the coal strike in America which caused a diversion of British competition from the French market, and also by the high rate of the pound sterling which lessened British imports into France to a certain extent. Fears of strikes among French miners were averted several times by compromises, or, as was the case in December, by putting off the miners' claims until such time as selling contracts had expired.

From the point of view of the industrial coal consumers the question of coal supply, chiefly during the latter part of the year, was often serious, on account of a shortage of rolling stock in certain regions, and of increased industrial demand for which the amount of coal available for consumption in France was hardly sufficient. The coke problem became so acute during the latter part of 1922 that the production of pig iron and steel was impaired.

Additional information regarding coal appears in this issue under the following sections:

Cable review, western Europe:
New wage agreement agitated by British coal miners.
Coal production of Czechoslovakia.
Far East: Japanese industrial stagnation results in restriction of coal production.
Latin America: Chilean coal market quiet.

PETROLEUM

Henry C. Morris, Chief, Petroleum Division

PERUVIAN MARKET FOR PETROLEUM PRODUCTS.

W. N. Pearce, clerk to trade commissioner, Lima.

Practically all gasoline and kerosene consumed in Peru is produced in the Republic, with the exception of the limited quantities entering the Amazon port of Iquitos. There is a small market in the country, however, for certain classes of foreign petroleum products, especially fuel oil, lubricants, and greases.

Fuel oil is imported principally from the United States, as the Peruvian product is not considered suitable for burning. The chief consumers of fuel oil are the Central and Southern Railways, and a few other minor lines along the coast. Comparatively little fuel oil is used for general industrial purposes or sold to ships, which usually bunker at Balboa. Imports of petroleum products in 1921 totaled 20,843,200 kilos, as compared with 6,999,635 kilos in 1920. Of the 1921 imports, 11,812,700 kilos were listed as coming from Panama, 8,627,500 kilos from Mexico, and the rest direct from the United States.

Principal Consumers of Lubricants.

The principal consumers of lubricants and greases are the cotton and woolen mills, sugar estates, rice mills, mining companies, cottonseed-oil plants and cotton gins, owners of automobiles and tractors, and minor manufacturing industries. There are comparatively few automobiles in Peru; it is estimated that 2,300 passenger cars and 1,100 motor trucks are being run in Peru at present. Several grades of lubricating oil are produced in Peru, but the industry is not yet sufficiently developed to keep out foreign oils.

Ten or twelve of the best known brands of American lubricating oils are on the market. This trade is controlled by the large importing houses of Lima, which act as wholesalers and place their brands on consignment or sell outright to garages, automobile supply stores, hardware stores, and filling stations. Competition is keen, and the market for additional brands does not appear favorable. Lubricating oil from Germany is beginning to be sold locally, and it is said that this product originally comes from Russia.

The market for lubricants has been somewhat active during the past few months, because of the increased use of omnibuses in Lima. This is generally believed to be a temporary situation, however, and no permanently increased demand is anticipated.

PETROLEUM PRODUCTS TRADE OF INDIA.

Kerosene and lubricating oils were in fair demand in India during 1922, consequently the American importing companies had a more successful year than the British companies which handle locally produced gasoline and paraffin wax. Extremely low prices for these latter commodities in conjunction with high production costs both in the oil fields and refineries, resulted in rather unsatisfactory returns for the local companies.

Customs returns for the fiscal year ended March 31, 1923, are not available. Totals through December covering a period of nine months show that the import of kerosene was larger by 22 per cent than during the similar period of 1921. The United States supplied 74 per cent and most of the remainder came from Dutch Borneo. There was very little gasoline imported, as most of this is produced locally.

Lubricating oil for the nine months' period showed a gain of 9 per cent. The countries of origin are not indicated, but the totals for previous fiscal years show that the United States supplied 75 per cent or more of this oil. For the year 1913–14 the Dutch East Indies shipped about 20 per cent of the lubricating oil imported by India, but the returns for more recent years indicate that they have lost this trade, as less than 1 per cent is credited to them.

Batching oil, a very heavy, cheap, lubricating oil, used to soften jute fiber before weaving, is in good demand by the jute mills near Calcutta. American oil companies furnished about 75 per cent of the quantity during 1920–21. During the following year the Dutch East Indies made a good gain in this market and increased their share to 50 per cent of the total. The imports during the nine months' period, March to December, 1922, are about 30 per cent greater than corresponding figures in 1921.

The fuel oil imports show a gain of 9 per cent in the nine months' period of 1922 as compared with 1921, but the United States does not share in this trade. About three-fourths of the demand is supplied by Persia, while most of the remainder comes from the Dutch colonies.

Import Statistics.

The imports of petroleum products into British India during the fiscal years 1914, 1921, 1922, and the first nine months of the fiscal year 1923 are shown in the following table. Quantities are expressed in imperial gallons (1 imperial gallon=1.2 United States gallons) and values in dollars (converted at the average exchange rate for the various periods).

Imports of petroleum products into British India.

Products.	1913–14	1920–21	1921–22	April–December, 1922.

Kerosene (bulk):				
Gallons	52,975,622	48,948,768	41,344,725	[2]
Value	$6,357,973	$11,039,266	$7,432,283	[2]
Lubricating oil:				
Gallons	14,952,931	10,017,357	7,939,952	7,295,506
Value	$2,573,457	$6,740,707	$4,258,523	$3,222,327
Batching oil:				
Gallons	[2]	8,443,140	8,959,384	8,449,652
Value	[2]	$2,232,816	$1,907,353	$1,257,426
Fuel oil:				
Gallons	7,765,680	48,162,750	58,171,728	42,426,362
Value	$332,083	$4,180,481	$3,517,519	$3,073,381
Other mineral oils:				
Gallons	3,415,997	1,477,090	1,399,727	1,441,012
Value	$1,158,692	$590,501	$541,785	$381,694
Total:				
Gallons	95,021,456	125,295,244	122,969,911	96,216,483
Value	$13,332,747	$28,425,765	$19,358,938	$15,200,406

[1] Includes bulk kerosene.
[2] Included with kerosene in cases.
[3] Not available.

Europe Takes Exports.

India exports only the lighter mineral oil products, such as gasoline, benzine, and naphtha. The quantity exported averages 20,000,000 imperial gallons or more yearly, as is shown in the following table, and it is all shipped to Europe.

Exports of petroleum products from British India.

Products.	1913–14	1920–21	1921–22	April–December, 1922.
	Gallons.	*Gallons.*	*Gallons.*	*Gallons.*
Gasoline, benzine, etc.	(1)	18,856,640	20,156,323	12,872,247
Kerosene	8	7,224	29,820	
Other mineral oils	[1] 22,308,692	784,358	2,528,466	126,032
Total	22,308,700	19,648,222	22,714,609	12,998,279

[1] Includes gasoline, benzine, etc.

The gasoline exported during the April-December period of 1922 was valued at $4,201,019 and other mineral oils at $40,597.

Market Prices.

The latest wholesale price quotations mention American kerosene as $2.97 to $3.35 per case of 10 gallons and $2.35 per two tins for the cheapest brand marketed. Dutch Borneo and locally produced kerosenes ranged from $2.85 to $2.97 per case and $1.76 to $2.23 per two tins. Gasoline was quoted at 42 to 70 cents a gallon at various points throughout India.

Additional information regarding petroleum appears in this issue under the following section:

Latin America: Transfer of Bolivian oil concession.

LUMBER

Axel H. Oxholm, Chief, Lumber Division

MARKET FOR SOFTWOOD SHORT LENGTHS ABROAD.

In every foreign lumber market there is a well-defined demand for short lengths, and our competitors abroad in the lumber export business have for decades filled this demand, whereas American exporters of softwoods have contented themselves only with shipping stock 8 or 9 feet as minimum lengths, thinking perhaps that such specifications would make it easier for them to compete with lumber from other countries where short lengths (6, 7, and 8 feet) are included in every normal specification.

An observer of European conditions will find that considerable quantities of American softwoods and hardwoods are used for parquet flooring in very short lengths. There is, furthermore, a great demand for short lengths of certain American softwoods for the construction and finish of railway cars, particularly for third-class passenger coaches. Furniture factories, carpenter shops, toy factories, etc., prefer to use short lengths of softwoods in large quantities; and as American lumber used for these purposes has to be cut down from long lengths, it is evident that the cost in many instances has been prohibitive. If we consider the standard contract covering softwood shipments from northern Europe, which furnishes the bulk of the softwoods for the international lumber market, we find that the contracts stipulate that short lengths of 6, 7, and 8 feet can be included in any specification to the extent of 5 per cent of the total quantity shipped. These short lengths are usually sold at two-thirds price, based on the quotation for 9-foot and up, but the demand for special stock of short lengths may at times be so considerable that the shippers often find no difficulty in disposing of the better grades of short lengths without reduction in price.

Furthermore, it is of the greatest importance to consider the advisability of shipping short lengths in order to insure better stowage, and shipowners have the right to demand at least 5 per cent of short lengths of any cargo. This matter is important for the shipowners because the freight for lumber shipped in cargo lots is based on volume and not on weight. At times shipowners will freight short lengths of northern European lumber at two-thirds of the regular freight charged for long lengths (9 foot and up).

Disposal of Surplus Stocks of Short Lengths.

As the question of the disposal of surplus stock of short lengths in this country is a very vital one, our exporters should investigate the possibility of disposing of such stock abroad. Not only would they benefit themselves by doing so, but they would also accommodate their foreign customers and widen the market for American lumber, particularly if short lengths could be disposed of at a similar reduction in price, such as established by the north European lumber exporters.

It is generally estimated that short lengths constitute from 7 to 20 per cent of the output in northern Europe (this figure varies according to the different dimensions) and the percentage of short lengths produced in the United States would possibly show a similar figure. However, it is most disheartening to see foreign importers cut off a few feet of a 20 or 30 foot long-leaf yellow pine or Douglas fir plank to accommodate a special demand for short stock.

Our exporters and manufacturers are responsible for this condition because they have never agreed upon a uniform policy regarding the disposal of short lengths in foreign countries. This is another matter to be taken up by a prospective national organization of lumber exporters, covering all species of lumber.

CONDITIONS IN THE LUMBER TRADE IN LONDON.

Vice Consul Charles L. DeVault, London, England, February 16.

Throughout the month of January and the first half of February restricted demand, hesitancy among importers, and firm prices all round were the features of the lumber trade in London. The hardwood market has been unusually quiet since January 1. The demand indicated during the last quarter of 1922 has not developed. It is believed, however, that this condition is temporary.

The total imports of mahogany into the United Kingdom during January, 1923, amounted to 5,407,000 board feet of hewn goods, valued at $677,874, and

1,212,000 board feet of sawn wood, worth $200,062. (Values converted at par—$4.8665 per pound sterling—throughout this article.)

The January imports of sawn hardwoods other than mahogany amounted to 15,963,000 board feet of lumber, valued at $1,729,457. The January hewn-hardwood imports included a large quantity of teak. The United States supplied 230,000 board feet of hewn hardwoods, valued at $23,106, while the imports of hardwood lumber from the United States were 11,570,000 board feet, valued at $1,249,187.

American ash lumber in firsts and seconds is in regular request in London, Liverpool, and other parts of the country, but shippers' quotations are frequently beyond buyers' reach. No. 1 common and selects, chiefly 1 inch thick, are in fair demand. The heavy increase in prices on gum quoted by shippers has brought business in this lumber almost to a standstill. In quartered oak the only demand has been for firsts and seconds of 10 inches and up wide. In plain oak the Liverpool market is demanding wagon oak planks, and London provides a steady outlet for 3-inch and 4-inch oak planks. There is practically no demand for walnut logs, and lumber inquiries from all quarters have been extremely limited. There is a very general demand for poplar in No. 1 common and selects, planed to ⅞ inch, 10 inches, and up. There is some demand for No. 2 common, planed to ⅞ inch.

In the f. o. b. market a steady but restricted business is being carried on, mostly in Finnish goods, with a few Swedish and Baltic contracts. In all these transactions prices are very firm. Battens 2½ by 7 inches are generally quoted at $54 to $56.50; 6-inch at $51.60; and 2 by 4 at $46.70 to $47.90 per thousand feet.

Softwoods in Demand by British Railways—Imports.

British railways are now coming into the market for car-building materials, etc., as anticipated, and there have been many recent issues of specifications of requirements by railway companies.

The imports of softwoods during January, 1923, were: Hewn, 6,993,000 board feet, valued at $331,423, including 3,200,400 board feet, at $195,030, from the United States; sawn, 158,199,000 board feet, valued at $6,800,024, including 13,793,400 board feet, at $963,635, from the United States; planed, 27,790,800 board feet, valued at $1,582,858, including 400,800 board feet, at $36,922, from the United States.

Sales of Baltic Lumber.

Swedish sales have not been so frequent or extensive as Finnish, except possibly from the upper gulf ports, from which some large lines have been placed.

Importers are now making a very strong stand against the inclusion of the clause allowing 10 per cent discolored wood to be included in the Finnish contracts this year. Sometimes the buyers agree to the inclusion of discolored wood when a reduction of $2.50 to $5 per thousand feet is made. The quantity which can be shipped from Finland during 1923 is estimated at about 1,287,000,000 board feet.

In planed goods some small transactions continue to be done from Norway, but the shippers' price of $51.60 c. i. f. per thousand feet to London and the east coast serves rather to curtail business. A keen inquiry for scantlings is shown by the offers now being made for Norwegian parcels.

Numerous plywood shipments arrived from Reval, Riga, Memel, and Danzig during January, and the supply continues. An artificial scarcity has been created by the delay in deliveries of plywood from Finland—the source of large supplies. Alder, birch, and oak panels and veneers are especially in demand.

The reports from Russia about a larger export this coming season have made little impression on importers here. The idea, in fact, prevails that the export from Soviet Russia will probably be diminished rather than increased, as the old supplies are believed to be exhausted.

THE GERMAN LUMBER MARKET.

Commercial Attaché Charles E. Herring, Berlin, February 13.

The market for American lumber in Germany is at present negligible in comparison with pre-war years, because American imports must be paid for in high-exchange currency. Unfortunately German import statistics are not completely classified, but it is clear from the following import figures for 1922 that imports of American lumber in that year are very small:

	Board feet.
Walnut logs	839,990
Other hardwood logs	584,080
Sawn walnut	67,925
Sawn soft pine	11,875,468
Cedar logs	554,386
Sawn cedar	2,255,642

Germany must therefore look to other sources for its lumber supply, almost 30 per cent of which was imported in pre-war days. The neighboring countries with low exchange, such as Austria, Poland, and the Baltic States, are now the principal foreign sources. Some imports have recently arrived direct from Russia, but it is apparent that the amounts involved are small. Most of that which is of Russian origin is usually consigned through some intermediary in Danzig, Memel, or the Baltic States.

German Market Affected by Exchange Fluctuation.

The condition of the German lumber market is, of course, dependent upon the constant fluctuation of the German mark, which places the lumber trade upon a purely speculative basis. Some German forest owners have attempted to establish their prices on a gold basis, but the effort has not been very successful. The mark prices now prevailing are considered very high by consumers, but they actually advanced only about 30 per cent during the second half of February. During the last week in January Pommeranian planks were quoted at 300,000 to 350,000 marks per cubic meter (424 board feet). Financial difficulties have resulted in many small mills closing, while some of the larger ones are on part time or are consolidating with other mills in order to lower operating and overhead costs. However, lumber retailers are reported to have had fairly good sales because purchasers have hastened to take advantage of the old prices.

Lack of Bidding at Lumber Auctions.

Consul F. T. F. Dumont, Frankfort on the Main, February 23.

According to the Frankfurter Zeitung, there was no bidding at the first lumber auctions held by the French in the State forests in the Rheinpfalz, although large lots of mine timber, coniferous lumber, and beech logs were offered.

Orders for large consignments of logs from Czechoslovakia were canceled on account of the sharp rise in

the value of the Czech crown. Offers from that country were very plentiful.

Conditions Unfavorable for Importation.

Consul Alfred W. Donegan, Konigsberg, February 24.

When German lumber prices recently passed world market values the prospects for a profitable importation of lumber from the United States and Czechoslovakia seemed good. This is no longer the case. Firms that imported foreign timber or made contracts for later deliveries and did not immediately cover their orders by the purchase of foreign currency are now suffering heavy losses. Numerous large sawmill concerns in central Germany that bought round timber from Czechoslovakia are said to have had especially heavy losses.

In Poland costs of production in the lumber industry are increasing steadily. This is causing a decrease of business with Germany and Polish sawmill owners are now trying to create a market for their products in England.

PHILIPPINE WOODS.

Arthur F. Fischer, Director of Forestry, Manila.

The more plentiful woods suitable for export are included very largely in two botanical families, *Leguminosae* or locust family, and *Dipterocarpaceae* or lauan family, of which the first furnishes the harder and more highly colored and figured woods and the latter the larger volume, making up 75 per cent of the total volume of commercial woods of the Philippines. While not having such striking grain and color or being generally quite so hard and durable as the leguminous species, the dipterocarps have a very pleasing color and grain, somewhat resembling mahogany, for which they are substituted in the American market under the name of Philippine mahogany.

In point of quantity the total cut for 1921 for the principal leguminous species was some 10,000,000 board feet, while the dipterocarp or lauan species amounted to over 80,000,000 board feet. With the large local demand and proportionately high prices of the leguminous species for both construction and cabinet purposes, there will probably never be any appreciable export trade in these woods, but the large quantities of the lauan group available and the fine finish which can be secured with them for cabinetwork and interior finish makes possible the development of a large export trade.

During 1921 the total exports of the lauan group (red and white lauan and tanguile) were 9,870,000 board feet out of a total export volume of 11,790,000 board feet, and a similar proportion in 1920 of 12,420,000 board feet of lauans out of a total of 13,860,000 board feet of all species. Of the remaining quantity of export timber indicated in these figures, the major portion is composed of the heavier members of the dipterocarp family, such as apitong, guijo, and yacal; the nondipterocarp species for 1921 amounting to only 145,000 board feet.

Native Cigar-Box Wood.

The cigar-box lumber par excellence of the world has for many years been the Spanish cedar of tropical America. Kalantas is closely related to, and, to all practical intents, identical with Spanish cedar, the marked similarity in color, texture, and odor, rendering the two varieties almost indistinguishable. It is the only native wood used in Manila for high-grade cigar boxes. For cheaper boxes several of the lauans and nato are used.

[Copies of a detailed report on export timbers of the Philippines, prepared by the Philippine Bureau of Forestry, may be obtained from the Lumber Division when printed.]

French Lumber Imports in 1922.

Consul J. Lee Murphy, Paris, March 2.

The total of imports of lumber into France in 1922 amounted to about 1,316,000,000 board feet, valued at $55,000,000—a substantial increase over last year. The principal sources of supply for the French market in 1922 were: Sweden, 393,000,000 board feet; Czechoslovakia, 166,000,000 board feet; and Germany, 81,000,000 board feet.

Imports from the United States amounted to about 44,000,000 board feet, valued at $3,300,000, compared with 30,000,000 board feet in 1921. The part played by the United States in the total lumber trade of France during the last three years shows a steadily declining tendency, the percentage of imports from the United States being 5.3 per cent in 1920, 3.8 per cent in 1921, and 3.6 per cent in 1922. With the prospect this year of large French purchases from Poland and Russia and with the present high rate of exchange between the United States and France, the chances for increased imports from the United States during 1923 do not seem particularly promising at present.

Russian Lumber Activities in Latvia.

Extracts from Jaunakas Sinas and Rigasche Nachrichten (Latvian Publications) transmitted by Consul F. W. Coleman, Riga, February 17.

The Soviet Government, having obtained consent from Latvia to allow the floating of Russian timber along the Dvina River under the same conditions as heretofore, intends to float 500,000 logs along the Dvina this year and to prepare the same in Riga for export. With this aim in view Russia desires to establish its own sawmills on the Lutzava Island. Besides this Russian timber, 100,000 logs are expected this season from Poland. In the year 1922, 1,182 rafts with 266,335 logs and supports (altogether 284,950 pieces) arrived in Latvia from Russia, while 6,635,000 feet of deals and 242 cubic fathoms of pit props were exported from Latvia.

CUT-OFFS.

European and North African Briarwood Production and Exports.

Reports in regard to the production and export of briarwood in Europe and north Africa are available and can be obtained upon application to the Lumber Division.

Polish-German Lumber Trade Improving.

The timber trade between Poland and Germany is picking up and the latter country is reported to be paying about $40 per thousand feet for rough-sawn dimension timber at the Polish-German frontier. This price is considerably in excess of British prices at Danzig. (Acting Commercial Attaché H. B. Smith, Warsaw, January 13.)

Additional information regarding lumber appears in this issue under the following section:

Foreign trade opportunities Nos. 5969, 5971, 5972, 5973, 5974, 5975, 5976.

ELECTRICAL EQUIPMENT

R. A. Lundquist, Chief, Electrical Equipment Division

WIRELESS BROADCASTING IN JAPAN.

Commercial Attaché James F. Abbott, Tokyo, March 2.

The Japanese Government has relaxed its hold on one division of communications to a limited extent. According to a statement by the Department of Communications, private concerns will be permitted to broadcast by wireless. Many applications have been made to the Government, but for the present only three or four financially sound companies in the larger cities, such as Tokyo and Osaka, will be licensed. These companies will be required to pay a tax and will be permitted to collect for their service direct from subscribers. The Government will charge users a yearly registration fee and turn over a part of this to the broadcasting companies.

The Ministry does not state what proportion of the charge will be retained by the Government, but in promulgating its regulations for using radio sets to take effect April 1 the statement is made that a "suitable" amount of tax will be levied on the privileged concerns. The companies will broadcast news articles, reports of Government offices, speeches, music, etc., during specific hours allotted to each company.

It is anticipated that a complete receiving set will cost 20 to 30 yen (1 yen=$0.4985), and that the farmers who may receive quotations of cereals from the cities and residents of remote parts of the country, where means of communication have been lacking or limited, will be benefited. Individual users will not be allowed to exchange messages among themselves.

Electrification of Government Iron Works at Yawata.

Consul Henry B. Hitchcock, Nagasaki, Japan, February 26.

The Yawata Iron Works of the Japanese Government is reported to be undertaking the general electrification of its plants. Definite plans are now being prepared which call for an outlay of 18,000,000 yen ($9,000,000), to be expended over a period of three years, in the installation of electric cranes, conveyors, trucks, and the like, and motors for different pieces of machinery. Ample power is now available and several of the plate mills and foundries have already been equipped to make use of the electric service, with entirely satisfactory results. Further equipment is to be purchased and installed, as the existing steam engines, which now drive the machinery mechanically, need to be replaced.

Savings of 60 per cent in fuel and 30 per cent in labor are some of the results anticipated. The saving in coal is especially to be desired, since the visible supply of this fuel in Japan is small. From a statement of Mr. Kishiwara, the expert in charge of the electrification work, it would appear to be a nationally encouraged policy to develop the industrial use of electricity as rapidly as possible in order to conserve coal for the use of steamships.

Electrification of Swiss Federal Railways.

Complete electrification of the Swiss Federal lines by 1928 has been authorized by the Federal Council. It had been previously planned to finish this work by 1933, but owing to the large number of unemployed in Swiss machinery and electrical industries the general management of the Federal Railways requested an acceleration of the work of electrification. According to the new scheme, 75,000,000 to 80,000,000 francs are to be spent yearly, instead of 50,000,000 as heretofore planned.

The total length of line involved is 1,600 kilometers (1 kilometer=0.62137 mile), of which 400 kilometers are now completely electrified. The new program requires the providing of 215,000,000 francs sooner than would otherwise have been necessary, the total amount being 450,000,000 francs. It is expected that about 60,000,000 francs will be advanced by the Confederation to assist the railways in carrying out the new plan.

Electrical Trade Notes.

Electric Ranges in South Africa.

Careful study is being made by the Durban town council of a scheme for renting electric ranges to consumers of electricity. Heating devices are already very freely used. The price of current, after a consumption of a certain minimum, is $\frac{5}{8}$d. ($1\frac{1}{4}$ cents) per kilowatt hour.

British Electrical Exports and Imports for January.

British imports of all electrical apparatus, except bare conductors, totaled £284,102 in January, while exports of the same classes of material amounted to £1,196,090, according to a summary published in the Electrician (London), February 16. This shows an increase of £125,251 over the imports of January, 1922, and a decrease of £173,383 in exports, as compared with January, 1922.

Recent Developments in Radio Regulations in England.

The British post-office authorities are experiencing some difficulties in enforcing the law requiring licensing of receiving sets. The Electrician (March 2) reports that an owner of an unlicensed set at Oldham was fined 40s. It is probable that the license fee for homemade sets will be raised from 10s. to 21s. in order to compensate the British Broadcasting Co. for the loss of profit. The Postmaster General in a recent statement said that it was permissible to move sets from the address specified in the license, provided the issuing post office was notified.

Broadcasting Begins at Cardiff, Wales.

Following the initial broadcasting concert of the Cardiff station of the British Broadcasting Co. on February 13, keen interest is being taken in this subject by the local public. The newspapers are devoting one or more pages to broadcasting and are carrying display advertisements of a number of manufacturers of wireless equipment in the United Kingdom. All of the large department stores, hardware dealers, electrical supply dealers, and some drug stores are selling receiv-

Power Plant for Yunnanfu.

Extension of the present electric-power supply system of Yunnanfu has been under consideration for some time, since the existing plant is entirely inadequate to supply the demand for lighting. It is planned to purchase two 420-horsepower water turbines, two 350/400 K. V. A. generators, two transformers, switchboard equipment, and the necessary accessories. It is said that negotiations for low-priced German equipment have been in progress and that initial cheapness rather than prompt and definite delivery appears to be the primary consideration. (Consul M. S. Myers, February 6.)

Lighting Plants in Dominican Republic.

The Dominican Provinces of Santo Domingo, San Pedro de Macoris, La Romana Barahona, and Ozua, having a population of approximately 400,000, are served by four power plants, which have about 4,000 kilowatts installed capacity. The present plant in the city of Santo Domingo was dismantled in February of this year and work was started on a modern plant of much larger capacity. Preparations have been made to light the streets and many private homes have been wired. The new plant will contain two 500-kilowatt turbines of American manufacture and will supply 60-cycle alternating current at 110 and 220 volts. (Vice Consul Joseph T. Moran, March 1.)

Contract for Street-Car Franchise in Guatemala Signed.

An electric belt line street-car system will replace the old mule cars of Guatemala City under a contract recently signed by the commissioner of public works. The agreement has been approved by the President and is being submitted to the National Legislative Assembly. According to the terms of the franchise, the proposed line will be 9 miles in length and operated either by storage-battery cars or from a central power station. The cars must have a capacity of 30 persons and service must be maintained between 6 a. m. and midnight. Authorization is given to acquire hydroelectric rights and distribute light, heat, and power during a period of 35 years. (Consul Arthur C. Frost, Guatemala City, February 21.)

Bergen's Suburban Electric Service.

Plans for the double-tracking and electrification of the State Railway from Bergen to Nesttun, a distance of between 5 and 6 miles, have been completed and accepted by the State Railways administration. The estimated cost is 6,000,000 crowns (1 crown=$0.268 at normal and $0.18 at present exchange) and the municipalities of Bergen and Fana are to pay 15 per cent thereof, the balance to be paid by the State. This bit of railway is the Bergen terminal of the Christiania-Bergen Railway and Nesttun is the terminal station of the suburban trains, with hourly service between the hours of 6 a. m. and 12 midnight. With one station within the city limits and four outside it serves a population of about 12,000 people, or about one-tenth of the population of what may be called "Greater Bergen." (Consul George Nicholas Ifft, Bergen, February 17.)

CHEMICALS

Charles C. Concannon, Acting Chief, Chemical Division

SWISS COAL-TAR DYE EXPORTS.

Vice Consul William H. Mathee, Zurich, February 27.

Switzerland's exports of coal-tar dyes in 1922 amounted to 3,872,800 kilos, valued at 55,257,000 francs (kilo=2.2046 pounds; Swiss franc=$0.193 at par), compared with 3,706,700 kilos and 57,676,000 francs in 1921. On the other hand, a very marked increase occurred in the year's shipments of artificial indigo, these reaching a total of 3,460,800 kilos, valued at 13,158,000 francs, against 1,182,900 kilos and 9,497,000 francs in 1921. The trend of the trade from quarter to quarter can be traced in the following table:

Switzerland's exports of coal-tar dyes, 1921 and 1922.

Articles and chief countries of destination.	First quarter.	Second quarter.	Third quarter.	Fourth quarter.	Total for year.
ANILINE AND OTHER COAL-TAR DYES.	*Kilos.*	*Kilos.*	*Kilos.*	*Kilos.*	*Kilos.*
1921	802,500	992,300	751,100	1,160,800	3,706,700
1922	1,062,400	883,400	927,900	999,100	3,872,800
United States	157,000	221,300	243,000	90,000	711,300
Belgium	85,700	64,800	79,600	98,100	328,200
France	281,000	193,100	172,200	331,400	977,700
Great Britain	294,800	167,100	162,100	162,600	786,600
ARTIFICIAL INDIGO.					
1921	22,500	26,800	294,900	838,700	1,182,900
1922	576,900	773,100	945,100	1,165,700	3,460,800
China	541,400	701,700	830,700	1,021,000	3,094,800
Japan	27,900	56,000	50,300	30,800	165,000

The sharp drop in exports to the United States in the closing quarter of 1922 is attributed to the coming into force of the new American tariff on September 22. Swiss dye manufacturers are said to be complaining of German competition and the effect on trade of German reparation dyes.

Franco-German Synthetic-Ammonia Agreement.

Commercial Attaché Charles E. Herring, Berlin, Germany.

In connection with the recent consideration by the French Chamber of Deputies of the convention between the French Government and the Badische Anilin und Sodafabrik, relating to the manufacture in France of synthetic ammonia by the Haber-Bosch process, the following digest of its terms as drawn up over three years ago may be of interest:

The Badische offers its full and voluntary cooperation, both in acquainting the French with the Haber-Bosch process for the manufacture of synthetic ammonia and in erecting a synthetic-ammonia plant in Toulouse, France.

During the life of the convention the French engineers are to have unrestricted entry to the Badische works at Ludwigshafen and Oppau, Germany, and they shall be informed as to all improvements made on the process during this period. The Badische furthermore promises not to compete in France, French colonies, and protectorates.

In consideration, France pays the Badische 5,000,000 francs for supervising the construction of the Toulouse plant, one half to be paid when the convention becomes effective and the other half when one-fifth of the proposed capacity of 100 tons of pure nitrogen content daily is reached. The Badische is to participate in the profits of the Toulouse plant when that is built and producing at least 30 tons daily. If nitrogen sells at 5 francs or more per kilo, the Badische participation is 2 per

cent; if 2 francs or more but less than 5 francs, 4 per cent. France pledges to keep the process secret and to acquaint the Badische with any improvements made on it during the life of the convention.

The convention will last 15 years from the date when the Toulouse plant is producing at the rate of 30 tons pure nitrogen content daily.

Record Output of Alsatian Potash.

Consul William J. Pike, Strasbourg, France, February 21.

During 1922 there was a record output of potash salts by the mines in Alsace. The production of potash during each of the past four years was: 1919—592,365 tons; 1920—1,222,370 tons; 1921—903,134 tons; 1922—1,326,727 tons.

At the present time chloride manufacturers are working at full capacity and are able to produce more than 250,000 tons of potassium chloride a year. In addition to this, the Société Commerciale des Potasses d'Alsace is said to produce a considerable quantity of potassium sulphate.

Chemical Trade Notes.

Manufacture of Chemical By-Products in India.

An iron and steel works at Jamshedpur has recently put into operation a battery of coke ovens, with a by-product plant attached, for the extraction of tar and ammonia liquor, the latter to be used in the manufacture of ammonium sulphate. (Vice Consul Harold Shantz, Calcutta, January 25.)

Indian Gums Offered.

An exporter in India has informed Consul Avra M. Warren, Karachi, of his desire to communicate with American firms interested in importing lac, shellac, gums, licorice, asafetida, etc. Further information may be obtained by communicating with the Chemical Division, Bureau of Foreign and Domestic Commerce, Washington, D. C., and referring to file No. 86351.

Netherlands' Exports of Quinine and Aniline.

Shipments of quinine from the Netherlands amounted to 17 tons during the month of December, increasing in January to 43 tons, of which the United States took 30 tons. Exports of aniline dyes increased by 62 per cent in January over December, the United States taking 11 per cent of the whole. (Consul General G. E. Anderson, Rotterdam, February 24.)

Additional information regarding chemicals appears in this issue under the following sections:

Latin America: Nitrate shipments from Chile.
Far East:
Abolition of Indian cess on indigo.
Restriction of Japanese chemical production.
Foreign trade opportunities Nos. 5932, 5940, 5950, 5961, 5963, 5968, 5979, 5980, 5981.

SPECIALTIES

Henry H. Morse, Chief, Specialties Division

SPECIALTY COMMODITIES IN WORLD MARKETS.

HEATING AND COOKING EQUIPMENT.

The Market for Stoves in South Africa.

The United States supplies a fair share of the stoves imported by South Africa. From January to October, 1922, out of a total of £65,067 worth of stoves imported into South Africa, about 20 per cent came from the United States. England, of course, is the chief source of supply, with the United States second and Sweden third.

The most popular cookstove on the South African market is what is known in the trade as the Dover type. This is a low-priced cookstove. It is rather small and has a five-hole top and a wood or coal grate, with a small hearth and oven. It is sold at from £3 15s. to £15 retail. A similar stove, equipped with reservoir, and retailing at from £11 to £15, is also widely used. The reservoir supplied with this type is lined with tin, which may be renewed when worn out. British manufacturers have been able to market the lower-priced types of stoves in South Africa more cheaply than either American or Swedish exporters.

The type of gas stove in general use in South Africa is a British-made five-burner range, equipped with oven, grill, and top rack. It is sold locally at £20 retail.

As compared with the number of cookstoves sold, the volume of trade in heating stoves is quite small. This is due to the very mild climate over a large part of the country, where wood and coal grates (open fireplaces) are depended upon for heating purposes. Small gas and electric heaters are used to some extent.

There is a demand for a good-grade, large-sized, American-made kitchen range. A local importer and wholesaler states that his firm is preparing to market some American stoves of this class at prices up to £50 retail. (Consul Monnett B. Davis, Port Elizabeth, January 23.)

The Cuban Market for Oil Stoves and Gas Heaters.

The market for oil stoves in Cuba has recently improved, but sales are still affected by the fact that stocks at the time of Cuba's financial difficulties were very large and are not even now entirely disposed of.

So far as gas heaters are concerned, Habana is now the only city where gas is available (the gas companies in other cities are not operating at present), but its use for cooking and heating is increasing. The approximate charge for gas is 8⅓ cents per cubic meter, with a deduction of 40 per cent on all consumed above 30 cubic meters monthly. In general, the demand for gas ranges and water heaters is improving, with the United States dominating the field. (Consul John R. Putnam and Commercial Attaché Paul L. Edwards, Habana, March 10.)

OFFICE SUPPLIES.

The Cuban Market for Office Supplies.

Filing cabinets.—Filing cabinets of steel construction are most in demand in the Cuban market. A large

proportion of those in this market at present are of imitation mahogany finish, the bulk of the remainder being green. The four-drawer cabinet with lock seems to be the most popular type. The market is supplied chiefly from the United States and prospects are bright for a considerable development of this trade.

Typewriters.—The present market for typewriters is good, with the chances bright for a steady improvement throughout 1923. The chief competition comes from Germany, the principal makes from that country being the Kontinental (known elsewhere as the Wanderer) and the Kappel. These German machines are for the most part sold on a monthly installment plan, and they enjoy a fairly active sale.

Cash registers.—The cash-register field is almost completely dominated by American firms. Sales of cash registers in Cuba have been quite active lately and prospects for 1923 are bright.

Office furniture.—Market conditions, so far as office furniture (except filing equipment) is concerned, has recently shown a distinct improvement, and prospects are even brighter for the spring and summer. The slow recovery of the Cuban office-furniture market has been due to the fact that a large number of banks, commercial houses, etc., closed at the time of the financial collapse, thus throwing a considerable amount of second-hand furniture on the market. Cuba has also developed a considerable domestic manufacture of solid mahogany furniture. Its chief competitive feature with American office furniture is its lower price, for it is frequently made of second-quality wood, which has not been properly seasoned. The workmanship is also inferior. With increasing prosperity in Cuba this price factor will become less and less important. (Acting Commercial Attaché Paul L. Edwards, Habana.)

American Typewriters in Brazil.

The United States leads by a wide margin in the exportation of typewriters to Brazil, and American typewriter manufacturers have further strengthened their already firm position in the Brazilian market, as the following table will show. The reason assigned for the greatly increased exports of American typewriters to Brazil during the first six months of 1922 is that in 1921 large stocks were still left over from 1920. These have been disposed of, with the result that imports into Brazil during the present year have practically paralleled sales. In other words, the market is now on a firm and healthy basis.

The following table shows the origin of typewriters imported into Brazil in the year 1921 and the first six months of 1922:

Origin of typewriters imported into Brazil.

Countries of origin.	Year 1921.		First 6 months of 1922.	
	Kilos.	Milreis.[1]	Kilos.	Milreis.[1]
United States	37,384	1,130,337	47,950	1,217,084
Germany	14,450	252,044	3,852	45,972
Italy	506	14,810	38	1,669
Great Britain	292	16,971	249	12,164
France	116	1,693	139	4,397
Argentina	114	1,822	.....	.....
All other countries	270	9,323	114	4,306
Total	53,132	1,427,000	52,342	1,285,592

[1] 1 milreis=$0.5462.

Two very interesting features should be noted—first, were greater for the first six months of 1922 than for the whole of the previous year; and second, the large decrease in German exports to Brazil. (Consul A. T. Haeberle, Rio de Janeiro, February 21.)

Marketing Office Supplies in Algeria.

The Algerian market is commercially French. Of a total population of some 6,000,000, six-sevenths are natives, but they are accustomed to the French language and to French trade methods. In general, office supplies, like many other manufactures imported into Algeria, are purchased in France even when of American origin. The reason for this is that Algeria is easy to reach from France, being but 48 hours away from Marseille, and passengers and mail steamers make the trip almost daily. Merchants keep on hand, therefore, comparatively small stocks of goods and do business on a small scale through connections in Marseille or, less frequently, in Paris. (Consul Edward A. Dow, Algiers, February 1.)

ATHLETIC GOODS.

Increased Demand for Sporting Goods in Cuba.

The demand for American sporting goods in Cuba is on the increase. Baseball, tennis, football, and basketball supplies are the chief articles called for. Manufacturers should note that athletic activity in Cuba is much greater in winter than during the summer. (Commercial Attaché Paul L. Edwards, Habana.)

Opening for Golf Goods in Geneva.

A new golf club will shortly be opened in Geneva, Switzerland, which will bring with it a demand for clubs, balls, bags, and other golfing supplies. At present retail prices of golf clubs sold by Swiss firms are approximately as follows: Drivers, $2.85 to $3.75; spoons and brassies, $2.95 to $3.90; mashies, niblicks, and cleeks, $3.25 to $3.75; putters, $3.50 to $4. Golf balls vary considerably in price, running all the way from $4.50 to $10 per dozen. Canvas bags cost about $4.25 and leather bags approximately $7.25.

An idea of the size of the market for golf supplies in all of Switzerland may be had from the number of existing links. Exclusive of the new one to be opened at Geneva, there are 12 of these, located at the following tourist centers: Aigle, Flims-Walthaus, Lausanne, Les Rousses, Lucerne, Maloja, Montana, Montreux, Ragatz, Samaden, St. Moritz, and Zurich-Dolder.

In entering the Geneva market correspondence should be carried on in French. Manufacturers should also realize that British houses, which are the most prominent in the Swiss market, grant liberal terms. (Consul Lewis W. Haskell, Geneva, Switzerland, February 12.)

American Golf Clubs in Argentina.

There is a small but growing demand for golfing supplies in Argentina. While the natives of the country have not taken to the game in the same manner as the people of America and England, there is a gradual development of interest evidenced by the opening of new golf clubs. The market at present is largely in the hands of British sporting-goods dealers, who show moderately successful sales. A good way to introduce golf clubs might be to get directly in touch with the professionals at the various clubs. (Commercial Attaché Edward F. Feely, Buenos Aires, February 12.)

Fishing Popular in Vera Cruz.

During the season fishing is a very popular sport in

for American fishing tackle. Most of the fishing tackle in Vera Cruz has been secured from the United States in the past. (Consul John Q. Wood, Vera Cruz, February 7.)

Baseball Gaining Popularity in Mexico.

Recent reports from consular officers in various sections of Mexico indicate the widespread and increasing popularity of baseball, which should bring with it increased demand for baseball equipment. In Chihuahua, for example, there are three large parks in which 15 teams play almost daily. Curiously the demand has been mostly for the better class of baseball equipment rather than the cheaper classes. The same situation is encountered in Vera Cruz, where on Sundays and holidays practically all available space is used for baseball playing. It has been stated that baseball is now more popular than bull fighting and is given more space in the newspapers.

The United States is, of course, the source of supply for all types of baseball equipment, and so far the demand has generally exceeded the local supply. Much buying is done direct, but in many sections of Mexico it would be profitable to grant agencies to dealers who would carry stocks.

HOSPITAL AND LABORATORY SUPPLIES.

Improved Cuban Market for Supplies.

There is a very marked improvement in the market for hospital and surgical supplies, the sales at present being reported from 50 to 70 per cent heavier than a year ago. A good variety of stock is being carried to meet the increased demand and the importers are recommencing their purchases abroad. Private institutions are now buying again. Wholesale dealers in this class of merchandise in Cuba usually require cash at the end of 30 days. The foreign manufacturing firms are still selling on open account in some instances, but the general tendency is to be more strict in the allowance of credit than was the case before the financial crisis.

The market for laboratory equipment is also much improved, recent sales being reported as double those of a year ago. Although stocks of laboratory equipment were quite heavy at the time of the financial crisis, these are now largely exhausted and buying is becoming increasingly active. (Commercial Attaché Paul L. Edwards, Habana, March 10.)

The Madras Market for Laboratory and Hospital Supplies.

The United States is second as an exporter of laboratory and hospital supplies and instruments to Madras, India. Figures for 1922 show a total value of about 60,000 rupees for hospital supplies and surgical instruments and about 20,000 rupees for laboratory equipment. (Conversion on a basis of 3 rupees to $1.) The chief limitations of the market are that Madras is not an industrial region and consequently there are few technical schools and laboratories, and that all the larger hospitals are run by the Government, which means that they buy their supplies from the United Kingdom. (Vice Consul H. A. Doolittle, Madras, February 7.)

FIREARMS.

The Peruvian Market for Firearms.

The market for ammunition in Peru is limited, but the bulk of such products imported comes from the United States. Great Britain has a fair share of the trade in cartridges for hunting and trap shooting. Shotgun ammunition is used chiefly by the army and by rifle clubs. Trap shooting and target practice are popular and such clubs are encouraged by the Government. (Commercial Attaché W. E. Dunn, Lima.)

The Venezuelan Market for Firearms.

The United States is strong in the firearms trade of Venezuela. Figures for 1921 (those for 1922 not being available) show that out of a total of 514 kilos of cartridges (empty and loaded) purchased by Venezuela, 431 came from the United States. Venezuela also bought 138 shotguns in the United States.

For purposes of sales Venezuela may be divided into three chief commercial divisions: Caracas, Maracaibo, and Ciudad Bolivar. Unless a large importing house with established connections in the important cities of the Republic is selected as agent, separate agents should be appointed for all three of these sections. (Vice Consul S. J. Fletcher, La Guaira.)

Small Market for Firearms in Northern Chile.

The northern district of Chile, being dry and rainless, affords little game for hunting and consequently only a small amount of ammunition is sold for this purpose. There is one rifle range near the city of Antofagasta, but, aside from that, little interest is taken in target practice. (Consul Stewart E. McMillin, Antofagasta.)

Chronometer Contest in Switzerland.

There will be an international contest for the regulating of chronometers, to take place at Neuchatel, Switzerland. The contest covering marine chronometers will take place on April 25 and for other chronometers on May 25. Manufacturers from a number of countries are expected to compete.

British Aluminum Products Catalogue on File.

The Specialties Division has on file a catalogue of Williams (Ltd.), of Birmingham, covering prices on household aluminum ware of the type just exhibited at the British Industries Fair in Birmingham. The prices quoted are not those actually charged to the trade, but are subject to a reduction of one-third. Any firm interested can secure the catalogue in question for a short period by referring to file No. 39.

Special Reports on File.

The Specialties Division has on file the following reports which can be secured for a short period by firms interested. On all inquiries the proper file number should be mentioned.

85861—The market for soda fountains in the United Kingdom.
83166—The market for dentists' supplies in western Sweden.
85862—The dental goods market in the United Kingdom.
7278—The market for safes in Brazil.
85652—The button industry in Hamburg.
80994—Market for equipment and supplies for barber shops in Birmingham.

SHOES AND LEATHER MANUFACTURES

A. B. Butman, Chief, Boot and Shoe Division

FEBRUARY PRODUCTION OF BOOTS AND SHOES.

During February, 1923, the boots and shoes, exclusive of rubber, manufactured in the United States totaled 29,590,670 pairs, comprising 8,599,127 pairs of men's, 1,760,636 pairs of boys' and youths', 9,393,041 pairs of women's, 3,401,620 pairs of misses' and children's, 2,383,827 pairs of infants', 774,584 pairs of athletic and sporting (leather), 874,970 pairs of canvas and other textile fabrics, and 2,402,865 pairs of all other slippers and miscellaneous footwear.

The production of these classes during the first two months of the year was 60,148,436 pairs; this total exceeded that of the corresponding period of 1922 (49,671,164 pairs) by more than 10,000,000 pairs. The approximate production increases in the first two months of 1923 over the 1922 period in the number of pairs of leather boots and shoes manufactured were 3,000,000 of men's, 2,500,000 of women's, 500,000 of misses' and children's, and 1,000,000 of infants'. Athletic and sporting shoes of leather as well as shoes of canvas also show for 1923 encouraging increase in the number of pairs produced.

Boot and Shoe Industry in Italy.

Consul W. Roderick, Dorsey, Florence, February 28.

The most common types of boots and shoes manufactured in Italy for men are chrome leather shoes, in both black and tan. Uppers are frequently of cloth. The greatest demand is for sizes from 6 to 10, with widths from 3 to 5, corresponding to the American B to D. Heels are low and broad, at least 80 per cent ranging from 2.5 to 3 centimeters (1 to 1⅛ inches) in height. The demand in women's footwear is for the low variety, such as pumps fastened with straps and buckles. Heels are almost always high and of French type; they are generally from 5 to 7 centimeters (1.96 to 2.75 inches), and some are as high as 8 centimeters (3.15 inches). The sizes most sought are 5 to 8 with widths 3 to 5. For children the English sandal shape with low broad heels is in greatest favor.

About 60 per cent of the leather for uppers is manufactured in Italy. The better grades of leather are imported, principally from Germany, with some consignments from England, France, and the United States. At least 70 per cent of all sole leather is domestic production, the remainder being supplied chiefly by Germany and in small part by England. Shoe findings are principally of national production, especially the cheap grades; the remainder, about 30 per cent, are supplied by England.

Prices and Trade.

Wholesale factory prices for men's low shoes run from 90 to 95 lire, and for high shoes from 100 to 105 lire. For women's shoes factory prices range from 75 to 90 lire a pair, while children's shoes are turned out at about 25 lire. Retail prices are from 20 to 25 per cent higher than factory quotations. Prices of imported shoes, largely supplied from Germany, are 10 to 15 per cent higher than the domestic article.

It is estimated that about 25 per cent of all boots and shoes sold in Italy are imported. Germany supplies about 15 per cent of the entire consumption and smaller lots come from the United States, England, Switzerland, and Czechoslovakia.

There has been a slight exportation of boots and shoes from Italy to the Balkan States, but owing to the difficulty of obtaining payments this has been discontinued. This trade was principally in out-of-date styles for which there was no local demand.

United Kingdom Increases Exports of Boots and Shoes.

The export trade of the United Kingdom in leather boots and shoes during February, 1923, amounted to 49,248 dozen pairs, or an increase of 20,000 dozen pairs over the quantity exported during February, 1922, and of more than 14,000 dozen pairs over the export trade of the corresponding month of 1921. During the first two months of 1923 there were 98,625 dozen pairs of leather boots and shoes exported by the United Kingdom to various foreign markets.

The following table shows the number of dozen pairs of leather boots and shoes exported by the United Kingdom to leading countries during the January-February period of 1921, 1922, and 1923:

Exports of leather boots and shoes from United Kingdom.

Exported to—	2 months ended Feb. 28—		
	1921	1922	1923
	Dozen pairs.	*Dozen pairs.*	*Dozen pairs.*
Sweden	2,752	181	391
Netherlands	10,989	7,894	3,390
Belgium	2,047	1,570	3,102
France	1,571	2,201	2,826
Argentina	353	1,358	2,041
British South Africa	20,393	13,367	20,192
British East Indies	3,043	1,442	3,430
Australia	290	2,371	13,140
New Zealand	4,778	8,581	29,061
British West Indies (including Bahamas) and British Guiana	1,079	3,511	2,839
Other countries	25,500	14,833	18,213
Total	72,795	57,309	98 625

Items of Interest to the Trade.

Boot and Shoe Trade of Bagdad.

The boots and shoes manufactured in Bagdad are of a low grade and for local consumption only. The leather used comes principally from India, and the work is all done by hand. Prices range from $1 to $2 per pair. British and American boots and shoes are sold in this market, but the demand is relatively small. The best medium-grade imported shoes sell for about $4 per pair and wear much better than those made locally, but the difference in price gives the local product a great advantage. There will not be an extensive market for imported boots and shoes until business begins to swing back to normal, and then it will be necessary to send a special agent to introduce a suitable

quality and style. (Consul Thomas R. Owens, Bagdad, Iraq, January 10.)

British Shipments of Leather Gloves in February.

During the month of February, 1923, the United Kingdom exported 3,691 dozen pairs of leather gloves, valued at £15,269. The quantity and value were less than during the corresponding month of 1922 (4,629 dozen pairs, valued at £18,486), but considerably more than the exportation of similar goods during February, 1921 (2,257 dozen pairs, valued at £11,383).

British Export Trade in Saddlery and Harness.

The saddlery and harness export trade of the United Kingdom during the first two months of 1923 reached a valuation of £37,264, which was approximately £8,000 more than during the corresponding period of the preceding year. This increase was due principally to the larger demands for goods of this character from British South Africa, which took £10,303 worth in the 1923 period as compared with £1,964 in 1922. Exports to the United States and the British East Indies also increased.

Boot and Shoe Industry of Sao Paulo, Brazil.

Consul Ezra M. Lawton, Sao Paulo, February 19.

The shoe manufacturing industry, next to that of textiles, is perhaps the most important in the Sao Paulo district. About 4,500,000 pairs of various sorts of leather footwear are made annually in the district, according to the best available information. They are divided as follows: Boots (riding), 500 pairs; women's shoes and slippers, 1,650,000 pairs; men's shoes, 1,100,000 pairs; sandals and similar types, 1,749,500 pairs. There are 32 shoe factories in Sao Paulo, of which 15 are important and the others much smaller. There are also hundreds of individual shoemakers, each turning out fifty to several hundred pairs of shoes annually. For this reason it is impossible to give any exact figures of the actual production.

A local representative of American shoe machinery states that nearly 90,000 pairs monthly are made in the State of Sao Paulo on American machines.

Local manufacturers make no special attempt to produce snug-fitting shoes, as do American manufacturers. Women's slippers usually have extremely high heels and rounded rather than pointed toes. The stitched-down type of cheap shoes without heels is much worn, and a sort of carpet slipper, of which there are hundreds of thousands manufactured annually in the district, is worn to an ever greater extent. Wooden-soled shoes or clogs are almost equally common. These are all of local manufacture.

Origin of Leather and Findings.

The United States has been furnishing most of the leather and shoe findings used in the trade here, but this condition is changing, or at least is in danger of being changed. Brazilian sole leather is used exclusively, as is also native canvas and shoe linings. Imported leather for uppers comes chiefly from the United States, but considerable amounts are now being imported from England, Germany, France, and other European countries. Native skins are beginning to be used as well, and while mostly of inferior quality, Sao Paulo tanners are producing a really good quality of kid and patent leather. Such leather is always cheaper than foreign leather.

Very few shoes are exported from Sao Paulo. Factories here receive numerous requests for prices for export, but having a market in Brazil for all they can produce, they are not interested. No shoes are imported into this district, principally because of the high tariff.

Additional information regarding shoes and leather manufactures appears in this issue under the following sections:

Tariffs and trade regulations: Proposed Dutch import restriction on footwear.
Foreign trade opportunities No. 5954.

RUBBER PRODUCTS

E. G. Holt, Acting Chief, Rubber Division

ECONOMIC DEPRESSION LIMITS PERUVIAN MARKET FOR RUBBER GOODS.

A. M. Walker, Rubber Division.

American manufactures dominate the Peruvian rubber goods market, although exports of rubber goods from the United States to Peru have been steadily declining in value since 1920. Whereas the war expanded the demand for rubber manufactures in Peru, the value of exports from the United States to that country increasing from $44,155 in 1914 to $480,193 in 1920, that country's purchases decreased to $351,088 in 1921 and to $276,780 in 1922. The decline may be partly attributed to the downward trend of prices, although depreciation in exchange and the general depression are the principal causes. The total Peruvian imports of rubber goods increased in value from $457,355 in 1919 to $857,252 in 1920, decreasing to $647,731 in 1921.

Share of United States in Tire Imports.

Prior to the war the tires imported into Peru were supplied by Germany, the United States, France, and Great Britain, in the order named. War conditions and the closer shipping relations with the United States placed American tires far in the lead in that market, although France and Great Britain still retained a considerable trade. The value of Peruvian tire imports rose from 4,828 Peruvian pounds in 1913 to 55,305 in 1919. In 1921, by reason of changed classification, tire imports were grouped with other soft rubber wares, the entire group being valued at 114,990 Peruvian pounds. (The normal value of the Peruvian pound is $4.8665; its exchange value at present is about $4.30.) United States exports of tires to Peru for 1920 were valued at $266,438, declining to $176,208 in 1921, but increased to $211,643 in 1922.

About 90 per cent of the automobiles used in Peru are of American makes. At the beginning of 1922 the total number of cars was estimated to be nearly 4,000, but during that year more cars were discarded than there were new ones purchased, and estimates of January 1, 1923, place the total in the country at 3,306, including 1,003 trucks. Because of the predominance of

American cars, inch-sized tires have almost complete control of the market. The straight-side tire is largely used, as there are a comparatively large number of high-priced heavy cars.

American-made tires are by far the most popular, although dealers in Michelin, Continental, Dunlop, Pirelli, and Bergougnan tires are actively engaged in an effort to supplant the more popular American makes. Price reductions by Michelin ranged from 15 to 30 per cent last fall, and these reductions were followed by other dealers. A commission of 5 per cent is regularly paid to chauffeurs by retailers.

American Mechanical Rubber Goods Most Popular.

Approximately 95 per cent of the Peruvian imports of rubber belting, hose, and packing came from the United States in 1919, the last year for which detailed information is available. The statistics in this line follow:

Peruvian imports of mechanical rubber goods in 1919.

Article.	Total.		From United States.	
	Kilos.	*Peruvian pounds.*	*Kilos.*	*Peruvian pounds.*
Rubber belting	26,135	8,978	25,470	8,681
Wired rubber hose	34,012	15,237	31,397	14,065
Other rubber hose	43,108	12,070	40,354	11,299
Rubber packing	13,816	7,184	13,264	6,897

United States statistics give the exports of the above articles to Peru for 1920 at a value of $127,914; in 1921 at $141,166; declining in 1922 to only $39,303.

Mining is the leading industrial pursuit of the country and the mining industries are the largest consumers of belting, hose, and packing. Gold, silver, copper, and petroleum are produced on an important scale. At the end of 1918 there were about 150 producing oil wells near Paita, from which port more than 10,500,000 gallons of crude petroleum were exported in 1917. Mining operations for other metals are certain to follow the extension of railroad facilities. On the other hand there are only about 450 industrial establishments in Peru, hence the industrial market for mechanical rubber goods is comparatively limited.

Only a Limited Market for Rubber Footwear.

The rubber footwear market in Peru is a small one, but of the total imports 75 per cent come from the United States. The total imports in 1919 were valued at 2,063 Peruvian pounds, 1,582 of which represented imports from the United States. Rubber footwear exports to Peru from the United States in 1922 were valued at $8,229, exclusive of rubber soles and heels valued at $1,703. The 1922 exports included boots $5,707, canvas rubber-soled shoes $2,239, and rubber shoes $283. Other rubber goods exported from the United States to Peru in 1922 included miscellaneous sundries and specialties valued at $15,902, and waterproofed clothing valued at $8,334. In these lines American-made goods also dominate the market, although Japanese, German, British, and French articles are extensively offered in competition.

America Predominates in Australian Tire Imports.

During the three months' period, September-November, 1922, Australian pneumatic-tire imports were valued at £211,428, according to official statistics. Imports of other rubber tires were valued at £25,330, of which the United Kingdom supplied £11,821, the United States £11,738, France £1,097, Canada £506, and Italy £166; 82 per cent of the solid-tire imports were taken by New South Wales, 10 per cent by Victoria, and 6 per cent by Queensland.

A comparison of the following statistics of pneumatic-tire imports with the statement for total tire imports in the May–July period (COMMERCE REPORTS of January 15, 1923, p. 158) shows a gain from 40 to 50 in the percentage of imports from the United States, and a loss from 24 to 12 in the percentage from France, which may help to explain the recent price reductions by Michelin in Australia.

Australian pneumatic-tire imports—September, October, November, 1922.

Source.	New South Wales.	Victoria.	Queensland.	South Australia.	West Australia.	Tasmania.	Total.
United States	£44,259	£29,158	£10,160	£19,305	£5,137	£2,191	£110,210
Canada	27,279	16,713	6,253	5,798	4,519	495	61,057

Rubber Trade Notes.

British Rubber Exports to United States.

The exports of rubber invoiced at the consulate general at London, England, for shipment to the United States during February, 1923, amounted to 9,212,569 pounds valued at £657,101, which contrasts with 2,065,607 pounds valued at £112,019 plus $89,748 in January. (Consul General R. P. Skinner, London, February 28.)

Cheap Tires Being Introduced Into the Philippines.

Stocks of both pneumatic and solid tires are normal in the Philippines except in 30 x 3½ size. The demand is almost exclusively for cord tires, but during the past few months large quantities of low-grade tires have been received. Dealers claim that the average tire consumption annually per car has been reduced during the past five years from 5 to slightly less than 2. (Trade Commissioner John A. Fowler, Manila, January 22.)

Tire Price Reductions in South Africa.

The 10 per cent price reduction on casings in South Africa by Michelin was unexpected in view of the indications of a rise in price due to the increased cost of raw materials, especially cotton and rubber. This follows a previous 10 per cent reduction by the same company late in December or early January. One American company met the Michelin cut on February 15, and other companies are expecting similar instructions from headquarters. It is understood that Dunlop is not inclined to reduce prices. (Trade Commissioner P. J. Stevenson, Johannesburg, February 13.)

Cord Tire Market in Southern Chile.

Competition between Michelin and Dunlop has resulted in substantial tire price reductions in southern Chile, Dunlop underselling and thereby increasing sales. The Dunlop price for a 30 x 3½ cord casing is £3 15s. Leading American firms have met prices but have lacked supplies of cord tires. Imports into Puntas

Arenas are free of duty, and because of this and the high freight rates from Valparaiso to Punta Arenas, shipments should be made direct rather than from distributors' stocks in Valparaiso. (Consul Austin C. Brady, Punta Arenas, February 1.)

Hungarian Tire Imports from Italy.

Up to March 21 the Hungarian Government has authorized the importation from Italy of 1,200 rubber tires, either pneumatic or solid. (Commedcial Attaché H. C. McLean, Rome, February 25.)

Additional information regarding rubber products appears in this issue under the following sections:

Tariffs and trade regulations: Rubber export restriction in Kelantan.
Foreign trade opportunities No. 5954.

AGRICULTURAL IMPLEMENTS

George B. Bell, Chief, Agricultural Implements Division

NETHERLANDS IMPLEMENTS TRADE IN 1922.

Consul General George E. Anderson, Rotterdam.

Imports of agricultural machinery into the Netherlands in 1922 showed few changes as compared with the trade in 1921. Imports continued in fair volume in spite of the general depression and constitute an exception to the general state of the import trade for the year. Germany furnished the largest proportion of agricultural machinery in practically all lines. This was due to low prices as compared with American machinery, and to the advantage of lower freight rates and other charges which are enjoyed by German manufacturers. Further, in some respects, much of the machinery made in Germany is more suited to Dutch requirements than the more modern American equipment. Dutch farmers are also much better acquainted with German machines and German farming methods. American manufacturers, however, sold more modern mowers than they had done in previous years, and obtained nearly one-third of the trade in this line.

The imports of the various items of farm equipment for 1921 and 1922 are shown below:

Imports of agricultural machinery into the Netherlands.

Items.	1921		1922	
	Metric tons.	Value.	Metric tons.	Value.
Plows	1,197	$141,415	1,227	$163,780
Seeding machinery	334	57,812	314	44,080
Mowers	1,045	208,457	2,118	308,180
Haymaking machinery	591	108,617	539	79,040
Threshing machinery	1,584	234,895	1,550	234,840
Other agricultural machinery	1,809	253,560	1,974	203,720
Cream separators	130	63,987	96	53,580
Sterilizers	51	28,115	62	31,920
Other dairy machinery	349	140,269	401	149,340
Garden tools, etc	5,961	2,479,453	6,580	2,507,240
Total	13,051	3,716,580	14,861	3,835,720

Most of the plows, seeding machinery, and dairy equipment were imported from Germany. The United States furnished a part of the mowing and threshing machinery, as well as some of the haymaking equipment. Belgium supplied the largest share of cream separators, with Germany and Sweden following in importance in the order named. Pasteurizers were imported mostly from Germany and Denmark, while practically all of the other dairy equipment came from Germany. More than 75 per cent of the garden tools and equipment was imported from Germany, and 10 per cent each from the United States and Great Britain. That is, the imports of these articles from the United States were of the same value as those from Great Britain, although double the quantity was imported from Great Britain.

The importation of farm tractors from the United States, which was started a year ago when 53 tractors were imported, was continued upon a smaller scale, the imports from the United States in 1922 numbering 42, according to Dutch statistics. While the farms and farming methods of the Netherlands do not offer much encouragement to the use of tractors, a fair trade is being done in them.

Exports of Agricultural Machinery.

Exports of agricultural machinery from the Netherlands include chiefly supplies for sugar and rubber estates in the Dutch East Indies and a moderate trade in ordinary farm machinery with Belgium and Germany. Some dairy equipment is also exported to Norway and Great Britain. Garden tools and similar articles were also sent to Belgium and Great Britain, while one-half of the total was exported to the East Indies. The exports of agricultural machinery and equipment were as follows:

Exports of agricultural machinery from the Netherlands.

Items.	1921		1922	
	Metric tons.	Value.	Metric tons.	Value.
Plows	54	$7,666	19	$5,320
Seeding machinery	10	1,000	6	1,520
Mowers	22	4,333	51	7,980
Haymaking machinery	4	1,000		
Threshing machinery	93	25,000	103	12,920
Other agricultural machinery	33	7,333	56	7,980
Cream separators	13	4,333	8	3,420
Sterilizers	3	1,333	2	1,140
Other dairy machinery	317	118,333	108	47,500
Garden tools, etc	802	369,000	629	247,380
Total	1,351	539,331	982	335,160

Tractor Market in Portuguese East Africa.

Consul Cecil M. P. Cross, Lourenco Marques.

The introduction of motor-driven tractors is under consideration by several of the large plantation companies in Portuguese East Africa. Hitherto, the prevailing tractive power on these estates has been steam tractors burning wood for plowing, and small steam locomotives running on narrow-gauge railroads. The clearing of the land has been relied on in most cases to furnish a supply of wood for fuel, but as the estates

have extended, this source of supply is not sufficient, and other sources of fuel supply, or different sources of power must be found.

The price of gasoline, which on the more remote estates runs over $1 per gallon, is so high as to almost prohibit its use in tractors. Kerosene is being considered as a motive power. Nearly all of the estates have, however, more or less extensive sugar plantations, and several have experimented successfully with the production of alcohol from the waste products. It is hoped to develop this industry to a point where it will supply sufficient power at least to drive motor tractors for the lighter plows, and perhaps for heavier plowing as well.

Modern Dairy Equipment in Switzerland.

Vice Consul William Mathee, Zurich.

The dairy industry in Switzerland is becoming more modernized and in consequence there are new possibilities for the sale of American barn and dairy equipment to fill the demand caused by the changes that will necessarily follow this movement. The quaint old-fashioned barns are being replaced by modern structures, and better facilities are provided for sheltering the cattle.

Where the pasture lands upon the mountain sides are accessible, the cattle spend most of the summer and fall grazing in these pastures, and most of these herds furnish the milk necessary for the production of cheese. In the lowlands, however, and in the neighborhood of the cities, more modern methods prevail, and it is here that there exists the greatest opportunity for the sale of modern equipment. The large cities require an abundance of milk, and upon the dairies supplying the milk falls the heaviest burden. Labor costs are high and the cost of milk, which is delivered at the house into a receptacle owned by the customer, is considered high.

Therefore, labor-saving devices are needed, which not only increase efficiency, but also reduce costs. Modern barn equipment, such as feed and manure conveyors, are not known, but it is believed that they could be successfully introduced because of the need for producing milk that will sell at a lower price. Stanchions in connection with steel stalls would not sell readily because of the antipathy felt by the farmers toward this way of stalling cattle, but a demand might be created by means of educational propaganda.

Implement and Tractor Market in the Philippines.

Trade Commissioner John A. Fowler, Manila.

The recent rice-harvesting season in the Philippines caused some demand for rice-threshing machinery. Most of the sales of rice threshers also included sales of tractors. Otherwise, there were no tractor sales reported, and very heavy stocks of tractors still remain on hand. In the latter part of 1922 there was a large demand for parts of tractors, indicating that many of the tractors that have been laid up for months past are again being put to work.

There is a good demand for walking beam plows. Stocks are light and some renewal orders have recently been placed. There is also a good sale of rice hullers, with a good outlook for increased sales. The farmers have no ready cash, but they need machinery which they can buy only on long terms, which local importers are not in a position to grant. It is expected that there will be an improvement in agricultural-implements collections in April.

FINANCE

Grosvenor M. Jones, Chief, Finance and Investment Division

THE PUBLIC DEBT OF PERU.

Acting Commercial Attaché W. E. Dunn, Lima, February 28.

The public debt of Peru, as of September 30, 1922, was slightly under Lp.10,500,000 ($51,098,250 at par of exchange), including all foreign and domestic obligations. Since the date mentioned this total has been increased by a loan of £1,250,000 sterling placed in London, the major portion of which was used, however, in paying certain outstanding obligations of the Republic included in the above amount. According to the most reliable figures available the total public debt at the close of 1922 was approximately Lp.11,000,000.

A detailed statement of the public debt as of September 30, 1922, prepared by the Minister of Finance, reveals the following items outstanding:

EXTERNAL DEBT.

Salt loan (Emprestito de la Sal), 1909, 5½ per cent[1]	Lp.901,940
Northwestern Railway of Peru bonds, 1920, 5 per cent[1]	699,002
Municipality of Lima loan, 1919, 5 per cent[1]	565,100
Municipality of Callao loan, 1920, 8 per cent[1]	71,200
Guaranty Trust Co. loan, 1922, 8 per cent[2]	609,054
French claims (Dreyfus et al.), 5 per cent	524,992
Peruvian consulate, Liverpool (draft accepted, no interest)	Lp.4,200
Peruvian Legation, London (draft discounted by London Joint City & Midland, no interest)	10,000
Total external debt	3,385,488

INTERNAL DEBT.

Internal consolidated bonds (titulos), 1918, 7 per cent	2,152,703
Consolidated "vales" of 1889, 1 per cent	337,082
Amortization bonds (titulos) of 1898 (no interest)	39,356
Recognized credits (law of Feb. 6, 1918) (no interest)	305,464
Floating debt (Treasury obligations payable to bearer, no interest; issued from 1896 to 1913)	163,200
Treasury "vales" (no interest)	50,904
Treasury drafts (letras) (no interest)	197,022
Budget deficits (July 1, 1915, to Dec. 31, 1921)	332,941
Budget deficit of 1922	681,614
Total internal debt	4,260,286

[1] This is a sterling loan, here stated in Peruvian currency; the pound sterling and the pound Peruvian are equal at par.

[2] This is a $2,500,000 loan, here converted into Peruvian currency at the rate of exchange then prevailing.

LOCAL BANK LOANS.

Combined bank loan in "cheques circulares," 1914 (no interest)	Lp.85,072
Banco Aleman Transatlantico, 1915, 8 per cent on gold deposit	80,203
Banco Popular del Peru, 1915 (cheques circulares)	10,511
Banco del Peru y Londres (current account), 9 per cent	46,471
Banco Italiano (current account), 9 per cent	186,003
Banco Anglo-Sud Americano (current account), 9 per cent	85,579
Banco Aleman Transatlantico (current account), 9 per cent	30,270
National City Bank of New York (current account), 9 per cent	12,147
Banco Popular del Peru (current account), 9 per cent	12,000
Total local bank loans	548,256

MISCELLANEOUS LOCAL OBLIGATIONS.

Gildermeister & Co., advance on sugar export taxes, 1920 (original sum Lp.200,000), 8 per cent	45,230
Cerro de Pasco Copper Corporation, advance of $35,000 on export taxes (no interest)	8,750
Peruvian Steamship Co. (drafts discounted)	2,475
Peruvian Steamship Co. (passages and freight)	64,278
Empresa del Muelle y Darsena, Callao, 1920	41,436
Empresa Nacional de Trasportes (expenses of equipping confiscated German sailing vessels as per contract)	5,306
Peruvian Corporation (annual subsidy)	55,533
Marconi Wireless Co. (Ltd.) (money advanced) 9 per cent	88,118
	311,126

TAX COLLECTING AND FISCAL COMPANIES LOANS.

Compañia Recaudadora de Impuestos loan in Treasury bonds payable to bearer, 7 per cent	1,245,000
Idem, current account advances (no interest)	309,570
Idem, investment in tobacco monopoly, 8 per cent on capital	194,069
Compañia Administradora de Almacenes Fiscales advances	7,250
Compañia Administradora del Guano advances (no interest)	232,500
	1,988,389

RECAPITULATION.

External debt	3,385,488
Internal debt	4,260,286
Local bank loans	Lp.548,256
Miscellaneous local obligations	311,126
Tax collecting and fiscal companies loans	1,988,389
Grand total	10,493,545

Since the foregoing statement was prepared, the Peruvian Government has floated in London an additional loan of £1,250,000 sterling, secured by the revenues from the sale of guano. This loan was issued in December, 1922, at 80 net, 7½ per cent bonds being issued, with amortization in 25 years. The guano industry in Peru is under the control of the Compañia Administradora del Guano, the organization of which was changed so as to admit three new directors, who represent the lending firms, and in order to introduce additional safeguards. The revenues of this company reach approximately Lp. 200,000 per year. The proceeds of this loan were used in paying off certain items of the public debt held by British interests, including sums due the Peruvian Corporation, and for making up a portion of the current budget deficits. The loan is redeemable at par on or before June 1, 1948, by means of a cumulative sinking fund of 1½ per cent per annum beginning June 1, 1924. The Government reserves the right to redeem the outstanding portion of the loan on June 1, 1923, or on any interest date thereafter at 105 per cent, with six months' previous notice.

Establishment of Greek Bank in Rumania.

A Greek bank with a capital of 50,000,000 lei has been established in Braila, Rumania, under the name of Banque Helleno-Roumaine, the Vima (Athens) of January 24/February 6 announces. The capital of this bank is entirely Greek, and the directors and employees are all of Greek nationality. The principal purpose of the new institution is the facilitation of Greek trade and service to Greek merchants in their business transactions in Rumania and other near-by countries. The bank has instituted a department of products and merchandise and a commercial information bureau in order the better to subserve these ends.

Far East: Stringency in Indian money market.

CONSTRUCTION NEWS

[Further information pertaining to the following items may be obtained from the Bureau of Foreign and Domestic Commerce, or its district and cooperative offices, by referring to the reference numbers given. Where no reference number is given, further information is not available.]

India.—A company is being formed with a capital of about $300,000 which contemplates the erection of a Portland cement plant at a town near Madras, India. The report indicates that there is an opportunity for American firms to bid on the contract for the erection of the building and on the machinery and other supplies which will be required. The capacity of the plant is to be approximately 18,000 tons a year, and both the wet and dry processes are involved. A power plant and equipment for electrical drive will be required. Reference No. 87953. (Vice Consul H. A. Doolittle, Madras.)

Canada.—It is reported that an office structure is shortly to be erected in the down-town district of Montreal at a cost of $3,500,000. Two other office structures will also probably be erected in the near future. Work on one, of which the estimated cost is $750,000, is scheduled to begin in early spring. Reference No. 87860. (Consul General Albert Halstead, Montreal.)

Brazil.—The State of Rio Grande do Sul will spend 596,000 milreis for the construction of 14 bridges during the current year. An additional 70,000 milreis has been set aside for bridge-repair work. (Assistant Trade Commissioner M. A. Cremer, Rio de Janeiro.)

COMMERCIAL LAW

A. J. Wolfe, Chief, Division of Commercial Laws

TRADING UNDER THE LAWS OF ITALY.

Extracts from a report submitted to the office of the American commercial attaché in Italy by a prominent attorney in Milan.

[Italian legislation does not differentiate between the Italian and the foreigner. Article 3 of the Civil Code assures to foreigners the enjoyment of identically the same civil rights as those granted to Italian citizens. Liberty of commerce is accorded and guaranteed to all desirous of engaging in commerce. A foreigner trading in Italy is not obliged to become an Italian citizen and may remain in business in Italy indefinitely, retaining his nationality and citizenship. At present there is a project on foot to revise the Commercial Code and the Code of Procedure to include some advantages found in the legislation of other countries.]

The company laws of Italy recognize three types of commercial association—the simple partnership or private firm (societa in nome collettivo), the limited-liability company (societa anonima), and the joint-stock company (societa in accomandita). Simple partnerships are formed by two or more persons who conclude an agreement, which constitutes the basis of the relations between the partners themselves. As to third parties, responsibility of partners is unlimited, and they are liable for the obligations of the firm to the full extent of their personal fortunes. The articles of partnership must be drawn up in writing and contain (*a*) the name or title and the seat of the firm; (*b*) object or nature of the business; (*c*) names and domiciles of the partners; (*d*) names of the partners having the right of signing; (*e*) regulations covering the relationship between the partners; (*f*) quota which each partner has subscribed, in cash, credits, or in other ways; (*g*) proportion which each partner takes of the profits, and his share in the losses; (*h*) life of the partnership.

The partnership agreement is usually drawn up by a notary public in the form of a public act, though it may be a private document with the partners' signatures witnessed by a notary. An authenticated copy of the instrument has to be deposited with the Registry of the Tribunal, and the same is inscribed in a special book called the register of firms; it is then posted in the Tribunal, in the town hall, and in the office of the stock exchange; from there it passes to the chamber of commerce, where note of it is made. The firm is then legally constituted and forms a body which is capable of assuming obligations and rights which belong to it.

A simple partnership of this sort is required by law to keep a day book or journal, where every operation of whatever nature is noted daily, and an inventory book, in which is also entered the annual balance. Before these books are used they must be signed by a magistrate, who records the number of pages in each.

Limited-Liability Companies (Societa Anonima).

A limited-liability company is one whose liabilities are in proportion to its capital, no shareholder being responsible beyond the amount of capital he has subscribed. Companies of this kind are constituted by public act in which must be set forth (*a*) the name and the seat of the company; (*b*) the nature of the business; (*c*) the amount of capital subscribed; (*d*) the names and number of shareholders, and the number and value of shares held by each; (*d*) the value of other properties held by the company; (*e*) the number of directors; (*f*) the number of auditors; (*g*) the power accorded to general meetings; and (*h*) the duration of the company.

The board of directors ("consiglio di amministrazione") is chosen at a general shareholders' meeting. It is the duty of the chairman of the board to organize and direct the affairs of the company as president. Coupled with this board of directors there functions an organ of control known as the auditors ("collegio dei sindaci"), eonsisting of three or five effective and two substitute members. This body is nominated by the shareholders, and its duty is to supervise the bookkeeping and financial operations of the directors. It can, in case of necessity, overrule the decisions of the directors, necessitating the calling of an extraordinary meeting, or may appeal to the courts if it considers such intervention necessary in the interests of the company.

Joint-Stock Companies (Societa in Accomandita).

The joint-stock company is a mixed form having some of the characteristics of a simple partnership and some of a limited-liability company, though the formalities governing such organizations are essentially the same as those that control limited-liability companies. Beyond those books which it is obligatory for a limited-liability company to keep, joint-stock companies must have (1) a book which shows the exact position of each partner and his obligations toward the firm (payment for shares); (2) a book containing the minutes of the general meeting of stockholders; (3) a book containing the minutes of and the decisions taken by the board of directors. Before use these books also must be submitted to and countersigned by a magistrate.

In a joint-stock company certain shareholders are usually delegated to carry on the business; they are called "accomandatari" or active partners, and are responsible to the extent of all their private fortune. Stockholders whose activities are limited to the contribution of capital are known as "accomandanti" or sleeping partners; they can not participate in the management of the company, though they have the right to check up the actions of active partners.

Publication of Balance Sheets.

This brief statement will give an idea of the commercial life in Italy which is carried on by private

initiative. The law does not intervene beyond laying down certain rules for guidance, which are:

(*a*) For the private individual in commerce and for partnerships the law prescribes that every year an inventory must be taken and a balance struck. There is no publicity, and no outside person has means of knowing how business is progressing unless he is informed by those interested in the firm.

(*b*) For limited-liability and joint-stock companies the publication annually of the balance sheet is obligatory (these are published in a special bulletin in every prefecture and registry); anyone, therefore, can find out how business is proceeding.

Liquidation of Commercial Enterprises.

A commercial enterprise in Italy may be liquidated in two ways—voluntarily and involuntarily. The owner of a firm may go into voluntary bankruptcy simply by announcing to the authorities that he has ceased trading and by winding up his affairs. If there are several persons interested in the firm, either as partners or as stockholders, the liquidation is usually intrusted to one or more persons known as liquidators, who provide for the stopping of trading, the realization of assets, and the payment of debts.

Involuntary liquidation takes the form of bankruptcy. Anyone interested may apply to the court for a provisional examination of the position of a firm. The court then issues a receiving order, appointing a liquidator and an examining judge. A committee of inspection, consisting of three to five creditors, assists the liquidator. Bankruptcies may be simple or fraudulent—the latter when the bankrupt has acted in bad faith to avoid the payment of his debts. Moratorium, or suspension of payments as an intermediate insolvency state, does not exist in Italy.

Taxation of Companies.

Before the war taxation requirements were not exacting. A business firm had to make its contribution to the Italian Chamber of Commerce and to pay a trading tax to the municipal or county authorities and an income tax to the State. The income tax was based on profits earned during the year. In the case of limited-liability companies a circulation tax was levied, based upon the amount of the concern's capital.

Since the war a change has come into the situation through the need of the State to secure greater revenues. It is practically impossible to give an exact idea of the manner in which taxation is imposed; each case must be taken and judged by itself. Taxation has been increased, due to the depreciation of Italian money, and the proportion of tax to capital has also been increased. However, the Government is at work on a system of taxation which will be somewhat similar to the English income tax.

Outside Capital Welcome—Agents of Foreign Firms.

The Italian authorities seek to facilitate the introduction of foreign capital and are endeavoring to protect the foreigner from double taxation. It is believed that laws will be prepared exempting foreign capital not only from local taxation but also from the income tax.

With regard to persons representing foreign firms in Italy or acting for them, their relations are governed by contracts, and the law does not intervene unless there be something in the contracts requiring interpretation. The Italian law seeks to protect the employee against unjust dismissal; an employee should not be causelessly dismissed without compensation commensurate with the nature of his employment and length of service.

Consignment Laws in Finland.

Consul Leslie A. Davis, Helsingfors, February 27.

The laws of Finland are reticent as to conditional sales. Recourse must often be had, therefore, in questions of commercial law, to the laws, customs, and usages in other countries. Both suspensive and resolutory conditions and stipulations are recognized and, generally speaking, a very liberal standpoint is taken.

A foreign firm which consigns goods to a Finnish firm to be paid for as sold and which wishes to retain title to the goods until sold can do this by a written agreement or contract wherein this condition is expressly set forth. In case the Finnish firm with which such an agreement is made becomes insolvent, merchandise belonging to the foreign firm and still in possession of the Finnish concern does not merge with the custodian's estate, the American firm being free to resume possession of the goods. But, on the other hand, if the Finnish firm has already sold the goods in its possession to a third party and this third party has acted in good faith, the goods can not be reclaimed, the only remedy for the foreign firm being to file its claim against the insolvent estate.

No third party can exercise a lien upon such foreign-owned merchandise in the custody of the agent except in certain cases for rent, warehousing, and freight.

Prussian State Tax on Real Estate.

Consul Orsen N. Nielsen, Berlin, Germany, February 24.

A law providing for the taxation of real estate in Prussia at the rate of six-tenths of 1 per cent of its assessed value was passed by the Landtag on January 14, 1923, and was published in the Reichsanzeiger No. 43 of February 20.

Improved real estate which is not permanently devoted to agriculture, horticulture, or forestry will be taxed upon the basis of the valuation established for the payment of the surtax during the period 1917–1919. All other land will pay the tax upon a valuation 800 per cent higher than the valuation upon which the surtax was based. However, the Ministry of Finance is empowered to exempt from taxation lands on which workmen's homes are under construction, but the exemption applies only so long as building is in progress—in no event longer than for three years.

The law is to be in effect for three years (from April 1, 1923, to April 1, 1926), and taxes are to be paid quarterly, in the first half of the second month of each quarter.

TRANSPORTATION

E. S. Gregg, Chief, Transportation Division

SHIPPING.

THE NETHERLANDS GOVERNMENT AND SHIPPING.

E. T. Chamberlain, Transportation Division.

Notwithstanding the difficult position of the Netherlands throughout the war, with its eastern land frontier exposed to invasion and with its coast line on the North Sea—the scene of submarine warfare—Dutch merchant shipping during the eight years since the summer of 1914 has increased in tonnage more than during the eight years immediately preceding the war, and its percentage increase has not been much less. This result followed the comparatively small loss of Netherlands ships, 212,000 gross tons, by submarine attack, and the opportunity which a neutral position gave Dutch shipyards. Before 1914 their largest annual output was 104,000 gross tons; in 1916 it rose to 180,000 gross tons, in spite of difficulties in obtaining materials; in 1921 it reached 232,000 gross tons; and even in 1922 it amounted to 163,000 gross tons. The steel steamers under the Dutch flag in June, 1914, according to Lloyd's Register, amounted to 1,470,584 gross tons; and in 1922, to 2,613,051 gross tons; while in 1906 they amounted to 682,100 gross tons. Other Dutch ships are inconsiderable in tonnage—less than 25,000 tons gross—and diminishing.

As a large part of the Netherlands, by centuries of effort, was reclaimed from the sea, the acquaintance of its people with maritime affairs, of course, is intimate and general, and the relations of its Government to its merchant shipping have been close, but changing with the change of its political relations to Europe and the rest of the world. By right of discovery in the sixteenth and seventeenth centuries the Netherlands acquired a colonial empire in America, Africa, Java, Sumatra, Borneo, and islands of the Pacific. The application of a discriminatory shipping policy by Holland led to English retaliatory discriminations and the navigation acts of Cromwell, which England, in turn, abandoned when the United States in retaliation also adopted discriminatory shipping legislation. Merchant-shipping discriminations played their part in provoking the maritime wars of the seventeenth century between the Netherlands and England, by which England acquired the New Netherlands (New York and both banks of the Hudson River to Albany) and the Netherlands retained Dutch Guiana. Early in the nineteenth century, England also acquired from the Dutch the colony of the Cape of Good Hope and began the foundation of the British Empire in Africa. The Netherlands policy of preferential duties for cargoes carried in Dutch ships between the Netherlands and her remaining colonies, now with 40,000,000 population, was not wholly abandoned, however, until 50 years ago.

Dutch East Indian Colonial Policy.

At the outbreak of the World War the Netherlands maintained regular communication every week between Amsterdam, Rotterdam, and Batavia in Java and thence by smaller steamers throughout the Dutch East Indies, under mail contracts, dating from 1891 and 1892, which were slightly modified from time to time with increased pay for higher speed. The Netherlands Steam Navigation Company from Amsterdam once a fortnight took on the Dutch mails at Genoa, and the Rotterdam Lloyd on the alternate fortnights took on the Dutch mails at Marseille, both lines proceeding to Batavia. The mails thus had the advantage of expeditious European rail transportation, and both trade and political considerations were consulted in the choice of a French and an Italian Mediterranean port. The Netherlands was not a naval or a shipbuilding power at the time—in fact, the mail steamers were built mainly in England—so that the military considerations involved in the British, French, Spanish, and German colonial mail subsidy systems were not prominent in the Dutch system.

The running time and schedule of voyages were fixed in the contracts, which called for a payment by the Government of 5,600 florins ($2,250) for each outward and inward voyage. Separate contracts with the companies provided for the transportation of troops and supplies to the colonies, and of coffee, tin, and products of other Government monopolies in the islands, and for parcel post from the colonies. The subsidies were paid half by the Netherlands Government and half by the colonial government of the Dutch East Indies. In 1913 the total subsidies were a trifle short of 400,000 florins ($160,000). The submarine war deranged the service in 1916; in 1917 and 1918 it was suspended, but was resumed in 1919 under a 15-year contract which will expire during 1923. The payments for 1921 were 356,000 florins ($142,400).

Linked from the beginning with this weekly communication between the mother country and the colonies, thus assured by joint contributions of the two governments, was a regular communication between the ports of the Dutch East Indian archipelago, the

whole subsidy for which was assumed by the colonial government. From 1891 to 1916 the Royal Packet Navigation Co. was paid a subsidy per nautical mile on contract coasting voyages in the archipelago, the average annual payments amounting to about $200,000 for about 350,000 contract miles over 13 routes; but in addition, the company's fleet navigated 2,400,000 miles annually. The contract was revised in 1916, so that until 1925 the company is obliged to carry mails and parcel post on regular routes aggregating 1,500,000 miles and on such additional routes as the colonial government may determine, at a rate equivalent to not over 10 cents a mile, for a total payment not to exceed $200,000. Special rates are also fixed for Government cargo and Government employees.

Colonial Trade with Asia and Australia.

To extend colonial trade and communications, the Netherlands Government and the colonial government combined to advance in 1902, in 15 annual installments, the total sum of $1,500,000 to the Java-China-Japan Line for a voyage every four weeks between Batavia and other colonial ports and Hongkong, Shanghai, Amoy, Yokohama, and Kobe. The contract guaranteed the company 5 per cent on its paid-up capital, and profits in excess were to be divided with the Government as repayment for its advances. The profits were such as to repay the advances by 1919, when the contract was terminated. There may have been prevision of conditions which the war brought about, for the contract gave the colonial governor general the right to charter at fixed rates or to buy for the Government one or more of the ships of the company; the choice of directors and acts of the company were subject to the approval of the Government, which was authorized to attend all the company's meetings and examine any of its books and papers, and all the officers of the ships were required to be Dutch subjects. A somewhat similar arrangement was made by the governor general with the colonial Royal Packet Company in 1911, by which the colonial government advanced annually for 10 years 150,000 florins ($60,000) without interest, in return for a monthly direct service between Java and Australia. The Government's advances were repaid from profits, and the contract closed in 1920.

Government Loans to South American Line.

The method of Government loans to establish specific steamship routes, to be repaid from the Government's share in the profits, was also undertaken successfully by the Netherlands Government in the case of the Royal Netherlands Line to Brazil and Argentina. In 1906 the Government agreed to advance $1,500,000 to the company in 15 annual installments of gradually lower amounts, the Government taking half the mail receipts. From this source and a share of profits the advances were all repaid by January, 1920, the line fairly well established, and a new mail contract at International Postal Union rates was signed.

This method has been adopted, with modifications, in the French colonial contract with the Messagéries Maritimes Co., and an analogous proposition was included in the merchant marine bill before the Congress of the United States in 1922–23. The same general method which the Netherlands and Dutch East Indian colonial governments employed up to 1919, to establish the Java-China-Japan and South American lines have been followed in the effort which the Netherlands Government is now undertaking to open regular communication with the Dutch-speaking elements in the population of South Africa.

Subsidy to South African Line.

From several points of view the most important steamship contract which the Netherlands Government has approved since the war is that of July 20, 1921, with the Holland South Africa Line for an increased mail and passenger service with Cape Town and Durban. The Cape Colony was a Dutch colony 120 years ago, and the Dutch element is a large part of the European population of South Africa. The German East African subsidized line has been abandoned, of course, and the new line presumably will appeal to many elements in the population and trade of South Africa.

The essential features of the contract, as stated by Mr. H. W. Adams, acting commercial attaché at The Hague, in a report dated January 15, 1923, from which most of the specific data as to postwar Netherlands contracts in this article have been drawn, are as follows:

A contract between the Netherlands Government and the Holland-South Africa Line (Nederlandsche Suid Afrikaansche Stoomvaart Maatschappij, "Holland Suid Afrika Lijn") was entered into on November 30, 1920, and approved by a law of July 30, 1921. This contract covers a period of five years and provides for the operation of a service under the Netherlands flag between the Netherlands and South Africa and for the transportation of mails, including parcels, to and from the various ports of call. The company is to make 12 voyages annually at intervals of about one month with steamships which, in addition to being adapted to freight traffic, are equipped for transporting a limited number of passengers. The company is to increase gradually both the number of voyages and the facilities for the conveyance of passengers, to the end that within five years after the beginning of the first voyage under this contract, a yearly total of 24 voyages at intervals of about 15 days will have been attained. These semimonthly voyages are to be made with steamships equipped for the conveyance of both cabin and steerage passengers, in the services from Amsterdam or Rotterdam via Capetown to Durban and from Durban via Capetown to Amsterdam or Rotterdam. The company is permitted to establish additional ports of call other than those specified in the contract and to undertake more than the prescribed number of voyages.

This contract further provides that the company is to receive from the Government a yearly advance of 1,000,000 florins ($400,000) for a period of five years. If the profit available for distribution exceeds 6 per cent of the outstanding paid-up capital stock, such surplus is, first of all, to be used in paying to the Government interest at the rate of 5 per cent of the unredeemed balance of advances received up to December 31 of the preceding year. Half of the remaining surplus profit is to be retained by the company, while the other half is to be paid to the State by way of redemption of the advances received.

The following additional provisions were embodied in this contract:

1. *Nationality of officers.*—The commanders, mates, and engineers must be Netherlanders, unless this requirement be waived by the Minister for Agriculture, Industry, and Trade.

2. *Nationality of managers.*—All the managers must be Netherlanders, unless this requirement be waived by the Minister for Agriculture, Industry, and Trade.

3. *Appointments of managers.*—Appointments of managers are to be subjected to the approval of the Minister of Agriculture, Industry, and Trade.

4. *Government control.*—The Queen has the right to appoint a Government representative in the company, who may attend all meetings of shareholders or directors or of other such officials, and he shall have access to the offices and files and shall be allowed to inspect all the books and documents of the company.

The articles of association and modifications thereof, together with the terms and conditions on which debenture loans are to be made, are subject to the approval of the Minister for Agriculture, Industry, and Trade.

5. *Liquidation.*—The company shall not be liquidated without the consent of the Minister for Agriculture, Industry, and

Trade, who, however, may withhold this consent only on the ground that the necessity for such liquidation is not warranted by the financial condition of the company.

Transatlantic Mails.

Since 1888 the Netherlands Government has maintained a postal arrangement with the Zeeland Steampacket Co. for a mail service twice a day between Flushing and Queensborough. This service carries not only the mails exchanged between the Netherlands and Great Britain, but those from the Netherlands and other countries of northern Europe which are to be transferred in England to fast mail steamers for transmission to oversea countries, or mails landed in England by such fast steamers from oversea countries and destined for the Netherlands or other countries in northern Europe. Like the British, French, and Belgian channel ferries, the Zeeland Steampacket Co. is essentially a part of the world's international postal system. The company was paid 50,000 florins ($20,000) a year for carrying the Dutch mails, and for foreign mails it was guaranteed at International Postal Union rates 400,000 florins ($160,000); any excess above that amount was divided with the Government. During the war the company's service through the North Sea was irregular, and three of its best steamers were lost. The contract was revised in 1920, providing for an increase in the mail pay to meet increases in operating expenses, and the receipts in 1921 were $255,000. The maintenance of the route, furthermore, is so essential to the communications of the Netherlands and of the international postal system that the Dutch Government took the unusual step of investing 1,000,000 florins ($400,000) in the company's capital stock and also loaning it 2,400,000 florins ($960,000) at 6 per cent.

Most of the Netherlands mails for the United States have been expedited by this North Sea service to England and thence to America. Indeed, before the war the average annual letter-mail pay to the Holland-American Line to New York was less than $200, although since 1909 the company had had a contract with the Dutch Government at International Postal Union rates, or at a rate from 1910 to 1920 of $10 per cubic meter of ship's space occupied, and a minimum of $5 a trip. With the outbreak of war and the censorship of mails through Great Britain, the payment to the Holland-American Line rose to $72,000 in 1914 and to $148,000 in 1915; but it dropped rapidly in the years of submarine warfare, and in 1918 was only $30. The parcel-post payments before the war averaged $800 a year, rose to $58,000 in 1915, and dropped to $9.60 in 1917. In 1919 the total payments were $6,400. Since 1920 the rate has been 0.25 florin per kilo, a little less than 5 cents a pound.

For 40 years the Royal Netherlands West Indian Mail Line has maintained connections between the Netherlands and Dutch Guiana and Curaçao, partly by direct services from Amsterdam and partly by a line from New York. The mail subsidy, however, dates from 1895 and provided a payment of 1,400 florins ($560) for each outward and each homeward voyage, not to exceed 47,600 florins ($19,000) a year. This arrangement expired in 1920, and the present contract provides payment for letter mails by the International Postal Union and Netherlands pound rates, and for parcel post according to the space occupied and destination at rates varying from $12 to $16 per cubic meter. In 1913 the company's mail pay was $30,800, and in 1919 only $10,800. The amount at pound rates in 1921 is not stated.

Netherlands Subsidy Methods.

The usual Dutch method of paying for parcel post by the space occupied has been followed in the Government's latest mail contract of March, 1922, with the Holland East Asia Line, by which $4 per cubic meter is paid for parcel post to Portugal, $6 to Italy, $21.40 to China, and $23 to Japan.

The Netherlands Government, after 1890, began the policy of mail subsidies, to secure regular communications with the Dutch colonies; and that policy is continued since the war, with modifications to secure improved service. Recently the policy has been extended to secure connections with the Dutch-speaking population of South Africa, by the method of advancing annually considerable amounts of public funds to the steamship company which will undertake the service, the loans to be repaid from the company's prospective profits. This method was successfully employed in the years immediately before and during the World War, but its adaptability to peace conditions has not been conclusively demonstrated. The conditions of the South African experiment seem to be favorable.

SHIPPING AT CIENFUEGOS DURING 1922.

Consul Frank Bohr, Cienfuegos, Cuba, February 14.

Entrances at the port of Cienfuegos during the calendar year 1922 totaled 412 vessels, aggregating 1,208,380 gross tons, as compared with 342 vessels, of 930,059 gross tons, entering during 1921.

Foreign Tonnage Increases at Expense of American.

The following table shows the distribution of shipping by nationality during the two years:

Foreign shipping entering the port of Cienfuegos, 1921 and 1922.

Nationality.	1921		1922	
	Number.	Gross tons.	Number.	Gross tons.
American	194	529,264	169	508,318
British	56	187,359	86	311,729
Norwegian	40	65,523	63	155,965
Danish	11	21,682	52	110,404
Swedish	13	27,596	14	20,826
German			10	33,702
Japanese	4	23,727	5	29,117
Spanish	4	15,134	5	19,039
Dutch	13	44,322	3	10,299
French	2	9,065	1	5,157
All others	5	6,387	4	1,824
Total	342	930,059	412	1,208,380

These figures indicate a decrease in the proportion of the tonnage carried in American bottoms and correspondingly important increases in that carried by British, Norwegian, Danish, and German vessels. The last named brought practically only European cargo to Cienfuegos.

The principal increase in foreign tonnage at the expense of American has been due to the fact that the American steamship companies which maintained more or less regular services to Cienfuegos chartered steamships of Norwegian, Danish, and British nationality for the carriage of merchandise both to and from the United States. Foreign vessels are also replacing

American ships in the transportation of fuel oil from the Tampico district. This tendency is understood to be due principally to the smaller crews carried on the foreign vessels mentioned, the lower wages paid to officers and men, and the generally lower operating expenses.

Comparison of Pre-War and Post-War Entrances.

A comparison of the number and tonnages of vessels entering Cienfuegos during 1913 and 1919–1922 is given in the following table:

Shipping entering the port of Cienfuegos, 1913, 1919–1922.

Year.	Number of vessels.	Gross tonnage.
1913	305	538,255
1919	302	466,823
1920	449	799,537
1921	342	589,738
1922	412	766,285

It will be noted that the total tonnage for 1922 was greater than for previous normal years, and only a little less than that for the record year 1920. This, however, does not necessarily represent a normal increase, but is to be explained by the fact that at the beginning of the 1922 sugar season a considerable part of the previous year's crop remained unsold, thus leaving an unusually large tonnage to be handled during 1922.

SHIPBUILDING IN THE MERSEY AND CLYDE DISTRICTS.

Commercial Attaché W. S. Tower, London, February 21.

Shipbuilders on the Mersey and the Clyde do not feel very optimistic about the immediate prospects for their industry. The brief spurt of orders for new ships which developed in the last quarter of 1922 roused hopes of continued better business in 1923, but the booking of orders already has subsided as far as those two districts are concerned. Inquiries are still being received in considerable numbers, but few develop into actual contracts.

The majority of the keels for vessels ordered prior to the 1st of January have now been laid down, and for many yards no new keels are in sight for the ways from which launchings are being made. As a result, the feeling of cheerfulness that was evident two months ago is being replaced by one of doubt and uncertainty. This applies particularly to the outlook for new construction; repair work is still coming forward in fair volume, with some cases reported of success in getting important repairing contracts for the Clyde against keen Continental competition.

Materials not Obtainable at Former Low Prices.

In addition, shipbuilders are somewhat concerned about the higher prices for coal, iron, and steel. The contracts booked in recent months have been at prices which leave little or no profit for the builder. In short, they represent business taken to keep the yards going and organizations intact. It is understood that some of the prices quoted were made possible not only because profits were eliminated, but also because the steel was bought very advantageously from Germany, figures as low as £7 per ton c. i. f. for plates being mentioned, as compared with the current domestic price of £10.

It is no longer possible to repeat such prices for materials, even from the Continent, and the prospects of dearer coal and steel leave the shipbuilder wondering where orders are to come from if business dies down so soon after a small volume of contracts have been placed at prices which can not readily be lowered.

The only hopes for lower shipbuilding costs rest on reduced costs of transportation and on relief from the local rates and taxes which, unlike income or corporation profits taxes, must be paid whether there are any profits or not.

Outlook for Shipyard Labor.

Labor in the shipyards unquestionably is down to bedrock level of wages, the average now being estimated at not more than 25 per cent above pre-war wages, while the cost of living hovers close to 80 per cent above the pre-war level. However, from the standpoint of labor the present situation is much better than was the case three months ago. The amount of work on the books of builders holds out the prospect of more employment than has been in sight for a long time, although to date the new work recently placed is not sufficiently advanced to effect any lessening of unemployment. Unless contracts continue to appear the season of improved outlook for shipyard labor will be relatively short.

Rhine and Main Shipping Conditions.

Consul F. T. F. Dumont, Frankfort on the Main, Germany, February 9.

As a result of the Ruhr occupation, traffic on the Rhine and Main Rivers has practically ceased. Traffic on the Main between the occupied and unoccupied territories is prohibited. Empty and loaded barges are allowed to proceed only as far as Höchst, and loaded barges must obtain a permit from the French control at Mainz. Barges flying Swiss and Dutch flags, laden with foodstuffs for the unoccupied territory, are allowed to pass under permit from the control.

The railway strike at Mainz has stopped the transshipment of cargoes at that point and at Gustavsburg, while at other points on the middle Rhine high water has halted loading.

Effect of Ruhr Occupation on German Seaports.

Consul E. Verne Richardson, Berlin, February 13.

From present indications at Berlin, the joint action of France and Belgium in the Ruhr district is destined to advance the status of the ports of Bremen and Hamburg and, in a lesser degree, of Rotterdam, at the expense of Antwerp, which in recent months has become prominent as a landing and lading point for the commerce of Central Europe.

While official confirmation is lacking, it is generally understood that the German Government is now interesting itself in diverting such sea traffic as it can to German ports, a matter in which the leading shipping, receiving, and forwarding companies of Germany are cooperating. It is also reported that steamers already bound for Antwerp with cargoes destined for Germany have been notified to pass the Belgian port by and proceed for discharge to Germany or the Netherlands.

Shipping Notes.

New Italian Shipping Firm.

The Navigazione Generale Italiana Co. has arranged with the Lloyd Sabaudo Line to operate a joint freight and passenger service between Italian and Australian ports, the first vessel to leave Geona about the 1st of March. (Consul Romeyn Wormuth, Sydney, January 1.)

New Steamship Service between St. Nazaire and Morocco.

The chamber of commerce of the port of St. Nazaire has under consideration the establishment of a new steamship service between that port and ports of Morocco. A commission has been appointed to investigate the situation from the Morocco standpoint. According to present plans combination vessels will be placed in the service, thus enabling a direct interchange of the products of France with those of Morocco. (Vice Consul M. E. Malige, Nantes, February 20.)

New Steamship Service between Reval and Stettin.

The Esthonian Steamship & Forwarding Co. was organized in Reval in the latter part of 1922 to maintain regular service between Reval and Stettin. The new company is said to be backed by English capital, with participation from the Neuer Dampfer Gesellschaft, Stettin. (Trade Commissioner L. W. Rogers, Riga.)

Smyrna Steamship Office Moves to Alexandria.

The office of the Egypt & Levant Steamship Co. (Ltd.)—formerly Talbot Steamship Co. (Ltd.), operating 21,360 gross tons—has been removed from Smyrna to Alexandria on account of the demoralized condition of shipping at Smyrna. This company operates general cargo services from Greek ports to the United States and return by way of United Kingdom ports and Alexandria. A number of vessels of small tonnage operate in the general coasting trade between Alexandria, Constantinople, Piraeus, and Syrian coast ports, and act as a feeder service to this line. (Vice Consul Winfield H. Scott, Alexandria, February 3.)

Changes in the French Line Service to New York.

The steamship *La Bourdonnais*, 8,388 gross tons, of the Cie. Générale Transatlantique, made its last trip from Havre to New York on January 30. It will return to Bordeaux and for the rest of the year, commencing February 24, will operate between that port and New York. The *Niagara*, 8,590 gross tons, of the same company, which has been on the Havre-New York run, after its departure on January 20, will take up a monthly service between Havre, Habana, and New Orleans in place of the *La Salle*, 2,697 gross tons. (Consul Herbert O. Williams, Havre, February 8, 1923.)

Withdrawal of Refrigerated Meat Steamers, Argentina-Marseille.

Two of the largest vessels having refrigeration equipment for carrying meat from the Argentine to France are about to convert their refrigeration space to ordiary cargo space, according to the Lloyd-Français of February 23. Inquiries at Marseille have failed to disclose definitely which ships are concerned, but it is believed that they are the *Alsina* and the *Mendoza*, 8,600 gross tons each, operated by the Cie. Générale des Transports Maritimes from Marseille to Brazil and Argentina. (Consul Wesley Frost, February 27.)

Additional information regarding shipping appears in this issue under the following sections:

Latin America: Peruvian shipping activities.
Far East: Indian merchant marine considered.

RAILWAYS.

SALES INFORMATION ON LATIN AMERICAN RAILWAYS.

W. R. Long, Transportation Division.

The following article is the first of a series on individual railways in Latin America. All available printed sources of information have been used, and additional specific data have been obtained from consuls. A handbook containing this information in more detail for all the railways in Latin America will be published later.

FERROCARRIL NACIONAL DE CHIRIQUI, PANAMA.

In 1912, during the presidency of Dr. Belisario Porras, it was decided that the most practical way of developing the lesser known part of Panama would be by the construction of a railroad from the Pacific coast into that territory. With this end in view, surveys were made in three provinces by experienced American railroad engineers. The Government of Panama turned over their findings to a board of selected engineers for consideration. The unanimous report of this board in favor of the construction of a narrow-gauge (3-foot) railway in the Province of Chiriqui, 200 miles west of Panama City, was approved by the Government. Specifications were prepared, and in February, 1914, a contract was let to W. R. Hebard & Co. for the construction of the railway, ready to operate subject to the approval of a consulting engineer chosen by the Government.

Construction was begun in April, 1914, and was carried on at the expense of the contractors until November, 1914, when the Government succeeded in securing money to finance the construction by issuing in the United States 30-year 5 per cent Republic of Panama bonds. Work was then pushed forward more rapidly until July 1, 1916, when the road was opened to traffic. The administration of the road continued under the same supervision until January 20, 1921, when it was formally transferred by Government decree to the Central Commission on Roads, under whose jurisdiction it now operates.

The railroad, which was named the Ferrocarril Nacional de Chiriqui (Chiriqui Railway), extends as a single line from the port of Pedregal on the Pacific to David, a distance of 4½ miles. At David the road divides into two branches, one extending 18 miles west to La Concepcion, and the other 28 miles in a general northwest direction to Boquete. Later the Porterillos branch was added, extending for 7 miles from the Boquete branch at a point about 12 miles north of David.

Grades and Curves.

The grades of the Chiriqui Railway average from 3 to 5 per cent, with a maximum curvature of 6 to 12 degrees. From Pedregal to David and on the La Concepcion branch, the maximum grade is 3 per cent, and the maximum curvature 6 degrees. The maximum

grade on the Boquete branch is 5 per cent, and the maximum curvature 12 degrees. On the Porterillos branch the maximum grade is 5 per cent, and the maximum curvature 5 degrees. The road is fairly even in construction, there being no reverse curves. Spirals are used at places where trains run at a speed of over 20 miles per hour. On the steepest grades, however, trains do not run, on the average, more than 18 miles an hour; consequently, the superelevation of the upper rails at curves corresponds.

Culverts and Bridges—Clearances.

Twenty-six steel bridges and 108 culverts were constructed on the road. The majority of the culverts are of corrugated iron pipe, 24 to 72 inches in diameter, with concrete ends and wing walls. All the large pipes under heavy fills are reinforced throughout with 1-foot thickness of concrete to prevent sagging. The remainder of the culverts, 6 by 6 inches to 10 by 10 inches, are of reinforced concrete and rubblestone masonry. No tunnels exist on the line.

The minimum clearance determined by the inside dimensions of the bridges is 12 feet 8 inches in width—or 6 feet 4 inches on each side of the center line—and 18 feet 6 inches in height above the rail. Structural material 40 or 50 feet in length could be transported by loading it on two or three coupled flat cars.

Trackage.

Rails.—It was originally intended to use 70-pound secondhand rails obtained from the Panama Canal. After laying 26 miles of track with these rails, however, no more could be had. Consequently, the remainder of the line was laid with new 56-pound rails, both sections being American Society of Civil Engineers standard American type of tee rail.

Rail fastenings.—The rails are fastened to the ties by standard 4-bolt angle bars. Where creosoted ties were used, tie-plates were provided throughout the entire system.

Frogs.—The majority of the frogs are of secondhand manganese, only those used in the 56-pound rail track being new. Both types of frogs are of standard construction in every respect.

Sleepers.—As the 168,000 creosoted ties, 5 by 7 inches by 6 feet, called for in the original specifications would have had to be imported from the United States at additional expense, ties of the best available native wood were substituted and were laid at a distance of 24 inches from center to center throughout the whole system. These ties, however, have not proved satisfactory.

Track ballast.—The track is ballasted with broken stones, practically all the stone crushing being done by hand on account of the abundance of native labor.

Wyes and turntables.—At David and La Concepcion wyes were installed for the purpose of turning trains, while at Boquete a 60-foot turntable has been placed.

Rolling Stock.

The rolling stock owned by the Chiriqui Railway during 1922 is as follows:

Locomotives.—2 four-wheeled, 100-ton capacity; 1 saddle-tank switch engine with tank attachment, 18-ton capacity.

Freight cars.—3 box cars, 20-ton capacity; 5 flat cars, 20-ton capacity; 7 live-stock cars, capacity 20 tons or 20 head of stock.

Passenger cars.—2 first-class coaches, 44-passenger capacity; 1 second-class coach, 54-passenger capacity; 1 combination second-class passenger and stock car, 46-passenger capacity.

Motor cars.—1 20-passenger motor car; 1 12-passenger motor car; 1 10-passenger motor car; 1 8-passenger motor car; 1 2-passenger motor car; 1 10-passenger trailer.

Couplers.—The couplers are of the automatic type and are 24 inches above the top of the rail.

Fuel and Water Supply.

During the construction period, first wood and then coal was used in the engines. It was soon decided, however, to convert the locomotives to oil burners, and the necessary oil stations were installed. Crude oil is now used as fuel.

A 20,000-gallon water tank on a steel tower has been installed at David, while at Rio Cochen and Boquete there are 15,000-gallon tanks. Water for the tanks is obtainable from near-by streams, the supply being adequate for railroad purposes.

Telegraph, Telephone, and Signaling Equipment.

At the present time there is no signal system in operation on this road, trains being dispatched by telephone. Telephones are installed along the entire right-of-way. Steel poles of tubular type, carrying circuits of No. 10-gauge copper wire are used.

Right-of-Way Fences and Cattle Guards.

Right-of-way fences are constructed by stretching four barbed wires on wild-plum posts. Cattle guards consist of steel-surface sheets, with the side fences and posts made of the sheet tiling left over from the bridge foundations.

Buildings, Shops, and Appurtenances.

The Chiriqui Railway originally had six station buildings. The main railway shop was at David, and was constructed of galvanized iron with 50 by 125 foot beams. A car shed, 20 by 60 feet, was erected on the east side, and a boiler shop, 18 by 24 feet, on the north end. The machinery equipment of the boiler house consists of one 40-horsepower boiler and one 50-horsepower vertical and tubular engine; one 50-horsepower double-cylinder vertical French engine; one American pump, with a capacity of 70,000 gallons a day; and one water-condensing plant, which was constructed in the shop at David and is able to condense all the drinking water used on passenger trains.

The shop equipment consists of one locomotive pit, with drop pit and carriage; one double-spindle 26 by 48 inch by 8 foot American engine lathe, handling all work up to 48 inches in diameter, including locomotive driving wheels; one 24-inch back-geared shaper, equipped with vice-gear cutting centers and all necessary tools; one American drill press, 24-inch stroke, equipped with full line of drills of high-speed tool steel; one American cutter, and one set of tops to cut and tap nuts from ¼ inch to 1½ inch by 18 inches, carborundum wheels fine and coarse; one 6 by 36 inch grindstone; one 48 by 108 inch American hydraulic wheel press, 245 pounds capacity; one 400-pound steam hammer for blacksmith work, equipped with full set of tools for cutting all kinds of structural shapes used on the railroad; two forges, each equipped with anvil and full set of hand tools; one blast for forges, power furnished by an American boiler, belt driving; one double punch and shearing machine for boiler work, which has a 24-inch stroke and will work all plates up to ½ inch in thickness; one set of rolls for boiler and tank work, made of steel throughout; one set of flange clamps for handling work 8 by 72 inches; one 48 by 60 inch cast-iron leveling block, and full equipment of small tools necessary for working iron and wood.

Finances of the Chiriqui Railway.

The cost of construction of the road was estimated at $1,628,141, or about $32,560 per mile, excluding the Porterillos branch, which was constructed on a 5 per cent cost basis. This brought the estimated cost of the entire road to a little more than $2,000,000. When the road was completed in 1916 the actual cost was found to be $2,102,201.96. Financial statements of the road for the first five years of its existence are not obtainable, but it is understood that the road was operated at a loss—which was, of course, assumed by the Government. The compilation of traffic statistics was not commenced until July, 1922. For the calendar year 1921, according to the brief financial statement available, the road showed an operating deficit of $12,289.22, and for 1922 a deficit of $2,312. This is exclusive of the expenditure of $158,436 on reconstruction work between January 1, 1921, and June 30, 1922, which was made necessary by the deterioration of the road to a point where traffic could no longer be handled with safety. No expenditure had been made previously on either maintenance or equipment.

The revenue and expenses of the Chiriqui Railway from July to November, 1922, are shown in the following figures:

REVENUE.

Freight	$9,370.07
Passenger	4,061.65
Special trains	443.90
Other	9.08
Total from transportation	13,884.70
Wharf	959.35
Shop	58.95
Grand total	14,903.00

EXPENSES.

Maintenance of way and structures	$9,599.96
Maintenance of equipment	5,357.43
Transportation	10,060.61
Total for transportation	25,018.00
Wharf	159.09
Grand total	25,177.09
Net deficit	10,274.09

Character of Traffic.

Shipments carried over the Chiriqui Railway from the interior consist principally of native products, such as coffee, sugar, rice, bananas, and vegetables, cattle, and other live stock. Shipments inward comprise chiefly canned goods, clothing, and manufactured articles. Very little heavy or bulky freight is carried in either direction.

Traffic Statistics.

The compilation of traffic statistics dates from July 1, 1922. Data for the five months, July-November, 1922, are as follows:

MILEAGE STATISTICS.

Miles of road in operation	56
Train mileage	3,768
Motor-car mileage	8,136.50
Fuel oil consumed, gallons	34,223
Gasoline consumed, gallons	1,034
Fuel oil consumed per locomotive mile, gallons	9.09
Gasoline consumed per motor-car mile, gallons	.12
Goods handled at wharf, tons	2,156.90
Goods moved one mile, tons	34,866.46
Passengers transported one mile	64,727

RECEIPTS AND EXPENSES.

Maintenance of road per mile	$171.43
Revenue per freight-train mile	2.50
Expenses per freight-train mile	3.02
Revenue per ton per mile	.27
Expenses per ton per mile	.32
Revenue per train mile (passenger)	.55
Expenses per train mile (passenger)	1.67
Revenue per passenger per mile	.07
Expenses per passenger per mile	.21
Revenue per ton handled at wharf	.44
Cost per ton handled at wharf	.07

Purchase of Supplies.

According to decree No. 5, January 20, 1921, all purchases of material which the commission has to make abroad for the Chiriqui Railway must be made directly by or through the medium of the Chief of Materials and Purchases, Central Commission on Roads. In either case, purchases must be made by means of competitive bids. The commission is authorized to make purchases of other materials directly, in the country, but always by contract awarded on public competitive bids.

Personnel of Operating Staff.

The principal members of the operating staff of the Chiriqui Railway are as follows:

Director general: General Santiago de la Guardia, Secretary of Agriculture and Treasury of the Republic of Panama.
Superintendent general: Augusto Clement, David City.
Secretary and cashier: Salvador Jurado A., David City.
Chief mechanic: Albert Isaacs, David City.
General agent: Mariano Soto, David City.
Special agent: Alberto Alba, Panama City.

Latvian Railway Rates Reduced on Export Traffic.

American Minister F. W. B. Coleman, Riga, February 17.

The Latvian Ministry of Communications has decided to reduce railway tariffs on various Latvian products exported from the country. The tariff on glassware will be reduced by 25 per cent as from February 15, and similar reductions are planned for the conveyance of Latvian liquors, preserved goods, and butter intended for export.

Latvian railroads, which are Government owned, showed a deficit of 348,000,000 Latvian rubles in 1921 (expenditures, 1,668,000,000 Latvian rubles; revenues, 1,320,000,000 rubles), as against a profit of 140,000,000 Latvian rubles in 1921 (expenditures, 738,000,000; revenues, 878,000,000 rubles), in spite of the fact that shipments for the first nine months of 1922 (1,305,000 tons) exceeded those of the entire year 1921 by 69,000 tons.

[The exchange rate of the Latvian ruble in 1921 averaged 336 to the dollar. In 1922 it averaged 251 for the first 10 months, at the end of which time the Latvian ruble was replaced by the "lat" at the rate of 1 lat to 50 rubles. The lat, which is equal in value with the French gold franc, has been quoted approximately at par since its issue.]

Additional information regarding railways appears in this issue under the following sections:

Far East: Future management of railways attracts discussion in India.
Latin America:
Dunsmuir railway concession promulgated in Peru.
Railway traffic resumed on Bolivian railway.

COMMUNICATIONS.

CONCESSION TO ARGENTINE RADIO COMPANY.

Commercial Attaché Edward F. Feely, Buenos Aires, February 12.

The original concession granted March 15, 1919, to Siemens Schuckert (Ltd.), for the erection and operation of a high-power radio station in Buenos Aires, has been modified to meet the changed conditions resulting from the consolidation of American, French, English, and German interests in the Argentine Radio Telegraphic Company Transradio S. A.

The principal changes are as follows:

1. The period of the concession is extended to 50 years, under the same conditions as in the original decree.
2. The Argentine Radio Telegraphic Company Transradio S. A. is authorized to communicate with points distant more than 1,000 kilometers from Buenos Aires, with the exception of those with which the nation has its own telegraphic communication; but if the nation shall so request, the company is obliged to establish its service also to such points, under special agreements covering each case.
3. The concessionaire is subject to the provisions of the International Radiotelegraph Convention.
4. Rates shall be approved by the executive and shall be in accordance with the telegraph laws of Argentina. These rates shall be less than the equivalent of two-thirds of the telegraphic rates in force between the points served.
5. The company shall pay to the nation 1 per cent of the tolls for each word transmitted, relayed, and received, until such time as other charges are levied upon the receipts.
6. The Minister of Marine may transmit free not to exceed 30 words a day.
7. The company is authorized to carry on experiments in long-distance radiotelephony for a period of three years.
8. The company is authorized to make necessary changes in its installation, notifying the Minister of Marine and the Director General of Posts and Telegraphs in each case.
9. The date against which service must be inaugurated is extended six months.

[It is possible that operation of this service may come under the jurisdiction of the radio regulatory board recently appointed by the President, with the following composition: Director General of Posts and Telegraphs, chairman of general staff of navy, director of communications of the army, and the Secretary of the Treasury. The first-named official is president of the board.]

Additional information regarding communications appears in this issue under the following section:

Electrical equipment: Wireless broadcasting in Japan.

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

GENERAL TARIFF CHANGES.

GREECE.

C. E. Dickerson, jr., clerk to trade commissioner, Athens, February 10.

Canadian Goods Now Subject to General Tariff Rates.

All goods imported into Greece from Canada are henceforth to be subject to the general rates of the Greek customs tariff, according to a circular issued by the Minister of Finance on January 30, 1923.

[Products of the United States are admitted at the conventional rates of duty, which apply to about four-fifths of the articles dutiable under the Greek customs tariff and average approximately one-half of the general rates.]

CHOSEN.

Commercial Attaché James F. Abbott, Tokyo, March 3.

Proposed Abolition of Import Duties on Japanese Products.

The abolition of the duty now assessed on articles imported into Chosen (Korea) from Japan is provided for in a bill which has been presented to the Diet. Alcoholic beverages and textiles are excepted, and would continue dutiable.

The adoption of this bill would be in keeping with the Japanese policy of free trade between all parts of the Empire.

IMPORT AND EXPORT RESTRICTIONS.

FRANCE.

Journal Officiel, Paris, March 15.

Removal of Import Prohibition on Certain Animals and Meat Products from Denmark.

The prohibition on the importation into France from Denmark of sheep, cattle, and goats, and the fresh products therefrom, which was established as a measure of quarantine by decree of March 8, 1922, has been removed by decree of March 14, 1923.

FRANCE.

Consul Theodore Jaeckel, Bordeaux, March 6.

Agitation for Export Prohibition on Naval Stores.

Various syndicates of French maufacturers, located principally in the Paris district, are urging the Government to prohibit the exportation of naval stores. They claim that purchasers from countries whose currency is at a premium in France are depleting the domestic supply and forcing up prices. The producers, on the other hand, are opposed to any such prohibition, attributing the high prices to firm domestic demand and to speculation.

FRANCE.

Journal Officiel, Paris, March 11.

Export Restriction on Waste of Tinned Iron.

The French export restriction applied on December 31 last to waste and scrap iron or steel has been extended to include waste of tinned iron, 5 mm. or less thick, according to a decree of March 7. This restriction applies likewise to reexportation and transshipment.

[Full details of the decree restricting the exportation of waste and scrap iron or steel appeared in COMMERCE REPORTS for January 29, 1923.]

KELANTAN (MALAYA).

Board of Trade Journal, London, March 8.

Restriction on Exportation of Rubber.

The export of rubber is prohibited except under and in accordance with (*a*) a certificate of standard production and quarterly licenses; or (*b*) a coupon; or (*c*) a provisional license. These rules, issued under

the Export of Rubber (Restriction) Enactment of 1922, are along the lines of those issued in the Federated Malay States. Rates of duty are also prescribed for rubber exported from Kelantan under these provisions.

NETHERLANDS.

Progress of Bill Restricting Importation of Footwear.

The bill proposing the restriction on the importation of shoes was passed by the Second Chamber of the Dutch Parliament on March 23, 1923, and will be taken up by the First Chamber when it reconvenes on April 10, according to a cablegram received March 29 at the Department of Commerce, from Paul S. Guinn, secretary in charge of the office of the commercial attaché in The Hague.

It is expected that this bill will be finally enacted within a few days following the reconvention of the Chamber, and will likely be put into operation about the end of April. The proposed restriction will be in effect throughout the year 1923 and will limit the imports of footwear to the quantities imported during a normal year. The year which will be considered as "normal" has not yet been announced, but the opinion, generally expressed, points to 1919 as the year that will likely be chosen.

[The measure is an exception and does not foreshadow any abandonment of the free trade policy of the country, according to the statement given out by the Government. This action is a result of agitation for protection of the industry, occasioned by unemployment in the shoe factories in southern Netherlands, brought on by competition from cheaper footwear imported from Germany. It is not expected that this restriction will materially interfere with shoe imports from the United States.]

UNITED KINGDOM.

Consul General Robert P. Skinner, London, February 19.

Additional Restrictions Proposed on Importation of Hops.

Due to a crop surplus, the hop growers of Great Britain are pressing the Government for the adoption of some protection additional to that which they are now receiving under what is known as the Ministry of Food (Continuance) Act, 1920, which, through the requirement of import licenses, restricts the importation of hops into Great Britain.

TARIFF CHANGES ON SPECIFIC ARTICLES.

ARGENTINA.

Cable from Trade Commissioner Geo. S. Brady, Buenos Aires, April 2.

Export Duties for April.

Article	Duties in gold pesos per metric ton.		Article.	Duties in gold pesos per metric tons.	
	Former.	April.		Former.	April.
Oats in sacks	0.69	0.76	Wheat flour	0.56	0.56
Oats in bulk	.62	.70	Goatskins	50.00	50.00
Corn in sacks	1.30	1.34	Horsehides	.90	.90
Corn in bulk	1.20	1.25	Quebracho extract	1.78	1.78
Linseed in sacks	2.50	2.73	Quebracho logs	.35	.35
Linseed in bulk	2.25	2.49	Margarine	15.00	15.00
Barley	.54	.53	Tallow	2.74	2.74
Wheat in sacks	.83	.83	Dried blood	2.10	2.10
Wheat in bulk	.56	.57	Oil cake	1.53	1.53

[For the March changes see COMMERCE REPORTS for March 12, page 703.]

BELGIUM.

New Import Duties on Tobacco—Correction.

By a typographical error the new Belgian import duty on smoking and chewing tobacco and snuff was given in COMMERCE REPORTS for March 26, page 830, as 4,000 francs per 100 kilos. The correct figure is 400 francs.

CANADA.

Consul Dudley G. Dwyre, Fort Williams, Ontario, March 6, and Consul General Albert Halstead, Montreal, March 7.

Proposal to Levy Import Duty on American Periodicals.

The Magazine Publishers' Association of Canada has petitioned the House of Commons at Ottawa to impose an import duty on all American magazines and periodicals as a measure of protection to the publishers of Canada. They base their case on the fact that American magazines are sent in free of duty, while the paper on which Canadian magazines are printed pays a price protected by duty, and that two-thirds of the magazines is advertising, which, if sent in as advertising, would pay a duty of 15 cents per pound. Two methods of assessing duty are offered: (1) A specific duty of at least 10 cents per pound on all American magazines and periodicals, whether coming in by mail or otherwise; (2) a duty of 15 cents per pound on advertising matter appearing in American magazines and periodicals.

[Canadian newspaper opinion on the above proposal is divided, doubt being expressed as to whether Canada is ready to adopt such a measure and whether it would have the desired effect of creating a field for home-produced periodicals. Parliamentary action on the proposal is reported doubtful.]

CZECHOSLOVAKIA.

American Minister Lewis Einstein, Prague, February 19.

Reduction of Import Duty on Scrap Leather and Splits.

Following representations by Czechoslovakian importers, the import duty on leather splits has been reduced from 9 crowns to 3 crowns, and on scrap leather from 6.75 crowns to 2.15 crowns per kilo.

[The agitation for the proposed reduction of the import duties on these commodities was noted in COMMERCE REPORTS for December 18, 1922.]

GREECE.

Consul L. B. Morris, Saloniki, February 10.

Refugee Tax on Goods Imported into Saloniki.

A special surtax on all goods imported into Saloniki has recently become effective, to continue for a period of 10 years. The proceeds of this tax are to be used by the Government to repay a loan for the benefit of refugees from Asia Minor and Thrace. This tax is applied as follows:

Articles.	Drachmas.
	Per ton.
(1) Cereals, flour, salt, potatoes, sugar, dry vegetables, lime, sulphur, talcum, iron in sacks, files, window glasses	10
(2) Liquids in barrels, soap, dry fruit, oranges, lemons, olives, iron in large pieces, large pieces of lumber, and all other articles not included in one of the four classes given herein	15
(3) Cotton, animal hair, tobacco, glassware, furniture, small pieces of wood, machinery in cases or crates	20
(4) Novelties and notions (except cloth), silk goods, laces, embroideries, perfumes, potable liquids in boxes, stationery, druggist supplies, canned goods, confectionery, chocolate, cocoa, biscuits and crackers, photographic articles, matches	30

GREECE.

C. E. Dickerson, jr., clerk to trade commissioner, Athens, February 10.

Reduction in Export Duty on Olives.

The export duty on olives has been reduced from 2 drachmas to 0.20 drachma per kilo, payable in bank notes, according to a decree effective January 14, 1923.

GREECE.

Consul General W. L. Lowrie, Athens, February 20.

Certain Catalogues Exempt from Import Duty.

Catalogues, bound or unbound, with illustrations and the descriptive text on the same sheets, are passed free of customs duty, according to a practice established at the Greek customhouses.

So-called no-text catalogues, i. e., catalogue sheets with illustrations on which space is left blank for the text to be translated and printed in Greece, are dutiable as lithographic and typographic work at 3 gold drachmas per oke (2.8 pounds).

GUATEMALA.

El Guatemalteco, Guatemala, March 5.

Temporary Reduced Import Duty on Rice.

Rice may be imported into Guatemala until July 31, 1923, at 2 centavos (about 1 cent) per kilo, instead of the full duty of 4 centavos, according to a Guatemalan decree of February 24, effective from same date. This action is declared necessary, on account of the short crop of rice, to keep down the price until the new crop comes in.

ITALY.

Cable from Commercial Attaché H. C. MacLean, Rome, March 30.

Temporary Reduction of Import Duty on Kerosene and Bearings.

Beginning March 24 and effective until December 31, 1923, the Italian import duty on kerosene for use in agricultural motors has been reduced from 24 gold lire per 100 kilos to 10 gold lire.

Duties on ball and roller bearings have also been reduced as follows: Bearings weighing over 4 kilos are now dutiable at 1 gold lira per kilo; those weighing less than 50 grams at 10.40 gold lire per kilo (formerly ranging from 1 to 14.40 gold lire per kilo); loose balls, with a diameter in excess of 16 millimeters, are now dutiable at 2.10 gold lire per kilo; those with a diameter of less than 3 millimeters, at 10.80 gold lire per kilo (formerly ranging from 3.60 to 10.80 gold lire per kilo).

[Announcement of previous changes on these items was published in COMMERCE REPORTS for December 4, 1922.]

MEXICO.

Assistant Trade Commissioner H. Bentley MacKenzie, Mexico City, March 22.

Reduced Import Duty on Cotton Reimported from Lower California.

Unginned cotton may be imported into the United States from Lower California, ginned, and reimported into Mexico at 10 centavos per gross kilo, or one-half the regular duty, subject to the obtaining of a special permit from the Secretaria de Hacienda in each case, according to a Mexican decree effective March 22, 1923.

NEW ZEALAND.

New Zealand Gazette No. 16, February 15.

Rate of Duty on "Compo Board."

"Compo board" is dutiable at the rate of 4 shillings per hundred superficial feet, and, in addition, it is subject to the usual primage duty of 1 per cent ad valorem. In issuing this order the Governor General declares that "compo board," consisting of timber with a layer of paper pulp, strawboard, paper, or similar material cemented thereto on one or both sides, and not specially enumerated in the tariff, is a substitute for dressed sawn timber.

CUSTOMS REGULATIONS.

BRITISH INDIA.

London Board of Trade Journal, March 8.

Definition of Confectionery for Customs Duty Purposes.

In the absence of any definition of the word "confectionery" in the tariff, the term must be interpreted largely with reference to its commercial acceptation, according to Departmental Notification No. 811, issued February 3, 1923. The term is restricted to such articles of confectionery as are finished products and have sugar for their basis or principal ingredient.

The following articles, for example, which are used in the manufacture of confectionery, should be excluded from this term and are subject to lower rates of duty:

Manufacturers' chocolate or chocolate covering; fruit, candied peel, glacé cherries, crystallized and glacé fruit, preserved fruit, fruit in sirup, fruit pulp, and angelica; cake decorations, such as silver pills, gum-paste ornaments, artificial flower sprays, tin foil; essence and confectioners' colors.

The following finished products should be assessed as confectionery: Fancy and dessert chocolates, caramels, fondants, cachous, dragees, comfits (fourres cremes), marzipan mixtures, boiled sugar confectionery.

CANADA.

Customs Appraiser's Bulletin No. 2741, Ottawa, March 16.

Conversion of Values for Duty Purposes.

Where the depreciation or appreciation of the currency of the country of origin of imported goods is from 1 to 5 per cent, collectors will, in computing the value for duty purposes, apply the rate of exchange current at the date of shipment.

EGYPT.

Consul S. B. Jacobson, Alexandria, February 23.

Preparation of Invoices Covering Shipments of Alcoholic Preparations.

The Egyptian Customs Administration calls attention to the fact that shippers' invoices covering shipments of perfumery, medicinal preparations, varnishes, and, in general, all articles containing alcohol should clearly indicate the following data:

(1) For importations in barrels or in other recipients: Gross weight, tare, net weight and volume, and the percentage per volume of alcohol.

(2) For importations in bottles or vials: Volume of liquid per bottle or vial, and the percentage per volume of alcohol contained in each article.

(3) For varnishes in addition to the preceding indications: Whether or not the alcoholic content is denatured, and if it is denatured, the nature and percentage of each substance used in the denaturing process.

In the absence of the above information on the invoices, the Customs Administration will be obliged to analyze all shipments containing alcohol, and the consignees will have to bear the consequences of the delay.

GREECE.

Consul L. B. Morris, Saloniki, Februpary 10.

Permission for Free Reexportation of Goods in Transit Warehouses at Saloniki.

By a recent modification in customs practice, goods in transit or goods originally intended for Saloniki and placed in transit warehouse may be reexported to any destination without the ceding to the Government of any part of the foreign exchange concerned in the transaction, or without producing a certificate showing

that the goods were paid for at the place of origin with exchange of the new country of destination. Any goods already entered, if of foreign origin, may be reexported on the same terms as transit goods.

An exception to this rule is made for colonial commodities, flour, bread, fruit, lumber, petroleum, gasoline, automobiles, and manufactured articles, for which previous authorization must be obtained from the Ministry of Foodstuffs.

IRISH FREE STATE.

Notice No. 80 by Commissioners of Customs and Excise, London, March, 1923.

Handling of Shipments in Bond For or Through Great Britain.

In order to facilitate the passage into Great Britain and northern Ireland of dutiable goods exported thereto under bond from the importing ship's side in the Free State, or from a bonded warehouse in the Free State, or on drawback from the Free State, the Commissioner of Customs and Excise will, for the present and until further notice, subject such goods to a modified examination on importation, provided that there is annexed to the relative import entry, either prime or warehousing, a certificate from the customs and excise officers of the Free State giving full particulars of each package as ascertained by them at the time of landing ex-ship, removal from warehouse, or examination for drawback, as the case may be. It should be specially noted that this arrangement does not apply to duty-paid goods cleared from revenue charge in the Free State and afterwards imported into Great Britain and northern Ireland.

Traders desiring to take advantage of the concession should take steps to procure the necessary certificate from the customs and excise officials in the Free State at the time of examination for drawback or of delivery ex-ship or ex-warehouse of dutiable goods destined for immediate exportation to Great Britain or northern Ireland. They must also arrange that the certificate shall reach their agent, who will pass the import entry for the goods in Great Britain or northern Ireland at least as soon as the goods themselves reach the customs station there.

Corresponding certificates will be issued by customs and excise officials in Great Britain and northern Ireland on request from exporters of dutiable goods to the Free State.

Reciprocal arrangements have been made by the Revenue Commissioners in Dublin.

[Announcement was made in COMMERCE REPORTS for April 2, 1923, on page 66, of the establishment of a distinct customs régime by the Irish Free State.]

JAPAN.

Consul H. T. Goodier, Taihoku, Taiwan (Formosa), February 16.

Proposed Government Inspection of Tea.

The Government General of Formosa contemplates establishing an inspection office in Daitotei for the purpose of standardizing and improving the grades of tea intended for export trade. The inspection, for which no fee is to be charged, will govern grades, quality, weights, containers, tea lead linings, etc., and will be conducted at the time of packing. Inspectors' stamps will be affixed to the containers.

PANAMA.

Gaceta Oficial, Panama, February 19.

Customs Concessions for Importation of Automobiles Intended for Sale.

Persons wishing to import automobiles into Panama without paying the corresponding import duties until the machines are sold should observe the following regulations, according to an order issued by the Secretary of the Treasury on February 9:

(1) The automobiles should be kept in a separate place until listed by the Jefe de la Seccion de Ingresos; (2) when a sale is made, the Revenue Service should be represented at the delivery of the automobile, and when the sale is made to the authorities of the canal or for reexportation, all requirements demanded by law are considered fulfilled; (3) the bond which is deposited as a guaranty for the import duties may be for all automobiles imported; and (4) this extension is conceded solely to automobiles without luxurious or nonessential accessories.

Additional information regarding tariffs and trade regulations appears in this issue under the following section:

Cable review, South Africa: New South African budget carries tariff increase.

FAR EAST

F. R. Eldridge, Chief, Far Eastern Division

FAVORABLE OUTLOOK FOR BUSINESS IN INDIA.

Business conditions in India at the close of the first quarter of 1923 show increasing signs of improvement, with prospects for future prosperity more favorable than at the close of 1922. The shelves of the bazaar merchants are reported bare and purchases are being made in piece goods, hardware, and other articles. Tea has had a remarkable revival and the outlook for the jute mills remains good. Traces of any boom or speculation are absent. There has been slow, steady, natural buying to replace exhausted stocks, which can no longer be deferred. In some cases the enormous accumulated stocks have been entirely removed, even though at a great sacrifice, and dealers are becoming more optimistic. Record sales of automobiles and other commodities are also reported.

Outlook for the Piece-Goods Trade.

Stocks of goods in the bazaars and in the hands of the general merchants are less than usual. Inquiries have been coming in from the up-country dealers for the seasonal supply, doubtless in preparation for the demand from the villagers, who are receiving money for their produce or their work. The meeting of these requirements should be reflected in increased sales and in buying abroad. There are already inquiries for piece-goods remittances to London and the cotton mills of Ahmedabad, which were running on part time in December, are now working at capacity and some of the mill owners are considering the running of night shifts.

Indian merchants can not be pursuaded, however, that the era of sacrifice sales on the part of the large

importing houses is almost over; and they pay current prices, based on present production costs, only when forced to. When the situation is at last more fully realized, the result should be continued improvement.

Wages in the cotton mills have increased materially in the last five years and now stand 122 per cent above the pre-war figures in Ahmedabad, 87 per cent in Bombay, and 94 per cent in Sholapur. The demand for lower prices, if met, must mean lower cost of production. To meet this demand, therefore, the mill owners are considering the reduction of wages as not only necessary but justifiable in view of the cost of living and abundant crops.

Factories continue to be established and a new spirit is apparent in the program for the industrialization of India—that of assisting this country to develop its own resources for the benefit of the Indians. According to one authority, only 6 per cent of the population of India is employed in modern trade industry, the remaining 94 per cent being dependent directly or indirectly on agriculture. The progress of the country, therefore, still depends much more on agricultural improvement and subsidiary rural industries than on industrial expansion. Additional adequate and effective measures are consequently necessary, so that peasants may increase the yield of their land by applying modern scientific agricultural methods, such as the use of fertilizers, rotation of crops, deeper plowing, and seed selection.

Stringency of the Money Market.

The stringency of the money market for the past three months is a normal condition at this season, but is somewhat greater than usual. The financing of cotton, jute, rice, and other grains always causes a drain upon funds during the seasons when crops are moved. By the middle of January the bank rate was advanced to 8 per cent, which is reported to be the highest bank rate of any solvent country. There was a rapid rise in exchange, followed by a drop, which unsettled the money market in the latter part of January and interfered with the import business, much of which is done on small margins, making it possible for a merchant to easily lose in exchange much more than the apparent profit in a transaction.

According to the system of deflation adopted late in 1922, treasury notes to the value of nearly 90,000,000 rupees have been withdrawn from circulation, causing a considerable diminution in loans and advances and increasing the stringency. The amount of notes in circulation decreased in January to 1,729,013,128 rupees, according to the last reports, in contrast with 1,749,536,618 rupees the month previous. The percentage of metallic reserve to circulation at the same time was 63.37 per cent.

The business world feels that the currency should automatically expand with the needs of the trade and not contract at the will of the government. There is also a feeling that it is advisable that the government should abandon all attempts to interfere in the control of note issue, banking, and exchange, and that something like the American Federal reserve banks should be created to handle business finances free from governmental control.

Bullion Market—The Budget.

The Indian bazaars have had a brisk trade in silver. Not much American silver has been offered, but China has both bought and sold (often both on the same day), causing flurries in the market. Gold has been bought so freely that the London market has been unable at times to supply the demand. Nearly £1,000,000 were sent from South Africa and considerable sums from Australia and United States. The strong demand from the interior is credited to the excellent crops and the revival of the export trade, which has furnished certain classes with a surplus, which is converted into ornaments. The bank failures of 1911–12 have made many Indians afraid to trust their money in banks, while the commercial depression of 1921–22 and the unsatisfactory results of many industrial undertakings have made them distrustful of investments in corporations. The noncooperative movement has also increased the tendency toward hoarding.

The budget of the government of India shows the same excess of expenditure over income which has been evident during the past five years. This is due mostly to the increases in wages and governmental expenses, occasioned by the rise in prices consequent upon the war. The government of India, as well as the provincial governments, is continuing to exercise every possible economy and in some cases retrenchments have been so sweeping as to arouse discussion in the press as to whether they have impaired administrative efficiency. All the legislatures have shown a reluctance to impose new taxation. The Indian legislature shows a tendency to advocate balancing the budget by reducing the expenditure on the army and on the buildings for the new capitol at New Delhi, while the government of India proposes to balance the budget by increasing the salt tax—a measure which the legislature declined to pass last year.

Recent Economic Legislation.

The cotton cess bill, which recently passed the assembly, permits the continuance of research work for the improvement of cotton, which will ultimately place the Indian farmer in a position to meet the increasing demand for long-staple cotton and thus compete more successfully with other cotton-producing countries.

The indigo growers, however, have been somewhat disheartened by the abolishment of the cess upon indigo, which was regarded by the retrenchment committee as wholly unnecessary under existing conditions of the indigo industry. Further research work along this line will be conducted as a part of the ordinary operations of the agricultural department.

In pursuance of a resolution submitted to the legislative assembly a year ago, a committee of experts and nonofficial Indians has just been appointed to investigate the various problems arising in connection with the proposition to establish modern shipbuilding in India and to organize an Indian merchant marine. This is a step of no small importance in international commercial relations and is eliciting much comment. At the close of the war this same proposition was discouraged by the Indian industrial commission, which advised that until the local supply of steel had been greatly increased it might be more profitably and quickly utilized in other ways.

The future management of Indian railways has continued to attract attention. English business men in India are apparently unanimous in insisting that they shall be controlled in India by Indians and Europeans just as any other business, with a capital half in bonds and half in shares, instead of by British companies with their boards of directors sitting in London.

POST-WAR POLICY OF THE JAPANESE INDUSTRIALISTS.

Based on report from Commercial Attaché James F. Abbott, Tokyo.

Instead of writing off inventory losses by means of a deflation program Japanese industrialists have systematically restricted production with the sanction and encouragement of their Government. This policy has protected the interests of manufacturers and traders with large warehouse stocks, together with the correlated banking interests, by maintaining high prices. Since it regards the maintenance of its industries as vital the Japanese Government has apparently felt justified in going to greater emergency lengths than the Western nations in protecting them. What the net economic results will show, when the effects of high costs on both living conditions and foreign competition are thrown into the balance, is not yet established. A study of a few of the industries which have adopted the policy of restricted production gives some interesting side lights on the highly organized state of Japanese industry and the predominant influence of the Japanese Government in fields which in the United States are left to private initiative and control.

Paper Production Reduced.

The Japan Paper Mill Association, which is made up of Japan's 12 leading paper mills, put into effect, between December, 1920, and February, 1922, a 20 per cent restriction of production. Since that time a 10 per cent restriction has been maintained. The object was to prevent the breaking of prices by abrupt dumping of quantities of paper on the market and to reduce warehouse stocks to normal size. The success of the policy is evidenced by the fact that the total stock of 130,000,000 pounds in December, 1920, was reduced to 80,000,000 pounds by December, 1921, and to 72,000,000 pounds by April, 1922. The last-named amount is about 8,000,000 pounds below the normal stock. However, the abnormally high prices resulting from this artificially created shortage have been breaking since the early part of 1922, due to the importation of cheap foreign papers.

Restriction in Chemical Industry.

The sharply reduced exports of caustic soda and bleaching powder from Japan and a decrease in the domestic demand following the slump of 1920 caused the manufacturers of these chemicals to agree upon a 50 to 60 per cent restriction of output in July of that year. In spite of this attempt to curtail production, the output has not decreased and the steady accumulation of these chemicals in Japanese warehouses has gradually weakened the market. The failure of the restrictive measures to decrease the output was due not only to a lack of control over the individual manufacturers, but to an increase in the efficiency of production and to the introduction of new processes. Notwithstanding the restriction, which lasted until November 15, 1922, when the ban was raised, the price situation did not improve and Japanese manufacturers of caustic soda and bleaching powder had great difficulty in meeting the competition of imports of cheaper foreign products.

Copper Restriction Boosts Price.

Until recently Japan ranked fifth as a copper-producing nation. Next to silk and cotton yarn, copper was its most important export. Due to the high cost of production during recent years, the copper manufacturers have lost practically all of their copper-export business and, in order to compete in the domestic market with foreign copper, have had to ask for a higher duty on copper imports. In order to protect this important home industry, the duty on copper, which had been 1.2 yens per picul (45 cents per 100 pounds), was increased during March, 1922, to 7 yens per picul ($2.63 per 100 pounds). It was thought that this increase would be sufficient to shut out copper imports, which had increased steadily since the war until about 20,000 tons were being imported annually. Due to the effectiveness of the new tariff and to the continued restriction of domestic production, warehouse stocks of copper have steadily declined to about normal and the market price is gradually increasing.

Industrial Stagnation Results in Coal Restriction.

Fearing a break in the price of coal because of the large stocks on hand, the Japanese coal operators have restricted the output since the 1st of May, 1921, when a restriction of 17 per cent was established. This action resulted in substantially reducing the overstocks of coal in the market, and on January 1, 1922, it was decided to reduce the restriction to 12½ per cent, effective until April of that year. Due to the general industrial depression in the early part of 1922, the coal operators decided in May to increase the restriction to 17 per cent. In spite of this restriction, the stocks on hand at the principal ports of export increased from 181,000 tons on June 1 to 476,000 tons on October 1, 1922, but, because of the intense agitation for the removal of the restriction, the operators decided to reduce the curtailment to 10 per cent from October, 1922. Owing to the sharp reduction of the amount of coal on hand in the early part of the year and to the influence of the coal miners' strike in the United States, the price of coal in Japan has remained firm since the spring of 1922 and even manifested an upward tendency during the summer when the market is ordinarily dull.

Need for Foreign Markets.

The industrial system developed in Japan during the World War produces far more than can be consumed at home. If this system is to be maintained, foreign markets must absorb the surplus. The Japanese post-war policy of keeping prices at a high level by restricting the output is not only making it more and more difficult for Japanese goods to compete in foreign markets, but is also making it possible for foreign goods to compete in Japan's domestic trade. Meanwhile the cost of living and the cost of production remain at a very high level and show an upward tendency.

Establishment of Kirin Stock Exchange.

In order to develop agricultural enterprises in Kirin, China, an agricultural stock exchange is to be established with a capital of $10,000,000. The exchange is to deal in exporting grain to other Provinces, assist agricultural enterprises, and issue loans. (Shanghai Journal of Commerce.)

MARKET CONDITIONS IN CHILE IMPROVING.

Assistant Trade Commissioner W. E. Embry, Santiago, March 22.

For the greater part of a year reports of Chilean business conditions have been generally encouraging and that country's business outlook during March has not grown less optimistic. Just as in other recent months, the improvement in March was gradual, without any spectacular features. Nitrate sales are holding up well. The exchange market is active, with the local currency increasing in value. Losses are less, while imports during the current month are greater in volume than in either January or February. Bank collections are reported easier.

Nitrate Exports—Production of Copper.

Exports of nitrates from Chile during February amounted to 292,000 metric tons, while sales during the same month were given as 158,000 tons. During the first 20 days of March 179,000 tons were sold, thus assuring an important increase over the February sales. Contrary to frequently expressed opinions, the European nitrate markets continue to be reported good. Copper production is increasing and prices continue to improve.

Chilean Stocks of Imports.

Stocks of merchandise in many lines became seriously depleted during the long period of depression through which the country recently passed, and there has been considerable hesitation on the part of merchants in restocking. However, at present, these depleted stocks are being added to in most lines. The supply of iron and steel products is normal and they are moving satisfactorily. Belgian prices on steel are slightly under those offered in Chile by American firms, while Germany, as a competitor, has been practically eliminated for the present from the local import market.

The coal market is quiet. Prices offered on American coal are slightly weaker than on the Welsh product. The Chilean coal fields are experiencing minor labor troubles, due to the partial cessation of operations in the industry. The reports recently circulated concerning an agreement between Chilean mine owners and the Krupps for the manufacture of coke in Chile appear to be well founded.

Comparative Prices.

Prices generally ruling in the import trade of Chile are higher than during February on rice and sugar and are somewhat lower on coffee and edible oils. Otherwise, prices on staple articles have remained about the same as in February. Prevailing prices on export commodities are generally lower than for the corresponding period in February. The charter market is higher than for some time past, due at least in part to the increased shipments of nitrates and copper.

Finance and Exchange.

Customs collections for the month of February amounted to 12,000,000 gold pesos (1 gold peso=18d.) This is approximately equal to the December figure and 1,000,000 gold pesos less than the collections during January.

The discussion of various measures providing for the deposit of Chilean conversion funds abroad has been taken up and the State Council has already approved plans which will soon be presented to Congress for action.

During the first 21 days of March the average rate of exchange on the Chilean paper peso in terms of the dollar was $0.12¾. This marks an improvement over the February average value, which was $0.12. The present strengthening is regarded as temporary, having been brought about, partially at least, by the increased exports of nitrate and, therefore, likely to weaken at the close of the nitrate season. Possible developments in consideration of the budget are regarded as likely to affect the course of the local exchange.

Recent Business Developments in Peru.

Acting Commercial Attaché W. E. Dunn, Lima, March 22.

The general outlook in Peru has materially improved since the settlement of the general strike in February and the country has weathered that storm extremely well. The substantial increase in the value of the Peruvian pound reflects this improvement clearly. Current high prices for Peruvian products is another factor that has brought about the present improved undertone in the local business world. Notwithstanding these favorable indications concrete effects of the current higher prices will probably not be evident before May or June. A fair degree of genuine prosperity may reasonably be looked for during the second half of the present year.

Prices of Raw Products Higher.

Prices of the principal raw products of Peru are generally higher than those of February. Future cotton sales have been consummated and planters are looking forward to still higher prices. A fair cotton crop is counted upon, and harvesting on a small scale in a few valleys has already begun. Some important contracts for the future sale of cane sugar have been made at prices ranging from 22s. to 23s. per Spanish quintal. Converted at the present rate of sterling exchange this is equivalent to a price of $0.051 to $0.053 per pound.

Stocks of Imports and the New Tariff.

Stocks of imported commodities on hand are, generally speaking, well proportioned to the demand. In anticipation of the application of higher rates on certain commodities under the proposed tariff schedule, considerable quantities of these articles were brought into the country. On the other hand, stocks of goods either not affected by the tariff, or on which rates were reduced, have been allowed to dwindle. The Chamber of Deputies has approved the Senate modifications of the tariff bill with a few minor changes. The bill will be returned to the Senate for final action, and its passage is looked for within a fortnight. Unless unexpected changes occur, the new tariff schedule will be put in effect about May 1. The duty on women's shoes, as modified, is fixed at 7 soles per kilo. The growing exportation of balata, particularly from Iquitos, is subjected to a 5 per cent ad valorem tax until the pending law is definitely passed.

Financial Legislation—Exchange.

A bill requiring branches of foreign banks to maintain a minimum capital of 200,000 Peruvian pounds was promulgated on March 21. Branches at present maintained are allowed a period of six months in which to comply with the terms of the decree.

Congress has commenced the discussion of the national budget. According to the estimate which is being used as a basis for consideration, the revenues for the coming year will be 6,798,000 Peruvian pounds.

The projected sanitation loan for $25,000,000, which has been under consideration for several months, has been returned to New York for further changes.

Peruvian exchange has continued to rise in value during the current month, and on March 22 was quoted at $4.30. On January 24 the Peruvian pound was worth only $4.01. On February 23 it had risen to $4.10.

Shipping and Railroads.

A new steamship service will be inaugurated in April, connecting the west coast of South America, including Peru, with Spain. It is reported that an extensive movement is under way in Spain to bring about closer relations, both commercial and intellectual, with the countries of Latin America and that this movement is receiving the hearty support of the Government.

Negotiations are in progress looking to the modification of the Peruvian fumigation requirement necessitating vessels putting in at Ilo. Certain modifications have already been made, exempting fast mail boats and others from a strict enforcement of the law, under certain conditions, which include the payment of a tax of 20 Peruvian pounds.

The Dunsmuir Railway concession was officially promulgated on March 20. According to the terms of the contract, 90 days are allowed from this date for the raising of the specified funds.

Construction Activities in Lima.

A considerable amount of residence construction is under way in Lima and its suburbs. There is little prospective activity in business office or store construction, although two large office buildings are practically completed and one is in process of erection. A local company plans to build homes for army officers on a mutual aid arrangement with Government assistance. If the plan materializes, several hundred thousand dollars' worth of residence construction will result.

Peruvian Imports for March.

The following table shows the number of cases of certain classes of merchandise imported at the port of Callao from the United States, Great Britain, and Germany, from February 22 to March 21, 1923:

Callao imports from United States, Great Britain, and Germany.

Commodity.	United States.	Great Britain.	Germany.	Commodity.	United States.	Great Britain.	Germany.
	Cases.	*Cases.*	*Cases.*		*Cases.*	*Cases.*	*Cases.*
Cotton goods	439	380	248	Rubber products	7	23	12
Drugs and chemicals	1,027	449	536	Lubricating oil	795	150	.....
Electric supplies	357	128	137	Plumbing supplies	100	3	.....
Glassware and pottery	382	399	451	Pumps	19	2	.....
Hardware, tools	153	133	226	Tires	191	1	.....
Machinery and parts	88	34	310	Automobiles	10	.....	1
Paints, varnish	185	6	5	Accessories	155	.....	2
Paper and products	720	29	691	Cement	3,000	.....	7,000
				Motors	30	.....	30
				Pianos	5	.....	36

Of agricultural implements, excepting tractors, there were 103 imported from the United States, and 5 from Great Britain. From France were imported 25 cases of drugs and chemicals, and from Belgium 200 cases of cement.

The total number of cases imported during the period from February 22 to March 21, including miscellaneous merchandise not listed above, was as follows: From United States, 23,489; Great Britain, 2,870; Germany, 10,240; France, 640; Belgium, 200 cases.

It may be noted that only two English vessels arrived at Callao during the month and that more are expected during April.

Favorable Outlook in Bolivia.

Cable from Consul Dayle C. McDonough, La Paz, March 26.

For several months conditions in Bolivia have steadily improved and the latter half of March has been especially prosperous. The dullness that threatened to make its appearance earlier in the month has been completely dissipated. This favorable condition is largely due to the increased prices offered for tin and copper, which are Bolivia's principal export commodities. As a result of the present market conditions of these minerals, the mining industry of the country is in a very satisfactory condition and the reopening of several of the smaller mines is anticipated. Bolivia is so richly endowed in mineral resources and they are so widely scattered that an important part of Bolivian mine products come from smaller mines. The value of the boliviano on the exchange market continued its upward movement during the past month. The small number of failures reported at present is another notable feature of the present situation.

Exports and Imports—Stocks.

Bolivian exports for the month of February amounted to 9,125,000 bolivianos (1 boliviano=$0.33 at present exchange). Tin exports to Great Britain during the month amounted to 2,514 metric tons while 2,643 metric tons were shipped to the United States. During January 2,972 tons went to the former country and 1,210 tons to the United States. Total figures for copper and silver exports for February are not available, but the incomplete figures give 522 metric tons of copper and 585 tons of silver exported.

Among the February imports, totals of which are not yet available, the more important items are flour from Chile; cotton goods and iron and steel products from Great Britain; cement, hardware, paper, and explosives from Germany; cotton goods, and paraffin wax, canned goods, flour, and lumber from the United States.

Stocks on hand are generally below the average except in metal bags, rice, and paper (except newspaper). Of these three commodities full stocks are on hand.

Automobile Market—Transfer of Oil Concession.

Although the Bolivian market for automobiles is extremely limited, it is at present active.

An important oil concession, comprising 100,000 hectares (1 hectare=2.471 acres) in the Cochabamba district, has recently been transferred from local agents to Gibbs & Co.—a British firm.

Resumption of Railway Traffic—Budget and Exchange.

Railroad traffic between La Paz, Oururo, and Cochabamba has been resumed. This portion of the line was temporarily out of operation as the result of heavy rains and washouts.

The national budget for 1923 has been published rather earlier than anticipated. A deficit of 12,300,000 bolivianos is shown.

The average rate of exchange for the first 25 days of March is 3.02 bolivianos to the dollar, or $0.331 per boliviano. The corresponding average for February was 3.14, or $0.318 per boliviano.

The tendency is toward a firmer market, which should stimulate importations. In this connection, however, a tendency has been noted to await the results of the general election before making extensive purchases. This election is scheduled to occur in May.

Agricultural Conditions in Mexico.

North central Mexico apparently has sufficient domestic supplies of staple foods to carry over until the next harvests, according to a dispatch from Consul Lee R. Blohm, under date of March 6, from Aguascalientes. Corn, for which there is a large local demand, was fairly plentiful in the States of Aguascalientes and Zacatecas last year, and the price is below that of 1921. The wheat crop, which will soon be harvested, was injured by the premature cold weather of last November, and as usual will probably not be over three-fourths of the amount necessary for local consumption. Although the bean crop was only about half that of 1921, there were some exports to the United States prior to the imposition of an export duty. Chile peppers are scarce, the price has doubled, and there will be none for shipment, even to surrounding sections. Other vegetables, except potatoes and fruits, were raised in quantities sufficient for local requirements.

Western Mexico Shipping Corn to Northern Sections.

This year the Mexican west-coast State of Colima and surrounding country in the State of Jalisco have been able to ship some of their surplus agricultural products to the northern States of Chihuahua, Coahuila, and San Luis Potosi, where there is a shortage. This movement and the decrease in acreage planted by farmers on account of the low prices of 1921 have resulted in higher prices for corn and rice, wrote Vice Consul Stephen E. Aguirre from Manzanillo on February 24. Statistics of production are not available, but from individual reports it seems that the crops of Colima have been less than in 1921 and not quite so good as those of the coastal region of Jalisco. The same section of the State of Michoacan is retarded in the exportation of agricultural products by the absence of transportation facilities. Shipments from the Manzanillo consular district were chiefly corn, tobacco, beans, and coquito nuts, and most of them were taken by the Mexican coastwise trade.

Possibility of Government Aid to Garbanzo Growers.

The present crop of garbanzos, or chick peas, in the State of Sonora, will be harvested during May and June, and according to the terms of a recent decree, can not be exported prior to the 1st of October. It is not yet known, advises Consul Bartley F. Yost, of Guaymas, in a report, dated March 4, whether the Federal Government of Mexico will this season continue the custom, which prevailed through the past two years, of advancing through the Comision Monetaria 10 pesos on each sack deposited in the warehouses at Navajoa, Sonora.

Southern Mexico Rushing Coffee to Markets.

Some economic benefits may accrue to southern Mexico from the efforts of practically all the coffee planters to take advantage of the prevailing higher prices occasioned by the existing demand, according to a dispatch from Vice Consul George E. Seltzer, at Salina Cruz, dated March 5. Shipments are being rushed in so as to dispose of stocks before the market feels the effect of the Brazilian crop.

Slow Improvement Anticipated in Nicaragua.

Consul Harold Playter, Nicaragua.

Real effects of this season's good crops in Nicaragua will not be generally felt until April or May, and it is not anticipated that, even then, the commercial interests of the Republic will have recovered from the depression of the past few years. Although confidence is returning, credits are improving, and 1923 is expected to show a marked betterment in trade, Nicaragua will need at least one more year of good crops to recover the lost ground. Much of the money now being received for coffee and sugar is applied on old debts or necessary repairs and plantation work, but the amount finding its way into the channels of trade is steadily increasing.

Importations for January, 1923, were 63 per cent greater than those for December, 1922, and exportations more than doubled. The United States led in about all imports, the exceptions being kerosene and products from Peru, cement from Germany, hardware and ceramics from Teutonic countries, and paper and matches from Scandinavia.

The coffee outlook is still excellent, but early predictions of 40,000,000 pounds are now reduced to an estimate of about 30,000,000 pounds, for the present crop. About two-thirds of the best grades are going to the United States, Great Britain taking most of the balance, and, contrary to the usual custom, but little is going to France.

It is expected that from 25,000,000 to 30,000,000 pounds of white sugar will be available for export.

British Colonization in Brazil.

A plan is being developed to establish colonies of British farmers in Brazil, according to Wileman's Brazilian Review. It is reported that 400,000 hectares (1 hectare=2½ acres) have been purchased in the State of Bahia, where English families are to be located for the cultivation of rubber, cacao, cotton, and other products. A party of experts is to leave England in April for the purpose of investigating conditions in Bahia and estimating the chances for a successful colony. All preparations are to be completed within a year and the first settlers are to leave England before April, 1924.

Additional information regarding Latin America appears in this issue under the following sections:

Paper: Latin American markets for paper.
Rubber products: Economic depression limits Peruvian market for rubber goods.
Transportation—Railways: Sales information on Latin American railways.
Transportation—Communications: Concession to Argentine radio company.

EASTERN EUROPE AND LEVANT

E. Dana Durand, Chief, Eastern European and Levantine Division

LAND REFORM IN FINLAND.

Consul Leslie A. Davis, Helsingfors.

On November 25, 1922, Finland's president signed the so-called Lex Kallio. The object of this law is to extend the ownership of agricultural land, to increase agricultural production, and to provide building lots for homes.

The importance of the land question for Finland may be realized from the fact that, in 1901, 43 per cent of the families in rural districts were landless; since that time this proportion has increased. At the same time, the large estates of 250 hectares (about 618 acres; 1 hectare=2.47 acres) occupied 28,000,000 acres, or 56 per cent of the cultivable area.

Terms Under Which Land may be Expropriated.

In order to provide land for distribution, expropriation may be resorted to only in cases where the necessary area can not be obtained from the State lands nor by voluntary process. Expropriation applies, first, to certain lands held by lumber companies; next, to outlying tracts whose owner does not live on or cultivate them; and lastly, to large estates exceeding 200 hectares (about 500 acres) or in the Province of Uleabord, 400 hectares, even though the owner lives thereon and cultivates the same. In any case, all land which can be demonstrated to be necessary for rational culture upon a property shall be exempt from compulsory alienation. In the case of these large estates, the area which may be expropriated is as many per cent as there are full hundreds of hectares in the estate, excluding waste land; thus, from an estate of 200 hectares, 2 per cent or 4 hectares may be expropriated; from one of 300 hectares, 3 per cent or 9 hectares; and so on; but if the estate is over 5,000 hectares, not more than 50 per cent of the area may be expropriated.

Properties are exempted which, if divided among the owner's children or among the inheritors of an estate, would not suffice to allot to each the maximum area of cultivable land (in the more open part of the country, 40 hectares). The children of landowners have the prior right to possession of land to which they also have an inherited right.

Obligations Resting Upon the Purchaser.

To be qualified to obtain land a person must be conversant with agricultural work and must possess the necessary implements or have money or credit for the purchase of such, while a person desiring land for dwelling purposes must have the means or ability to construct a house and make his living thereon.

The area to be given to the applicant shall be large enough for a medium-sized family to be able to till it by its own efforts, but in no case shall it be more than 20 hectares (about 50 acres).

The price to be paid normally for the land expropriated shall be based on current local prices, but may not be in excess of the average price for the immediate preceding 5-year period. For crops, standing timber, and buildings expropriated the State shall pay cash; also for the land itself it shall pay in cash when the price is not over 5,000 marks, but otherwise in 7 per cent State bonds or partly in bonds and partly in money.

The person obtaining the land shall repay the State in yearly payments of 7 per cent in the case of farm lands and 9 per cent in the case of dwelling lands. Four per cent of this shall be considered as interest and the remainder applied to the amortization of the loan. Larger sums, however, may be paid for amortization, if desired, in which case the proper provisions shall be complied with.

Overhead Costs in Russian Nationalized Industries.

From Economic Life, Moscow, of January 26.

A special commission of the council of labor and defense, which is now working on the problem of reducing overhead expenses in Russian industries, has established the fact that such expenses enter most seriously into the cost of raw materials, which make up from 50 to 70 per cent of the cost of the manufactured product.

In the cost of textiles, raw material makes up 74 per cent, as yarn; in leather products it constitutes up to 76 per cent, in the form of sole leather; in sugar, 45 per cent; in matches, 34 per cent; in distilling of alcohol, 35 per cent; etc. The total overhead expenses on raw cotton and wool mount as high as 100 per cent as a result of the fact that the raw material, before reaching the manufacturing trust, passes through several intermediary organizations, each of which charges 10 per cent profit, at least 10 per cent for "organization expenses," and 10 per cent for "incidentals." This represents a minimum. Consequently the ultimate cost of the raw materials to the manufacturing trust is swollen enormously. The same anomaly exists in the case of fuel and bread, the overhead expenses on the latter for State institutions constituting from 20 to 30 per cent of the cost, while private organizations somehow manage with a surcharge of only 10 per cent.

The State industries are also encumbered with different extra assessments for various labor funds over and above the regular wage scale, amounting to an addition of almost 60 per cent to the basic wage rate and bringing this item of costs up to about pre-war levels.

The direct overhead expenses of manufacture, such as maintenance of administration, repairs, insurance, amortization, etc., amount in the leather industry to 22 per cent of the cost of the product, as against from 6 to 14 per cent in pre-war times; in the sugar industry, to 35 per cent, as against 20 per cent before the war; and in the textile industry, to 17 per cent, as against 11 per cent in pre-war times. All these high expenses are the effect of mismanagement. Owing to insufficient concentration of production, the coefficients of consumption of fuel, man power, raw materials, and auxiliary supplies are also inordinately high in comparison with established coefficients.

Tariffs and trade regulations:
Greek tariff subjects Canadian goods to general rates.
Permission for free reexportation of goods in transit at Saloniki.

BALKANS AND LEVANT.

Exports Declared from Bucharest to United States.

Consul Ely E. Palmer, Bucharest, Rumania.

Rumanian exports declared through the American consular office at Bucharest during the calendar year 1922 show a gain of more than 100 per cent over the preceding year. The largest single item contributing to this increase was 1,117,622 pounds of unrefined copper, valued at $134,860, which actually originated in the Old Kingdom of Serbia and was transshipped from the Rumanian port. While exports of beverages and hog bristles did not reappear during 1922, there was a considerable increase in the exportations of fruits and nuts, furs and fur skins, and vegetables. Dairy products and caviar, while not exported during 1921, contributed about 5 per cent of the total export values in 1922.

Declared exports from Bucharest, Rumania, to the United States during the calendar years 1921 and 1922.

Declared Exports from Iraq to United States.

Consul Thomas R. Owens, Bagdad.

Exports from Iraq (formerly Mesopotamia) to the United States declared during the calendar year 1922 through the two American consulates, Bagdad and Bassorah, reached a total value of $3,175,185—an advance of 50 per cent over the combined values in 1921. More than half of this increase is credited to Bagdad exports, the value of which was nearly 107 per cent greater than in 1921.

Declared Exports from Bagdad.

The increase in declared exports from Bagdad to the United States in 1922 is particularly noticeable in the case of almonds, carpets, pistachio nuts, sausage casings, skins, and wool. It will be noted that there were no exports of nuts during 1921.

Declared exports from Bagdad, Iraq, to the United States during the calendar years 1921 and 1922.

WESTERN EUROPE

Charles E. Lyon, Acting Chief, Western European Division

DANISH FOREIGN TRADE IN 1922.

Based on report from Assistant Trade Commissioner Harry Sorensen, Copenhagen.

Danish foreign trade showed an unfavorable balance of 275,000,000 crowns during 1922, which represents an increase of 10,000,000 crowns over the official estimates. The increased imports and decreased exports during December are cited as reasons for the increased unfavorable balance. During 1921 the excess of imports over exports amounted to only 128,000,000 crowns, or less than half that for the year 1922. The considerable increase in the unfavorable trade balance during the latter year was due chiefly to price deflations.

The total imports for the year amounted to 1,555,000,000 crowns, while exports reached a total of only 1,242,000,000 crowns, of which 68,800,000,000 crowns were reexports. The value of the imports, exports, and reexports during 1922, by months, is shown in the following table:

Danish foreign trade in 1922.

Months.	Imports.	Exports.	Reexports.	Excess of imports.
	Crowns.	*Crowns.*	*Crowns.*	*Crowns.*
January	102,000,000	76,000,000	4,000,000	22,000,000
February	71,000,000	73,000,000	3,000,000	[1] 5,000,000
March	103,000,000	95,000,000	5,000,000	5,000,000
April	126,000,000	70,000,000	6,000,000	50,000,000
May	159,000,000	108,000,000	5,000,000	46,000,000
June	140,000,000	121,000,000	5,000,000	14,000,000
July	117,000,000	102,000,000	5,000,000	10,000,000
August	135,000,000	84,000,000	6,000,000	45,000,000
September	134,000,000	115,000,000	7,000,000	12,000,000
October	147,000,000	105,000,000	7,000,000	35,000,000
November	129,000,000	114,000,000	6,000,000	9,000,000
December	141,000,000	103,000,000	5,000,000	33,000,000

[1] Excess of exports.

The figures do not include exports by parcel post which, during the year, reached a total of about 13,000,000 crowns. The increased unfavorable balance during December was due in large part to heavy holiday trade.

Leading Import Commodities Show Increases.

The quantity figures of nearly all of the more important classes of imports show increases in 1922, as compared with corresponding figures for 1921.

Danish imports of leading commodities.

Commodities.	1921	1922
	Metric tons.	*Metric tons.*
Maize	460,800	436,500
Other grains	82,500	203,600
Wheat flour	27,600	47,200
Oil cake and meal	419,500	417,400
Coal, briquets, and coke cinders	2,552,000	3,633,000
Petroleum	48,000	76,000
Benzine	35,000	52,000
Other duty-free fuel oils	39,000	75,000

Quantity and Value of Export Trade.

The quantity and value figures for the main classes of exports during 1921 and 1922 are as follows:

Danish exports of leading commodities.

Commodities.	1921		1922	
	Quantity.	Value.	Quantity.	Value.
Packing-house products:	*Metric tons.*	*Crowns.*	*Metric tons.*	*Crowns.*
Pork	85,300	350,000,000	111,400	360,000,000

[1] Does not include inquiries handled by foreign service of the bureau (27 posts, 80 representatives) by the cooperative offices maintained by the bureau in 25 chambers of commerce and boards of trade in the United States.

[2] This classification of inquires under "Regional," "Commodity," "Technical," and "Miscellaneous" headings cover only the period from Oct. 2, 1921, to July 1, 1922. The figures for trade opportunity addresses and trade lists are for the entire year.

[3] Information reserved from "Foreign trade opportunity" announcements, printed in each issue of the COMMERCE REPORTS. (Name and address of foreign inquirer interested in the purchase of American goods, including references, cable address, and other details.)

AFRICA

OBSTACLES TO AMERICAN BUSINESS IN PORTUGUESE EAST AFRICA.

Consul C. M. P. Cross, Lourenco Marques.

The annual import and export trade of Portuguese East Africa, exclusive of transit traffic for the Transvaal and Rhodesia, amounts to approximately $30,000,000. Of this amount the United States secures only about $1,000,000, representing chiefly articles which either can be secured only from the United States or are notably cheaper or superior in quality, such as automobiles and high-grade hardware. American articles which do not have these special advantages can not find an opening in this market.

There are several reasons for this situation. Among the most important is the fact that no American capital has been invested in this territory, with the exception of two oil companies which maintain selling organizations manned exclusively by non-Americans, and one of which patronizes exclusively foreign steamship lines. Portuguese interests in the field are negligible. Most of the resources of the colony are being developed by the British, and for this reason the great bulk of machinery and supplies comes from England. American machinery, except occasionally for special types of work, is not regarded with favor by the British capitalists. As a rule the shipping agencies and many of the retail stores are in the hands of British individuals, who naturally favor British goods.

Another reason is that the great bulk of small articles, which are not used in sufficient quantity as yet to warrant large importations but which in the aggregate represent a considerable volume of trade, is secured in small lots from the Union of South Africa and is therefore of British manufacture. American manufacturers of these classes of goods, who have obtained a foothold in the Union of South Africa, are securing a small percentage of the local trade.

The Public Debt of the Union of South Africa.

Consul Charles H. Pisar, Cape Town.

The public debt of the Union of South Africa, which in 1910, the year in which the Union was formed, stood at £116,036,987, had increased to £191,784,936 by March 31, 1922. This represents a debt burden on the white population of more than £125 per capita. The reproductive portion of the amount outstanding on the latter date was £120,824,510. This sum was invested in railways, harbors, the Land Bank, and various loans made to Provinces, municipalities, irrigation boards, and settlers of Government lands. The remaining £70,960,426, which represents the dead-weight debt, was incurred in the prosecution of the war and the construction of public buildings and works. Interest charges on the public debt amounted to £7,260,000, of which £4,585,000 was paid on the reproductive debt and £2,675,000 on the unproductive debt. The real net debt of the Union, calculated by deducting the amount of the reproductive debt, the sinking fund, and the credit balance on the loan account, is £56,224,924, but as the sinking fund is not available for immediate redemption purposes and the Treasury must pay interest on all outstanding loans, the net debt is regarded as being approximately £70,000,000. In connection with the public debt, it has been pointed out that provincial debts constitute part of the Union debt, whereas in countries like the United States each State is responsible for its own debt.

Financial Position of British South Africa.

Prepared in Western European Division.

The Minister of Finance of the Union of South Africa has estimated that government finances for the fiscal year ending March 31, 1923, will show a deficit of about £900,000. A deficit of less than £400,000 had been expected, but owing to a serious shortage in the income tax returns and other internal taxes, revenues fell considerably below budget estimates. Many economies have been effected in the administrative departments of the Government, resulting in the reduction of expenditures by some £600,000 below the original estimates. Further economies will be effected to reduce the cost of national administration in an endeavor to balance the budget. Instead of present additional taxation, the Minister of Finance urges further development of the resources of South Africa, which would enable the Government to derive increased revenue from direct and indirect taxes. It was pointed out that the financial position of South Africa with regard to staples of production—gold, diamonds, wool, and mohair—was far better than last year. The gold industry, with increased efficiency in the mines and reduction of costs, is operating at capacity; the diamond industry is steadily reviving and the market is showing improvement.

Public Finances of Southern Rhodesia.

A surplus is expected in the public finances of Southern Rhodesia during the current fiscal year. This, it is felt, will lend assurance to the flotation of a loan of £1,000,000 when the colony, which recently voted to accept responsibility of self-government, takes over the public works and buildings from the British South Africa Company, by which the country has been administered. For the nine months ending December 31, 1922, the excess of revenues over expenditures was £13,683, although a deficit of £139,637 had been expected. Public revenues for the financial year ending March 31, 1923, were estimated at £1,185,500, of which £1,006,711 had been collected at the end of December. Expenditures for the first nine months of the fiscal year amounted to £993,028, which was considerably below the budget estimate of £1,325,137 for the year. During the fiscal year 1922 the public revenues of Southern Rhodesia amounted to £1,491,417 and expenditures to £1,309,344, the surplus last year being £182,073.

SURVEY OF CURRENT BUSINESS

Prepared in the Bureau of the Census

INCREASED ORDERS INDICATE CONTINUED PRODUCTIVE ACTIVITY.

Further figures on February production in the United States show that the January high level was well maintained and even slightly bettered when account is taken of the difference in working days in the two months. On this basis additional new high records were made in wool consumption and copper production. Orders continue in large volume in most lines, and the unfilled orders on hand for many commodities, such as steel sheets, steel barrels, and flooring, were the largest recorded in recent years.

Prices received by farmers for crops and live stock again increased, while the cost-of-living figures was unchanged from January. Retail distribution continued at high levels, while savings deposits increased throughout the country.

The index of mineral production for February was 106.5 compared with 1919 as 100, declining from 124.3 in January, owing to the decreased output of bituminous coal. The index of marketings of animal products declined from 113.4 in January to 95.3 in February, while the crop marketing index declined from 114.5 to 73.4. The index numbers for both minerals and animal products were higher than a year ago, but crop marketings were the lowest recorded for February in recent years, due to the small marketings of cotton and tobacco.

Textiles—New High Record in Orders for Metal Commodities.

Consumption of wool in textile mills declined to 57,916,000 pounds in February, but the daily rate of consumption was slightly higher than in January and was the highest since comparable figures first became available in January, 1921. Machinery activity was maintained at a high rate.

Cotton spindles were active on the average 227 hours in February, which was slightly better, considering the shorter month, than the 249 hours in January.

Production of steel sheets in independent mills declined in February, but the daily rate of production was higher than in January. Shipments of sheets were less than production, but sales were greater. Unfilled orders for sheets were the highest since October, 1920, and unsold stocks declined.

Shipments of steel barrels declined slightly, but production and unfilled orders made new high records.

Copper production at 102,515,000 pounds declined slightly, but the daily rate of production made a new high record since 1920.

Fuels—Record Gasoline Production—The Paper Market.

Although bituminous coal production was 16 per cent less in February than in January, anthracite production was at about the same daily rate as in January, and totaled 7,773,000 tons.

Figures for gasoline production for January, which have just become available, show another new high production at 623,823,000 gallons, the first month that production has exceeded 600,000,000 gallons. January consumption of 443,128,000 gallons was exceptionally high for January, while stocks exceeded 1,000,000,000 gallons for the first time in history.

Production and shipments of both mechanical and chemical wood pulp declined slightly in February. Stocks of mechanical pulp declined to a new low record, but stocks of chemical pulp continued to increase.

Production and shipments of newsprint paper declined in February, but the daily rate was slightly higher than in January. Consumption by publishers declined and stocks increased slightly, owing to the larger transit stocks, though publishers' holdings declined. Prices of newsprint did not change materially.

Production of both corrugated and solid-fiber paper boxes was slightly smaller than in January, but the daily rate of consumption was higher. Output of folding boxes declined, but new orders increased to the highest level since last August. Orders for labels declined.

Automobile Output—Building Materials.

In spite of the shorter month, automobile output for February was 13 per cent larger than for January, passenger-car production amounting to 254,415 cars and trucks to 21,354 cars.

Further reports on lumber production indicate that the February output was about 85,000,000 feet less than the January production, but the daily rate of production was higher. Compared with a year ago, there was an increase of about 70,000,000 feet. Shipments of lumber greatly exceeded production except in the lake region.

Declines occurred in the production, shipments, and orders for maple flooring, but stocks increased slightly, and unfilled orders were the highest since April, 1920.

Production and shipments of both clay fire and face brick declined considerably, but for silica brick slight increases occurred. Stocks of clay fire and silica brick declined and those of face brick increased. Unfilled orders increased and prices were stable.

Foodstuffs—Tobacco—Water Transportation.

The movement of rice declined in February, receipts and shipments being smaller than a year ago, but stocks were almost 25 per cent larger.

Cold-storage holdings of meats, cheese, eggs, and poultry were considerably higher than at the end of February, 1922, but holdings of fish and butter were less. Inspected slaughter and consumption of meat in January was much larger than a year ago, with hog slaughter the largest in recent years.

There were slight declines in the consumption of all kinds of tobacco products in February, but all increased over February, 1922, with cigarette consumption about 50 per cent larger. Sales at loose-leaf warehouses declined sharply and were less than half as large as a year ago.

Entrances and clearances of vessels in foreign trade were about the same as a year ago, but the foreign vessels formed a larger proportion of the total this year. The number of vessels under construction declined while completed vessels increased in February.

Prices—Other Movements—Savings Deposits Increase.

Further advances in the prices received by farmers for crops and live stock made the former the highest index number since December, 1920, at 30 per cent above the pre-war average, but the live-stock index was only 7 per cent above the pre-war average.

The cost of living as compiled by the National Industrial Conference Board remained stationary at 58 per cent above the pre-war average, as an increase in clothing neutralized a decline in food prices.

Department store sales were at about the same daily average as in January, and newspaper advertising declined at about the same ratio.

Savings deposits in banks increased in February in all districts, and deposits in the Postal Savings System showed the first increase since February, 1921.

Dividend and interest payments were larger than a year ago.

Data from Survey of Current Business.

The following table gives such data from the next issue (No. 20) of the Survey of Current Business as have been received between March 20 and 31, 1923. Figures received prior to March 20 were published in the March 26 issue of COMMERCE REPORTS and are not repeated here.

All items given in the following table correspond with similar information in the issues of the Survey of Current Business. These figures should always be read in connection with the detailed tables in the Survey, where specific descriptions of the data and their sources are given. The figures given are in some instances collected by governmental agencies and in other cases by trade associations or technical journals. All of this is explained in the monthly Survey of Current Business, which may be obtained from the Superintendent of Documents, Washington, D. C., for $1 per year.

[Footnotes are printed at end of table.]

[1] Revised. [2] January, 1922.

FOREIGN TRADE OPPORTUNITIES.

Reserved information may be obtained from the Bureau and its district and cooperative offices by duly registered firms and individuals upon written request by opportunity number. The Bureau does not furnish credit ratings or assume responsibility as to the standing of foreign inquirers; the usual precautions should be taken in all cases; references are generally furnished and form a part of the reserved information. Correspondence may be in English unless otherwise stated. Symbols: * Reported by American consular officers; † Reported by commercial attachés and trade commissioners; ‡ Direct inquiries received by the Bureau.

American manufacturers and exporters in following up "Foreign Trade Opportunities" submitted by foreign representatives of the United States Government should not fail to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters, as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.

6004.†—Aluminum pistons, bolts and nuts, fan belts, cheap light jacks, automobile clocks, and nonbreakable hydrometers—AUSTRALIA. Agency desired by the representative in the United States.

INVESTIGATIONS BY UNITED STATES TARIFF COMMISSION.

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 2 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Diethyl barbituric acid and derivative thereof.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 5 of Title I of said tariff act, namely: Diethyl barbituric acid and derivatives thereof, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission passed on the 27th day of March, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 3 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Barium dioxide.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to the articles described in paragraph 12 of Title I of said tariff act, namely: Barium dioxide, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission passed on the 27th day of March, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 4 by the United States Tariff Commission for the purposes of section 315 of the Tariff Act of 1922.

Casein.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922, and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 19 of Title I of said tariff act, namely: Casein, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office, in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission passed on the 27th day of March, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 5 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Logwood extract.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 39 of Title I of said tariff act, namely: Logwood extract, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States, passed on the 27th day of March, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 6 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Potassium chlorate.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922, and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 80 of Title I of said tariff act, namely: Potassium chlorate, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office, in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission, passed on the 27th day of March, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 7 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Sodium nitrite.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the

rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 83 of Title I of said tariff act, namely: Sodium nitrite, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of the order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission passed on the 27th day of March, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 8 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Mirror plates.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 223 of Title I of said tariff act, namely: Mirror plates, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission passed on the 27th day of March, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 9 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Pig iron.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers veste di nhim by section 315 of Title III of the tariff act of 1922, and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 301 of Title I of said tariff act, namely: Pig iron, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office, in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission, passed on the 27th day of March, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 10 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Swiss pattern files.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 362 of Title I of said tariff act, namely: Swiss pattern files, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission passed on the 27th day of March, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 11 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Paint brush handles.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922, and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in pargraph 410 of Title I of said tariff act, namely: Paint brush handles, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office, in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission, passed on the 27th day of March, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 12 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Sugar.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 501 of Title I of said tariff act, namely: Sugar, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, pub-

lished by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission passed on the 27th day of March, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 13 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Cotton warp-knit fabric.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922, and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 914 of Title I of said tariff act, namely: Cotton warp-knit fabric, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office, in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission passed on the 27th day of March, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 14 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Cotton gloves made of warp-knit fabric.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 914 and 1430 of Title I of said tariff act, namely: Cotton gloves made of warp-knit fabric, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission passed on the 27th day of March, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 15 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Cotton hosiery for infants.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 916 of Title I of said tariff act, namely: Cotton hosiery for infants, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two consecutive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission passed on the 27th day of March, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 16 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Wall Pockets.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 1313 of Title I of said tariff act, namely: Wall pockets, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission passed on the 27th day of March, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 17 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Artificial or ornamental fruits, vegetables, grains, leaves, flowers, and stems or parts thereof.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922, and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 1419 of Title I of said tariff act, namely: Artificial or ornamental fruits, vegetables, grains, leaves, flowers, and stems or parts thereof, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office, in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission, passed on the 27th day of March, 1923.

SALES INFORMATION SERVICE.

The Commercial Intelligence Division of the bureau maintains a classified World Trade Directory Index of foreign merchants for the purpose of assisting American firms seeking contracts with foreign buyers and agents.

From the information already collected through the foreign representatives of the Departments of Commerce and State, lists of firms engaged in practically every line of business in any part of the world can be furnished. A large number of these lists indicate the relative size and importance of each firm in its community, nationality of owners or managers, character of business, and the various commodities handled. These lists are great aids to traveling salesmen and firms undertaking advertising campaigns.

Further data, such as the countries from which firms make most of their purchases, date of establishment, bank and trade references, number of employees, and other confidential data that can only be obtained by representatives on the ground are also available and can be secured by requesting sales information reports on specific firms.

Knowing what agencies are handled by the different foreign firms, the Commercial Intelligence Division is well equipped to select and recommend the names of agents or firms who could properly represent American exporters.

This confidential sales information service is available to all American firms who have their names recorded on the bureau's Exporters' Index.

COMMERCE REPORTS

A WEEKLY SURVEY OF FOREIGN TRADE

HERBERT HOOVER, SECRETARY OF COMMERCE — JULIUS KLEIN, DIRECTOR BUREAU OF FOREIGN AND DOMESTIC COMMERCE

American Tariff Subject to Change.

American concerns whose interests are in any way affected by the tariff rates on imports of foreign goods into the United States will do well to follow the announcements in COMMERCE REPORTS giving public notice of investigations or hearings by the United States Tariff Commission, with a view to a possible modification of the import duties on particular commodities as set by the tariff act of 1922.

Perhaps the most distinctive feature of the new American tariff act, as compared with preceding acts, lies in those provisions vesting in the President the authority to modify the basic duties, in accordance with proven differences in costs of production, to prevent unfair practices in import trade or to meet discriminatory duties or practices against American commerce or shipping.

Acting upon complaints presented to them, the United States Tariff Commission, which is charged with assisting the President in the exercise of the new discretionary powers, has recently ordered investigations into the relative costs of production of 17 commodities, with a view to possible recommendation of changes in the present duties. These investigations are being carried out under that authority of the tariff act of 1922 (section 315) which empowers the President to change classifications and to increase or decrease the basic duties within a range of 50 per cent, upon proof that the duties now collected do not measure the "differences in costs of production in the United States and the principal competing country." In case of goods subject to ad valorem duties, when it is found that such an advance in the rate of duty will not equalize the differences in the cost of production, the President may order the duty to be assessed upon the American instead of the usual foreign valuation.

The Tariff Commission is required by law to "give reasonable public notice of its hearings" and "reasonable opportunity to parties interested to be present, to produce evidence, and to be heard." COMMERCE REPORTS, of the Department of Commerce, and Treasury Decisions, of the Treasury Department, both being official weekly publications and circulating among concerns interested in foreign trade, have been chosen as the means of giving such public notice of its actions. At the request of the Tariff Commission, arrangements have therefore been made for formal notices of the investigations and hearings to be reproduced in COMMERCE REPORTS for two successive weeks. A series of such notices announcing investigations just initiated into the costs of production on special commodities is reproduced for the second time in the last pages of the present issue. Interested concerns can obtain copies of the rules of procedure under which applications and investigations are to be made and hearings held, upon direct request of the United States Tariff Commission, Washington, D. C., or Customhouse, New York.

Quotations for Export.

From time to time articles appear in periodicals of various kinds encouraging American manufacturers to make their proposals c. i. f. foreign ports. In other instances these manufacturers are urged to be liberal in granting terms to buyers overseas. In still other instances the writers plead with our manufacturers to offer products that conform to the specifications of foreign buyers. Careful discrimination should be exercised by those who attempt to follow these suggestions, for often the ideas expressed are only half-truths or even less dependable statements.

If a manufacturer is to solicit export business seriously, his first step should be to establish a definite policy—making c. i. f. quotations to foreign purchasers only when he is fully satisfied that his organization is in a position to handle the business on those lines. It sounds very simple to quote c. i. f. foreign port, but in making such a quotation the manufacturer should realize that there are many kinds of marine insurance and unless matters are very clearly comprehended misunderstandings may arise. Some goods should be insured w. a., others f. p. a., etc., and a manufacturer incurs very definite responsibilities if he undertakes a c. i. f. transaction without having all details regarding insurance precisely understood. Correspondingly, in connection with freights, there are many kinds of bills of lading, and a manufacturer should not undertake to make quotations inclusive of freight to foreign ports unless he has in his organization men who are thoroughly experienced in handling such subjects.

The suggestion that liberal terms be extended to foreign buyers implies that the manufacturer has in his credit department facilities for examining the credits of buyers in distant countries, and it is scarcely practicable for a manufacturer to develop such machinery unless he has a reasonably large volume of foreign business.

These are matters that are handled daily by companies making a business of export. It will be found that the work of arranging for ocean freights, marine insurance, the financing of a shipment while in transit, the handling of steamer and insurance claims, and the supervision of a consignment from factory to destination is a business in itself and forms one of the legitimate activities connected with the handling of any foreign shipment. Until such time as a manufacturer has a volume of sales large enough to justify him in expanding his own organization to cover these functions, his business will probably be handled more cheaply if he delegates this work to one of those companies that specialize in it.

Similarly, discretion should be used in undertaking to meet unusual specifications as written by foreign buyers. A manufacturer whose factory is equipped to produce cloth 36 inches wide would probably have to rebuild the entire plant to produce an export order 42 inches wide. Most American commodities are standardized, and if export business is to be profitable it should, in general, be in the regular lines of production and not on special goods that disorganize factory routine.

"Let the Buyer Believe."

The greatest enemy of truth is half truth in its various forms—exaggeration, understatement, and misleading presentation of facts.

Truth begets confidence. Half truth breeds suspicion which grows into disbelief.

In the primitive forms of trading the callous principle prevails: "Let the buyer beware." In enlightened commercial intercourse the guiding principle is: "Let the buyer *believe*."

Slowly but surely the first of these principles has been discarded by merchants of integrity and vision. In the enthusiasm of publicity promoters the fanciful touch of half truth has at times been tolerated in advertising. But the good sense of those who are building advertising into a most potent selling force now rejects any departure whatever from fidelity to fact.

"Truth in advertising" has come to stay. It is nowhere more vital than in publicity designed to sell goods abroad.

Some shadow of excuse for half truth on the printed page might be pleaded by those who must dress fleeting news for casual readers. Hence a lower standard is applied to sensational headlines. But this is publicity that dies in a day.

The message that is to live and bear fruit must be indisputably true. Truth is the very foundation of sound merchandising at home and abroad. The confidence that arises from it is the prime essential of success in foreign commerce.

It is for this reason that the commercial film is making headway as an advertising medium in foreign trade. The foreigner who has ruefully found from time to time a discrepancy between promise in print and performance in practice finds proof and confirmation through his own sense of sight.

It is gratifying to note (as mentioned in the last issue of COMMERCE REPORTS) that the export publishers of the country, true to their tradition as pioneers in foreign trade promotion, have banded together to banish, to the best of their ability, conscious misstatement in copy accepted by them for their advertising pages.

These "shop windows of America," scanned by foreign buyers, will have nothing exhibited that is not as represented. But the same standard must be applied to circulars, catalogues, and travelers' words. There must be no sales talk that is not true.

BUREAU HELPS AMERICAN IMPORTER TO COLLECT $11,000.

Eleven thousand dollars has been collected, through the intervention of the Division of Commercial Laws of the Bureau of Foreign and Domestic Commerce, in behalf of an American purchaser of sugar-beet seeds. This importer bought from a European country a shipment of seeds that arrived in the United States in a condition of impurity and wholly useless for the purpose for which they were desired. Although the purchaser, probably through unfamiliarity with commercial usage, had failed to avail himself of certain methods prescribed in the foreign country for establishing the quality of the shipment—and consequently the seller could not be forced either by law or moral pressure to meet the demand for reimbursement—the various agencies set in motion by the Division of Commercial Laws proved successful and procured a most satisfactory settlement.

MONTHLY CABLE REVIEWS

WESTERN EUROPE.

Charles E. Lyon, Acting Chief, Western European Division.

UNSETTLED CONDITIONS CONTINUE IN FRANCE.

Based on cable from Commercial Attaché Chester Lloyd Jones, Paris, April 7.

[Little progress has been made by the French Senate Finance Committee in its budget discussion, and provisional credits have been voted for April and May. Prices continue to move upward generally. Ruhr coal receipts, although still small, tend to increase, a lack of transportation facilities now being the chief difficulty.]

Committee Discussion of Budget Continues.

The French 1923 budget is still in the hands of the Senate Finance Committee, which opposes the Chamber proposition of relying on loans to meet the deficit. The Senate hopes to effect a balance by further reduction of expenditures and more severe measures for the repression of fraud. The Minister of Finances declares that the improvement in tax returns indicates that the deficit for 1923 will not exceed 2,000,000,000 francs. Parliament has now adjourned until May 8. The finance committee is studying proposed Senate modifications to the turnover tax, and there is considerable agitation in favor of the suggestion that the turnover tax be replaced by a tax on all products, involving a single collection, preferably at the source. Parliament has voted the creation of an additional undersecretary of finance to handle budget affairs.

Provisional Credits for April and May.

Provisional credits (bouziemes provisoires) covering the general budget for April and May and the special budget for May were voted on March 29. Credits voted to cover the general budget proper amount to 4,579,000,000 francs, and for accounts including railroads annexed to the general budget, 483,000,000 francs. Special budget credits amounted to 1,170,000,000 francs, including an item of 53,000,000 francs for maintaining troops in the Ruhr. The law prohibiting the export of capital was also extended until June 1.

The Minister of Liberated Regions states that reconstruction payments to the end of the past year totaled 41,000,000,000 francs, equaling 47 per cent of the total damages.

Paris Bank Clearings—Exchange.

Debits and credits of the Paris clearing house totaled 38,000,000,000 francs in February, an advance of approximately 300,000,000 francs over January. An average daily draft of 791,000,000 francs was required to clear the February amount, as against 725,500,000 francs in January. On the Bourse there has been a poor demand for the principal stocks since Easter. Quotations are rising, and exchange fluctuations have retarded transactions in foreign securities.

New York buying rates on franc cable transfers advanced from $0.0604 on March 15 to $0.0674 on March 21, then dropped to $0.0647 on March 24, but after considerable fluctuation recovered to $0.0674 on April 9.

Fuel Shortage Still Handicaps Metallurgy.

Blast-furnace operators have been forced to import considerable quantities of coke from various foreign countries during the past month. Since the beginning of the Ruhr occupation 40 blast furnaces have shut down. Supplies from the Ruhr are increasing, and the Société Cooperative des Hauts Forneaux, which has charge of coke distribution, states that the worst of the crisis has passed. The Minister of Public Works estimates present daily coal receipts from the Ruhr at 4,000 tons, and expects this to be increased to 7,000 tons before the end of the month. The minister further states that available stocks above ground in the Ruhr total 560,000 metric tons of coke and 2,000,000 tons of coal; the problem, therefore, is largely a matter of transportation.

No settlement of the Saar coal strike has been reached, but Lorraine strikers are returning rapidly. Iron and steel market conditions have been generally upset, and blast furnaces are unable to fill orders. La Journée Industrielle estimates that the Ruhr occupation caused a loss of 100,000,000 francs to the French iron and steel industry during January and February, and a similar loss may be produced during March.

Textile Conditions Quiet—Improvement in Shoe Trade.

The cotton textile situation is calm. Spinners are fairly busy, but lack new orders. The woolen industry is below normal, although prospects for the near future are more hopeful. Linen spinners and weavers have orders for several months ahead, and market conditions are very good. Silk plants are favorably situated and have a considerable number of orders ahead. The French embroidery industry is still undergoing difficulties.

Hide and leather prices remain high, with an upward tendency, and shoe retailers are protesting. The shoe business, however, has improved with the arrival of good weather. Some shoe manufacturers have increased prices by from 5 to 6 per cent, with a possibility of further increases up to 10 per cent.

There is an increased seasonal activity in the building trades, but continued high prices have kept operations below normal. The chemical market is still active, owing to shortage of supplies in the Ruhr.

February Foreign Trade.

Foreign trade totals for February increased over those for the previous month. Total imports, based on importers' declarations, were valued at 2,343,000,000 francs for February, as against 2,144,000,000 francs in January. Exports (based on 1921 values) totaled 2,327,000,000 francs, as compared with 1,696,000,000 francs in January. Exports of manufactured articles increased from 945,000,000 francs in January to 1,235,000,000 francs in February. In volume, imports de-

creased from 4,111,056 tons in January to 3,883,970 tons in February, while exports increased from 1,895,683 tons in January to 2,490,459 tons in February.

The Minister of Commerce has invited the chambers of commerce and the syndicates to submit suggestions concerning the bases for revision of the French tariff.

Improved Railway Receipts—Lyon Fair Successful.

Average daily car loadings during the first three weeks of March were 56,761 compared with 55,342 for the same period in February. Receipts of the principal French railways up to March 11 of this year amounted to 1,230,000,000 francs, an increase of 4½ per cent over the same period of last year.

The recent Lyon Fair is reported to have been a great success, the number of visitors having been greater than ever before and the volume of orders very satisfactory.

ADVERSE INDUSTRIAL CONDITIONS IN AUSTRIA.

Based on cable from Trade Commissioner William Ford Upson, Vienna, April 7.

[The industrial and commercial stagnation characterizing Austria's condition since the beginning of the year continued throughout March. Wage difficulties were further aggravated by a 6 per cent increase of living costs on March 15. A miners' strike halted iron smelting and caused a threatening situation among other industries. Favorable progress on the rehabilitation of Austria and subscriptions to the preliminary loan, together with improved foreign relations, indicate a more substantial situation in the future.]

Rehabilitation of Austria Progresses Favorably.

Recent progress on the rehabilitation of Austria is indicated as follows: A 1 per cent turnover tax became effective on April 1; a proposed consolidation of ministries reduces the number of these from 11 to 8; and negotiations at Rome and London for the long-term loan of 650,000,000 gold crowns are favorable. On account of opposition of minority parties the increasing of import duties on some 15 commodities, mostly foodstuffs, on December 21, 1922, has been declared unconstitutional as this change still lacks the approval of the national assembly or extraordinary council. Curtailment of the railroad pass privilege caused a passive strike among the postal and telegraph employees, interfering slightly with the spring fair. Early reports about the fair, however, indicate more favorable results than experienced at any previous one.

Subscription by European Countries to Preliminary Loan.

Public loan operations were successfully concluded for about £3,500,000 at the end of February. This loan, which is to be acquired by the flotation of treasury bills yielding approximately 7 per cent, will be subscribed to in the following countries in amounts indicated: England, £1,800,000; France, 60,000,000 francs; Belgium, 8,500,000 Belgian francs; Switzerland, 5,000,000 Swiss francs; Netherlands, 6,000,000 florins; and Sweden, 1,600,000 Swedish crowns. These loans are repayable from the proceeds of the long-term reconstruction loan when floated, or refundable in obligations thereof. The Austrian Government retains the option of redeeming them on 30 days' notice and payment of 4 per cent interest on the unexpired term, should more favorable loans be floated before maturity. Combined with other sources of revenue obtained from the liquidation of the Austro-Hungarian Bank and the remaining balances of the Czechoslovak, French, and Italian loans, these loans greatly strengthen the position of the Government and allow continuance of the reconstruction program. Preparations for the long-term loan continue, and the Reparation Commission announces indefinite suspension of its liens on customs revenues and monopoly income in order that they may be used for service on the present and long-term loans.

German Competition Eliminated—Relations with Other Countries Necessary.

The industrial and commercial stagnation was generally unbroken, but improvement is foreseen, particularly through German exchange developments. German underselling in the past has prolonged and intensified the difficulties of Austrian readjustment. The February decline and recovery of the mark left German prices and wages at a high level, which practically destroyed Germany's competition, accomplishing for Austria what months of internal adjustment failed to do. It now becomes apparent, however, that more than the elimination of German competition is needed to restore Austrian industrial and commercial activity. Reduced buying is generally prevalent throughout central and southeastern Europe, with the result that Austrian products, though competitive, still find few buyers.

This condition gives particular significance to the efforts of the Austrian Government to establish more satisfactory relations with neighboring countries. The view of Chancellor Seipel and his colleagues as to Austria's needs is sound. He sees, first, the necessity of putting the internal household in order, and, second, of obtaining the cooperation of neighboring powers that is necessary to an ordered existence for Austria.

National Bank Statement—Exchange Steady.

The National Bank reports plans for the relief of high interest rates through easy commercial discounting. The note circulation on March 23 amounted to 4,238,000,000,000 crowns, as compared with 4,208,000,000,000 crowns on February 23. Commercial deposits increased to 299,000,000,000 crowns from 179,000,000,000 crowns. The equivalent of the metal reserve in paper crowns also rose from 1,112,600,000,000 crowns to 1,308,000,000,000 crowns on March 23. Commercial discounts dropped to 683,000,000,000 crowns from 728,000,000,000 crowns for the previous month. According to the statutes of the National Bank which permit the deduction of the Government's debt for discounted treasury bills from circulating currency for which cover is required, the metal reserve of the bank on March 23 was 65 per cent against 61 per cent on February 23. As 20 per cent is the required reserve, this shows that the permissible additional emission could be considerable.

Exchange was steady, averaging about 71,000 crowns to the dollar during the month. The New York exchange continued to quote the crown at $0.0014 on April 6.

Savings deposits in 12 banks at the end of February amounted to 125,000,000,000 crowns against 115,000,000,000 crowns on January 31, or an increase of 8.6 per cent; this compares with a 46 per cent increase during January.

Cost of Living Rising.

The cost of living continues its tendency to rise. On March 14 the Government index stood at 10,151 as compared with 9,600 on February 14, or an increase of about 6 per cent, due largely to an increase of rents. Since the beginning of the year increases have been indicated by 1 per cent on January 14, 2 per cent on February 14, and, as above mentioned, 6 per cent on March 14. This index covers four groups—food, clothing, rent, and heat and light—and is based on 1 for July, 1914.

The Volkswirt index of living costs, based on January, 1921, as 100, also increased slightly to 20,376 on March 31 from 20,070 at the end of February, and 20,130 for January. This index differs from the one just given, in that it purports to represent the minimum upon which one person can live in Vienna at the present time. All of the factors entering into the cost of living are supposed to be included in the proportion in which they actually occur.

Exports to United States Increase.

Declared exports to the United States amounted to $312,000 as compared with $280,000 in February, comprising practically the same principal commodities as in previous months—electric light bulbs, undressed furs, and manufactures of rubber—according to Consul Foster in Vienna.

BALKANS AND LEVANT.

E. Dana Durand, Chief, Eastern European and Levantine Division.

RUMANIA'S IMPORTANT NEW LEGISLATION.

Based on cables and reports from Acting Commercial Attaché Louis E. Van Norman, Bucharest, and reports from Consul Ely E. Palmer, Bucharest.

[The adoption of a new constitution should have some steadying influence on business, which is still greatly depressed. A new budget has been adopted. The exchange control law recently enacted is causing considerable complaint. Underground resources have been nationalized by the constitution. Scarcity of food has caused a prohibition on export of cattle.]

Financial Situation.

Despite determined opposition, Parliament, on March 27, adopted the new constitution. A transitional budget for the nine months beginning April 1, 1923, and totaling approximately 15,400,000,000 lei, was approved by the Parliament. Apparently this shows a big increase over the budget for the year ended March 31, 1923, which provided for approximately 10,498,000,000 lei; but the 1922–23 budget was expected to be supplemented by an extraordinary budget, providing, among other things, for certain military expenses, while the transitional budget, it is believed, is meant to cover all expenses. The new budget, according to report, provides for interest on the consolidated foreign debt. Indirect taxes are expected to yield approximately 5,880,000,000 lei, and direct taxes, $1,570,000,000 lei. The fiscal and calendar year will coincide beginning with 1924.

In early March a delegation of officials and bankers arrived from Holland to arrange for the stamping of Rumanian treasury notes (to the value of 5,000,000 lei gold) held in Holland. The news of the agreements concluded with the London creditors of Rumanian merchants (see COMMERCE REPORTS for Mar. 19, p. 723) has had a good effect and, although the debts thus settled are comparatively small, a number of concerns will be able to resume business relations with British merchants. Late press reports indicate that an agreement has been made with respect to debts due Manchester merchants. Other European creditors are protesting against the London agreement.

Currency and Exchange Situation.

Bank-note circulation on March 17 was approximately 15,460,000,000 lei, as compared with 15,110,000,000 lei on January 27. It has been announced that a further sum of 10,000,000 gold crowns from the liquidation of the Austro-Hungarian Bank will soon be transferred to Rumania. The new 1, 2, and 5 lei metal coins, authorized some time ago, will be made in Rumania.

Leu exchange was substantially unchanged during March and stood at $0.004767 on April 6. The law establishing an exchange-control commission, which became effective on February 27, is causing irritation and is further restricting business; moreover, it has not succeeded in improving exchange. The confusion over its operation has caused banking transactions to fall off considerably, while local money changers are said to have lost over 80 per cent of their volume of previous business. The law, which aims to prevent speculation in exchange, provides that no transactions, whether in bills of exchange, checks, or currency may be effected, except by certain specially authorized banks or by brokers acting on their behalf, or by the brokers to whom special permits have been granted for particular exchange operations.

Credit and Business—Rise in Living Costs Less.

The acute credit stringency, together with the parliamentary struggle over the constitution, reacted seriously on general business conditions, and the stagnancy has been pronounced. The adoption of the constitution may, perhaps, tend to alleviate the situation slightly, but the chances for a general revival of business before the next harvest are slim.

The cost-of-living index for the end of February (provisional figure) was 2,617, as compared with 2,557 for January—a rise of 60 points, as against a rise in January of 91. The increasing cost of living is reflected in the intention to advance railroad rates again on May 1.

Petroleum and Lumber Situation.

The new constitution definitely settled, at least for the time being, the State's policy with respect to petroleum, for the nationalization of underground resources has now become part of the fundamental law. A few days before the adoption of the constitution a new turn was given to the provisions on this subject—namely, that "rights already acquired will be contingent on the workings of a new mining law yet to be framed"—but it is not yet known whether this clause was finally adopted. The Minister of Industry and Commerce re-

cently established a bureau for the control of deliveries of petroleum for domestic consumption. Crude production for February continued to decline, being 114,000 metric tons as compared with 127,000 tons for January. Exports during February (20,000 tons), however, exceeded those of January by 1,000 tons.

The lumber industry continues to maintain briskness, although the February export of 61,000 tons was 16,000 tons less than that of January. Lumber exports for 1922 exceeded 700,000 tons—the best year of the industry.

Cereals and Other Agricultural Products—Cattle.

February exports of cereals show a further decline, being 102,000 metric tons as compared with 122,000 tons for January; until the new harvest, small exports may be expected. The scarcity of beans and corn is causing the Government to consider prohibiting the exportation of those commodities and to encourage their cultivation by means of a subsidy. The exportation of clover and lucerne seed has already been prohibited. On the other hand, exports of cattle during February reached 20,000 head, as compared with 16,000 head for January. Further exports, however, have been prohibited until after June 30.

YUGO-SLAV CONDITIONS CONTINUE TO IMPROVE.

Based on a report by Assistant Trade Commissioner F. W. Allport, Vienna, Austria; on reports by Consul K. S. Patton, Belgrade, Yugoslavia; and on other sources.

[Financial and business improvement is seen as a result of the present economic policy. Imports and exports are slowly moving toward an equality. Economic negotiations with Austria have terminated satisfactorily.]

Financial Situation—Receipts Generally Exceed Budget Estimates.

The financial policy inaugurated by the present Minister of Finance (see COMMERCE REPORTS, March 19, p. 724) is apparently giving positive results, which are having a directly beneficial effect on business and public confidence. Receipts from internal, indirect, and direct taxes exceed budget estimates. Receipts from imports taxes, however, show a decrease, which is regarded as an excellent symptom because it indicates a decline in imports. The reduction of export duties is having a favorable effect on foreign trade. Customs receipts for January amounted to 694,453,992 dinars. Receipts from the State railways for the last six months of 1922 were approximately 708,361,000 dinars. The railway budget estimates for the entire year were 1,250,000,000 dinars; so that, reckoning the estimate for each half year at 625,000,000 dinars, receipts for the second half year showed an excess over budget estimate of 83,000,000 dinars.

Banknote Circulation—Exchange.

On February 8 the bank-note circulation totaled approximately 5,301,696,000 dinars, as compared with 4,884,000,000 dinars on January 15. Exchange, which stood at $0.010433 on March 9, was quoted at $0.01008 on April 6; a high of $0.01083 was reached on March 10 and a low of $0.01001 on April 4. The dinar, however, has not reached the low point of January and February.

The Zagreb Loan of £500,000.

A loan reported to have been offered to the municipality of Zagreb (Agram) by a British syndicate, if fully subscribed, will yield the municipality an approximate sum of £409,705. The interest proposed is 10 per cent, and the loan is to run for 40 years. The minimum amount to be guaranteed is $150,000. The municipality is to buy necessary machinery from British manufacturers, unless others quote lower prices, on tenders received publicly. It is also reported that a German syndicate has offered to construct the various public works and enterprises for which the loan is required, if the municipality will give to the syndicate the net income for 10 years from the works constructed.

Economic Negotiations with Austria.

The Austrian press reports satisfactory agreements on various matters discussed at the recent conference between Austria and Yugoslavia, which terminated on February 24. The terms of this agreement are noted elsewhere in this issue, under the division headed "Eastern Europe and Levant."

BULGARIA'S UNCERTAINTY PARTIALLY DISPELLED.

Based on reports from Consul Graham H. Kemper, Sofia, Bulgaria, and on other sources.

The amount of reparations to be paid by Bulgaria has at length apparently been decided by the Reparations Committee; the figures, as reported, are placed at 550,000,000 gold francs, payable probably in 60 years. Such a decision will undoubtedly serve to dispel some of the uncertainty manifested in business and financial circles for some time, which has caused merchants to be very cautious and has resulted in a decrease in both imports and exports. Although figures are not yet available it is stated that, for the first time since the war, exports for 1922 have about equaled imports in value. Both imports and exports, however, are far below pre-war normal. In 1914, for instance, imports reached 628,324 tons, which (even allowing for about 200,000 tons of coal then imported, but now unnecessary because of the use of the native product) is much more than the 179,722 tons imported in 1921.

Few sales abroad of Bulgarian tobacco have been reported, although the exportation of stocks previously purchased continues, especially to the Netherlands and Germany. Owing to the conditions created by the Greco-Turkish War, production of Greek and Turkish tobacco has considerably diminished, and American buyers are now turning to Bulgaria. Tobacco acreage in 1922 was 319,034 acres, and production 18,000,000 kilos. Exports of grain have decreased, but the foreign market for Bulgarian skins has been active. Almost all Bulgarian exports pay an export tax, and exporters are required to surrender to the National Bank one-third of the foreign exchange received for such exports, at a rate considerably less than the market rate for such foreign values.

The marked fluctuations in exchange since March 9, when the lev stood at $0.006229, have reflected: First, the uncertainty prevailing for some time with regard to the reparations decision and general business; second, the subsequent effect of the report that an agreement was imminent with regard to the reparations and the later natural reaction.

FOODSTUFFS

Edward G. Montgomery, Chief, Foodstuffs Division

THE GREEK MARKET FOR EDIBLE FATS.

Consul General W. L. Lowrie, Athens, February 17.

Greek imports of dairy and cooking butter, received mainly from the neighboring Balkan and Mediterranean countries, in recent years have decreased to very small proportions. Their place has been taken largely by American oleo and mutton oil and French coconut oil. Imports of these oils for the first nine months of 1922 and the corresponding period of 1921 are shown in the following table:

Greek imports of oleo, mutton, and coconut oil.

Items and countries of origin.	First 9 months of—	
	1921	1922
Oleo and mutton oil:	*Tons.*	*Tons.*
United States	1,224	828
Netherlands	42	41
Canada	30	.....
All other countries	26	31
Total	1,322	900
Coconut oil:		
France	83	585
All other countries	.....	86
Total	83	671

As shown by the above statistics, imports of coconut oil have been important only since the beginning of last year, when it was introduced for cooking purposes under the lower customs classification of industrial fats. It never had been imported before except for industrial purposes. This discrimination has since been adjusted, but despite this the price of coconut oil has been kept below that of oleo and mutton oil.

The American as well as the French oils are sold on brands, and while the well-established ones are accepted without difficulty, it is not easy to introduce new ones except by systematic efforts. Oleo oil is considered a better product than coconut oil and in normal times commanded a premium over the latter. Under present exchange conditions, however, the lower price of the French article is the principal consideration, and increasing quantities are being shipped from Marseille.

The French oil is packed with two tin boxes in a case and thereby has an advantage in respect to customs duties, which are assessed on the net weight of such packages, but on the gross weight of commodities packed in barrels. Moreover, packing in tin better prevents leakage, which is not infrequent in the case of oleo oil during the summer.

The buying season for oleo oil is principally during the cooler season—from September to May.

American Flour and Grain in Austria.

Consul Carol H. Foster, Vienna, February 13.

The chief obstacle to the sale of American flour in Austria is the lack of uniform standards of quality. Hungarian and Yugo-Slav millers, who are the principal competitors of American millers in this market, mark their products according to the same definite standard, with the result that consumers buying these flours know exactly what they are getting. American products, on the other hand, are not definitely marked as to quality, and flours ostensibly of the same quality vary considerably.

United States grain is rated excellent by Austrian millers, and the prices are no higher than those of competing grains. The chief obstacle to the sale of United States grain appears to be the long time required for transporting the grain from the United States to Vienna—generally about two months. Experts state that the key to a successful exploitation of the Austrian market for grain is the maintenance of a large stock in some European city having good railway connections.

Exports of Coffee from Santos, Brazil.

Vice Consul Herndon W. Goforth, Santos.

The total number of bags of coffee of 60 kilos (132 pounds) shipped from Santos to ports of the United States during the six-month period ended December 31, 1922, was 2,736,026, according to figures published by the Associacao Commercial de Santos. The number of bags of coffee declared on consular invoices certified at the Santos consulate during this period was 2,778,550. The figures are of particular interest, since the period covered represents the first half of the coffee-crop export year of 1922–23. The total declared exports of coffee from Santos to the United States during the full calendar year 1922 were 4,855,248 bags, valued at $86,496,702.

Ordinarily the United States purchases 50 to 55 per cent of the total coffee exported from Santos. For the six months ended December 31, 1922, the percentage increased to 65 per cent, and from December 31, 1922, to February 20, 1923, it rose to 70 per cent.

Verified stocks of coffee in storage at Santos on June 30, 1922, amounted to 2,501,578 bags, and on December 29, 1922, the amount reported on hand was 2,244,583 bags, indicating a decrease of 256,995 bags during the first half of the current export year (July 1, 1922, to June 30, 1923).

The decrease in Santos coffee stocks has progressed more rapidly during January and February, 1923. On February 20, 1923, stocks were reported as 2,026,215 bags, indicating a decrease of 475,363 bags since July 1, 1922, and a decrease of 218,368 bags since December 29, 1922. Stocks on February 20, 1922, were 2,662,273 bags, or 636,058 more than on February 20, 1923.

Reports for the Sao Paulo coffee crop now maturing (export crop of 1923–24) indicate that the estimate of 12,000,000 bags will be fully realized, if not exceeded.

Notes on Food Products.

Grain Crops of Spain.

The principal grain crops of Spain, named in the order of their importance, are wheat, barley, rye, oats, and corn, of which crops wheat totals practically as much as the other four combined. The grain crops

for 1922 in metric tons were: Wheat, 3,414,748; barley, 1,688,101; rye, 666,830; oats, 453,071; and corn, 681,564. (Vice Consul Albion W. Johnson, Barcelona.)

Flour Exports from Vancouver.

Since September, 1922, shipments of flour from Vancouver to Japan, China, and the United Kingdom have increased to five or six times the volume for the same period of the previous year, amounting to approximately 1,158,000 bushels of wheat, about one-half of which is milled in Vancouver. (Consul General Frederick M. Ryder, Vancouver, British Columbia.)

Potato Growing in Germany.

At the seventh annual meeting of the German Potato Growers' Association, held in Berlin in February, the importance of increasing the annual yield of potatoes in Germany was emphasized, potatoes being the cheapest article of food in Germany, according to the members of the association. The Government has been urged to reduce railway freight rates on seed and fertilizers and to remove the restrictions from potato products. (Consul E. Verne Richardson, Berlin, February 23.)

Butter Production in New Zealand.

The peak of the current dairying season has passed and the production of butter in the Auckland district is much greater than during the height of any previous season. The quantity of butter received for grading at the Farmers' Freezing Co.'s stores this season to the end of January, 1923, was 972,651 boxes, compared with 703,771 boxes during the corresponding period of last year—an increase of 268,880 boxes. When it is remembered that the production of last season was a record one, the striking nature of this season's efforts on the part of the Auckland dairy farmers may be realized. The quantity of cheese received during the season to the end of January was 56,445 crates, as compared with 77,833 crates in 1921–22. (Consul Karl deG. MacVitty, Auckland.)

TOBACCO

REVIEW OF TOBACCO MARKET IN THE NETHERLANDS.

Consul General George E. Anderson, Rotterdam.

The receipts of tobacco in the international tobacco market of the Netherlands during 1922 amounted to less than one-third of the receipts in 1920. However, the imports during 1920 were excessive and do not represent the annual trade of the Netherlands, although, on the other hand, the receipts for 1922 were abnormally low, which is indicative of the depressed conditions which have been obtaining in the tobacco industry for the past two years. The financial and economic collapse of Germany and other European countries has so affected the market that, toward the close of the past year, there was almost a complete cessation of trade with Germany, which normally takes more than 75 per cent of the total amount of tobacco handled in the Netherlands.

As a result of the decreased imports the Dutch market has been able, after two years of immense overstock, to reduce its stocks of tobacco on hand by 134,018,628 pounds, in spite of the decline in both exports and withdrawals for consumption.

The amount of tobacco actually coming into the international market in the past three years appears in the following table:

Imports of tobacco into the international market.

Variety.	1920	1921	1922
	Pounds.	*Pounds.*	*Pounds.*
Java and Sumatra	385,700,000	147,668,000	110,200,000
United States	55,100,000	37,468,000	15,428,000
South America	22,040,000	24,244,000	8,816,000
Greece and Turkey	39,672,000	13,224,000	8,816,000
All others	8,816,000	11,020,000	6,632,000
Total	511,328,000	233,624,000	149,892,000

It should be noted that these statistics differ materially from those contained in subsequent tables, since the above statistics include tobacco handled only in transit in addition to tobacco reported from customhouse returns.

Surplus Stocks Diminished.

The quantity of tobacco on hand in the Netherlands at the beginning of 1921 is not definitely known, but considering the exports and consumption for that year to be approximately 330,000,000 pounds, disregarding any stocks held previous to that year, there was a surplus in stock from the imports of about 180,320,000 pounds. Imports during 1920, under the stimulus of a large crop in the Dutch East Indies and the anticipation of a large movement of tobacco into Germany and central Europe, amounted to 511,328,000 pounds, as compared with a normal importation of approximately 225,000,000 pounds.

It is against this stock of 180,320,000 pounds, which is almost sufficient for the annual supply of the country and its export demands during normal years, that the trade has been constantly drawing for the past two years, with the result that it has reduced the stock by 75 per cent, and the stock of tobacco in the country at present is certainly no greater, and probably is less, than normal.

Aside from this reduction in stocks, the trade during the past year has been without redeeming features. The receipts, both in the bonded warehouses and by direct importations during 1922, decreased by 37,346,000 pounds, or a little less than 20 per cent. The withdrawals for consumption and exports decreased 62,854,000 pounds, or 23 per cent. However, the drafts

on stocks, which were greatest in 1921, continued during 1922, and, with the exception of Central and South American tobacco in 1921, no class of receipts in the past two years has equaled the deliveries.

The General Trend of Trade.

The general course of trade appears in the following table, which includes the official statistics of the entrepôt, or bonded-warehouse trade, and statistics covering direct imports and exports (after deducting deliveries from bond), excluding the transshipment trade, which is shown in a subsequent table. In the export trade, which means largely the demand in Germany, Austria, and Czechoslovakia, the demand for American tobacco was stronger than for any other variety.

The total movement of unmanufactured tobacco in the country during the past two years has been as follows:

Movement of tobacco in the Netherlands.

[In 1,000 pounds.]

Other	2,354	813	170	209	2,454	1,541
Total Central and South American	21,724	9,424	4,636	5,568	12,568	9,552
European:						
Non-Turkish	7,582	6,801	2,374	1,594	10,644	8,657
Turkish	12,017	9,543	2,989	3,238	14,885	12,842
Total European	19,599	16,345	5,363	4,832	25,529	21,499
Grand total	190,326	152,890	63,580	48,442	206,414	158,697

NOTE.—Excess of deliveries over receipts were 79,669,000 pounds in 1921 and 54,251,000 pounds in 1922.

In the comparative loss of trade the import of South and Central American tobaccos decreased the most during the year 1922, the loss being 57 per cent as compared with 1921. The loss in trade of tobacco from the United States during this period was about 42 per cent, that of Turkish was about 16 per cent, and that of the Dutch East Indies was about 9 per cent.

Consumption in the Netherlands.

The withdrawals from bonded warehouses, or direct imports for consumption, show the effects of decreased consumption of tobacco in the Netherlands. The consumption of cigars has, to a certain degree, been supplanted by the popularity and cheapness of cigarettes and smoking tobacco, which is indicated by the class of tobacco withdrawn and imported for consumption. The consumption of Central and South American, Turkish, and other European tobaccos, which are used largely for cigarettes and smoking tobacco, was heavier in 1922, while that of East Indian tobacco decreased about 8,897,175 pounds, or 29 per cent. The consumption of American tobacco was reduced about the same percentage.

Entrepôt Shipments.

The following table discloses the fact that of the total transshipments of tobacco from the Netherlands, which totaled 43,714,125 pounds in 1922, as compared with 41,059,305 pounds in 1921, Germany takes about three-fourths of the amount.

Total	41,059,305	41,059,305	43,714,125	43,714,125

Tobacco Crop of Sumatra.

According to a review of the producing markets in the Dutch East Indian trade, published by the Tobacco Warehouse Commission, the Sumatra harvest for the 1921 crop amounted to 163,681 bales (1 bale=about 175 pounds), of which importers from the United States purchased 5,245,690 pounds, as compared with purchases of 3,697,785 pounds of the previous crop. The American demand for this tobacco is the greatest factor in the market. The crop of Sumatra, which is being sold at the present time, aggregates 204,000 bales, of which about 22 per cent is considered desirable for the American trade.

The Java receipts during 1922 amounted to 325,000 bales out of a total of 368,000 bales offered by the plantations. Of the 368,000 bales offered, 292,000 bales were of the 1921 crop.

Tobacco from Central and South America.

The arrivals from Central and South American countries in 1922 were reduced by two-thirds of 1921 receipts, and the trade in American tobaccos was unsatisfactory, on account of the small demand for higher-priced tobacco, and because most offerings did not meet the requirements of the trade. The price of Burley and Virginia advanced steadily during the year, but the quality of Burley and Maryland left much to be desired. The price of Turkish tobacco advanced steadily as a result of the short crop.

Imports in January, 1923.

The imports of tobacco into the Netherlands during January, 1923, indicate that the industry is returning to normal, since the imports for the month show a marked increase over imports for January, 1922. The imports of tobacco from the East Indies were 1,760,996 pounds, as compared with 1,135,060 pounds during January, 1922, while imports from the United States increased from 2,541,900 pounds to 2,829,936 pounds. Other varieties, chiefly Turkish, increased from 835,316 pounds in January, 1922, to 1,042,492 pounds in January, 1923. Imports of cigars fell from 293,132 pounds to 123,424 pounds, which seems to indicate the breaking of the hold of German manufacturers on the Dutch market. There was an increase in imports of cigarettes, all of which came from Germany and Great Britain.

THE DANISH TOBACCO INDUSTRY.

Assistant Trade Commissioner H. Sorensen, Copenhagen.

A law regulating the importation of tobacco and tobacco products into Denmark was passed by the Danish Government about a year ago in an effort to provide protection against "exchange dumping." This law applied until April 1, 1923. From reports of the Danish Statistical Department this regulation has shown material effects on the domestic industry during the past year.

In the following table is given a statistical summary of production and importation of cigars and cigarettes, which are the most important products, for 1919 to 1922, inclusive. The favorable results of this law to the domestic industry are accentuated in the quarterly report of production and imports for 1922, which shows a marked decrease in imports and an increase in production.

Denmark's production and imports of cigars and cigarettes.

Periods.	Production.	Imports.	Total.
	Pounds.	*Pounds.*	*Pounds.*
Year 1919	5,103,220	117,510	5,220,730
Year 1920	5,422,900	271,400	5,694,300
Year 1921	3,169,035	783,550	3,952,585
Year 1922	3,070,926	1,090,225	4,161,151
First quarter 1922	617,757	351,870	969,627
Second quarter 1922	693,599	382,075	1,075,674
Third quarter 1922	767,235	241,415	1,008,650
Fourth quarter 1922	992,335	114,865	1,107,200

As a result of a law of February 18, 1922, which restricted the manufacture of tobacco and tobacco products to places suitably equipped, the number of establishments manufacturing tobacco dropped from 1,518 to 926, though the number of workers employed increased from 4,035 to 6,800 during the year.

The production during 1922 consisted of 197,960,000 cigars, 68,506,000 small cigars, and 774,534,000 cigarettes.

Tobacco Crop in Porto Rico.

The planting of the 1922–23 tobacco crop of Porto Rico was approximately 50,000 acres, and as a result of favorable weather conditions the growing crop is considered very good, according to cabled information from the Acting Governor of Porto Rico. This is a pronounced increase over the 1921–22 crop of 35,302 acres, which yielded 24,711,566 pounds. The Department of Agriculture and Labor estimates a production this year of 26,000,000 pounds, which is a substantial increase over the production of recent years. However, with the strong and growing demand for Porto Rican tobacco and cigars, and in view of the fact that practically all stocks of the 1922 crop have been exhausted, there is no cause for apprehension of an excess surplus of tobacco from this crop.

Italy's Tobacco Monopoly Shows Increased Profits.

Consul General John B. Osborne, Genoa, March 6.

It is estimated that the tobacco monopoly for the fiscal year 1922–23 will yield a revenue of 2,700,000,000 lire (1 lira=$0.193 at par and $0.05 at present exchange), as compared with a revenue of 1,581,307,272 lire for 1919–20; 2,461,869,920 lire in 1920–21; and 2,651,445,415 lire in 1921–22. The last year for which the figures on net revenue are available is 1919–20, which shows a net revenue of 979,525,764 lire. The income during the first four months of the present fiscal year was 912,900,000 lire, as compared with 891,600,000 lire for the same period last year.

Probable Demand for Tobacco in Mexico.

Vice Consul Willys A. Myers, Veru Cruz.

The Mexican cigar and cigarette manufacturers will import Sumatra wrappers and Connecticut and Virginia tobacco for blending purposes in the manufacture of cigars and cigarettes, on account of the decreased production of the 1922 tobacco crop.

Additional information regarding tobacco appears in this issue under the following sections:

Cable review, Balkans and Levant: Bulgaria's tobacco acreage and output.

CONSTRUCTION NEWS

[Further information pertaining to the following items may be obtained from the Bureau of Foreign and Domestic Commerce, or its district and cooperative offices, by referring to the reference numbers given. Where no reference number is given further information is not available.]

Canada.—The house of commons of Prince Edward Island has authorized an expenditure of $296,700 for the improvements of harbors and rivers. Considerable new work will be undertaken in construction of breakwaters and wharves throughout the province. Reference No. 88576. (Vice Consul Arthur B. Giroux, Charlottetown, Prince Edward Island.)

Canada.—The Government at Ottawa has approved the construction of an elevator by the Montreal harbor commission, which will have an ultimate capacity of 10,000,000 bushels, to be constructed in units of 2,500,000 bushels capacity. The first section, which is to cost $2,347,000, will be started soon. An enlargement of the former Grand Trunk grain elevator will be undertaken. The work is expected to cost approximately $750,000. Reference Nos. 88394 and 88686. (Consul General Albert Halstead, Montreal.)

Canada.—It is reported that a large department store of nine stories will be constructed in Montreal. An apartment house of 250 apartments will also be erected in that city. Reference No. 88721. (Consul General Albert Halstead, Montreal.)

Canada.—The installation of a filtration plant in the Province of Ontario has been recommended. Reference No. 89081. (Consul Felix S. S. Johnson, Kingston.)

France.—The inner port of Boulogne-sur-Mer is being enlarged by dredging the now unnavigable bed of the Liane River, and the building of a drawbridge will be commenced in the near future. On the works 4,000,000 francs will be expended.

Canada.—Several power companies in Ontario are planning extensive developments of hydroelectric energy. Reference No. 88690. (Vice Consul Harold S. Tewell, North Bay.)

INDUSTRIAL MACHINERY

W. H. Rastall, Chief, Industrial Machinery Division

INDUSTRIAL PROGRESS IN INDIA.

In reports previously published by this Bureau attention has been called to the rapidly expanding market for American industrial machinery in India—a country that is now absorbing approximately $100,000,000 worth of machinery a year, of which perhaps 15 per cent is from the United States. This is shown by the following table:

India's imports of industrial machinery.

Years.	Total imports.	Imports from United States.	Percentage from United States.
1913–14	£6,076,606	£112,170	1.8
1914–15	5,304,650	123,659	2.3
1915–16	3,882,306	152,075	3.9
1916–17	3,297,580	206,373	6.2
1917–18	2,579,292	490,590	19.0
1918–19	3,258,240	798,198	24.5
1919–20	8,652,879	2,531,968	29.3
1920–21	21,004,032	3,463,640	16.5

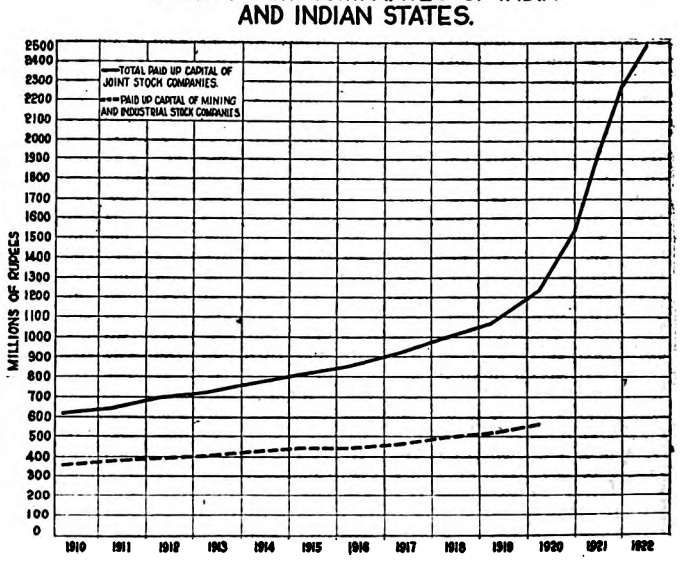
NOTE.—From a recently-published report entitled "Asiatic Markets for Industrial Machinery," which can be secured from the Superintendent of Documents, Washington, D. C.; price, 60 cents.

It has also been shown that India is definitely committed to a policy looking toward the industrialization of the country, which involves problems of great difficulty, as can be realized from the fact that the size of the country is about 60 per cent of the size of the United States, but the population is three times as large. India is a producer of raw materials, both mineral and vegetable, in great variety. As this policy of industrialization has now been pursued since about the time of the armistice, it is interesting to see the direction in which those interested are working.

Consistent Progress Being Made.

A census of the large industrial establishments was taken in 1917 and again in 1922; and in spite of the fact that there have been decreases in certain lines of activity, marked expansion is shown elsewhere. The number of rice mills has increased over 12 per cent; engineering workshops, nearly 30 per cent; sawmills, 13 per cent; woolen mills, 50 per cent; sugar factories, 37 per cent; stone works, 29 per cent; vegetable-oil mills, 25 per cent; flour mills, 25 per cent; etc. On the other hand, many new ventures have not developed satisfactorily. For example, it was discovered in war days that Germany had secured a dominant position in the export trade in hides, and that India would export to Germany hides and tanning materials in the same ship, part of which were ultimately reexported in the form of leather, despite the fact that sentiment in India seemed to favor the development of the tanning industry, certain legislative efforts having been made to extend protection thereto. Notwithstanding all this, the number of establishments in 1922 was only 32 per cent of the 1917 total, or, if the measure be the number of hands employed, the industry is only 61 per cent of its former size.

The accompanying table shows the complete summary in detail, and it is interesting to note that consistent progress has been made in practically all lines of industry, especially when measured by the number of employees, which, after all, would appear to be the most significant part of this statement.



Industrial progress in India.

Class of Industry.	Number of establishments.		Number of persons employed.	
	1917	1922	1917	1922
Cotton-spinning and weaving mills	284	285	282,297	307,343

Total	4,939	5,312	1,252,606	1,367,136

Paid-up Capital of Indian Companies.

Another way of estimating the significance and importance of the movement to industrialize India is by means of the returns published by the government of India, showing the total paid-up capital of the joint-stock companies there. As compiled, these returns include shipping, trading, banking, and insurance companies, as well as railways, mining and industrial cor-

JOINT STOCK COMPANIES OF INDIA AND INDIAN STATES.

porations, and to this extent the returns are not quite satisfactory. For certain years statistics are available showing the paid-up capital of the mining and industrial corporations separately from the above total, and in the accompanying diagram these two curves are plotted, showing the expansion that has been made since 1910. Unfortunately the separate data for the mining and industrial enterprises are only available up to March 31, 1920, but from the curve showing the total flotations it seems fair to draw the inference that very rapid development is to be anticipated. The fact that capital is supporting the plan for the industrialization of India in the way indicated by this diagram would seem also to demonstrate that persons interested in the sale of industrial machinery in India would feel justified in making a corresponding sales effort, as there is undoubtedly a demand for machinery as required for the industries represented by these capital flotations.

London Supports Plans for Industrialization of India.

To a very large extent this capital is from Indian sources, although very heavy investments of British capital are being placed in India. The growth of these flotations is apparently a very significant indication of the sincerity with which London supports the plans for the industrialization of India.

The following table shows the amount of new capital issued in London for enterprises in India and Ceylon:

Six months ended June, 1920	£1,514,000
Six months ended December, 1920	3,513,000
Six months ended June, 1921	14,638,000
Six months ended December, 1921	14,925,000
Six months ended June, 1922	14,078,000
Six months ended December, 1922	22,041,000

The record of American producers in furnishing factory machinery in India shows quite clearly that it is perfectly possible to develop this business, and the market is further attractive because the rapid rate of development to be expected there provides an expanding market that can absorb additional sales effort without seriously disturbing the existing business.

Additional information regarding industrial machinery appears in this issue under the following sections:

Tariffs and trade regulations: Import duty established on certain machinery in Greece.

Foreign trade opportunities Nos. 6043, 6054, 6056, 6057, 6058, 6059, 6060, 6061, 6062, 6063, 6064, 6065, 6066, 6067.

AUTOMOTIVE PRODUCTS

M. H. Hoepli, Acting Chief, Automotive Division

AMERICAN CARS PREEMINENT AT AMSTERDAM SHOW.

Consul Frank W. Mahin, Amsterdam, February 27; Acting Commercial Attaché S. H. Cross, Brussels, February 14.

American passenger cars predominated at the Amsterdam Fourteenth Annual Automobile Exposition held February 9–18. Of the 63 cars shown, 23 were American makes, 14 were German, 12 were French, 7 were British, 4 were Italian, 2 were Belgian, and 1 was Dutch. The show was considered a success locally; large sales were made of both low and medium priced cars, approximately in the ratio of 9 to 1. The American contingent was especially well represented in the high-priced class; although these cars attracted considerable attention, the greatest interest was shown in products selling in the Netherlands under $2,500.

German Cars Not Actively Competing.

Despite the large German representation, dealers in general feel that the German car is no longer an active competitor. The best known factories are oversold, and the florin prices of other German makes are higher than those of corresponding American vehicles. Representatives of German cars are usually financed by the manufacturer, although cars are not shipped on consignment to any considerable degree. Independent agents usually receive new florin-price schedules by registered mail every other week, with instructions that modifications may be made on consultation with the factory. It is reported that some German manufacturers do not always protect their dealers by refusing to sell direct from the factory.

American Makes the Best Sellers.

American cars were by far the best sellers, prices being lower by 20 to 50 per cent than at the exhibition in 1922; quotations on low-priced cars approached those on motor cycles with side cars. Forty-eight different makes of motor cycles were shown, 24 being English, 7 American, 7 German, 4 Belgian, 3 Dutch, 2 French, and 1 Italian. The American motor cycle, although formerly in favor, is reported to be losing the market because manufacturers do not produce a low-priced, low-powered, one-cylinder machine.

Very few American accessories were shown; the exhibits were by no means representative of the large quantity used in the Netherlands.

Factors Limiting the Automotive Market.

The passenger-car market in the Netherlands is smaller than that in Belgium, owing to better train connections in the larger cities and the smaller industrial activity. There has been less impulse to postwar expenditures than in Belgium, and the commercial crisis has been more acute. The Dutch are also more conservative, and, finally, the absence of domestic factories lessens the popularity of motoring. Regulations and ordinances forbidding new garage construction in certain areas, particularly in Amsterdam, hamper the acquisition of new cars.

On the other hand, the relation between the florin and the dollar is stable, and Dutch business shows signs of improvement; hence an increase in the motor-vehicle market may be anticipated. The demands of the market in the Netherlands in the future are ably covered in the following article, written by an official of the Spyker works and published in a number of Dutch automotive publications:

Future Demands Met by 25-Horsepower Cars.

In point of sales and manufacture automobiles must be divided into three main classes—passenger cars (subdivided, according to motive force, into approximately 60 horsepower, 25

horsepower, and 10 horsepower), trucks, and busses. In the first subclass can be counted the so-called heavy cars used principally for touring. For the moment these must be regarded as a side line by both manufacturer and dealer, since the present economic malaise permits only a small category of customers to afford such a car. The 25-horsepower car will become the vehicle for this country in the future, since the initial cost is not too high and the type combines to a certain degree the pleasure as well as the business vehicle. The 10-horsepower cars, in my opinion, are too light for the bad Dutch roads, and their body work offers too little comfort.

On account of unfavorable business conditions, the demand for trucks is small; but upon a revival of trade and industry there will certainly come some inquiry for trucks—probably of the 2-ton type. Most of Dutch highways do not permit the transport of too heavy loads without abnormal wear and tear on the roads. Omnibuses at present are built generally on 2-ton truck chassis. As the entrance step on most omnibuses is high, a construction type must be sought on which the chassis will be lower, so that entrance will be facilitated and the whole vehicle made more comfortable. At this time there is a large demand for omnibuses, since many places in this country have no rail or tram connection with the large cities.

[While the author of the foregoing article has classified passenger cars by horsepower, the American industry takes price as a basis for grouping the various vehicles, namely, those "valued over $2,000," those from "$800 to $2,000," and those "under $800." It is to be noted that the 25-horsepower car, which is considered suitable for conditions in the Netherlands, is also the type most popular in this country.]

MOTOR-TRUCK SITUATION IN JAVA.

Consul Charles L. Hoover, Batavia, January 5.

Motor-truck distributors in Java, with approximately 500 heavy trucks in stock, are facing a serious situation as the result of considerable municipal and Residency legislation which is unfavorable to the use of heavy trucks.

In the Residency of Batavia trucks of more than 2½ tons may not be used except in the municipality of Batavia. The Residencies of Preanger, Cheribon, Soerakarta, and Deli have set the same weight limits.

In the Residency of Pekalongan some roads are closed entirely to motor trucks; on other roads only light trucks of not more than 1½ tons may be used, and then only under special permit; 10 main roads are open to truck traffic, irrespective of weight. Trucks weighing over 2,000 kilos are allowed only by special permit in the municipality of Pekalongan.

Trucks weighing more than 3 tons are not allowed in the Residency of Kedoe. Trucks using solid tires are taxed 20 to 50 per cent higher, according to weight, than those using pneumatic tires.

The Residency of Semarang has not yet passed regulations regarding the use of trucks, but a special meeting will be held soon for that purpose.

Large Price Cuts Made.

Under the above circumstances motor-vehicle distributors and their bankers are facing serious losses. One of the largest colonial companies has issued a statement showing the price sacrifices it is ready to make in order to move its stock. Among these offers are some trucks, well known in the United States, for which the company paid 6,500 florins, but which it now lists at 3,500 florins, with an additional discount of 20 per cent. Other price reductions are as follows: 1½-ton truck, from 11,000 to 4,500 florins; 2½-ton, from 13,500 to 5,500 florins; 4-ton, from 14,000 to 7,000 florins; 5-ton, from 22,000 to 7,000 florins. (Rate of exchange on January 4 was 2.57 florins to $1.) All of these prices are subject to 20 per cent discount, and customers paying cash are able to secure an additional 10 per cent reduction.

Refund of Import Duties Refused.

Some of the bankers in Batavia who were heavily involved in the importation of these trucks petitioned the Government of the Dutch East Indies, through a bankers' association, to grant a refund of the import duties so that the trucks, being barred from the local highways, might be reexported to other countries where they could be used. This petition, as well as a request that trucks imported prior to the establishment of maximum weight regulations be exempted from the operation of such regulations, was definitely refused.

Under these conditions the supply of trucks on hand will meet the demand for the next two years at the rate sales are being made to purchasers located in those residencies and municipalities where the heavier makes may be operated. Even in those places the operation of trucks is unprofitable, except in a few cases, owing to the excessive rates of taxation. For example, in the municipality of Batavia, where heavy trucks are allowed, the rate of annual taxation is as follows: 1-ton truck, 300 florins; 3-ton truck, 600 florins; 4-ton, 900 florins; 5-ton, 1,200 florins; over 5 tons, 2,000 florins.

[Full details regarding the principal makes of trucks included in the present stocks, Javan imports during the past three years, and an extract from the local regulations may be obtained by interested American exporters from the Automotive Division through the proper district or cooperative office of the Bureau of Foreign and Domestic Commerce on applying for Exhibits 86662 and 87263.]

Imports of Motor Vehicles into Russia.

Abstracted by the Eastern European Division from Economic Life (Moscow) of February 28, 1923. The bureau assumes no responsibility for the accuracy of the data.

The number of automobiles imported into Russia, commencing in 1901 with 40 cars, reached over 1,000 in 1909 and 8,158 in 1917. There was no importation of automotive vehicles during 1918 and 1919; in 1920 and 1921 the number of cars imported amounted to 9 and 46, respectively. Beginning with 1922, the importation of automobiles into Russia became subject to regulation by the Automotive Transport Administration, which made available more exact data. The number of cars imported during that year amounted to 264. Import licenses were issued for 278 cars, consisting of 108 low-priced American cars, 66 Mercedes, 20 Bentz, 20 Oppel, 20 Horth, and 11 Daimler; the rest were scattered among other makes. Cars of 10 to 20 horsepower predominated. Of motor trucks imported, those of 3 to 4 ton capacity constituted about 84 per cent; but all motor trucks represented only a very small percentage of the vehicles imported.

By countries of origin for imported automotive vehicles, Germany occupied the first place, with 74.4 per cent; United States, 20.9 per cent;[1] Italy, 2 per cent; and France, Austria, and England, 1 per cent each. Germany had also led in the pre-war imports of automotive vehicles into Russia, furnishing 81 per cent of total number of cars imported by Russia in 1913. By places of destination, the 264 cars imported in 1922 were distributed as follows: 139 went to the city of Moscow and its district, 25 went to all the other parts of the country, and 100 were not yet put in operation.

[1] The bureau is unable to account for the disparity between the number of license permits for American and German cars and the actual number of importations by countries of origin.

Of the latter, 53 new machines had been put in operation in Moscow City and Province up to February 15, 1923.

Of the number of licenses issued for importing automobiles, 70 per cent went to State trading and industrial enterprises; about 8 per cent to cooperatives; 5 per cent to foreign missions and representatives; 3.5 per cent to private persons; 3.3 per cent to the autonomous territories; 1.7 per cent to the Supreme Council of National Economy; and the rest to other governmental institutions.

AUTOMOTIVE DIGEST.

Denmark—American Cars Used on Railway Tracks.

Some of the smaller private railroads in Denmark are using a number of low-priced American cars by removing the rubber tire and replacing it with a flange fastened on the under side of the wheel. These flanges are manufactured by a Danish firm and enable motor cars to be used on the railways as well as on the ordinary highways. (Consul General Marion Letcher, Copenhagen, March 5.)

Czechoslovakia—Bus Lines Steadily Increasing.

During 1922 the Czecho-Slovak State Autobus Transportation Service established 25 new autobus routes having a total length of 520 kilometers; this brings the number of lines in operation up to 100, with a combined length of 2,102 kilometers. Twenty-three light and 48 heavy trucks were used for the transportation of letters and packages alone, and covered a daily distance of 8,765 kilometers. The administration plans on establishing 56 new routes during 1923. (Consul C. S. Winans, Prague, February 16.)

Portugal—Interest in High-Priced Cars Revived.

The demand for passenger cars selling at $2,500 to $3,000 in the United States again manifested itself in Portugal during January, after the depression which succeeded last summer's considerable sale of this class of American car. One of the principal dealers is now selling one of these cars a week, while the Fiat agent is making even greater sales. (Consul General W. Stanley Hollis, Lisbon, February 8.)

Italy—Fiat Model 501 Reduced in Price.

The most popular model of the Fiat passenger car, No. 501, was recently reduced in price to 22,000 lire and 27,000 for the closed model. A year ago the open model was selling for 27,000 lire. The present price amounts to about $1,100, taking exchange at 20 lire to the dollar, and comes very close to the price asked for the lowest-priced American car on the market or for a high-powered motor cycle, owing to the high duty imposed on foreign motor vehicles. (Commercial Attaché H. C. MacLean, Rome, March 6.)

Java—Motor-Cycle Market Steadily Increasing.

In contrast to the depression existing in the passenger-car and truck markets in Java, motor-cycle sales are steadily increasing. Although dealers do not expect any exceptional demand, a normal yearly increase in sales is anticipated. Imports of motor cycles in 1919 totaled 718, of which 658 came from the United States. In 1920, 1,049 machines were imported, of which 969 were American; in 1921 imports numbered 1,327, of which 888 were from the United States. Statistics for 1922 are not yet available. (Consul Charles L. Hoover, Batavia, January 5.)

Spain—New License Tax Imposed on Motor Trucks.

The Spanish Government on February 28 published a ministerial decree imposing the following annual license tax on trucks and automotive vehicles used for commercial purposes: 1-ton capacity, 150 pesetas; 2-ton capacity, 250 pesetas; 3-ton capacity, 500 pesetas; 4-ton capacity, 800 pesetas; over 4 tons, 1,600 pesetas. The Spanish Government, in order to preserve the roads, is also attempting to discourage the use of heavy and antiquated two-wheel cars by levying higher taxes on this type of cart than on the four-wheel types. (Commercial Attaché Chas. H. Cunningham, Madrid, March 5.)

Additional information regarding automotive products appears in this issue under the following sections:

Tariffs and trade regulations: Classification of auto parts and motors in Mexico corrected.
Foreign trade opportunities Nos. 6022, 6029, 6041, 6042, 6048, 6049.

COMMERCIAL INQUIRIES ANSWERED BY BUREAU AND DISTRICT OFFICES.

Correspondence Division, R. H. Brasel, Chief.

The following table shows the number of commercial inquiries answered by the Bureau of Foreign and Domestic Commerce in Washington and its seven district offices in the United States during the periods June 27, 1921, to July 1, 1922; July 2, 1922, to March 24, 1923; and the week ending March 31, 1923.

Classes.	June 27, 1921, to July 1, 1922.	July 2, 1922, to Mar. 24, 1923.	Week ended Mar. 31, 1923.
Total inquiries answered	[1] 505,661	[1] 619,664	[1] 16,597
The above total includes the following classified inquiries in addition to many others which could not be identified under a specific group: [2]			
Commodity:			
Agricultural implements	6,210	9,976	214
Automotive	17,674	39,546	886

Eastern Europe	4,837	19,201	759
Western Europe	32,378	191,289	4,915

[1] Does not include inquiries handled by foreign service of the bureau (27 posts, 80 representatives) by the cooperative offices maintained by the bureau in 25 chambers of commerce and boards of trade in the United States.

[2] This classification of inquiries under "Regional," "Commodity," "Technical," and "Miscellaneous" headings cover only the period from Oct. 2, 1921, to July 1, 1922. The figures for trade opportunity addresses and trade lists are for the entire year.

[3] Information reserved from "Foreign trade opportunity" announcements, printed in each issue of the COMMERCE REPORTS. (Name and address of foreign inquirer interested in the purchase of American goods, including references, cable address, and other details.)

TEXTILES

Edward T. Pickard, Chief, Textile Division

WORLD TEXTILE NEWS IN BRIEF.

German Textile Trade With Karachi.

A noteworthy feature of the import trade of Karachi is the growing proportion of German wool textiles imported. Germany in turn is buying increasing quantities of raw cotton and wool. (Consul Avra M. Warren, Karachi, India, January 18.)

Arghan Cultivation and Fiber Extraction.

On February 23, 31 crates of "silk grass" (arghan) plant suckers were shipped to England, where experiments in the culture and growth of arghan are to be carried out in greenhouses. (Consul William Wallace Early, Belize, British Honduras, March 11.)

Greek Trade in Raw Wool.

Greek imports of wool and hair amounted to 395,156 kilos (kilo=2.2046 pounds) and exports of wool to 633,756 kilos in 1921. For the first seven months of 1922 imports of wool and hair were 182,619 kilos and exports of wool 449,909 kilos. (Acting Commercial Attaché R. O. Hall, Athens, February 9.)

Port Elizabeth Ostrich Feather Market.

An average amount of business was transacted on the Port Elizabeth ostrich-feather market during January, sales amounting to 25,105 pounds, valued at £22,315, compared with 17,553 pounds, valued at £16,186, in December. (Consul Monnett B. Davis, Port Elizabeth, Cape of Good Hope, South Africa, February 1.)

Austrian Trade in Cotton Manufactures.

Austrian exports of cotton manufactures during the first nine months of 1922 amounted to 15,231,000 kilos, valued at 93,170,000 gold crowns ($18,876,242), against only 10,216,700 kilos exported in 1921. Germany, Hungary, Czechoslovakia, Yugoslavia, Rumania, and Poland, in the order named, were the chief markets for Austrian cotton goods in 1922. (Consul Robert Heingartner, Vienna, February 12.)

Brazilian Cotton Exports.

Exports of cotton from Brazil during 1922 were 33,947 metric tons, compared with 19,607 metric tons in 1921 and 37,424 tons in 1913. Exports of cotton from Brazil, after earlier periods of expansion, have never shown such encouraging development as in the last few months, according to the Jornal de Commercio. (Commercial Attaché W. L. Schurz, Rio de Janeiro, February 22.)

Sisal and Flax in Kenya.

There were large shipments of sisal and flax from the Colony of Kenya during the last quarter of 1922. The sudden drop in the market value of flax had nearly ruined many settlers, who had planted flax in large quantities during the post-war boom, and was one of the principal causes of the great depression of the past two years. (Consul William L. Jenkins, Nairobi, Kenya, Africa, January 8.)

Rumanian Cotton Goods Prices Lower.

Prices for cotton and cotton goods in Rumania have fallen off somewhat. Cotton yarn that was selling a few weeks ago at 1,100 lei per package now finds no buyers at 1,000 lei. Shirtings show a decrease of 10 to 15 per cent, the lowest price quoted being 338 lei per meter (meter=1.09 yards). Czecho-Slovak prints from old stocks sell at 45 to 50 lei per meter. (Commercial Attaché Louis E. Van Norman, Bucharest, February 19.)

Port Elizabeth Mohair Stocks Scarce.

There is little activity on the Port Elizabeth mohair market at present, chiefly because of scarcity of ready supplies. Stocks on hand are estimated at only 1,200 bales, consisting mainly of winter hair. The new season commences about March. Shipments of mohair to the United States declined from 140,656 pounds, valued at £83,249, in December to only 68,573 pounds, valued at £44,362, in January. (Consul Monnett B. Davis, Port Elizabeth, Cape of Good Hope, South Africa, February 1.)

Madras Piece-Goods Demand Reviving.

Signs of reviving demand for piece goods are not lacking in the Madras bazaars, but business has been quiet. It is believed that a healthy demand from up country, where consuming markets are reported as short of stocks, is on the point of materializing. Inquiries have been mostly for grays and whites, but offers have been too low to suit holders, whose tone is firmer in view of rising replacement costs cabled from Manchester. (Vice Consul H. A. Doolittle, Madras, India, February 8.)

Indian Exports of Jute Manufactures.

Exports of jute bags from India fell from 467,959,703 bags in 1921 to 401,689,951 in 1922. The principal destinations in 1922 were: Australia, 59,196,653 bags; Straits Settlements, 53,108,000; North America, 49,630,800; Cuba, 37,920,200; Burma, 37,469,350; United Kingdom, 30,008,300. Exports of jute cloth increased from 1,112,357,685 yards in 1921 to 1,256,917,484 yards in 1922, of which North America took 980,361,192 yards, South America 157,379,860 yards, the United Kingdom 54,890,500 yards, Australia 24,002,216 yards. (London Times Trade Supplement, March 17.)

Cuban Market for Men's Neckties.

The market for men's neckties in Cuba is especially strong, popular prices ranging from $1.75 to $2.50. On the whole the United States holds the leading position in this field, although an appreciable number of neckties have recently been imported from Italy and some are manufactured locally. Sales are made to the stores by traveling salesmen from the United States or by local wholesale houses that carry stocks. In many cases the larger retail stores buy direct from American manufacturers. [A list of importers of ties in Habana may be obtained from the Textile Division of the Bureau of Foreign and Domestic Commerce at Washington by referring to file No. 7820.] (Assistant Trade Commissioner C. A. Livengood, Habana, March 17.)

INDIA'S TEXTILE TRADE WITH JAPAN.

Assistant Trade Commissioner C. B. Spofford, jr., Calcutta, January 17.

An encouraging feature for Japan in the Indian import trade is the position its manufacturers have maintained for textiles. Despite severe losses during the recent depression, Japanese cotton and silk goods have in the main held their own in India against those of the United Kingdom and the Continent. In order to appreciate more fully what this trade amounts to and in what lines Japan has been able to compete, a survey of the more important classes of textiles seems desirable.

Cotton Twist and Yarn.

Competition between the United Kingdom and Japan in gray cotton yarns begins with 20s and, save for 21s to 25s, extends up to and including 60s; beyond this count the United Kingdom appears to have the import market to itself. Japanese rivalry is more serious in mercerized yarns, but it is not a factor in the colored twist and yarn trade, and is comparatively unimportant in bleached yarns. Imports of cotton yarn into India from the United Kingdom and Japan are compared in the following table:

India's imports of cotton twist and yarn.

Cotton twist and yarn.	1920-21			1921-22		
	Total imports.	From United Kingdom.	From Japan.	Total imports.	From United Kingdom.	From Japan.

Mill production of cotton yarn of all sorts in British India for these same fiscal years amounted to: 1920–21—1s–15s, 228,417,244 pounds; 16s–20s, 187,165,042 pounds; 21s–25s, 141,929,193 pounds; 26s–30s, 46,895,054 pounds; 31s–40s, 14,867,869 pounds; above 40s, 2,067,137 pounds; wastes, 313,902 pounds; total for the year, 621,655,441 pounds. 1921–22—1s–15s, 252,475,673 pounds; 16s–20s, 187,662,415 pounds; 21s–25s, 144,951,702 pounds; 26s–30s, 48,378,631 pounds; 31s–40s, 16,706,626 pounds; above 40s, 2,363,580 pounds; wastes, 472,093 pounds; total for the year, 653,010,720 pounds.

Of India's imports of cotton yarn and twist in the nine months—April–December, 1922—amounting to 45,722,338 pounds, the United Kingdom supplied 27,633,756 pounds and Japan 16,877,468 pounds, but data on domestic mill production for this same period are not yet available.

Future of Japan in Indian Piece-Goods Market.

Japan has made marked progress in the cotton-goods trade, increasing its shipments to India from a total of 9,000,000 yards in 1913–14 to 170,000,000 yards in 1920–21. This position was attained largely as a result of close cooperation between the Japanese Government, banks, merchants, and manufacturers during and following the war.

Japan's success in expanding or even holding this valuable trade will probably depend upon its ability to produce a higher grade of cloth at a competitive price. This will not be easy, because its plants and equipment were imported at an unusually high cost, its labor bill is increasing, its working hours have been shortened, and the importations of expensive raw material continue necessary. However, with less skilled labor, the operating costs of Japanese mills in the production of fine fabrics will not show so wide a differential when compared with costs in British and American mills. Increasing production of cheap goods in China and India will necessarily affect Japanese exports of this class.

Indian mills are becoming more important as a factor in supplying the domestic demand as the quality of their output improves. Indian mills (exclusive of those in Native States) produced 1,194,284,154 yards of gray and bleached piece goods and 431,606,734 yards of colored piece goods during the year ending March 31, 1922, compared with 1,040,648,638 yards of gray and bleached and 432,838,231 yards of colored in 1920–21. The output of gray and bleached dhutis increased from 325,452,281 yards in 1920–21 to 439,261,486 in 1921–22, and gray and bleached shirtings and long cloth from 431,962,856 yards in 1920–21 to 463,249,037 in 1921–22. In gray-goods sales to India, Japan has been losing ground since 1921, while the United Kingdom has been gaining. Imports of white and colored goods from both countries are still much below 1921 figures. These losses are evident in the following table:

India's imports of cotton piece goods.

Piece goods.	Year ending Mar. 31—		April–December, 1922.
	1921	1922	
	Yards.	*Yards.*	*Yards.*
Gray (unbleached)	580,208,403	635,608,133	697,657,496
United Kingdom	420,287,698	526,493,158	630,702,830
Japan	150,428,376	83,490,368	61,340,724
White (bleached)	421,734,132	306,166,654	292,514,645
United Kingdom	408,560,383	299,339,523	287,429,792
Japan	3,819,617	1,860,766	1,616,412
Colored, printed, or dyed	489,255,755	138,278,689	165,517,312
United Kingdom	448,598,019	121,559,458	141,886,548
Japan	16,074,955	4,924,076	11,805,831

Japan Dominates Cotton Hosiery and Silk Market.

Japanese manufacturers control the Indian market for certain qualities of cotton hosiery and supply about 70 per cent of the imports. This proportion was increased to 80 per cent during April–December, 1922. The bulk of this trade consists of light, cheap underwear and socks for the bazaars, in which lines the manufacturers of other nations can hardly hope to compete. The better qualities are imported from the United States, with increasing competition from Germany.

As might be expected, Japan has a commanding position in the important silk market of India. The bulk of the imports of yarns, noils, and warps is obtained from Japan, with the balance shared chiefly between China and Italy. Silk piece goods are likewise an important item in Japan's shipments to India, this trade being practically monopolized by Japan and China. Silk mixtures come principally from the United Kingdom, Germany, France, and Italy. The silk sewing-thread trade is largely in British hands.

During the war Japan built up a considerable trade in wool cloths in India in lines which compete with those of Central Europe, and as a consequence receipts of Japanese goods are now negligible. Even without European competition, the products of Indian woolen mills in Cawnpore, Bombay, and Dhariwal would probably have eliminated the Japanese article from this market.

India's Textile Exports to Japan.

Raw cotton makes up over 85 per cent of India's total exports to Japan. Jute products rank next to cotton, but Japan's requirements for jute manufactures are small. In 1921–22 sales of sacking gunny bags to Japan amounted to 35,765,333 bags, valued at 13,089,669 rupees, and of all jute manufactures 13,168,888 rupees. Japan also purchased 12,002 tons of raw jute valued at 2,408,375 rupees. For April–December, 1922, jute manufactures show sharp declines from the 9 months' figures of the preceding year, but raw jute increased in both quantity and value.

Winter Sale of Furs in London.

Consul General Robert P. Skinner, London, England, February 24.

Practically the whole offering of furs, which was fully up to average, at the winter sale in London just concluded was absorbed. Prices showed some decline, especially in the staple articles. A feature of the sale was the large number of buyers who attended, the Continent, particularly France and Germany, being unusually well represented. Scandinavian buyers were noticeably absent, while Americans were present in fair numbers.

The demand was good and the bidding animated. The home trade bought large quantities, and a considerable part of the offerings was taken on French account. Germany did not purchase up to the usual quantity, but America was keenly interested in white fox, stone marten, Persian lamb, squirrel, fitch, kolinsky, and mole.

Brokers point out that there are still considerable quantities of this season's catch in the United States, "and it would therefore seem likely that shipments to the spring sales [which commence on April 19] will be considerable. The demand for nearly every kind of fur remains good, and the present range of prices is by no means high. We therefore expect that, provided the political situation does not become worse, the present level of prices will be maintained at the coming sale."

Fluctuations in Prices.

Red fox (best kinds), otter, fisher, lynx, wolverine, sea otter, chinchilla, black musquash, mink, Persian lamb, marmot, white bear, kitt fox, mole, nutria, dry hair seal, and monkey realized the same prices as at the fall sale, while red fox (cheaper kinds, consisting almost entirely of European and Asiatic skins), stone marten, baum marten, kolinsky, and fitch rose 10 per cent. Kangaroo advanced 20 per cent and wallaby 30 per cent.

All others declined—white fox by 5 per cent; Australian red fox by 5 to 10 per cent; and ringtail opossum, marten, skunk (best northwestern, western, and Michigan), brown bear, grizzly bear, South American fox, cat (house), and Russian badger by 10 per cent. A 12½ per cent drop occurred in beaver and 15 per cent in cross fox, northern and fresh southwestern skunk, and salted fur seals. The decline in Australian opossum was from 15 to 20 per cent. Clear silvery silver fox, Russian sable, stale southwestern skunk, civet cat, squirrel skins and backs, gray fox, and badger fell by 20 per cent, and brown and southern musquash, raccoon, and black bear by 25 per cent. The heaviest fall—30 per cent—affected silver fox (other than clear silvery), blue fox, ermine, American opossum, wolf, and leopard.

The Italian Silk Industry.

Consul Leon Dominian, Rome.

The production of cocoons in Italy has declined about 50 per cent because a large number of mulberry trees in Piedmont, Lombardy, and Venetia were cut down during the war. In Lombardy the peasants are now paying rent to landowners and managing their cocoon raising independently, whereas formerly expenses and profits were shared by both. However, under the present system production is low, this being attributed to the fact that the peasants have not availed themselves of the knowledge and experience of the landowners.

Factory capacity has also been curtailed since the war about 33 per cent, as many plants were sold during the war for their metal. This fact, added to the present restricted export market, has caused a decline in the mill output in about the same ratio as cocoon production.

Italian exporters of silk pay particular attention to the Latin American and Near Eastern markets. Transactions in the latter field are hampered by the exchange situation, and any improvement will be dependent upon currency stabilization in the Balkan countries and the regions to the east.

German Fabric-Glove Industry in 1922.

Vice Consul Christian T. Steger, Dresden, February 12.

The German glove industry during 1922 was much more fully occupied and in general more successful than had been anticipated at the beginning of the year. Prices asked by the manufacturers were paid without question by foreign buyers. The greater part of the output went to foreign countries, only a comparatively small portion remaining at the disposal of domestic customers. The local trade was slow in placing orders at the beginning of the year in the expectation of a rise in German exchange and a consequent drop in prices. While home buyers hesitated, the industry was booked far ahead with export business and prices had greatly increased.

During the early part of the year prospective increases in English and American tariffs caused buyers from these countries to purchase everything that was available for shipment before the new duties should go into effect. German buyers who held back until after the delivery of these orders in the hope of lower prices were disappointed, since higher cost of raw materials and labor had advanced the cost of the finished product.

Before the application to German gloves of the English key industries act, the Austrian and Czecho-Slovak manufacturers were unable to compete with the German industry in foreign markets. Since, however, these new tariff regulations are in force, German fabric gloves are practically excluded from the United Kingdom and its colonies. Toward the end of the year German factories were forced to resort to the delivery

of glove material to the ready-made clothing industry. These deliveries are assuming great importance as a means of continuing production in the industry. This same tendency toward the sale of material is seen in the foreign trade, since the Germans are now better able to compete in this line than in the finished article. The sale of semifinished products seemed at the end of the year to be the only means of sustaining mill activity.

Yorkshire Rag Trade Improves.

Consul Percival Gassett, Leeds, England, February 21.

Renewed interest is developing in Yorkshire rag circles and prices are again rising for certain grades. Following the levying of an import duty on rags by the United States on September 22 last, exports from the Leeds district declined, dropping from a total declared value of £286,846 in the September quarter to £61,611 in the December quarter—that is, from $1,271,119 to $276,412 at the rates of exchange ruling during the two periods. Furthermore, prices of the soft rags affected declined by £15 to £20 a ton.

Now exports of rags to the United States are steadily increasing, and the old prices are being obtained and have even been exceeded in several instances. American manufacturers are making a class of cloth for which they are practically obliged to have large quantities of good-quality soft rags of light shades. British underwear and stockings answer this purpose. It is surmised, though, that not all the rags now being bought in the local market are for export or immediate consumption in the home trade and that there is some likelihood that prices will continue to harden.

The Fur Fair at Chalon-Sur-Saone.

Vice Consul Hugh S. Fullerton, Lyon, France, March 5.

The Chalon annual fur fair is reported to have enjoyed an even greater popularity this year than it did last year. Although its activities were, as always, rigidly limited to the one day (February 27), a large number of French and foreign buyers were attracted to it and the volume of business was large. The skins originated for the most part in contiguous portions of France—the Alps, the Jura, the Vosges, the plateau of Langres, and the Department of the Cote-d'Or.

Prices in nearly all cases showed marked increases over 1922, quotations for the principal pelts in 1923 were: Mountain fox, 80–120 francs; field fox, 40–60 francs; marten, 250–280 francs; skunk, 35–40 francs; otter, 80 francs; mole, 2 francs; badger, 15–20 francs. Prices in 1922 were: Mountain fox, 45 francs; field fox, 30 francs; marten, 160 francs; skunk, 20 francs; otter, 50 francs; mole, 1 franc; badger, 15 francs. Even rabbit skins, which are always disposed of in great quantities, rose from some 15 francs per kilo in February, 1922, to from 20–28 francs.

The depreciation of the franc gave considerable impetus to the purchase of the more expensive skins by British and American dealers. French firms found it difficult to compete under these adverse conditions. German, Polish, and Czechoslovakian buyers contented themselves with rabbit skins and the less-sought-after furs. Most of the purchases were for export.

FRENCH TEXTILE SITUATION.

Based on cable from Commercial Attaché Chester Lloyd Jones, Paris, April 9.

Stocks of raw cotton warehoused at Havre on March 30 were 125,000 bales, of which 114,000 were American; and 18,000 bales, all from the United States, were afloat for this port. Stocks at other continental points totaled 191,000 bales, of which 158,000 came from the United States; and stocks afloat for these ports amounted to 227,000 bales, of which 119,000 were American. Stocks on hand and afloat for England were 1,023,000 bales, of which 542,000 came from the United States. Cotton textiles are quiet. Spinners are fairly busy but lack new orders. The condition of the French embroidery industry continues unfavorable.

The activity of the wool industry is below normal, but the prospects are better for the near future.

Flax sowing is under way, but it is too early to estimate the acreage. Linen spinners and weavers have orders for several months ahead. The condition of the market is very good, and important quantities of yarn are being exported to England.

Silk Production, Imports, and Exports in 1922.

A recent unofficial report gives the following figures for the 1922 production of the French silk industry: Raw silk, 195,000 kilos; silk conditionings at Lyon, 5,891,500 kilos, valued at 1,072,100,000 francs; silk goods, 2,253,000,000 francs; artificial silk, approximately 140,000,000 francs. France's imports and exports of raw silk, floss silk, silk yarns, and silk fabrics for 1922 were:

French imports and exports of silk, silk yarns, and silk fabrics in 1922.

Articles.	Imports.		Exports.	
	Quantity.	Value.	Quantity.	Value.
	Kilos.	*Francs.*	*Kilos.*	*Francs.*
Cocoons	491,900	18,879,000	31,300	1,420,000
Raw silk	5,757,200	1,142,922,600	350,600	54,290,000
Silk waste	64,300	724,000	451,500	9,933,000
Spun or thrown silk	134,300	29,178,000	741,400	135,212,000
Floss silk:				
Raw	7,273,600	94,335,000	880,300	17,773,000
Combed	307,800	9,153,000	113,200	7,358,000
Yarns of silk and waste silk [1]	1,066,900	57,524,000	684,500	57,650,000
Manufactures of silk and waste silk [1]	375,300	85,669,000	6,345,400	1,377,817,000

[1] Includes artificial silk.

The present situation of silk mills is good, and orders on hand are sufficient for some time. There are prospects ahead, however, of lower prices for manufactured products.

French Artificial-Silk Industry Prosperous.

Assistant Trade Commissioner David S. Green, Paris, March 15.

The excellent position of the French artificial-silk industry is reflected in the annual report of one concern engaged in the manufacture of artificial silk by the viscose process. The firm has recently secured the right to exploit British patents covering the manufacture of artificial silk from cellulose acetate and has established a branch mill with a capacity of half a ton of the cellulose product daily. An option on an artificial-silk mill erected during the war near Rouen has also been secured.

Cotton Growing Increasing in South Africa.

Consul Lewis V. Boyle, Durban, Natal, December 9.

There are said to be approximately 4,000,000 acres of land in the Union of South Africa suitable for growing cotton, 2,000,000 acres of which are in the Transvaal and 2,000,000 acres in Natal. Considerable interest in growing cotton has recently been aroused in Natal because of the ravages of the boll weevil in the United States. The production of cotton in South Africa has steadily increased from 22 bales in 1910 to 2,320 bales for the season 1921–22.

The outlook for the 1922–23 crop is exceedingly promising, because the rains fell earlier than usual, permitting the cotton to be planted in October and November, about one month sooner than in past seasons. It is estimated that there are 5,200 acres under cotton in Natal this season, and that the combined yield in Natal and the Transvaal of the current crop will be about 4,000 bales of 500 pounds. The principal variety grown is known as "Griffin," which has a staple about $1\frac{1}{8}$ inches long.

Cotton is produced in Natal at the present time in the district known as the Pongola Valley, about 250 miles from Durban, along the line of the railway connecting that city and Johannesburg. The cotton is picked by native women and children, the supply of this labor being so abundant that it is unnecessary to hire native men to pick cotton. Picking costs amount to approximately 2 shillings per 100 pounds.

Additional information regarding textiles appears in this issue under the following sections:

Cable review, Western Europe: French textile conditions quiet.
Latin America: Wool prices in Chile.
Tariffs and trade regulations: Increased Greek inport duty on floor oilcloth and sailcloth.
Foreign trade opportunities Nos. 6021, 6022, 6026, 6027, 6028, 6029, 6030, 6031, 6032, 6033, 6034, 6035, 6036, 6037, 6038, 6039, 6044, 6082.

SPECIALTIES

Henry H. Morse, Chief, Specialties Division

SPECIALTY COMMODITIES IN WORLD MARKETS.

FURNITURE.

Growing Market for American Metal Furniture in Japan.

There is a growing demand for metal office furniture in the Japanese market, which is being supplied largely by American manufacturers. There is little local competition, as the manufacture of metal furniture is of little importance in Japan. The Japanese have always been skilled woodworkers and have made wooden furniture almost exclusively. After a prolonged investigation only one manufacturer who makes metal furniture has been located. This concern is Iwashiya Matsumoto Fukumatsu, 12, Sanchome, Honcho, Nihonbashiku, Tokyo. He is chiefly engaged in the manufacture of surgical appliances, but makes metal beds as a side line.

The Japanese, as a rule, do not sleep on beds, but use "futons" (heavy padded quilts), which are spread on the floor. These are taken up each morning and put away in closets, where they are out of the way until needed again. However, a few Japanese have become accustomed to western modes of life and have built foreign additions to their native houses. These additions are furnished entirely in foreign style, including, of course, foreign beds. In addition there is a market for American metal beds, which are used by hospitals and foreign-style hotels, and in the homes of foreign residents. (Commercial Attaché James F. Abbott, Tokyo.)

The Mexican Market for Furniture.

There has been a progressive increase in the amount of furniture imported into Mexico during the past four years. For example, in 1922 American furniture was imported into Mexico as follows: Metal furniture of all types, $361,531; chairs, $125,135; wooden office furniture, $62,863; and other wood furniture, $465,963. This steady increase illustrates the growing taste and appreciation of the Mexican public for furniture manufactured in the United States.

There is a certain amount of local competition. In Mexico City two large furniture factories do a moderately good business and individual cabinet and furniture makers make up a considerable amount of smaller furniture to order. Before the war a large trade was carried on in Mexico by Austrian manufacturers of bent-wood furniture with wicker seats and backs. This trade, however, has largely lapsed. France exports a limited amount of furniture to Mexico. This, for the most part, is of elaborate design and upholstered in bright colors.

Most of the furniture in the Mexican market is handled by dealers who import for their own account. (Consul General Claude I. Dawson, Mexico City, March 9.)

SODA-FOUNTAIN EQUIPMENT.

Market for Soda-Fountain Equipment in Syria.

An American soda fountain has recently been introduced in Beirut. Its success should warrant the introduction of others in other parts of the city. On account of climatic conditions the vendors of cool drinks form an important part of the community. That these would be replaced by modern up-to-date soda fountains seems possible in view of the fact that the natives have already taken to the one fountain already in operation. A good method of introducing equipment of this kind would be through advertising matter printed in French. Prices are generally quoted c. i. f. Beirut. (Vice Consul Frederick O. Bird, Beirut.)

Possible Market for Soda Fountains in Santiago de Cuba.

There is a good possibility for the successful introduction of soda fountains in the city of Santiago de Cuba. At the present time there is only one modern soda fountain in operation in the city, and while soda fountains are not nearly so largely patronized in Cuba as in the United States the patronage of the one now in operation would seem to justify the installation of others. (Consul Harold D. Clum, Santiago de Cuba, January 19.)

Opportunities for Soda Fountains in Vera Cruz.

There should be a good opportunity for the establishment of a modern up-to-date soda fountain in the city of Vera Cruz. At present there are no large soda fountains in use, although conditions would seem to warrant the establishment of one. (Consul John Q. Wood, Vera Cruz, January 15.)

Italy Offers Possible Market for Soda Fountains.

At the present time neither ice cream nor sodas are consumed to any degree in Italy. There is a variety of ice cream similar to the French "parfait," but it is only served in restaurants. There is a possibility, however, that the large number of American tourists who visit Italy every year would make a modern soda fountain a good investment. So far as the Italians themselves are concerned, it is difficult to give an accurate opinion as to whether they would patronize soda fountains or not. They are much addicted to soft drinks composed of syrup and water and it is therefore quite possible that they would find soda a drink much to their taste. (Consul Homer M. Byington, Naples.)

DENTAL SUPPLIES.

Increased Purchase of Dental Supplies in Cuba.

Cuban purchases of dental supplies from the United States are increasing. Large surplus stocks ordered before the financial crisis are now about exhausted and orders are being placed to replenish them. While the previous large purchases, often covering a whole year's potential supply, are not likely to return, smaller and more frequent orders will take their place on a gradually increasing scale. Much of the business is done on open account, the balance being on 30 to 90 days' documentary draft basis. (Commercial Attaché Paul L. Edwards, Habana, March 10.)

The Sicilian Market for Dental Supplies.

Dental instruments and dental supplies of American manufacture are particularly strong in Sicily because of their excellent quality. So far as dental chairs are concerned, Germany offers keen competition on a price basis, although German dental chairs lack both the finish and durability of the American product. Most of the dentists in Sicily procure their equipment and supplies either direct from manufacturers or through agents established in Milan, Genoa, or Rome, where stocks are kept. (Consul Edward I. Nathan, Palermo.)

SANITARY SUPPLIES.

The Market for Plumbing Supplies in Tientsin.

The demand for plumbing supplies in Tientsin, China, is on the increase. A considerable number of modern buildings, warehouses, etc., are being constructed, which are to be equipped with water and steam heating apparatus. Besides the use which plumbing supplies would find in ordinary types of buildings, there is also a big demand for them on the part of railways, mines, electric light companies, and factories. The chief articles required are pipes and tubes, sanitary articles, heating devices, and other commodities used in general plumbing work. Most of the plumbing supplies in Tientsin come from the United States. Before the war European countries were the chief source of supply, but now American plumbing supplies predominate the market, and the development of Tientsin and its surrounding territory should bring with it an increased demand. (Consul General Stuart J. Fuller, Tientsin, February 10.)

Market for Drinking Fountains in Birmingham.

There is a good potential market for drinking fountains in Birmingham, England. Public fountains are widely employed, but these are universally of the type making use of an insanitary metal cup for common use. In office and public buildings, too, the only facilities seem to be ordinary faucets, for which the user must supply his own cup. Thus, while tea and other beverages have a wider use for quenching thirst in England than in the United States, which makes the installation of convenient and up-to-date sanitary drinking fountains less of a necessity, there is nevertheless a good field for their introduction. (Consul John F. Jewell, Birmingham.)

Cuba Purchases American Plumbing Supplies.

The increase in building activities throughout the island of Cuba during the past few months has resulted in an improved demand for plumbing equipment and supplies. These come almost exclusively from the United States, a very small amount coming from England. The trade has recently been receiving offers of German plumbing equipment and supplies, but thus far practically no shipments from that source have been received. (Acting Commercial Attaché Paul L. Edwards, Habana.)

HARDWARE.

Good Market for Iron Buckets in Mexico.

The United States supplies about 75 per cent of the iron buckets for the Mexican market, with most of the remainder coming from the United Kingdom. So far as construction is concerned, American buckets are lighter and deeper than those supplied by England. These latter also are elevated about three-quarters of an inch from the floor by means of a flange or hoop welded to the bucket proper, and they are considerably wider at the top. This provides an advantage for such uses as scrubbing floors, etc., where it is necessary to dip mops into the bucket at frequent intervals, but for the carrying of liquids the American style is much preferred on account of its lighter weight and narrower top. American-made buckets of the 14-quart size retail for the equivalent of 65 cents, while those of the same capacity from England sell for about 90 cents. (Consul Walter F. Boyle, San Luis Potosi, February 24.)

The Tientsin Market for Saws and Tools.

There is a good market in Tientsin, China, for small tools and hack-saw blades. As regards the former, the superiority of American tools seems to be quite generally recognized, the chief obstacle to their introduction being the price factor. In general, the Chinese use low-grade tools, some of these being made in local establishments and most of the rest of low grade being supplied by Japan.

While hack-saw blades are not definitely listed in the Chinese customs returns, there is reason to believe that the trade in these is keeping pace with the growing industrial development of China. The present time should be opportune for an aggressive introduction of American hack-saw blades into the Chinese market. (Consul General Stuart J. Fuller, Tientsin, February 8.)

Buenos Aires a Good Market for American Shovels.

Most of the shovels in use in Argentina, except those purchased by British railroads, come from the United States. The chief demand is for low-grade shovels, although a few of high quality are sold. The styles most commonly used are the plain-back, square-point, and

plain-back round-point models with "D" handles. This type is sometimes sold with long handles. Both plain narrow and wide back grafting spades are also used. These, however, are only sold with "D" handles. Current quotations on fourth-grade round-point shovels are about $8.90 per dozen, c. i. f. Buenos Aires. Retail prices average 30 pesos paper per dozen (normal exchange value of paper peso is 42.4 cents; now quoted in the neighborhood of 37 cents), which is more or less the present landed cost.

The peculiarity of the Argentine market is the affiliation of the word "Excelsior" with shovels. All manufacturers who sell shovels in Argentina label their products with this word regardless of type or quality. In fact, the situation has reached such a point that several dealers in Argentina were not able to dispose of their stock until they had changed the labels on the shovels to include the word "Excelsior." After that they found a ready sale for them. (Commercial Attaché Edward F. Feely, Buenos Aires, February 8.)

Market for Toys in Madrid.

Consul Keith Merrill, Madrid.

There is a fair sale of American toys in the city of Madrid, Spain. Competition in this line comes chiefly from Germany—particularly in the cheaper varieties of toys. Nevertheless toy shops are numerous in Spain, and these report excellent sales.

Additional information regarding specialties appears in this issue under the following sections:

Tariffs and trade regulations:
Increased Greek import duties on certain specialties.
Increased import duty on matches in Colombia.
Warning against sending unsolicited advertising matter to Mexico.
Proposed Rumanian prohibition on imports of luxuries.
Foreign trade opportunities Nos. 6022, 6044, 6070, 6071, 6072, 6073, 6074, 6076, 6077, 6078, 6079.

LUMBER

Axel H. Oxholm, Chief, Lumber Division

EDUCATION OF A LUMBER EXPORTER.

Generally speaking, few employees of an average lumber export concern in this country can be said to receive a thorough knowledge of the various phases of the lumber export trade, chiefly because our men do not as a rule spend any time abroad to widen their knowledge in this line. In looking over European lumber trades journals one is struck by the many advertisements in which young men are offering their services to lumber importing and exporting companies at a modest salary in order to gain experience. In northern Europe, for instance, the general procedure is for a man just out of college to spend at least one year in some lumber mill and in forest operations. Another year is spent in the foreign-sales division of the home office. At the age of 20 to 25 years the young man goes abroad and spends some time in various foreign lumber agencies. Usually a start is made in the United Kingdom, because it is the most important market. Then another year or so may be spent in France and perhaps one year in Germany or Spain.

Inasmuch as this work is undertaken as a matter of study the salary commanded is naturally very moderate but usually sufficient to pay for board and room. On the other hand, a student is given more latitude in regard to the choice of work, and he is made thoroughly familiar with sales methods, handling of complaints, and receiving of cargoes. When the young man returns to his native country he has acquired a broad experience and is in a position to take up his duties as foreign sales manager. Because of this foreign experience he is in a better position to satisfy his foreign customers and to understand the position of his agents.

Sales Managers Keep in Close Touch With Foreign Markets.

Usually the larger mills send out their sales manager once a year to visit the various markets, thereby keeping in close touch with their connections and also enabling their sales manager to obtain first-hand knowledge of foreign market conditions. On the other hand, foreign importers and agents often send some of their staff who are desirous of learning the business to north European mills, where they obtain a thorough knowledge of the conditions pertaining to the production of lumber. There can be no doubt about the beneficial effect of such interchange of information and, as a result, the trade in north European lumber is not facing so many difficulties and seems to be conducted on a very smooth basis. The agents and importers know the particular kind of stock which the various mills are in position to offer, and the exporters know the requirements of the foreign trade and how to satisfy their foreign customers.

The Lumber Division has received the impression from several of the leading exporters in this country that such a plan, as far as American exporters are concerned, would be of great benefit. However, an objection has been raised because it is felt that young men, given a chance by their concerns to take these foreign trips, would in many cases look to competitors for better opportunities upon return to the United States. This may or may not be the reason why young men in our lumber export offices are not given an opportunity of obtaining a first-hand knowledge of foreign conditions. The fact remains that our lumber export industry suffers to-day because so many individuals in charge of export sales have not a thorough understanding of foreign market conditions, and many exporters lack the personal relations with their foreign customers which have meant so much to our colleagues in other lumber exporting countries.

MARKET FOR HEWN SQUARE TOP LOGS.

In view of the fact that Egypt imports many millions of feet of small hewn poles to be used in the construction of native huts, there seems to be an opportunity for the disposal of low-grade material from this country. The present sources of supply of this stock have been northern and eastern Europe. Finland is a large supplier, shipping about 50,000,000 feet of such tock in 1913. Owing to the stringent forest regula-

tions in northern Europe, it is not believed that this exportation can be carried on in the future on a large scale because such timber has largely been cut from young trees and the cutting of these trees is being prevented by law. On the other hand, in various parts of the United States enormous quantities of top logs are left in the forests because it has not paid to take them to the sawmills.

Egyptian Merchant Interested in Such Stock.

The Lumber Division has discussed this matter with an important Egyptian merchant handling such stocks and he has requested to be placed in touch with forest owners interested in supplying this material. The particulars are as follows:

The timber goes under the name of Egyptian balks. The dimensions are: 3 by 3 inches, 3 by 4 inches, 4 by 4 inches, and 4 by 5 inches. The lengths run from 13 to 25 feet, the latter lengths, however, being rare. Resinous woods are generally preferred. The stock is hewn on all four sides, but may have a wane from the top extending along half of the length of the timber. At the butt and at the middle the timber must hold the required measurements, but the top may be from ½ to 1 inch scant.

The quality is inferior to other kinds of hewn timber, and the consumers are not particular in regard to number of knots, discoloration, crooks, and other defects. It must be remembered that this material goes into the construction of very cheap native huts. It can, therefore, not be compared with the usual grade of building construction timber in the United States. Even a small amount of rot is tolerated. The present price paid for this stock landed in Alexandria, Egypt, is about $34 per thousand feet (based on measurements taken at the middle).

The lack of direct steamship connections from the principal lumber ports of the United States to Egypt is a handicap, but it is the opinion of the Egyptian merchant in question that cheap freight rates may be obtained by employing schooners or tramp steamers. The trade is very important in volume and it would well pay some enterprising lumber or logging concerns to investigate this matter. Even if the profit on this business should not be as satisfactory as the one realized on sawn lumber it must be taken into consideration that the demand for forest waste material would clean up the forests and thereby reduce the fire danger and would furthermore give employment to more men in the woods.

The Lumber Division will be pleased to connect interested parties with the Egyptian merchant in question. Particulars should be given covering kind and location, as well as quantities of each size and lengths of material available.

JANUARY LIVERPOOL LUMBER TRADE.

Consul Horace Lee Washington, Liverpool, England, February 13.

The timber market of Liverpool had a very successful month during January and imports and consumption both far surpassed the figures for the corresponding month of last year. Elm, oak, and birch logs had a very restricted demand during the month. A fair quantity of oak planks arrived, of which a large number went into consumption. One report states that the demand for oak planks continues strong at very firm prices and that it is difficult to secure supplies to fill orders. Birch planks, likewise, sold in very fair quantities, and, in spite of the fact that arrivals from North America were heavy, the local sales far exceeded the imports, and only a small stock remains.

The following table shows the imports and consumption for January, 1923, of such woods as come to Liverpool from America, and also the stock of these woods at the end of January, 1922 and 1923:

January imports, consumption, and stock of American woods.

Kinds of wood.	Imports, January, 1923.	Consumption, January, 1923.	Stock on Jan. 31.	
			1923	1922
	Board feet.	*Board feet.*	*Board feet.*	*Board feet.*
Douglas fir	780,000	432,000	1,428,000	3,828,000
Southern yellow pine:				
Hewn timber		60,000	180,000	120,000
Sawn timber	1,344,000	1,764,000	3,684,000	4,512,000
Planks and boards	1,008,000	708,000	2,208,000	1,824,000
American oak:				
Logs		24,000	408,000	528,000
Planks	432,000	264,000	828,000	1,032,000
American birch:				
Logs	36,000	36,000	216,000	204,000
Planks	480,000	648,000	1,092,000	1,416,000
Railway ties	59,400	19,800	693,000	8,712,000

ANTWERP LUMBER TRADE INCREASED DURING FEBRUARY.

Consul G. S. Messersmith, Antwerp, Belgium, March 5.

The lumber market in Antwerp showed improvement during February. There was some demand for American lumber, principally for oak. Transactions increased over those in January, and the price of yellow pine and oak advanced. This advance is due to the exchange, as prices in the United States to importers here remain unchanged. Stocks of American lumber are normal and consist mostly of oak.

The market for Scandinavian lumber is firm and prices are increasing. Demand continues good, but there have been no importations, as dealers accumulated their stocks several months ago. Stocks are not large enough compared with the demand, and it is believed that they will be liquidated before the arrival of the new lumber when the season opens for exportation from Scandinavia.

There were quite a few arrivals of Polish oak during February. This oak is much cheaper than American oak, but the sawing, dealers say, is not as carefully done as in the United States. Polish oak continues to be the principal competitor of American oak. There have been no further importations from Japan, and the stock of Japanese lumber in Antwerp is being slowly liquidated.

It is interesting to note that Memel and Danzig, which supplied considerable lumber for the Belgian market last year, have disposed of practically all of their stocks in England. In general, the demand continues good and prices are increasing slightly. The price increases both for American and Scandinavian lumber are due to the fall in the Belgian franc rather than to increases in prices in the countries of origin.

CUT-OFFS.

Siberian Lumber Export Tax Removed.

The Vladivostok government has removed the export tax on Siberian woods formerly imposed by the White régimé. (Commercial Attaché Julean Arnold, Peking-Shanghai, February 15.)

Swedish Sawmill Strike Settled.

The sawmill strike in Sweden was settled on the basis of status quo wages, according to cable advice received by the Lumber Division on April 3. Operations were expected to be resumed the first week in April.

Logging Operations in Northern British Columbia.

Logging operations in the northern half of British Columbia during January produced 2,102,461 board feet of spruce logs, 420,227 board feet of white-fir logs, and 22,000 linear feet of red-cedar poles. The Prince George Division has forests not yet thoroughly cruised, which probably contain hundreds of millions feet of spruce, hemlock, and cedar suitable for lumber and poles. (Consul E. A. Wakefield, Prince Rupert, British Columbia, February 24.)

Sorting Device for Lumber.

The attention of the Lumber Division has been called to a patented device for sorting lumber, which seems to merit the attention of our lumber mills. The inventor, a Swedish sawmill owner, has for years experimented with automatic sorting of lumber, and this system has been installed in several large Swedish sawmills, according to advice received by the Lumber Division. The American patent carries the number 1349836 and the inventor's name is G. E. Johanson.

Samples of Foreign Woods Received by Lumber Division.

The Lumber Division has received from the American consulate at Manzanillo, Mexico, samples of nine native Mexican woods, including mahogany, cedro, coral, primavera, solocuahil, rosa morada, mapilla, parota, and tampisiran. A sample of "ñambar," or rosewood, has also been received from the American consulate at Corinto, Nicaragua. These samples have been placed in the exhibit files of the Lumber Division, where they may be examined.

Lumber Business at Foochow, China.

The lumber business at Foochow has improved. Rafts, both of poles and logs for sawing, are coming down river in considerable quantities again, indicating that a modus operandi has been found on the upper river. However, the new taxes on river traffic have so increased the laid down cost of sawn lumber in Foochow that it is feared that Foochow pine lumber will lose out in foreign competition. (Consul Ernest B. Price, Foochow, February 15.)

Greek Timber Cut Small.

The Ministry of Agriculture has announced that during the first six months of 1922 there were cut from the forests of Greece 15,243,648 board feet of timber. From this total there were obtained 29,426 long tons of charcoal, and 96,165 long tons of fuel wood. The revenue of the State from taxes on these and other forest products during this period amounted to a total of $197,291 (at the average New York rate of exchange for the drachma during this period.) (Chas. E. Dickerson, jr., clerk to Trade Commissioner, Athens, January 27.)

Exports of Timber from Russia During 1922.

About 72,000,000 board feet of round timber, 396,000,000 board feet of lumber, and 3,240,000 board feet of hewn timber were shipped from Russia during 1922, according to the Lesopromislennoe Delo (a Moscow timber journal). The greater part of the exports (about 55 per cent) went via White Sea ports. About 22 per cent went from Petrograd and about 20 per cent across the western frontier, while only 3 per cent went from Black Sea ports. The value of timber exported was $14,599,500, as compared with $77,864,000 in 1913. The loss of Riga, Reval, and Libau now compels the Russian exporters to seek other outlets. Efforts have been made to direct the exportation via Petrograd by giving timber a discount from the usual charge for railway freight. (Consul Leslie A. Davis, Helsingfors, January 31.)

Italian Lumber Market Uncertain.

With regard to the general situation of the Italian lumber market, "Il Legno" reports that no change has recently taken place. There are very few sales at low prices, and altogether the market is decidedly dull. Owing to the limited amount of new construction and the few orders that are being placed, competition is very keen and buyers are holding off in the hope of a further decline. The Austrian Government has been granting assistance to its exporters who may be expected to make a special effort to place their goods in Italy, owing to the uncertainty of conditions in Germany and Polish competition in that market. Czechoslovakia is also active, although the recent improvement in the market has permitted a renewal of exports to Germany. Altogether the outlook for the future is decidedly uncertain, although normally at this season the market usually shows a decided tendency. (Commecial Attaché H. C. MacLean, Rome, March 10.)

Philippine Lumber Market.

The Philippine demand for Pacific coast lumber has gradually declined as local lumber has been made available, according to a report from Trade Commissioner John A. Fowler, Manila, under date of January 22. He adds that at one time from 10,000,000 to 12,000,000 feet of Douglas fir were used during the year, but at present 2,000,000 feet is considered to be a good turnover. This lumber is used for barges and for other purposes where a light lumber is required. Approximately 100,000 feet of California redwood is used during the year. Local stocks are well proportioned to the demand. (Trade Commissioner John A. Fowler, Manila, January 22.)

A later report cabled from Trade Commissioner Fowler on March 22 states that Douglas fir continues in good demand. The advance in price of native lumber reported in January is not yet fully effective. The February imports of lumber and manufactures amounted to 418,000 pesos (1 peso=$0.50).

Imports at Boulogne-sur-Mer Greatly Increased.

The imports of wood from the Scandinavian countries and Russia into the port of Boulogne-sur-Mer for 1922 were almost twice as large in volume as those for 1921. In 1921 the port received 41,622,000 board feet, while in 1922 receipts amounted to 77,249,000 board feet. The 1922 tonnage came principally from Russia (314,000 board feet), Finland (21,746,000 board feet), and Sweden (55,136,000 board feet).

A total of 6,566,000 board feet was received at the port during January, 931,000 board feet coming from Finland, 4,742,000 board feet from Sweden, and 893,000 board feet from Norway. In February the receipts dropped to 4,082,000 board feet, 251,000 board feet coming from Finland and 3,391,000 board feet from Sweden. (Vice Consul Wm. W. Corcoran, Boulogne-sur-Mer, March 10.)

Additional information regarding lumber appears in this issue under the following sections:

Cable review, Balkans and Levant: Rumanian lumber exports.
Latin America: Brazil to organize forestry service.
Tariffs and trade regulations:
Removal of Italian export restriction on certain lumber.
Revised export duties on timber products in Rumania.
Foreign trade opportunities Nos. 6050, 6051, 6052, 6053.

MINERALS AND METALS

Luther Becker, Chief, Iron and Steel Division

ITALY'S MINERAL PRODUCTION IN 1922.

Commercial Attaché H. C. MacLean, Rome, March 5.

While Italy's mineral wealth is decidedly limited in so far as the development of known deposits is concerned, practically all of the principal metals are found in greater or less quantities, and in a few instances Italy occupies a position of considerable importance. The question of developing the country's natural resources more extensively has recently been receiving a good deal of attention; and as capital is available, it seems probable that the present production will be materially increased, at least in some instances.

The Bureau of Mines in the Ministry of Agriculture has just given out provisional figures covering the output not only of minerals but also of certain products of Italy's metallurgical establishments for 1922. These statistics in the main show wide variations when compared with 1921, especially for iron and copper ore, mercury, sulphur, iron and steel, and zinc, as below (quantities stated in metric tons of 2,204.6 pounds):

Italian mineral and metallurgical output in 1921 and 1922.

Articles.	1921	1922	Articles.	1921	1922
OUTPUT OF MINES.			OUTPUT OF MINES—con.		
	Tons.	*Tons.*		*Tons.*	*Tons.*
Iron ore	274,000	416,400	Slate	9,700	12,700

[1] Kilos of 2.2046 pounds.
[2] Of this total, 1,200 tons were electrolytic zinc.

Conditions in Iron and Steel Industry.

The most striking change appears in the case of iron ore and iron and steel. In 1922 the output of iron ore reached 416,400 tons, as compared with 274,000 tons in 1921, an increase of more than 50 per cent. In 1913, however, 603,000 tons of iron ore were mined, while in 1917 the maximum production was reached with 994,000 tons. Thus the showing made in 1922 is good only when comparison is made with 1920 and 1921, the two years during which the crisis in the Italian iron and steel industry was most acute. Turning to pig iron, an increase of 175 per cent over the previous year is seen in the case of iron smelted with coke, whereas both charcoal iron and synthetic iron declined; but the three items grouped have a total in 1922 of 91,400 tons, compared with 60,400 tons in 1921. Steel increased in about the same proportion.

These figures indicate clearly the revival that took place in the Italian iron and steel industry in the latter half of 1922. Still, as in the case of iron ore, the 1922 production of iron and steel was considerably smaller than in 1913 and far below the maximum attained during the war. In 1913, 427,000 tons of pig iron and 933,000 tons of steel were produced, while in 1917 the maximum was reached, with 471,000 tons and 1,331,000 tons, respectively. Thus, although steel production is at about the pre-war level, pig-iron tonnage is only about 21 per cent of what it was in 1913. In place of pig iron steel manufacturers have been utilizing large quantities of iron and steel scrap, of which 208,000 tons were imported during the first nine months of 1922, the latest period for which statistics are available.

Copper, Mercury, and Bauxite.

While Italy possesses no important deposits of copper and occupies an insignificant position among copper-producing countries, the decline that has taken place in the quantity of copper ore mined is rather interesting. In 1913 production amounted to over 89,000 tons and was maintained at approximately this level during the war. In 1919 the quantity mined fell to 16,000 tons, and, although a small increase took place in 1921, the total for 1922 was only 7,134 tons.

As a result of the acquisition of the Istrian mines, located in the territory annexed after the war, Italy has risen to a position of importance as a producer of mercury. In 1919 the production of metallic mercury was only 548 tons, or one-half the average that was maintained during the war. In 1920 the Istrian mines produced 526 tons and the total rose to 1,401 tons. In 1921 there was a decline to 1,071 tons, but in 1922 production rose to 1,530 tons. The decline in 1921 was primarily due to labor troubles at the most important mine in Tuscany, which was shut down for about six months.

Italy's production of bauxite has also been materially increased by the annexation of the Istrian Peninsula. Whereas for the six years from 1916 to 1920 the quantity of bauxite mined averaged less than 8,000 tons, in 1921 it grew to 49,120 tons, of which 46,000 tons were produced in the Trieste district, and in 1922 a further increase was recorded. Though no official figures are available, it is known that a fair export trade in this commodity is being developed.

Sicilian Sulphur Crisis Relieved.

The crisis in the Sicilian sulphur industry became especially acute in 1922. In 1915 the production of raw sulphur was 358,000 tons and of ground sulphur ore 22,000 tons. By 1921 these totals had declined to 284,000 tons and 29,000 tons, respectively, and in 1922

production was only one-half the 1915 total. Notwithstanding this falling off in output large stocks of sulphur are still being carried by the Sicilian Sulphur Consortium, and a special effort has been made to maintain exports in the face of American competition. During the first nine months of 1922 a very good showing was made, exports of crude and refined sulphur having amounted to about 81,500 tons.

It is essential to Sicily that the sulphur industry should be kept alive, and the Government has just come to the aid of the consortium by guaranteeing a bond issue of 100,000,000 lire to be made by the latter, the proceeds of which will materially strengthen its financial position and will permit it to carry the accumulated stocks until they can be distributed. An agreement with American sulphur interests which has recently been concluded is expected to be of considerable benefit to the Sicilian sulphur industry.

UNITED STATES IMPORTS OF PIG IRON DECREASING.

Imports of iron and steel products into the United States during December amounted to 96,398 long tons, nearly one-third less than the total for November. The entire loss is accounted for by a drop in pig iron, which for the present is less readily available in Europe for exportation to America than it was during the fall of 1922. Importation of scrap, the bulk of which still comes from Canada, has risen slightly.

During the two months under consideration the receipts of foreign iron and steel products into the United States consisted of:

United States imports of iron and steel for November and December, 1922.

Articles.	November.	December.	Articles.	November.	December.
	Tons.	*Tons.*		*Tons.*	*Tons.*
Pig iron	93,767	54,728	Tubular products	308	265
Scrap	25,575	28,602	Boiler and other plates	320	147
Ferromanganese, manganese metal and alloys	6,192	5,160	Round iron and steel wire	230	137
Steel ingots, blooms, billets, slabs, steel bars, etc	2,008	1,760	Nails and screws	27	84
Structural shapes	3,055	1,447	Castings and forgings	163	81
Bar iron	2,114	1,171	Flat wire and strip steel	195	66
Ferrosilicon	415	1,053	Wire rope and insulated wire, all kinds	2	49
Rails and splice bars	1,378	992	Sheets and saw plates	273	17
Tin plate	34	347	Bolts, nuts, rivets, and washers	4	15
Wire rods	120	277	Total	141,180	96,398

In addition to the above tonnages, there were imported during December 80,634 square feet of card clothing, 167,221 tons of iron ore, and 18,305 tons of manganese ore and concentrates. France supplied 52,044 square feet of card clothing and the United Kingdom 27,589 square feet. Of the iron ore, Cuba shipped 60,100 tons, Chile 59,000 tons, Algeria and Tunis 24,520 tons, and Sweden 22,386 tons. All but 5 tons of the manganese ore and concentrates came from Brazil.

December Imports by Countries of Origin.

The United Kingdom furnished nearly one-half of all the iron and steel products imported into the United States during December, the other leading sources for the month having been:

Leading sources of December imports of iron and steel.

Countries.	Tons.	Countries.	Tons.
United Kingdom	45,808	Jamaica	2,712
Canada	16,814	Panama	2,257
France	9,371	Netherlands	2,037
Cuba	5,764	Sweden	1,958
Belgium	5,130	Peru	1,586
Germany	2,793		

Of the British shipments 37,217 tons were pig iron, 5,151 tons ferromanganese and manganese alloys, 1,977 tons were scrap, and 692 tons represented commodities embraced in the classification including steel ingots, blooms, billets, slabs, bars, etc. Canada's more important consignments included 14,492 tons of scrap, 1,053 tons of ferrosilicon, and 942 tons of pig iron. Receipts from France were largely pig iron—7,770 tons—although 990 tons of structural shapes and 428 tons of rails and splice bars deserve mention. Belgian and German shipments were mostly pig iron—4,760 tons and 2,094 tons, respectively. Scrap composed all but 1 ton of Cuba's share and the entire consignments from Jamaica and Peru. It was also the major portion—2,072 tons—of Panama's shipments. The Netherlands sent 1,945 tons of pig iron to America. The more important products received from Sweden were 1,050 tons of bar iron and 712 tons of steel ingots, blooms, billets, slabs, bars, etc., and 149 tons of wire rods.

VIZCAYAN IRON MINING IN 1922.

Consul H. M. Wolcott, Bilbao, Spain.

The iron mines of Viscaya Province in 1922 produced a total of 1,287,302 metric tons of ore, official returns distributing the output by quarters as follows:

Iron-ore production of Vizcayan mines, 1922.

Period (1922).	Rubio.	Washed.	Calcinated.	Total output.
	Tons.	*Tons.*	*Tons.*	*Tons.*
First quarter	165,267	42,519	67,073	274,859
Second quarter	178,325	42,438	85,616	306,379
Third quarter	184,720	42,461	86,093	313,274
Fourth quarter	218,767	89,042	84,981	392,790
Total	747,079	216,460	323,763	1,287,302

Last year's results represented the lowest output of the Vizcayan mines in more than four decades. The year opened with unusually large stocks on hand at the mines, due to the greatly decreased demand for Bilbao ore in the United Kingdom in 1921, but there was a partial revival in the demand from England in the closing months of 1922.

The Year's Exports—Outlook More Promising.

The following table shows the total exports of Vizcayan iron ore from the ports of Bilbao and Castro Urdiales by countries of destination for the years 1913, 1921, and 1922 in metric tons of 2,204.6 pounds:

Exports of Vizcayan iron ore, 1913, 1921, 1922.

Countries of destination.	1913	1921	1922
	Tons.	*Tons.*	*Tons.*
Great Britain	2,062,450	499,413	919,303
Holland [1]	847,670	209,578	208,776
France	148,809	37,472	4,560
Belgium	60,075	16,634	31,973
Germany	25,933	11,942	3,297
Total	3,144,937	775,039	1,167,909

[1] Exports to Holland were principally for transshipment to Germany.

The partial revival in Great Britain's demand for Bilbao ore in recent months and the rise in sterling exchange (which means a better return to local exporters) tend to a more optimistic outlook for this basic industry of the Bilbao district at the beginning of the present year than has been noted for some time. Local mine operators and ore exporters feel that the critical point in the depression has passed, but the prices at present realized are not sufficiently remunerative to permit any except the best situated mines to operate at a profit.

CEYLON PLUMBAGO OUTPUT AND TRADE.

Consul Marshall M. Vance, Colombo, February 7.

The plumbago industry of Ceylon has not recovered from the slump that occurred at the close of the World War. The larger mining centers have been shut down for the past four years, and only a few of the smaller mines have been active.

Exports in 1922 showed a great increase over those during 1921 and were larger in volume than in any year since 1918; they were still, however, much below pre-war exports and were less than one-third the shipments of the peak year of 1916. The prices obtained last year were not so high as those of 1921, although they exhibited a hardening tendency in the final quarter.

The Director of Mines of the Government of Ceylon states in a recent report that on May 1, 1922, a little over 20,000 tons of all grades of plumbago were being held in the island. This stock was reduced by January 1, 1923, to 15,100 tons.

Chief Foreign Buyers of Plumbago.

The United States has been by far the largest purchaser of Ceylon plumbago during the past 10 years and took 134,893 hundredweight, or 64 per cent of the total exports, in 1922. This is a 213 per cent increase over the amount bought by America in 1921. Other large purchasers in 1922 were the United Kingdom, Japan, Germany, Australia, British India and Burma, and France. Exports to all these countries, except Australia, increased markedly in 1922, as is seen below:

Exports of plumbago from Ceylon, 1913–1922.

Year.	United States.	United Kingdom.	Japan.	Germany.
	Cwt.	*Cwt.*	*Cwt.*	*Cwt.*
1913	289,218	106,954	2,151	123,559
1914	138,545	52,712	1,243	62,952
1915	276,421	113,412	311	.....
1916	503,741	111,712	.....	.....
1917	419,141	93,117	.....	.....
1918	163,553	127,731	1,222	.....
1919	79,896	45,198	1,601	.....
1920	119,843	37,082	6,552	3,157
1921	43,062	6,627	9,461	14,398
1922	134,893	21,024	18,973	18,679

Year.	Australia.	India and Burma.	Other countries.	Total exports.
	Cwt.	*Cwt.*	*Cwt.*	*Cwt.*
1913	4,606	667	43,652	570,807
1914	6,469	1,252	21,389	284,562
1915	5,246	989	39,972	436,351
1916	5,581	2,365	44,817	668,216
1917	6,252	3,417	2,013	523,940
1918	5,769	6,054	11	304,340
1919	2,924	1,812	1,097	133,428
1920	9,999	2,635	4,832	184,100
1921	8,127	3,818	1,503	86,996
1922	7,584	5,329	4,753	211,235

Large buyers not listed were Russia (until 1916) and Belgium. No shipments were made to Belgium during the war years, but exports to that country and to France and the Netherlands as well are now on the increase. The unit employed in the table is the hundredweight of 112 pounds.

Outlook for 1923.

An increased demand for plumbago was felt during the last three months of 1922. As a result, the opening of additional mines is now being contemplated, but until present stocks are still further reduced a general resumption of mining will not occur. It is doubtful if many of the larger pits will reopen before the middle of 1924 unless a heavy demand for Ceylon plumbago develops within the next year.

French Iron and Steel Situation.

Cable from Commercial Attaché Chester Lloyd Jones, Paris, April 9.

Supplies of coke were low in France during the greater part of March, and blast-furnace operators were forced to import fuel from various countries. Since the beginning of the Ruhr occupation 40 blast furnaces have been blown out, but the supply of coke from the Ruhr is increasing and the Societe Cooperative des Hauts Fourneaux claims that the worst of the crisis has passed. This organization hopes to deliver to its blast furnaces 22 per cent of their coke demands during April at basis price.

French production of iron and steel during February was 305,000 metric tons of pig iron and 289,000 tons of steel ingots and castings, a marked decrease from the January output of 426,000 tons of pig iron, 399,000 tons of steel ingots, and 8,500 tons of steel castings. La Journee Industrielle estimates that the loss to the French iron and steel industry has been 100,000,000 francs for January and February and perhaps 100,000,000 francs more for March. Blast furnaces were unable to fill their orders, and conditions were generally upset in March.

Prices are now quoted as follows: Phosphorous pig iron, 500 to 520 francs per metric ton; hematite pig iron, 540 to 580 francs; merchant bars, 860 francs f. o. b. mill; structural shapes, 820 francs; soft open-hearth steel plates, 5 millimeters thick, 950 francs f. o. b. mill; wire rods, 900 francs; and nails, 1,350 francs.

Greek Output of Magnesite and Chrome in 1922.

Consul Leland B. Morris, Saloniki, January 26.

Consequent upon the abnormal conditions of the country, the exploitation of the Yerakini magnesite mines was not actively carried out during 1922 despite a brisk demand on the part of foreign buyers. The total output during 1922 was approximately 2,700 metric tons, against 4,200 tons in 1921. The whole of the 1922 production, together with the stocks on hand at the end of 1921, amounting in all to 5,900 tons, was exported. The principal buyers were Great Britain, France, and Germany. No interest was noted on the part of American houses. No magnesite was calcined during 1922 because of the high cost of fuel.

As in 1921, chrome mines in this district were not exploited during 1922. Various reasons are given for their nonoperation, among them small demand for chrome, unfavorable prices, and unsettled general conditions.

Production of Central Metallurgical Industry in Soviet Russia.

Abstracted by the Eastern European Division from Economic Life (Moscow), January 26. The bureau assumes no responsibility for the accuracy of the figures.

Of the three metallurgical districts of Russia—Southern, Ural, and Central—the Central is the least productive, but it possesses the great importance of the mills being situated in close proximity to the machine-works centers of Petrograd and Moscow. For this reason the rehabilitation of several blast furnaces in the regions of Tula, or along the Oka, is considered highly essential.

The largest active blast furnaces of the Central metallurgical region, the Vyksunsk and Tashinsk plants, are controlled by the State machine trust "Gomza," in whose works there is produced almost half of the output of open-hearth steel of the Central district. Open-hearth ingots and rolled materials are also produced at the Putilov machine works in Petrograd, at the former Goujon works at Moscow, and at the Dumot mills of Tzarytzin. The Gomza plants proper, as well as the works above mentioned, are consumers of pig iron in quantities several times the capacity of the blast furnaces of the Central district. The proportion of pig-iron production in this region to the output of open-hearth steel and rolled materials can be seen from the following table of production for the calendar year 1922:

Articles.	First half year.	July–September.	October–December.	Total output.
	Poods.[1]	*Poods.*[1]	*Poods.*[1]	*Poods.*[1]
Pig iron	779,000	267,000	400,000	1,446,000
Open-hearth ingots	2,860,000	1,167,000	2,088,000	6,115,000
Rolled materials	1,992,000	839,000	1,402,000	4,233,000

[1] 62 poods = 1 long ton.

While the output of pig iron in the Central district amounted to but 13 per cent of total production in 1922, that of open-hearth ingots and rolled steel accounted for 28 and 27 per cent, respectively, of the total for Soviet Russia. The shortage of pig iron, in view of the state of transport, was made up by a disproportionately high use of scrap in open-hearth practice.

Bolivian Tin Mining Prosperous.

Consul D. C. McDonough, La Paz, February 12.

The mining industry in Bolivia is becoming more prosperous every day, with the price of tin, the principal product, rising consistently. The price of tin is now £188 sterling per ton of pure tin, as compared with an average price of £159 in 1922. Exports of tin concentrates amounted to 53,237 metric tons in 1922, the largest quantity ever exported in any one year.

An American company is planning to put in a mill with a capacity for treating 200 tons of ore daily, which will make it the second largest tin mine in Bolivia. Chilean capitalists hold options on several mining properties in Bolivia, which they may exercise and start several new mines. The rumor persists that a Bolivian capitalist who controls the largest tin mines in the country has sold them to American interests.

Improvement in Quebec Mineral Industry.

Consul E. Haldeman Dennison, Quebec, Canada, March 19.

The past year was a considerably more encouraging one for the mining industry of Quebec Province than was 1921, notwithstanding values of some of the principal items did not increase proportionately with the quantities. The total value of the mineral output of the Province in 1922 was $17,898,062, a 15 per cent gain over the preceding year. For the first time in the history of mining in the Province, however, metalliferous ores were not produced.

[Preliminary statistics of the output of minerals and building materials in Quebec for 1921 and 1922, as published by the provincial Department of Colonization, have been forwarded by Consul Dennison to the Bureau of Foreign and Domestic Commerce, which also has on file a copy of the preliminary report of the mineral production of all Canada for 1922 issued by the Dominion Bureau of Statistics.]

Additional information regarding minerals and metals appears in this issue under the following sections:

Cable review, Western Europe: Fuel shortage handicaps metallurgical industries in France.
Latin America: Copper market in Chile continues firm.
Tariffs and trade regulations: Mexican method of assessing the export tax on copper.

CHEMICALS

Charles C. Concannon, Acting Chief, Chemical Division

CANADA AN IMPORTANT PRODUCER OF ARSENIC.

Consul Felix S. S. Johnson, Kingston, Ontario, February 27.

Canada's production of white arsenic up to 1903 was secured from a plant at Deloro, Ontario, which treated mispickel residues from which the gold content had been extracted by amalgamation and bromocyanide treatment. In 1906 plants treating cobalt ores made provision for the recovery of white arsenic as a by-product, and since then white arsenic has been produced each year.

The total Canadian output of arsenic in its various forms for the five years 1917 to 1921 was:

Canada's total production of arsenic, 1917–1921.

Production.	1917	1918	1919	1920	1921
	Pounds.	*Pounds.*	*Pounds.*	*Pounds.*	*Pounds.*
From arsenical concentrates	560,000	2,156,000	1,060,000	1,256,000	2,982,000
White arsenic	5,312,000	4,964,000	5,718,000	3,662,000	
Total quantity	5,872,000	7,120,000	6,778,000	4,918,000	2,982,000
Total value	$669,431	$563,639	$509,924	$447,848	$269,300

Large Purchases by United States.

Arsenic forms one of the principal articles of export from the Kingston consular district to the United States, these shipments during the five years ending December 31, 1922, having amounted to:

Exports of arsenic from Kingston consular district to United States, 1918–1922.

Years.	Pounds.	Value.
1918	2,315,258	$235,822
1919	2,822,542	228,610
1920	2,022,209	230,919
1921	1,612,006	114,778
1922	2,333,136	176,846

As the above figures show, the major part of Canada's total arsenic output is treated in this consular district and exported to the United States.

Composition of the Ontario Ores.

The arsenic ores found in the Kingston district consist generally of quartz more or less heavily impregnated with mispickel, with occasional copper pyrites and frequently a large percentage of iron sulphide. The ores are worked for their gold and arsenic contents, the ore of the most important deposit of the region containing 12 per cent of metallic arsenic.

Arsenic is also a constituent of the silver-cobalt ores raised at Cobalt and is recovered in large quantities in the silver refineries. [The names of refineries in Canada in which arsenic from cobalt ores is produced may be obtained by addressing the Chemical Division, Bureau of Foreign and Domestic Commerce, Washington, D. C.; refer to file No. 87662.]

Quite recently the manufacture of insecticides, including Paris green, lead arsenate, and calcium arsenate, was begun at Deloro. The field for the employment of arsenical vermicides and insecticides is practically unlimited.

REVIVAL OF BARBADOS ALOE INDUSTRY.

Consul John J. C. Watson, Bridgetown, Barbados, British West Indies, March 8.

At the last monthly meeting of the Barbados Agricultural Society B. A. Bourne, acting director of agriculture, stated that he believed it would be profitable to grow aloes again in this island for the American market. In the opinion of Mr. Bourne, there are about 8,000 acres of waste land along the coast in Christ Church, St. Lucy, St. Philip, St. John, and St. Joseph Parishes suitable for the growth of the plant. Aloes were raised in this island for commercial purposes as far back as 1657, and the industry was kept up until the early part of the present century. It was abandoned then, due to the fact that Curaçao and the other Dutch Islands had begun growing aloes, which resulted in overproduction and a consequent drop in price.

The aloe plant grows to an average height of 2 feet, with a number of leaves which are about 4 inches broad, three-quarters of an inch thick, and 18 inches long. The commercial value of the aloes lies in the juice contained in these leaves. The leaves are ripe for cutting at the end of the first year and bear every year for six years, after which the yield falls off. The average yield for full-grown plants is about 500 pounds per acre. When the plant begins to bloom, which is in February and March, the leaves are cut off and the juice is collected in gourds, boiled, and allowed to cool.

Aloes are planted in rows about 2 feet apart, the distance between each plant being 1 foot. All that is required in the cultivation of aloes is to manure the soil well before planting and then to keep the land weeded. One advantage of this crop is that other crops, such as okra, guinea corn, and yam, can be grown between the rows; also the gourd vine, the gourds of which are afterwards used to contain the juice of the aloes.

Conditions in German Fertilizer Industry.

Consul F. T. F. Dumont, Frankfort on Main, January 18.

The demand for nitrogen in Germany is normally greater than can be supplied by the German nitrogen syndicate, and permission was given last year for the importation of 200,000 tons of Chilean nitrates. It is stated that the syndicate thereupon exchanged 10,000 tons of sulphate of ammonia for 13,000 tons of Chilean nitrates, having more sulphate of ammonia than was needed by German agriculture. The transaction is said to have been conducted at a loss, due to differences in cost of production. The syndicate is reported to have declared that it has no objection to the free entry of sodium nitrate if free export of its nitrogenous products be granted, should it be faced with accumulations of the latter.

Before the war the annual German nitrogen production was 100,000 tons pure nitrogen, the greater part of which was produced from the coke and gas works. By means of improvement in the works for the production of calcium cyanamide and synthetic nitrogen the output was increased to 340,000 tons of pure nitrogen. In spite of the many existing obstacles, the syndicate expects to increase production this year by 80,000 tons.

It is reported that orders in the new year have considerably fallen off and that, owing to great increases in wages and freight rates, the cost of production is rapidly mounting.

Chemical Trade Notes.

Indian Henna and Licorice Available.

A firm in Karachi, India, has informed Consul Avra M. Warren that it wishes to form connections with American firms desiring to import henna leaves and licorice roots. Further information may be obtained by communicating with the Chemical Division, Bureau of Foreign and Domestic Commerce, Washington, D. C., and referring to file 84935.

English Firm Wants U. S. Representative.

A firm in London, England, wishes to communicate with a reliable and energetic American firm which will act as representative for the importation into the United States of stick lac and also products of China and Japan. Further information may be obtained by communicating with the Chemical Division, Bureau of Foreign and Domestic Commerce, Washington, D. C., and referring to file No. CTN—1.

Present Situation in Austrian Chemical Industry.

The effect of the prevailing stagnation in Austria is intensified in the chemical industry by the large stocks which accumulated following the boom period of the summer. Sulphuric acid is a leading product of Austria's chemical industry, but it is reported sales have been made below cost of production, due to keen German and Czech competition. Hydrochloric acid and Glauber's salts experienced difficulty in finding buyers for the same reason. The output of fine chemicals and intermediates has been most severely affected, the Neue Freie Presse points out, as their cost of production has increased disproportionately. (Assistant Trade Commissioner F. W. Allport, Vienna, February 21.)

Advance in Price of Dyes and Chemicals in Japan.

During the course of the past month the market for dyes and chemicals in Japan has risen sharply. On February 20 carbolic acid was quoted at 60 to 70 sen a pound, yellow potassium cyanide 86 yen per 100 pounds, and yellow sodium cyanide 60 yen per 112 pounds. Dyes also are advancing, being as a rule about 30 per cent higher than a month ago. Domestic dyes, the market for which had been depressed owing to German imports, have become much firmer, and the talk that has been current of putting an embargo or at least a very heavy duty on aniline-dye imports has been dropped for the time being. (Commercial Attaché James F. Abbott, Tokyo, February 28.)

Additional information regarding chemicals appears in this issue under the following sections:

Latin America: Chilean nitrate production.
Foreign trade opportunities Nos. 6011, 6012, 6013, 6014, 6015, 6016, 6017, 6044, 6080, 6081.

PETROLEUM

Henry C. Morris, Chief, Petroleum Division

REVIEW OF THE PETROLEUM INDUSTRY IN THE TAMPICO DISTRICT.

Vice Consul George P. Shaw, Tampico.

Exploration and development of known pools of oil in the Tampico district during 1922 involved the drilling of 280 wells, of which 145 were producers, 89 were dry holes, and 46 salt-water wells. In the northern or Panuco district 163 wells were drilled and 117 were put down in the southern fields. The wells in the Panuco district were drilled by 50 companies or individuals, while 22 companies drilled in the southern fields. The difference in the number of companies actually engaged in drilling is due, first, to the fact that the principal companies have large holdings in the southern district, and, second, to the declining output in the southern fields which caused both large and small interests to engage in "wildcatting" in the Panuco district.

Summary of 1922 Operations.

The figures given in the following summary were compiled from official reports made to the Mexican Petroleum Bureau, as well as from unofficial sources, and, while believed to be accurate, are subject to correction by later official statistics. The total amount of all classes of oil in storage in Mexico on January 1, 1922, was 28,840,000 barrels. Production during 1922 totaled 185,712,000 barrels, of which the Panuco district furnished 46,978,000 barrels and the southern district 138,734,000 barrels (these figures include the small output in the Isthmian fields). Total shipments (including coastwise) from the Tampico district during the year were 185,049,079 barrels, while net exports exclusive of the percentage of coastwise shipments entering into domestic consumption and bunkers, amounted to 176,520,768 barrels. The total quantity of oil in storage on January 1, 1923, was 19,445,000 barrels, leaving a balance of 12,693,280 barrels representing the domestic consumption for the year.

Practically all of the coastwise shipments, except those to Vera Cruz, go to the Minatitlan refinery, where the first "cut" or separation of the crude oil is approximately 85 per cent topped and 15 per cent distillates. There is practically no demand in Mexico for the topped oil, the larger percentage being exported, while the kerosene, gasoline, and greases are largely consumed in the inteiror.

Tampico Leading Port of Shipment.

Oil from the Tampico district is shipped from the ports of Tampico, Port Lobos, and Tuxpam. Tampico proper, which is situated on the Panuco River, handles the larger part of the shipments and is a good deep-water river port and a safe harbor. A part of the output of the southern fields is transported to the Panuco River by pipe lines, and all of the Panuco oil shipped by water is loaded at Tampico. Port Lobos and Tuxpam are open roadsteads where light oil from the southern fields is loaded exclusively by means of loading lines extending a mile or so out to sea. The petroleum companies have their terminals and sea-loading pipe lines at various points along the beach for about 25 miles. All of this is included in the terms Port Lobos and Tuxpam.

Grading of Mexican Oil.

For statistical purposes the petroleum shipped from Mexico is divided into five general classes. Panuco crude is the oil produced in the district near the town of Panuco and is a heavy oil averaging from 11° to 12.5° B. It is not usually topped and is used principally as fuel in its original state. Tuxpam crude is the product of the southern fields, averaging from 19° to 21.5° B. There are some exceptions in wells from which oil as low as 10° B. or as high as 23° is obtained, but these are unusual, and the volume of such oil is relatively unimportant.

The term fuel oil denotes topped crude. Practically all of the fuel oil shipped is obtained from Tuxpam crude and averages 15° B., or slightly lighter than Panuco crude. Distillates include all the lighter products, such as crude naphtha, gasoline, and kerosene, although but little kerosene is exported, most of it being shipped to the interior for local consumption. Bunkers include any oil used as steamship fuel, but does not include oil used for this purpose by ships which are equipped for taking their fuel directly from their cargo of Panuco crude.

The following table shows the 1922 shipments of petroleum from the Tampico district by ports and classes:

Petroleum shipped from the Tampico district during 1922.

Classes.	Tampico.	Port Lobos.	Tuxpam.	Total.
	Barrels.	*Barrels.*	*Barrels.*	*Barrels.*
Panuco crude	43,038,001		92,317	43,130,318
Tuxpam crude	15,789,395	43,610,111	10,200,206	69,599,712
Fuel	48,918,751	4,792,628	1,032,829	54,744,208
Distillate	9,253,554	925,377	155,945	10,334,876
Bunkers	5,669,091	555,514	1,015,360	7,239,965
Total	122,668,792	49,883,630	12,496,657	185,049,079

Distribution of Exports.

The United States received 136,263,539 barrels of oil from the Tampico district during 1922, or more than 79 per cent of the total exports. The United Kingdom received the next largest amount, totaling nearly 6 per cent of all exports, Cuba took 4 per cent, and Argentina, Canada, and Chile followed with 2.5, 1.7, and 1.3 per cent, respectively. The detailed figures of exports by countries of destination during the last two years are shown in the following table:

Exports of crude oil and derivatives from the Tampico district.

Exported to—	1921	1922
	Barrels.	*Barrels.*
Algiers		32,929
Argentina	4,181,776	4,304,339
Azores	24,319	65,809

South America [2]	348,651	
Bunkers	[3] 6,475,723	[3] 5,892,952
Total	179,451,140	185,049,079

[1] Includes reexports.
[2] Country not specified—probably Argentina and Uruguay.
[3] This figure does not include coastwise shipments reexported as bunkers.

Recommendations of Polish Petroleum Council.

Assistant Trade Commissioner Elbert Baldwin, Warsaw.

The Polish petroleum council, summoned by the Ministry of Industry and Commerce for the purpose of discussing the Government bill relative to the petroleum industry, recently submitted certain findings and recommendations, which are summarized as follows:

1. A reduction of import duties is advocated on materials necessary for petroleum development and of which the domestic production is unsuitable or inadequate. This is intended to aid in restoring the declining Polish production of crude oil by means of new drilling and to offset development inactivity during the war.
2. The council recommends against permitting foreign crude oil to be admitted into Poland as raw material for Polish refineries, as it is believed that permanent improvement in the industry can come only from the development of Polish oil deposits.
3. It is recommended that exportation of Polish crude oil be permitted only when reserves equal to six months' production have been restored. (At the present rate of production, this would amount to about 360,000 tons.)
4. Regulation of internal and export railroad freight rates is advocated, the former to equalize an alleged disproportion between the petroleum and other industries, and the second to enable continued exportation of Polish petroleum products in competition with foreign products.
5. Improvement of rail communications in the oil fields.
6. Government credits to supply current lack of capital in the industry.
7. Payment to the industry of Czech crowns received in payment for crude oil exported to Czechoslovakia on compensation agreements, required for purchases of drilling and construction materials in Czechoslovakia.
8. In order to stimulate new developments it is recommended that a guaranty of boring the first well should be made practically the only condition to exploitation concessions.

United States Imports of Petroleum Products.

Total imports of mineral oils into the United States during 1922 showed an increase of 301,195,368 gallons over those for the preceding year, or a gain of about 5½ per cent, representing the largest figure yet reached for receipts of these products. Crude petroleum imports were 81,666,455 gallons above the 1921 receipts, while imports of refined and partly refined products increased over 200,000,000 gallons. Imports of gasoline and other light products during 1922, while relatively unimportant as compared with the total domestic consumption, were nearly double the 1921 figure for this class. Detailed figures for the last three months of 1922 and totals for the year are shown in the following table:

United States imports of petroleum products.

Products.	October, 1922.[1]	November, 1922.	December, 1922.	Total, 1922.
	Gallons.	*Gallons.*	*Gallons.*	*Gallons.*
Crude petroleum	423,440,999.	312,004,056	300,976,822	5,346,953,774
Refined products:				
Lubricating, illuminating, and fuel oils, tops, and other unfinished products				[2] 115,405,578
Fuel oils	21,976,085	45,357,654	56,444,540	[3] 123,778,279
Tops and other unfinished distillates	41,283,913	1,722,448	6,136,200	[3] 49,142,561
Gasoline, naphtha, and other finished light products	721,125	11,237,080	4,122,150	72,551,801
Illuminating oil	63,030	66,500	16,920	[2] 146,450
Lubricating oils	2,274	1,805,168	727	[3] 1,808,169
Total mineral oil	487,487,426	372,192,906	367,697,359	5,709,786,612
Paraffin wax	[4] 560,000	[4] 2,286,142	[4] 1,030,228	[4] 7,447,213

Export of Petroleum Products From the Caucasus in 1922.

Abstracted by the Eastern European Division from Economic Life, Moscow, February 21, 1923. The bureau assumes no responsibility for the accuracy of the data.

The total quantity of petroleum products exported by the Caucasian Federation of Republics during the calendar year of 1922 amounted to 184,758 long tons, consisting of 77,660 tons of kerosene, 46,340 tons of benzine, 50,000 tons of machine oils, 9,500 tons of fuel oil, and miscellaneous products 1,260 tons, according to preliminary data compiled by the commissiariat of foreign trade of Soviet Russia. The major part of the exported petroleum products, about 103,000 tons, or 56 per cent, went to England; 38,000 tons, or 24 per cent, to Germany; 14,800 tons, or 8 per cent, to Persia; 9,200 tons, or about 5 per cent, to France; 7,500 tons, or about 4 per cent, to Turkey; and 4,000 tons to Hungary. The rest, or less than 2 per cent, was taken by Belgium and Latvia.

The value of the exported petroleum products, exclusive of those exported to Persia, which was not given, is calculated at 15,182,800 gold rubles.

Petroleum Notes.

Petroleum Findings in Madagascar.

A commission sent out by the Superior School of Mines, Paris, confirms previous findings of petroleum in west Madagascar and states that in the Provinces of Morondava, Majunga, and Moevabanana there is evidence of considerable quantities of bitumen similar to the Scotch shales and the bitumens of Autun, in France, and large amounts of heavy oils. Methodical exploitation is strongly recommended in the report. (Vice Consul Charles L. DeVault, London, February 14.)

Storage Plant to be Erected in New Zealand.

It is reported from Wellington that a shipment of 6,000 gallons of petroleum obtained from the New Plymouth oil field was sent to Sydney in December. It is also reported that the British Imperial Oil Co. has purchased land near Wellington, where it intends to erect storage facilities and a canning plant. It is understood that the company expects to bring in gasoline, kerosene, and other oils in bulk and can them there for distribution. (Vice Consul Charles L. DeVault, London, February 14.)

Kerosene Trade of North Manchuria During 1922.

The consumption of kerosene for the year 1922 in north Manchuria was probably greater than for any preceding year, in spite of the general business depression which has so seriously affected Harbin trade. This was due in part to the natural growth of the business as it is extended and developed in the interior towns, but to a greater extent to the comparatively high prices received by the farmers for their very large crops of grain. In Harbin the consumption of kerosene and lubricating oil was about normal, while the demand for motor spirits increased considerably with the introduction of autobuses. (Consul G. C. Hanson, Harbin, February 17.)

Difficulties Encountered by Japanese Oil Producers.

Foreign oil companies brought large quantities of American and Mexican oil to Japan last year, the price being much lower than that of Japanese oil as the result of a marked decline in freight rates. Many new companies, including the Asahi Oil Co., the Nippon Kokusai Oil Co., and the Sekiyu Kyoto Hambaisho of Niigata have been established as importers of foreign oil. The large arrivals of low-priced supplies from across the Pacific discouraged local producers, and the output in Japan during last year showed a large decrease. Japanese operators complain of high wages and other expenses; the drilling of one well costs $50,000 at least, and having little capital, they are unable to attempt any trial boring. The Japanese oil industry can not compete with foreign oil unless production costs are greatly reduced. It is said that the Nippon Oil Co. is contemplating importing American and Mexican oil and has already established a very large depot on Sado Island, where large quantities are due to arrive at the beginning of March. Oil prices are expected to decline further because of the excess of supply over demand. (Japan Chronicle, February 1, 1923.)

Cable review, Balkans and Levant: Rumanian output of petroleum.
Tariffs and trade regulations:
Import duty established on certain mineral-oil residues in Greece.
Increased export duty on various petroleum products in Rumania.

COAL

INCREASED UTILIZATION OF BROWN COAL IN GERMANY.

Office of commercial attaché, Berlin, March 2.

The shortage of bituminous coal in Germany has given added impetus to German production of brown coal, despite the fact that since June, 1922, the monthly output of German brown-coal mines has consistently exceeded that of bituminous mines for the first time in history.

One of the new tasks confronting German industry, in the face of bituminous shortage, is to briquet to an even greater extent its available brown coal. Briquetting increases the calorific value by, roughly, 100 per cent, to an average of 4,500 calories. Existing briquetting plants, which previously operated 24 hours on week days but which closed on Sundays for cleaning up and repairs, now operate either every other Sunday or 12 hours every Sunday in order to increase production. Increased production due to Sunday overtime operations is estimated as increasing briquet output by 4 per cent.

Conversion of Brown Coal into Electric Energy.

Brown-coal interests are now transforming the coal at the mines into electric energy, which is conducted by wire to German industrial centers. This is the case at the works located at Golpa (which supply Berlin), Trattendorf, and Franken. The Golpa works, according to casual estimates, save the operation of 500 to 600 freight cars daily, which would be necessary to run the brown coal to Berlin if it were employed there for conversion into electric current. The building of power stations in the vicinity of brown-coal quarries is therefore being encouraged.

Available brown coal in Germany is by no means sufficient to free the country from foreign imports. It is now dependent in large measure on imports of British bituminous coal and Bohemian brown coal. The latter is an especially high-grade product, running in the raw state from 5,000 to 5,400 calories, against the 4,500 calorific value, mentioned above, of German brown-coal briquets.

41224°—23——5

Notes on Foreign Coal Trade.

Shortage of Pitch in South Wales Market.

A shortage of pitch used as a binder in the making of briquets continues in the South Wales market, and substitutes are being tried out. It was reported that around February 1 about 7,000 tons of pitch were in sight, while the requirements were 25,000 tons to the end of March. The price has continued to rise and on February 12 it was quoted at £8 per ton. The production of briquets in South Wales has exceeded 2,000,000 tons per annum, and the capacity of present plants is said to be 4,000,000 tons. Approximately 9 per cent of pitch is used in the manufacture of briquets, which indicates a possible consumption (with the plants running at full capacity) of around 360,000 tons annually. (Consul John R. Bradley, Cardiff, February 13.)

Austria's Fuel Production and Imports.

In December Austria's supply of domestic and imported fuel amounted to 714,000 tons, which, although below the November supply of 725,000 tons, was greater than that of December, 1921, 685,000 tons. The improvement was brought about wholly by an increase of imports amounting to 13 per cent from 393,000 tons in December, 1921, to 444,000 tons in December, 1922. Domestic production in the respective months decreased from 291,000 to 270,000 tons, or 8 per cent. Fuel imports from Upper and Lower Silesia were not so great at the end of 1922 as at the end of the previous year, and reduced supplies from these sources were made up by increased imports from Czechoslovakia, Poland and Galicia, and Germany. (Assistant Trade Commissioner F. W. Allport, Vienna, March 1.)

Additional information regarding coal appears in this issue under the following sections:

Cable review, western Europe: Coal and coke stocks in Ruhr.
Tariffs and trade regulations: Polish modification of taxes on coal and coke.

RUBBER PRODUCTS

E. G. Holt, Acting Chief, Rubber Division

MARKET FOR RUBBER FOOTWEAR IN BRITISH COLUMBIA AND YUKON TERRITORY.

Consul E. A. Wakefield, Prince Rupert, March 15.

Prince Rupert is an important fishing port and consequently offers a fair market for fishermen's rubber boots, which are imported chiefly from the United States. Such boots must be heavy and durable. Knee boots, three-quarter lengths, and hip boots are about equally in demand. Retail prices are $8 for knee boots, $9.75 for three-quarter lengths, and $11 for hip boots. There are approximately 1,500 fishermen on American fishing vessels plying between this port and the halibut banks for the greater part of the season, and probably 500 fishermen on Canadian vessels. Most of the rubber boots are sold either to Canadian fishermen or to employees along the water front; the American fishermen usually buy in the United States, where prices are lower because of the Canadian tariff.

Mining, lumbering, and sports boots and shoes are also used quite extensively, considering the comparatively small population. This portion of British Columbia is primarily a mining and lumbering section, and Prince Rupert being the largest distributing center north of Vancouver naturally gets a fair amount of the outfitting business for these industries. The many visiting hunters and fishermen generally purchase supplies before arriving here. Baseball, football, tennis, and basket ball are the principal sports offering a market for other kinds of rubber footwear.

The duty on rubber boots is 25 per cent ad valorem and a sales tax of 6 per cent is collected on the invoice price increased by the 25 per cent duty.

Whether to do business by direct sales or through agents is a debatable question. This consular district, which comprises all of north central British Columbia and all of the Yukon Territory, is sparsely settled, and most of the business houses are general stores. Once a business connection is established with such firms it may continue for a long period if supplies are satisfactory and the reasonable requests of the purchaser are given prompt attention. On the other hand, the general storekeepers and Prince Rupert retailers are usually more or less in touch with local manufacturers' agents. As imported merchandise is cleared through the local customhouse, a local representative to deal with customs clearances is almost a necessity.

United States Imports of Rubber During 1922.

There was a 62 per cent increase in United States imports of rubber during the calendar year 1922 over the previous year, or 674,410,392 pounds, valued at $101,843,188, were imported in 1922, as compared with 415,283,304 pounds, valued at $73,772,677 in 1921. The official customs returns for December, 1922, show imports of 75,164,624 pounds of india rubber valued at $11,410,959, as compared with 54,343,659 pounds valued at $7,837,851 in November. The following table shows imports of india rubber and similar gums for 1921 and 1922:

Article.	1921		1922	
	Pounds.	Value.	Pounds.	Value.
India rubber, and milk of	415,283,304	$73,772,677	674,410,392	$101,843,188
Jelutong or pontianak	3,908,401	351,893	5,229,505	403,812
Balata	1,822,398	1,077,859	1,819,022	978,765
Gutta-percha	2,205,509	333,564	1,832,950	281,012
Other crude, scrap, and reclaimed rubber	3,727,647	192,975	5,965,041	207,764
Total	426,947,259	75,728,968	689,256,910	103,714,541

How to Reach Alaskan Rubber Goods Market.

Shirl H. Blalock, District Manager, Seattle.

There is not sufficient tire business in Alaska to warrant a company sending exclusive tire salesmen there, although a number of jobbing houses in Seattle, Wash., send salesmen to Alaska who handle tires and rubber footwear among other lines. Juneau is the best point from which to reach the interior and some towns along

the coast. Shipping is open throughout the year from Seattle to coast cities as far as Seward. It is expected that the Government railway, which was put in operation last year, will be open to Fairbanks throughout the year; otherwise all points along the Yukon River, Nome, and northwestern points are closed to shipping from October to May. Seattle has been a satisfactory distributing point on account of transportation and the short shipping season for a large portion of Alaska. Exports of rubber goods from the United States to Alaska in 1922 were belting, hose, and packing, $100,021; automobile tires, $22,349; all other tires, $2,764; rubber boots and shoes, 87,180 pairs, valued at $222,176; and all other rubber manufactures, $20,643.

Rubber Trade Notes.

Limited Tire Market in Madagascar.

According to the latest census there are only 239 automobiles and trucks in Madagascar and tire consumption is very low. Only small stocks are carried by the dealers, who do not maintain fixed price lists but adjust prices daily in accordance with exchange fluctuations and the purchaser's necessity. (Consul Alfred T. Burri, Tananarive, February 3.)

Tire Trade in Southern Brazil.

Practically all tires used in Porto Alegre, Brazil, and the number used is important, are distributed from Rio de Janeiro and Santos, after clearance through customs there, being transported by the national coastwise trade. This district contains approximately one-tenth of the entire population of Brazil, and the per capita purchasing power is above the average for the entire country. (Consul Samuel T. Lee, Porto Alegre.)

Swiss Rubber Footwear Market Overstocked.

The rubber footwear market in Switzerland is overstocked. Swedish rubber shoes were imported in large quantities in the fall of 1922. American firms have been able to place only minor consignments because of the lower price of the Swedish goods. Swedish rubber overshoes are made to fit Swiss shoes and retail at 9 to 10 Swiss francs per pair, while American makes retail at 12 to 13 francs. As the Swiss people wear shoes with double soles for protection from humidity, the market for rubbers is limited. (Consul George H. Murphy, Zurich, February 15.)

Conditions Difficult in Hungarian Tire Market.

Although Hungarian dealers are anxious to form connections with American tire manufacturers, the present prospects are somewhat limited because import permits are very difficult to secure, while the requisite dollar currency is practically impossible to obtain from the Government exchange bureau at this time. Before shipping goods to Hungary, American manufacturers should assure themselves that the importer has both the import license and the necessary foreign currency, unless cash payment is made with order. (Consul Edwin C. Kemp, Budapest, March 1.)

Licensed Exports of Rubber from Ceylon and Malaya.

The Colonial Office announces that the exports of rubber licensed under the respective rubber-export restriction laws in Ceylon and Malaya have amounted to the following: Ceylon: November, 4,083 tons; December, 3,816 tons; January, 4,636 tons. Malaya: First quarter under restriction, 45,500 tons approximately, including 7,000 tons of stocks on the mainland; second quarter, 40,500 tons approximately. These figures do not include the production and stocks in the islands of Penang and Singapore. (Consul General Robert P. Skinner, London, March 6.)

Handbooks for Dutch East Indies and Cuba.

The Rubber Division has recently issued additional outline monographs showing facts affecting the importation of rubber products into the Dutch East Indies and Cuba. Firms interested in exporting rubber products to those markets should find the booklets valuable for reference and other purposes.

Additional information regarding rubber products appears in this issue under the following sections:

Tariffs and trade regulations: Specific duties on tires in South Africa.
Foreign trade opportunities Nos. 6068, 6069.

ELECTRICAL EQUIPMENT

R. A. Lundquist, Chief, Electrical Equipment Division

DEVELOPMENT OF THE SIEMENS CONCERNS.

Consul Orsen Nielsen, Berlin, Germany, March 10.

From the annual report for the business year 1921–22, covering the activities of the several organizations included in the Siemens interests (a German organization), it is learned that the Siemens Schuckert Werke was busy throughout the year.

The company received large orders for electrical equipment from the iron and steel and the mining industries. A number of installations for the production of synthetic nitrogen were made. Municipal power stations placed extensive orders for equipment for lighting. Export business was satisfactory and trade with the eastern border States and with Russia is reported to be developing satisfactorily.

The company's net profit of 109,393,712 marks for the year, and the fact that a dividend of 80 per cent had been voted, were mentioned in a report from the American consulate general at Berlin on February 26.

The report of Siemens & Halske, A. G., located in Berlin, contains the statement that the present efficiency of the Siemens & Halske workmen is not quite 75 per cent of their pre-war efficiency. In order to increase the production of the factory it was necessary to greatly increase the working force, which now numbers more than 100,000. Throughout the greater part of the year business was good and the company had a satisfactory number of orders, although a decreased amount of new business was evident toward the end of the year.

The cooperation between the Siemens & Halske, A. G., and the Deutsche Fernkable, G. m. b. H., worked out satisfactorily. Although the orders for railway signals increased during the year, they were less than the average pre-war orders. The output of internal-

combustion engines increased and new types were successfully developed.

A branch of the Siemens & Halske Co. in Lichtenberg near Berlin, operating under the name of Gebruder Siemens & Co., is reported to have had a satisfactory year, as also had the Siemens Bau Union, G. m. b. H., Kommanditgesellschaft, which was organized only a year ago.

The Osram, G. m. b. H., Kommanditgesellschaft, with the assistance of Siemens & Halske, increased their capital stock during the year and floated a bond issue.

The pay roll of the Siemens & Halske Co. and the Siemens Schuckert Werke for the year amounted to approximately 5,000,000,000 marks each. In February, 1923, however, it was estimated that the pay roll for each company would amount to 23,000,000,000 marks. The report points out that the sum of 104,000,000 marks, which is to be distributed in dividends by the Siemens Schuckert Werke, will to-day buy only a 400-horsepower direct-current motor, while formerly half the sum would buy a complete power station of 50,000 horsepower capacity. The net profit of the Siemens & Halske Co. in the business year 1922 was 158,245,336 marks, 80 per cent of which will be distributed in dividends.

Italian Central-Station Development.

Consul H. Earle Russell, Rome, March 9.

Increases in Italy's central-station capacity since 1915 have been substantial, in spite of the aftereffects of the war, the economic crisis, labor troubles, and other handicaps. In 1915 the various central stations of the Kingdom were developing 1,520,000 horsepower; at the end of 1922 the figure reached 2,170,000 horsepower, the increase being almost exclusively represented by hydroelectric stations.

During the years 1921 and 1922 alone there was an increase of about 300,000 horsepower, while 67 new hydroelectric stations entered into service, of which 15 were supplied with a total of 78,375,000 cubic meters of water from reservoirs and artificial lakes. During this same period work was begun on 51 new plants, with aggregate hydraulic energy of 364,454 horsepower, and on 27 reservoirs, holding a total of 209,656,000 cubic meters of water.

In addition to these, work is about to be commenced on other large plants, especially in Venezia Tridentino, where in another three or four years over 3,000,000 horsepower will be available, or more than double the amount developed before the war in that region.

With regard to capital invested, the showing is even more impressive. In 1915 a little less than 700,000,000 lire had been put into electric plants; on December 31, 1922, this figure had risen to 2,070,000,000 lire. Capital actually paid in, expressed in value of shares, amounted to 2,297,000,000 lire, or to about 2,550,000,000 lire, including that of municipal-owned companies and small distributors, while there are in course of payment another 312,000,000 lire, representing increases in capital already decided upon. It is calculated that during 1923 the investments of this nature will reach 3,000,000,000 lire, and 5,000,000,000 lire within three or four years. In considering these values, the figures for 1915 should be reckoned at the rate of $0.193 to the lira, while those for 1921, 1922, and 1923 should be estimated at approximately 20 lire to the dollar.

Electrification of British Railroads.

Consul General Robert P. Skinner, London, March 6.

Electricity will take the place of steam power on several hundred miles of railroad in the south of England and the Midland counties under the scheme being undertaken by the British railways.

Two of the routes on which it is planned to begin electrification immediately concern the Southeastern & Chatham System. The district lines from Charing Cross to Orpington (14½ miles) and Dartford (17¾ miles), and to Addiscombe and Hayes, are mentioned as the first, and will be followed by a second, section comprising lines to Gillingham (36 miles), Tonbridge (30 miles), and Dorking (23 miles). These form the basis for a more extensive electrification in the future. It is expected that the work will require about three years for completion.

On the London, Brighton & South Coast Railway the plans cover the electrification of the lines from London to Brighton (50 miles) and ultimately the whole of the London-Brighton area. Work is proceeding on the line through Croydon to Coulsdon (14 miles) and Wallington and is expected to be finished this year. Then will follow the change over from Coulsdon to Brighton and Brighton to Eastbourne(running east) and Worthing (running west).

Within the next two years the electrification of the three lines from Waterloo to Guilford (London and South Western Railway) will be completed.

The London, Midland & Scottish group are beginning the change over on the line covering Manchester, Oldham, Middleton, Royton, and Shaw, as a preliminary to larger developments. The same group intends to electrify the system to Rickmansworth.

[A copy of the final report of the Electrification of Railways Advisory Committee is on file in the Electrical Equipment Division of the Bureau of Foreign and Domestic Commerce, Washington, D. C., and may be obtained on loan by firms interested, either directly or through the bureau's district or cooperative offices, by referring to file No. 88821.]

Spanish Central Station Expanding.

Consul Thomas W. Chilton, Barcelona, February 3.

The large electric-power company Cooperativa de Fluido Electrico S. A., of Barcelona, which was formed in August, 1920, with a capital of 20,000,000 pesetas (1 peseta=$0.193) has recently increased its capital to 32,500,000 pesetas, and has issued 5,000,000 pesetas' worth of 6 per cent bonds in denominations of 500 pesetas each, which were offered to the public at 93 per cent, and are said to have been absorbed immediately upon being offered to the public. The proceeds of these bonds will be used to pay for machinery, transmission lines, equipment, and other materials necessary for the construction of the first of the three large groups of hydraulic-power stations owned by the company at Segre, La Vansa, and Cardona.

Orders for the machinery to be used have been placed with Brown Boveri & Co., of Baden, Switzerland; Escher Wyss & Co., of Zurich, Switzerland; and the Johnson & Phillips Co., of London. It is understood that these firms have either subscribed for or have accepted bonds in part payment of the machinery to be supplied.

It is stated that American manufacturers put in bids for this machinery but were unsuccessful in their at-

tempts to secure the orders, probably because they refused to take partial payment in bonds. The contract for supplying all the insulators and insulation for this new power service has been awarded to an American firm, and the order for supplying the underground cables has been given to a Spanish company. The copper that will be used will be furnished by Ballon & Sons, of London.

Electrification of Railroad Between Goteborg and Stockholm.

Consul Walter H. Sholes, Goteborg, Sweden, February 28.

The special committee having in charge the contemplated Goteborg-Stockholm railway electrification project has submitted its report on the subject to the Federal Railroad management, which in turn will prepare a report containing an economic comparison between steam and electricity as used for railway operation. It is believed that electricity will prove considerably cheaper than steam.

The entire cost of electrifying the railroad is estimated at 37,000,000 crowns ($9,916,000), which probably could be obtained at 4½ per cent at the present time.

Interest in the early solution of this question is general in Sweden, especially in the industrial world, which would be enabled thereby to start operations again and give employment to a large number of workmen.

It is estimated that the electrification work will take two years, and if nothing unforeseen happens it would be possible at the end of the year 1925 to make the trip between Goteborg and Stockholm on electric trains in 5½ to 6 hours. At present the run requires 9½ hours.

Additional information regarding electrical equipment appears in this issue under the following sections:

Tariffs and trade regulations: Import duty established on dynamos in Greese.
Foreign trade opportunities Nos. 6018, 6019, 6020.

HIDES AND LEATHER

Wilber J. Page, Chief, Hide and Leather Division

MARK FLUCTUATION AFFECTS GERMAN LEATHER INDUSTRY.

Consul F. T. F. Dumont, Frankfort on the Main, March 2.

The depreciation of the mark from 7,000 to 50,000 to the dollar in January, followed by its sudden rise to 20,000 to the dollar early in February, had a radical effect on the German leather industry. The fall in value made the financing of purchases of foreign raw materials extremely difficult, and the rise led to the withdrawal of hides and skins of domestic production from the market. Holders of these articles stated that their action was prompted by lack of demand, but this was disproved by the great differences shown in the bid and demanded prices. The real truth was that prices of raw hides and skins had been advanced quickly fivefold to meet the fall in the value of the mark, but holders of hides were unwilling to reduce them more than 15 per cent to meet the unexpected rise. This sudden rise compelled leather manufacturers to abandon temporarily the system of estimating prices on a dollar basis, but as soon as the mark seemed partially stabilized it was resumed and 10 per cent was added to basic prices. As a consequence, orders from manufacturers of shoes and leather goods fell off enormously during February. The continued difficulty in financing purchases of foreign raw materials is expected to increase the import of partly manufactured goods for finishing under contract and return to the foreign owner.

In the beginning of February prices of raw hides and skins increased 350 to 450 per cent. Sheep pelts showed even greater increases. The subsequent losses to wholesalers were heavy, because after the improvement in the value of the mark, they were unable to obtain proportionate selling prices from shoe and leather manufacturers. In the latter part of the month the demand for raw material fell off heavily. Sales dragged at the auctions, there was a downward trend of prices, which were claimed to have passed those of the world market, and various auctions were postponed.

Scarcity of Credit and Capital.

The German leather market felt the scarcity of credit and capital during February to a sharper degree than before. Sales to retail leather dealers were more numerous than those to shoe manufacturers. The market was also unfavorably influenced by the stoppage of shipments from the occupied territory where numerous upper leather factories are located. Quotations of oak sole leather butts in the beginning of the month were largely nominal, it being impossible in many instances to obtain the prices demanded. Reductions from $1 to $1.20 to $0.90 and $1.04 per kilo were made. Sole leather bends were quoted at from $0.65 to $0.70. The chief demand from shoe manufacturers was for lighter and middle weight goods, while leather dealers sought heavier qualities. Business in leather for finer uppers was very quiet throughout the month. Prices were quoted about as follows: Neat box, $0.25 per square foot; box calf, $0.35; and kid, $0.50. A certain interest was shown in colored goods.

Business in saddle leather was very unsettled and buyers showed a waiting mood.

The demand for finer portfolio leather was good. Black patent neat leather sold well, as did neat leather in "ice bear," antique, and so-called "Florida" (crocodile) finishes. All sorts of sheep leather found a good market. Sales of lining leathers were brisk. There was a great increase of prices of glazed leather in the first few days of the month. German glove factories booked orders from abroad, but news from America was reported as unfavorable, and in England Bohemian competition was felt. There was a falling off of domestic orders. Numerous so-called "slinger" sales were concluded with clothing manufacturers, old lots being sold off below cost price. Imports of raw skins from the Balkan States were favorably influenced by the improvement in the mark, and there was an increase of orders from America.

Grading Blackhead Sheepskins at Zeila.

Consul Raymond Davis, Aden, Arabia, March 7.

The port of Zeila derives much importance from the fact that after Berbera it is one of the greatest centers in British Somaliland for the sale and distribution of blackhead sheepskins. As a rule, in Zeila the blackheads are mixed with goatskins when sold, on account of the low price the latter would bring if handled separtely. The skins are sent to Zeila from Somodo, a three days' journey, and also from Borama, which is about six days' distant. Borama skins lead both in quantity and quality. It is stated that a Borama butchered sheepskin weighs about 3 pounds, and that in any large lot about 90 per cent would be considered primes. An average selection of a bundle of skins shows about 75 per cent to be primes and 25 per cent seconds.

During the war the average high price per score of these skins was about 60 rupees, while during the flurry of the closing months of 1922 it rose to 80 rupees; at present it is approximately 66 rupees. In packing for export to Aden a bale averages 9 scores, 8 for the heavy and 11 for the light. The average for goatskins is 12 scores. (The average exchange value of the rupee for last year was 28.74 cents, and the quotation on March 7 was 31.78 cents.)

The skins are usually sorted according to quality, and each bale contains only one quality, although they are, of course, re-sorted in Aden according to the ideas of the various shippers. Many Aden firms now have branches in Zeila with agents to buy the skins as they arrive, sort them according to grade, and prepare them for shipment to Aden.

Financing of Leather Imports in Hungary.

Consul Edwin C. Kemp, Budapest, February 20.

Several Hungarian firms are manifesting an interest in American leathers with a special view of securing agencies for such goods. At present, however, they are not inclined to buy outright or accept goods on consignment because of the difficulty in obtaining the necessary foreign currency with which to cover orders placed. In converting dollar quotations of American leather into crowns, Hungarian firms must consider the exchange rate; and whereas the official rate on February 20 was established as 2,735 crowns to the dollar, the outside rate ran as high as 3,500 crowns. As dollars are almost unobtainable from the Devisencentral, it becomes necessary for the importer to obtain foreign currencies wherever possible outside of the Government bureau.

In consideration of this private quotation of 3,500 crowns to the dollar, it is found that American prices are too high. However, if prices were converted at the official rate, considerable sales could be made of American leather in competition with Czechoslovak and German leathers now monopolizing the market. Some Hungarian firms are optimistic of the future and feel that the time is approaching when conditions will permit of some business being done.

Hide and Leather Trade Notes.

Market Sought for Italian Hides.

Two foreign exporters of hides in Italy desire to get in contact with American importers of hides. Further information may be obtained from the Hide and Leather Division by referring to import trade request No. 6.

Argentine Exports of Raw Stock and Extracts.

During the first two months of this year Argentina exported 1,054,000 hides, 8,000 bales of sheepskins, 3,500 bales of goatskins, and 31,000 tons of quebracho extract. All of these items except sheepskins show an increase as compared with the corresponding period of 1922, when the figures were: Hides, 972,000; sheepskins, 18,000 bales; goatskins, 1,000 bales; and quebracho extract, 21,000 tons. (Trade Commissioner George S. Brady, Buenos Aires, March 24.)

Dutch Hide and Leather Imports.

Imports of cow hides into the Netherlands decreased from 924 metric tons in January, 1922, to 842 metric tons during the past January, the trade being without animation and without features. The imports of calfskins, however, increased from 104 to 253 tons and there was more active trade in both horse and sheep skins. Imports of sole leather increased from 114 to 131 tons, Austria and Czechoslovakia dividing the trade with Germany. Imports of upper leather practically doubled, Germany having 75 per cent of the trade. (Consul General George E. Anderson, Rotterdam, February 24.)

Hide and Skin Stocks Low in Belgium.

The hide and skin market at Antwerp showed further inactivity during February. This condition was brought about by the political situation and by the fluctuations in exchange. Transactions were confined very largely to retail sales. There was a fair demand for second quality hides, but practically none for better quality hides. Purchases were largely confined to domestic hides, owing to the high prices of imported goods. The present stock is about 91,400 hides and skins, most of which are of second quality. Stocks are comparatively small for this market, and it is believed that the slightest revival of demand will bring about an increase in prices. (Consul G. S. Messersmith, Antwerp, Belgium, March 5.)

New Tannery Incorporated in Brazil.

The Sociedade Anonyma Cortume E Xarqueada Taubate has been authorized to function in Brazil. The new corporation, which is capitalized at 1,000,000 milreis, has taken over a small tannery in the municipality of Taubate, State of Sao Paulo, and plans to greatly increase its capacity. Inasmuch as the plant is situated on the Central Railroad, between Rio de Janeiro and Sao Paulo, both of which cities are the seats of large shoe-manufacturing industries, the company should find a ready market for its leather. Furthermore, the water of the Parahiba do Sul River, which is said to be very soft and admirably suited for the preparation of leather, is available for use in the plant. The new company plans to have a considerable jerked beef business, drawing its supply of cattle from the States of Sao Paulo, Minas Geraes, and Rio de Janeiro. About 150 head per day will be slaughtered during the killing season. The corporation is owned and managed exclusively by citizens of Switzerland. (Vice Consul Jack D. Hickerson, Rio de Janeiro, February 26.)

Additional information regarding hides and leather appears in this issue under the following section:

SHOES AND LEATHER MANUFACTURES

A. B. Butman, Chief, Boot and Shoe Division

INCREASING EXPORT TRADE IN LEATHER BOOTS AND SHOES.

The United States exported 548,404 pairs of leather boots and shoes during February, 1923, comprising 200,245 of men's, valued at $624,184; 198,580 of women's, valued at $450,182; and 149,579 of children's, valued at $176,702.

The February trade increased in volume 40.5 per cent over that of February, 1922, and 14.9 per cent over that of January, 1923. As compared with export statistics for February, 1922, it is noted that the number of pairs of men's leather boots and shoes exported in February, 1923, shows an increase of 22.3 per cent, women's 45.3 per cent, and children's 66.3 per cent.

Cuba, Mexico, and Canada were the predominating markets for men's shoes in February, 1923; Cuba, Canada, Newfoundland and Labrador, Mexico, and the United Kingdom consumed the largest quantities of women's shoes; and Cuba was the leading market for children's shoes.

The following tables show, by principal countries of destination, the number of pairs of men's, women's, and children's leather boots and shoes exported by the United States during February, 1922 and 1923:

United States exports of leather boots and shoes.

Import Trade in Leather Gloves Decreases.

The United States during the year 1922 imported 642,943 dozen pairs of leather gloves (631,256 dozen pairs of women's and children's and 11,687 dozen pairs of men's), which was approximately 250,000 dozen pairs less than the quantity imported the preceding year. It is interesting to note, however, that in both years the leather gloves imported for the use of women and children constituted about 98 per cent of the total. The quantities of leather gloves imported in 1922 from Italy and the United Kingdom were slightly less than in 1921, but the French trade shows a decrease of 279,138 dozen pairs; on the other hand, imports from Germany increased about 26,000 dozen pairs.

The following table shows the number of dozen pairs of leather gloves imported into the United States during the 12 months ended December, 1921 and 1922:

United States imports of leather gloves.

United States Foreign Trade in Leather Belting.

The February, 1923, foreign demand for leather belting required from the United States 76,874 pounds which was nearly 30,000 pounds in excess of the shipments made during February, 1922. The following table shows the number of pounds and the value of the leather belting exported by the United States to important foreign markets during February, 1922 and 1923:

United States exports of leather belting.

Items of Interest to the Trade.

Market for Leather Belts in Java.

The British commercial agent for the Netherlands East Indies reports that there is a good demand in Java for leather waist belts fitted with pockets and with holders for sheath knives.

Shoe Polish Trade in Sweden.

The brands of shoe polish now sold largely on the Swedish market are of Swedish manufacture. There are also a few French brands as well as a well-known English polish. The English brand is put up in three sizes of tin containers, retailing at 25 öre (6.7 cents), 45 öre (12 cents), and 70 öre (18.7 cents), respectively. (Consul W. A. Leonard, Stockholm, March 15.)

Market for Tennis Shoes in South Africa.

Tennis is a popular all-year game in the Union of South Africa, and the market for certain styles of tennis shoes is very good. The imports of this class of footwear into the country are furnished in great part

from the United Kingdom, with the United States a close second. The usual style of tennis shoe in demand is one having the upper of white buck or high-grade canvas, with a sole of either thick rubber or chrome tanned leather. (Saddlery and Harness, Walsall, England, March 10.)

United States Export Trade in Leather Manufactured Goods Increasing.

The United States exported greater quantity of all lines of leather manufactured goods during February, 1923, than during the corresponding month of 1922. Boots and shoes show an increase of 40.5 per cent in quantity, slippers 137.7 per cent, and athletic shoes 114.5 per cent; gloves, 283.8 per cent; belting, 57.7 per cent; harness and saddlery, 165.9 per cent; bags, suitcases, etc., 81.2 per cent; and pocketbooks, 24.8 per cent.

Shoe Trade of British Malaya.

Boots and shoes to the value of £36,251 were imported into British Malaya in 1922, as against £53,861 in the previous year, according to official statistics. Details of the countries of origin are not yet available for last year, but in 1921 the United Kingdom sent boots and shoes to the value of £36,039, while imports from the United States, the next highest country, were valued at £7,462. Exports, which went chiefly to the Dutch East Indies, were valued at £17,601 last year, as against £21,464 in 1921. (Shoe Trades Journal, London, England, March 2.)

Conditions in the Austrian Boot and Shoe Industry.

The Austrian shoe industry, like other Austrian industries, is suffering from high cost of production, which restricts inland sales and makes competition in foreign markets difficult if not impossible. In January this industry, which has an estimated yearly capacity of 60,000,000 pairs of shoes, was producing about one-fifth of its capacity, and in order to effect inland sales shoes were sold even below cost. Ladies' and men's black McKay shoes, for instance, which cost 170,000 crowns on January 9, were retailed at 128,000 on January 25. (Consul Carol H. Foster, Vienna.)

Employment in the British Boot and Shoe Industry.

Employment in the British boot and shoe industry during February continued slack, with much short time. There was little change as compared with January, slight improvements in some districts being balanced by a decline in others. The percentage of workpeople unemployed in the industry, as indicated by records at the employment exchanges was 8.2 on February 26 as compared with 8.8 per cent on January 22. Returns from firms employing 32,600 workpeople showed about 27 per cent on short time at the end of the month to the extent of about 10½ hours a week. (British Ministry of Labour Gazette, March.)

PAPER

John Matthews, jr., Chief, Paper Division

JAPANESE PAPER AND PULP MARKET.

Commercial Attaché James F. Abbott, Tokyo, March 7.

The Japanese pulp market has been dull for many months, and owing to the cheapness of imported pulps several factories have been closed. Conditions have improved lately, however, and prices have advanced consideraly as a result of the strike in Sweden, which has caused imports from that source to diminish greatly. Japanese pulp, which has been quoted as low as 5 sen (about $0.025) per pound, is now quoted at 7.6 and 7.7 sen. European first-grade unbleached pulp is quoted at about 9 sen, and bleached pulp at 11 sen per pound. The prices on Canadian pulp, which have been less than those quoted in the local market, are advancing, and now practically equal those quoted by the local mills. Present estimates are that the output of local pulp mills for this year will be around 90,000 tons.

Advance in Prices of Foreign Paper.

Foreign papers are likewise becoming firmer as a result of the rise in the price of pulp. Prices on American papers have advanced and in some grades they are as much as 20 per cent in excess of European quotations. Stocks are low and pulp and paper factories are profiting by the favorable turn in the market.

UNITED STATES PAPER IMPORTS.

Comparing United States paper imports and exports in 1922 with those of former years the following figures may be considered: In 1922 imports of paper (excepting printed matter) were valued at $85,914,879 and exports were valued at $24,152,567; in 1921 imports amounted to $88,673,487 and exports to $29,029,673; while in 1913 imports totaled $16,147,128, and exports $11,248,102. It can readily be seen that the trade has greatly increased since that time.

As in past years, newsprint composed the greater part of the imports, amounting to 1,029,268 short tons, valued at $72,354,266, in 1922; while 792,508 short tons, valued at $79,125,355, were imported in 1921. Of the newsprint imported in 1922, 896,314 short tons, valued at $64,127,112, came from Canada. Other items imported in 1922 were: Paper boards, first in quantity, with 33,681 short tons, worth $1,714,766; wrapping paper, 32,931 short tons, priced at $2,764,437; and miscellaneous other printing papers, 2,599 short tons, worth $320,302.

Side Runs of Paper Trade.

Reduced Output of Japanese Wood Pulp May Continue.

The Yalu Paper Manufacturing Co.'s mill and the Chosen factory of the Oj Paper Manufacturing Co.,

which were closed by agreement with other companies in order to reduce output, are not likely to be reopened, notwithstanding the recent improvement in the local pulp market. (Japan Chronicle, February 2.)

Japanese Imports of Wood Pulp and Paper During 1922.

Imports of wood pulp into Japan during 1922 are estimated at 8,789,000 yen (1 yen=$0.4985 at par)—an increase of 2,965,000 yen over the previous year. Paper imports during the same period are estimated at 12,371,000 yen—an increase of 6,604,000 yen over those for 1921.

Imports of Paper into Italy During 1922.

Imports of printing paper into Italy during the first nine months of 1922 amounted to 16,766 metric tons, valued at 20,069,636 lire. Other paper imports consisted of: Paper of various kinds, not ruled, 8,665 metric tons, valued at 22,755,311 lire; ruled paper, valued at 469,834 lire; and envelopes, valued at 974,778 lire (1 lira=$0.193 at normal and $0.05 at present exchange). There is also a large trade in the importation of pulp for the manufacture of paper, shipments coming principally from Germany, Switzerland, Austria, and the Scandinavian Countries. (Consul General John Ball Osborne, Genoa, March 14.)

British Paper Imports During the First Two Months of 1923.

British imports of paper during January and February of the present year have amounted to 180,152 long tons, valued at £1,914,968—an increase of 70,404 tons in quantity and £501,109 in value over the previous year's imports for the corresponding period. The largest imports were in printings and writings (40,850 tons), packings and wrappings (57,630 tons), strawboard (53,944 tons), and millboard, leatherboard, and cardboard (17,862 tons). Sweden and Norway furnished the bulk of the printing, writing, packing, and wrapping papers, although substantial amounts of the latter also came from Finland and Germany.

Additional information regarding paper appears in this issue under the following section:
Foreign trade opportunities Nos. 6044, 6069, 6081.

FINANCE

Grosvenor M. Jones, Chief, Finance and Investment Division

FOREIGN LOANS OF PERUVIAN CITIES.

Acting Commercial Attaché W. E. Dunn, Lima, February 28.

Lima and Callao are the only Peruvian cities having external debts. The former floated a bond issue of £600,000 in London and Paris in 1911, which is secured by a first mortgage on the public market, abattoir, and other real estate owned by the municipality. The National Government also assumes responsibility for this loan. The amount outstanding in December, 1922, was £565,100. Lima has also a mortgage loan of Lp. 30,000 with the Banco del Peru y Londres, a small loan with the Compañia Recaudadora de Impuestos, and other minor obligations. Municipal revenues for 1922 were approximately Lp. 243,658.

Important sanitation work in Lima is now being carried on by the National Government, including the extension of the waterworks system. An official census of the metropolitan district of Lima and Callao, with their suburbs, made in 1920, showed a total population of 251,750. The cities of Lima and Callao proper are given a population of 173,000 and 49,780, respectively.

Projects at Callao—Intercity Highway.

Callao has bonds outstanding to the amount of £71,200, the remainder of an issue of £100,000 made in April, 1910. A law of May 19 (No. 4126) now governs the payment of these bonds, for which responsibility has also been assumed by the National Government. The municipality of Callao has recently been negotiating with American bankers for an additional foreign loan of $1,500,000, which would be guaranteed by a first mortgage on municipal revenues, amounting to approximately Lp. 60,000 per year. The proceeds of the loan would be applied to the extension of the water mains, paving, and sewerage and other sanitation works. Various projects have been broached for the construction of modern port works at Callao, but no satisfactory basis for this work has yet been found.

Interest has been shown by both Lima and Callao in the building of a concrete highway between the two cities to replace the present almost impassable road. The distance is about 8 miles. Options have been given to various individuals for this project, but the necessary foreign capital has not been available.

No Arequipa Issues—Other Projects.

Arequipa, the third city of the Republic (population about 40,000), has at times manifested interest in floating a foreign loan for public improvements, but thus far without success. The town is the most important commercial center in southern Peru and does a considerable business in wool, hides, and other products. Small debts are due the Banco del Peru y Londres and the Compañia Recaudadora de Impuestos. There are no bonds outstanding. The annual revenues of the municipality average around Lp. 35,000.

None of the other Peruvian towns has outstanding obligations except for minor local and bank debts. Trujillo, the most important town north of Lima, has carried on various public improvements by local initiative only. Huacho has signed a contract recently for the installation of waterworks to cost approximately Lp. 30,000, most of which amount will be derived from a special local tax. Some 22 towns of the Republic are included in the sanitation plan of the National Government, which will be dependent on the negotiation of a special foreign loan for this purpose. Some of these towns have levied special import and export taxes, the proceeds of which are applied to local improvements.

Holland's International Balance.

Consul General George E. Anderson, Rotterdam, February 17.

It is difficult, if not impossible, to determine accurately Holland's international balance for the past year. According to writers in the financial and com-

mercial press, as a set-off for its excess of imports of $306,000,000 may be noted its net export of gold to the value of about $12,000,000; its profits on the diamond trade of $6,000,000; freights earned abroad by Dutch vessels to the amount of $64,000,000; its transit-trade profits of $20,000,000; the proceeds of loans and securities placed abroad of $130,000,000; its income from foreign investments of $70,000,000; its profits from travelers and other services of $12,000,000—a total of $314,000,000, or more than enough to account for the balance against it on merchandise account ($306,000,000), independent of gold shipments.

On the other hand, the adverse trade balance has been increased by the purchase of Dutch securities originally issued abroad to an estimated value of $34,000,000 and of foreign securities to the value of $18,000,000, or, with the adverse balance, a total of $358,000,000. The import of foreign capital, mostly German, but also Russian, Austrian, Polish, and from almost all other European countries, is the uncertain factor. Until some reliable statistics may be had as to how much of such capital has been sent into Holland for safe-keeping and more or less permanent investment, it is impossible to establish an accurate estimate as to Holland's real position in the international exchange market.

Proposed State Aid to Depositors of Bankrupt Danish Banks.

Assistant Trade Commissioner H. Sorensen, Copenhagen, February 27.

The Minister of Commerce introduced in the Rigsdag yesterday a bill proposing Government aid to the depositors and creditors of small Danish banks which have failed. The bill proposes that the Government refund to depositors in the Djurslands Landmandsbank, Landbrugs- Handels- og Haandvaerkerbanken i Kjøge, Thurø og Omegns Bank, Kallundborg Bank, Hellerup Bank, Kjerteminde Bank, and Haandvaerkernes Kreditbank up to 85 per cent of the funds lost.

It is stipulated, however, that the State subsidy for this purpose must not exceed 5,500,000 crowns. The money will be paid in five yearly installments from January 2, 1925. The bill further provides that this subsidy may also be paid to other depositors besides the savings depositors of the banks.

Additional information regarding finance appears in this issue under the following sections:

Cable review. Balkans and Levant: Financial situation in the Balkans.
Latin America: Chilean loans to nitrate producers.
Far East: The Boxer indemnity account.

COMMERCIAL LAW

FOREIGN COLLECTIONS.

A. J. Wolfe, Chief, Division of Commercial Laws.

From the establishment of the Division of Commercial Laws its constant aim has been to improve the existing facilities for the collection of overdue accounts and for the strengthening of the position of business men in the United States who chance to be parties to litigation abroad.

Several hundred claims of American manufacturers and exporters against concerns in foreign countries have now passed through the hands of the division, and in each instance either some action has been taken or advice rendered. It is therefore possible to draw certain conclusions with regard to the utility of the division's services in the collection of overdue accounts and the extent to which it properly may engage in this work.

Suggestions for Handling Overdue Balances.

When the Division of Commercial Laws was organized a number of foreign countries were in the throes of a financial crisis; contract repudiations, refusals to pay, requests for time extension, bankruptcies, suspensions of payment were the order of the day. These conditions have greatly improved during the past year, but with regard to accounts in the markets affected by the financial crisis of 1920–21 the following suggestions are offered the American credit man:

In the case of concerns that have made efforts to meet old obligations but are still debtors to any appreciable amount it is advised that a frank statement be requested as to the debtor's present status, the effect of any improvement in trading conditions upon his ability to pay the balance, and a definite understanding as to how and when the long-outstanding remainder may be settled. The creditor should express his appreciation of the honorable efforts of the debtor and should offer his help and advice in wiping the slate clean with a minimum of delay.

In quite a number of instances now coming before the Division of Commercial Laws for advice it appears that many firms have made payments and, having satisfied the creditor of their good faith, are now content to be dilatory, being tempted by the needs of new business to use their resources for financing new purchases in preference to settling old balances. In this connection it is believed that it would pay to go over the balances of such customers with a view to assisting them in clearing them up, always on the basis of a confidential exchange of ledger experience with other creditors and a check on new purchases.

Interchange of Ledger Experience a Weapon.

Customers who are still unable to pay but otherwise have not proved any bad faith should be made the subject of a thorough investigation at this time. If the improvement in trading conditions has not helped them to keep their heads above water, it might be economically sounder to take steps to have these concerns wound up than to have their accounts remain a festering sore on the wrong side of the ledger. Here, too, a thorough investigation is advised. The indefinite presence of dead accounts on the books of a manufacturer or exporter is, in many instances, less desirable than a final though small dividend as the result of bankruptcy proceedings.

With regard to those concerns which simply will not pay because they realize the disadvantageous position

the great power of credit grantors in the United States if the latter will but cooperate. It is true that in many instances it is difficult and costly to sue, but when the interchange of ledger experience assumes national scope these dishonest debtors will find themselves unable to make any purchases in the United States.

The foreign credit interchange bureau of the National Association of Credit Men has been quite successful in the employment of moral suasion with dilatory customers. This organization has prepared a circular in several foreign languages asking foreign credit risks to submit a financial statement and calling their attention to the status of the association as a union of American credit grantors. When the debtor becomes dilatory, the credit interchange bureau takes up the matter with him in a series of letters.

Limitations on Division's Intervention.

The Division of Commercial Laws in its work for the improvement of collection conditions does not adhere to any hard and fast rules, but studies each case on its merits. It can not undertake the collection of merely overdue accounts, which require dunning of the debtor, particularly where American law firms or local collection agencies or attorneys will handle such accounts for a reasonable fee. If the division intervened in such matters, it would be improperly competing with legal practitioners equipped for this business. However, in places where the Bureau of Foreign and Domestic Commerce has its affiliations, either through the courtesy of American consular officers or through its own field men, it is glad to intervene where the need for such action is manifest.

There has never been a disposition on the part of the Division of Commercial Laws to shirk an opportunity to serve American interests under the plea that it is not desired to make collection agents out of American official representatives abroad. The only criterion has been whether the intervention is necessary and whether the representative is in a position to intervene successfully and without jeopardizing his official usefulness. There are many cases in which payment is delayed because of a dispute that can be straightened out by a friendly call from a Government official, and the bureau's field men have in such cases intervened in a number of foreign countries with the result that settlement has been effected.

Some Countries Present Special Collection Problems.

There are some countries in which the collecting of overdue accounts is, temporarily at least, in a precarious condition. Such a situation exists, for example, in Cuba, where the court calendars are crowded with cases, and a new lawsuit has small chance of coming up for trial for a year or more. Here it is hopeless to ask Government officials to intervene save in some exceptional circumstances.

If the American creditor desiring to consult the bureau will submit full data regarding each claim with which he has a difficulty the Division of Commercial Laws will study it. If there are adequate and reasonable means for collection through existing channels, these will be pointed out; if the circumstances of the case warrant the intervention of the bureau, every effort will be made to obtain a settlement.

Prevention Better Than Cure.

The lessons of the individual cases submitted to the division point strongly to the need of greater care in the extension of credit.

Litigation in foreign countries is seldom advisable. It is costly and time wasting. It is also destructive of good business relations. Contracts with foreign customers should include an arbitration clause.

The matter of insuring export credits should be carefully studied and if it can be done economically all export shipments sold on credit should be insured.

CONSIGNMENT LAWS IN INDIA.

Vice Consul Harold Shantz, Calcutta.

According to the usual local practice there is no way in which a shipper of goods sold on consignment to a firm in India can retain a lien on goods actually in possession of the consignee, and therefore in the event of the consignee's bankruptcy the goods would be held for account of the creditors. "The only real safeguard," in the opinion of the committee of the Bengal Chamber of Commerce, "is to deal with firms of recognized standing."

However, as a local American banking institution points out: "An American shipper of goods consigned to a firm in India to be paid for as sold could pass the documents of title with the draft through a bank with instructions that the documents are to be handed over to the consignee on acceptance of the draft and execution of a trust receipt (as it is called) whereby the buyer undertakes to hold the goods in trust for the bank (or the shipper) until sold, and to hold the proceeds likewise, and to pay them to the bank, or to require the subpurchaser to pay the price direct to the bank."

Safeguarding the Shipper's Interests.

In regard to safeguarding the interests of the shipper of goods forwarded direct to the agent of the shipper on consignment sale, a Calcutta bank expresses the following views:

The agent will be responsible in damages to his principal if he fails to carry out his instructions and causes loss to the principal, and the remedy of the principal is by filing a suit against the agent in the local court. It may happen, rarely, that the agent has, at the time when he receives the proceeds or converts the goods, a dishonest intention; in such case he may be prosecuted in the criminal courts.

But apart from this personal remedy against the agent, there is no practical means of protecting the interests of the principal other than by taking security from the agent or passing the goods through a bank on the footing that the agent must give a trust receipt as he takes the goods from time to time. It should be noted, however, that even such a document will not afford absolute protection against fraud, because the agent might draw the whole of the goods on these terms and then fail to carry out his trust, leaving the principal to the undesirable remedy of taking legal proceedings.

Third parties who buy the goods are absolved from restrictions on the power of the agent which are not brought to their knowledge. The provision of law declaring this principle is contained in section 108 of the Indian contract act in the following words: "When any person is, by the consent of the owner, in possession of any goods or of any bill of lading, dock warrant, warehouse keeper's certificate, wharfinger's certificate, or warrant of order for delivery, or other document showing title to the goods, he may transfer the ownership of the goods of which he is so in possession or to which such documents relate to any other person, and give such person a good title thereto notwithstanding any instructions of the owner to the contrary; provided that the buyer acts in good faith and under circumstances which are not such as to raise a reasonable presumption that the person in possession of the goods or documents has no right to sell the goods."

Hypothecation of Goods—Title Under Bankruptcy.

Section 178 of the Indian contract act provides that a person who is in possession of any goods or of any document of title to

goods of the nature of those which have been enumerated may make a valid pledge of such goods or documents; provided that the pawnee acts in good faith and under circumstances which are not such as to raise a reasonable presumption that the pawnor is acting improperly; provided also that such goods or documents have not been obtained from their lawful owner or from any person in lawful custody of them by means of an offense or fraud.

In the event of the insolvency (or bankruptcy) of the agent the goods will not merge in his estate if they are definitely held on trust for the principal; but, otherwise, they will if they are "in the order or disposition of the agent in his trade or business by the consent and permission of the true owner under such circumstances that he (the agent) is the reputed owner thereof." The latter principle would ordinarily apply to a commission agent unless the circumstances were such as to indicate clearly that he was not the "reputed owner." What those circumstances must be is not a matter which can be summarized. The agent would probably object to be made to advertise the fact that he is not the true owner of the goods he sells, or that he is selling specified goods or goods generally as an agent and on behalf of a principal in whom the title rests. Such advertisement would call for inspection of the power of attorney of the agent and subject purchasers to risks which would militate against the sale of goods. The same objection would apply to the alternative of causing the agent to deal in the name of the principal and as a manager or employee who is not held out as having title to the goods in himself.

Arbitration Clauses Inoperative in France.

Consul General A. M. Thackara, Paris, February 16.

It is the custom in many countries of the world to insert in contracts or agreements a statement to the effect that, in case of dispute as to the proper carrying out of the instrument, the matter shall be settled by arbitration. Under French law, however, in the majority of cases these clauses are held to be illegal. Article 1006 of the French Code of Civil Procedure distinctly states that such a clause must clearly specify the exact reason for arbitration and give the names of the arbitrators, otherwise the stipulation is null and void.

In practice it is understood, according to information received from the president of a prominent syndicate of import agents, that the French courts will not uphold the validity of any ordinary arbitration clause inserted in a contract or agreement, on the ground that the agreement to arbitrate was arrived at prior to the necessity of arbitration having been established. The only class of arbitration recognized by French courts is that arising out of a dispute between two parties, the arbitration agreement coming as a sequel, and not as an antecedent, to the dispute.

At the time of the inauguration of the World Court of Arbitration, brought into being by the International Chamber of Commerce, Mr. Clementel, former Minister of Commerce, made the following statement:

We [France] would be very glad to cooperate with you in making the Court of Arbitration a success, but unfortunately arbitration is not recognized by French law except in special cases. When Minister of Commerce, I was interested in a bill to permit arbitration in its widest sense in France, but owing to the opposition met with in Parliament it was dropped. I will, however, introduce a new measure as soon as possible for the approval of the legislative body.

TRANSPORTATION

E. S. Gregg, Chief, Transportation Division

RAILWAYS.

SALES INFORMATION ON LATIN-AMERICAN RAILWAYS.

The following article is the second in a series on individual railways in Latin America. The first, dealing with the Ferrocarril Nacional de Chiriqui, Panama, appeared in COMMERCE REPORTS, April 9, page 121. All available printed sources of information have been used, and additional data have been obtained from Consul Maurice L. Stafford, at Baranquilla, Colombia, and from Special Trade Commissioner P. L. Bell. A handbook containing this information in more detail for all railways in Latin America will be published later.

COLUMBIA RAILWAYS & NAVIGATION CO. (LTD.)

Charles O. Frey, Transportation Division.

The history of the railroad owned by the Colombia Railways & Navigation Co. (Ltd.), operating between Cartagena and Calamar, in the Department of Bolivar, Colombia, dates back to 1889, when a concession was granted to Mr. S. B. McConnico, a United States citizen, for exclusive rights over a period of 50 years for a railroad from Cartagena to a point not specified on the Magdalena River. The contract provided that no other railroad was to be constructed within 50 kilometers on either side of the proposed line during the life of the contract. The Government reserved the right to purchase the line upon expert valuation at the termination of the 50 years. Should the Government fail to take over the road at the end of that time the concessionnaire was to have the privilege of exploiting it for an additional 50 years, during the last 25 years of which the Government was to receive 15 per cent of the net profits. At the end of the second 50 years the Government was to take over the line without payment.

Subventions to the Railway—Navigation Undertakings.

Law No. 11, of November 9, 1892, ordered that 8,000 Colombian gold dollars be paid for each kilometer constructed, the total subvention to be limited to 760,000 Colombian gold dollars in bonds redeemable by 5 per cent of the Atlantic customs receipts up to a maximum of 300,000 dollars in any one year. A land grant of 100,000 hectares (1 hectare=2.47 acres) was included in the concession, but only a small portion of it was taken over.

On August 21, 1891, Mr. McConnico also took over from its Colombian owners a concession for the construction of a wharf and warehouse at La Machina (Cartagena), and organized two companies in Boston—the Cartagena Terminal Improvement Co. (Ltd.), for the terminal construction at Cartagena; and the Cartagena-Magdalena Railway Co., for the line from Cartagena to Calamar. The construction work was started in January, 1892. The wharf was completed June 1, 1893, and the different sections of the railroad were opened as follows: Cartagena to Turbaco (23 kilometers) June 15, 1893; Turbaco to Arjona (15 kilometers) February 2, 1894; Arjona to Calamar (67 kilometers) August 1, 1894. The total 105 kilometers

was thus completed within the three-year limit specified in the concession.

Both of the above concessions were taken over by the Cartagena Railway (Ltd.), registered March 24, 1906, and when the Columbia Navigation Co. (Ltd.) was registered June 10, 1909, for the purpose of operating a steamboat service on the Magdalena River and the wharf at Barranquilla, the entire capital with the exception of seven shares was allotted to the Cartagena Railway Co. (Ltd.). In 1913, because of the financial condition of the navigation company, an amalgamation was effected, and the railway company took over the property of the navigation company.

The railway company, in its report of February, 1922, announced an agreement, subject to the approval of the stockholders and of the Colombian Government, for the sale to the Andian Corporation (Ltd.), Toronto, Canada, of its rights and facilities in the harbor of Cartagena for the sum of £50,000, and of the wharf and warehouses at La Machina at a price to be based on expert valuation.

Length and Gauge of Railroad.

The Cartagena Railroad operates 108.5 kilometers of track that has a gauge of 3 feet. The main line, from Cartagena to Calamar, is 105 kilometers in length; in addition, 3.5 kilometers of yard track and sidings are in operation.

Grades and Curves.

The railroad has only 28 kilometers of level line and 78 kilometers of straight track. The entire country traversed, with the exception of small areas around Lake Guajaro and near the Magdalena River at Calamar, is composed of low, arid hills. These hills could have been avoided but for provisions in the original concession, which were made in consideration of local needs rather than from a viewpoint of economy of operation and future development. Consequently, the railway to the town of Turbaco climbs a series of hills that involve 39 grades in all at a usual maximum of 2½ per cent, that near Turbaco being 2¾ per cent. The curves are sharp, those approaching the town of Turbaco having a radius of 70 meters. About four hours are consumed in traversing the length of the line, and light loads are necessitated.

Bridges, Clearances, and Tunnels.

The line has 125 bridges with a combined length of 1,876 meters; they involve 519 spans, 24 of the bridges being over 20 meters in length. The greater number are of wooden-pile construction, consisting of bents 12 feet by 12½ feet apart, which are made up of three or four piles and, where over 18 feet high, are cross braced vertically. Some have been replaced by steel-girder bridges, the largest being 306 feet in length over the Dique River near Calamar.

Clearance needed is 10 feet wide by 10 feet high.

There are no tunnels, but near the town of Turbaco are a number of heavy rock and dirt cuts.

Trackage.

The rails used on the Cartagena Railroad weigh 45 pounds per yard and are in 30-foot lengths.

Native hardwood sleepers, 6 inches by 8 inches by 7 feet, are used throughout and need replacing after about eight years of service.

In some places rock ballast is used, but generally ballast consists of dirt fill from the side of the right of way. While the line is in poor condition, it is fairly well repaired, considering the traffic.

Rolling Stock.

The following is an inventory of the rolling stock of the Cartagena Railroad as of April 1, 1922:

Locomotives	9	Freight cars:	
Passenger cars:		Box type (15 tons)	65
First-class	3	Flat cars (15 tons)	24
Second-class	3	Cattle cars (10 head)	19
Combination	3	Coal cars (15 tons)	9
Baggage cars	3	Repair car	1
Special company coach	1		
Caboose	1	Total	142
Tank cars (for water)	1		

The locomotive equipment is inadequate for heavy loads over the many grades. The cars are M. C. B. standard, steel underframe, wooden structure, with link and pin couplers. They have eight wheels, four to the truck. The loading capacity is 9 feet wide by 9 feet high by 40 feet long, and the maximum weight of package that can be handled is 20 tons. The rolling stock generally is in poor condition.

Fuel—Fuel and Water Stations—Signals.

Before the war, coal was imported and used as fuel, and a small bunkerage for steamers was carried at the La Machina wharf. As it was impossible to obtain a sufficient coal supply during the war, hard wood along the line was cut and mixed with the coal for fuel. There are large deposits of a good light, volatile, bituminous coal in the territory south of the San Jorge River, but as yet these fields have not been mined.

Coal bins and water tanks have been erected along the right of way at points 15, 26, 69, and 105 kilometers from Cartagena.

There is no signaling equipment in use.

Stations, Warehouses, and Repair Shops.

Stations are located at Turbaco, Arjona, San Estanislão, Soplaviento, and Calamar. There is a warehouse at Calamar, with a loading equipment of 15 tons at 20-foot boom radius. Cattle chutes are located at intervals along the line.

The company owns the repair shops located at El Espinal, which are equipped with a small foundry, machine shop, turntable, and large water tanks of both cement and wood. The company plans no changes in this arrangement, as the equipment is adequate for all necessary repairs as well as for much of the construction.

Finances.

The cost of constructing the Cartagena Railroad was approximately £2,720 ($13,219, at par) per kilometer for the 105 kilometers, as follows:

	U. S. dollars.
Special accounts	899,761
Attendant expenses	178,130
Station and attendant expenses	56,242
Accounts to be distributed	74,665
Material	86,013
Equipment	102,955
Total	1,397,766

Directors' reports and statements of accounts are issued annually to June 30, the balance sheet for 1920–21 having been submitted in February, 1922, as follows:

BALANCE SHEET.

	£	s.	d.
Debit:			
Capital Account, balance	73,863	8	7
Debentures, interest and dividend unclaimed	2,027	2	0
Debenture interest accrued on navigation debentures	25,596	0	0
Sundry creditors (London and Colombia), including reserve for taxes, etc	114,062	10	0
Insurance fund	14,263	3	1
Repair and renewal fund	4,417	7	3
Bills payable in Colombia	5,155	18	2
Loan from bankers	500	0	0
Profit account, balance	14,275	11	9
Total	254,161	0	10
Credit:			
Cash at bankers, in transit and in hand	41,549	11	4
Bills receivable	32,984	10	2
Stores in hand	67,765	3	5
Furniture and effects in London	334	17	6
Investments (London) at cost	11,826	2	1
Shares in other companies in Colombia	40	2	0
Sundry debtors, less provisions for doubtful debts (Colombia and London)	96,433	5	8
Claim against German firm in respect of deposit made in connection with pre-war contract for construction of steamboats, etc	2,658	3	9
Preliminary expenses in 1913–14, in connection with the proposed Prior Lien issue	569	4	11
Total	254,161	0	10

Traffic Statistics.

The following statistics for the fiscal year ended June 30, 1921, pertain to the railroad only:

Freight carried	metric tons	69,342
Freight traffic units	ton-kilometers	6,291,756
Passengers carried	number	21,883
Paid	number	19,037
Free	do	2,846
Passenger traffic units	passenger kilometers	2,165,600
Paid	passenger-kilometers	1,949,000
Free	do	216,600
Gross revenue	pesos	505,003
Freight	pesos	403,573
Passenger	do	83,500
Express	do	12,522
Other	do	5,408
Locomotive miles	number	94,000

Employees.

The following is a list of railroad employees as of May 1, 1922:

Blacksmiths	4	Laborers	330
Boiler makers	4	Clerks	60
Machinists	12	Staff	7
Machinists' helpers	8		
Carpenters	25	Total	450

Organization.

The home office of the Colombia Railways & Navigation Co. (Ltd.) is at 62 London Wall, London, E. C. The Colombian cable address is Pinedalop, Cartagena. Directors and officers of the company are as follows:

Directors: J. M. R. Francis, J. P.; Stephen H. M. Killik, J. P.; Walter Miller; Alfred Sim; Julian H. Simon.

Secreary: F. Thomas.

Superintendent: H. L. Tyrer, Cartagena, Colombia.

General managers: Pineda, Lopez & Co., Cartagena, Colombia.

Purchasing agent in the United States: Bliss-Dallet Co., 118 Broad Street, New York.

Additional information regarding railways appears in this issue under the following sections:

Cable review, western Europe: French car loadings increase.
Electrical equipment: Electrification of British railroads.

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

COMMERCIAL TREATIES AND AGREEMENTS.

GREECE—RUMANIA.

Chargé d'Affaires Jefferson Caffery, Athens, February 20.

Temporary Extension of Commercial Treaty.

The privileges of the conventional tariff of Greece have been extended to goods of Rumanian origin for two months, on reciprocity, beginning January 10, 1923, according to a decree published in the Official Gazette for February 3, 1923.

This extension was granted at the request of the Rumanian Government, after the commercial treaty between Greece and Rumania had been revoked by Greece, pending the negotiation of a new treaty.

SPAIN—NEWFOUNDLAND.

El Eco de Las Aduanas, Madrid, March 14.

Newfoundland Accedes to the Terms of the Anglo-Spanish Commercial Treaty.

Newfoundland now enjoys all the benefits of the commercial treaty of October 31, 1922, between Spain and the United Kingdom, by having notified the Spanish Government, through the British ambassador at Madrid, of its adhesion to the terms of that treaty.

[The essential provisions of the Anglo-Spanish commercial treaty were published in COMMERCE REPORTS for November 13, 1922, on pages 430 and 431.]

GENERAL TARIFF CHANGES.

COSTA RICA.

Le Gaceta, San José, November 25, 1922.

Customs Surcharge on Imports by Nonlicensed Concerns.

All commercial and industrial establishments, excepting coffee and sugar plantations, macaroni factories, and certain other businesses of minor importance, are required to pay a tax, in the form of a national, equal to twice the amount of the municipal tax, according to a costa Rican decree effective January 1, 1923. The Secretary of the Treasury is empowered to modify the amount of the national license tax within limits of 50 per cent, either up or down, if he considers the municipal tax too high or too low in a given instance.

As a means of enforcing this requirement, it is provided that any merchandise imported by persons not having a license will be subject to an additional tax of 5 per cent of the value of the merchandise in the place of origin, payable at same time as the import duty. Merchandise related to one kind of business when imported by those having a license for a different kind of business is also subject to the 5 per cent tax.

CUBA.

Revision of Import Tariff Suspended.

The office of the Commercial Attaché at Havana advises that, in view of the preoccupation of the Cuban Administration with other problems, the proposed revision of the Cuban tariff will probably not be carried through for some time to come. While it was expected that the special Tariff Commission would report the results of its hearings to the Cuban Legislature on March 15, the Commission had covered only one out of the 13 classes of the tariff schedule by that date, and requested a considerable extension of time. In the meanwhile internal developments in Cuba had taken such a turn that it now seems likely that serious consideration of the tariff measure will be suspended for a considerable period.

[When the problem of the revision of the Cuban tariff is again brought up for consideration, further notice will appear in COMMERCE REPORTS.]

FIJI ISLANDS.

Vice Consul Quincy F. Roberts, Apia, Samoa, February 27.

Establishment of Port and Customs Service Tax.

The Port and Customs Service Tax Ordnance of 1922 provides an ad valorem tax of 1¼ per cent on goods arriving in Fiji after January 1, 1923. This tax is in addition to the present duties and is to be levied upon all goods, whether exempt from import duty or not.

The Governor in Council is empowered to exempt from this tax, by proclamation, such goods as he may see fit.

GREECE.

C. E. Dickerson, jr., clerk to trade commissioner, Athens, February 14.

General Revision of Import Tariff.

The import duties on a long list of articles in the Greek customs tariff have been increased and new duties have been imposed on a number of articles formerly free of duty, by a decree effective February 9, 1923. This list includes many luxury articles, articles locally produced, on which the tariff is increased for protective purposes, and certain classes of lesser importance. Raw materials, staple goods and construction materials, in general, are omitted from the list, as are articles already heavily taxed, and goods the heavy taxation of which might lead to retaliatory measures on the part of countries from which they are imported.

Principal Articles Affected.—Among the articles on which the duties have been doubled or more than doubled are: Rice flour, potato flour, pearl barley, surgical goods, starch, starch flour, floor oilcloth, mining fuses, and sailcloth.

The following articles, included in the list of articles which were formerly free of duty when imported from the United States, are now dutiable at various rates: Certain mineral oil residues, leather machine belting, suction or force pumps and fire engines of any metal, agricultural and industrial machines and parts, dynamos, optical goods and instruments, American air pumps, electroplating machines, and asphalt roofing paper.

The ratio between the gold and paper drachma has been fixed as follows for the payment of import duties on certain classes of goods:

(Item 1 a–k) Live animals in general; (item 20 a–b) cereals the grain, except wheat, and roasted barley; (item 21 b) flour of cereals other than wheat; (item 23 a–b) rice; (item 26) pulse in general; (item 137 a) sugar and sirups; (item 242 a–b) T-iron girders, articles of cast or wrought iron for buildings, and certain other iron and steel manufactures; and (item 62B a–b) petroleum for the new provinces: ratio of 10 paper drachmas to 1 gold drachma.

(Item 19) Wheat and meslin, in the grain; and (item 21 a) wheat flour: ratio of 1.45 paper drachmas to 1 gold drachma.

Method of Payment of Duties.—Import duties on all other articles, including ad valorem duties and all conventional rates, are now collected in gold drachmas or in bank notes. The gold drachma is to be converted into bank notes at the rate fixed on the 25th of each month, figured on the basis of the average rate of foreign exchange. This rate will apply for the collection of import duties during the following month.

The average rate of foreign exchange for the collection of import duties during the month of February, 1923, was fixed at 375 drachmas to the sterling pound, i. e., 15 paper drachmas to 1 gold drachma.

Municipal duties, demurrage and transit fees, as well as export duties in metallic drachmas assessed on rags, oil cakes and glass débris, are to be collected in gold drachmas or bank notes at the ratios as given above for the payment of import duties.

[The text of the above decree is on file in the Division of Foreign Tariffs, and information concerning the new duties on specific commodities will be furnished upon request.]

IMPORT AND EXPORT RESTRICTIONS.

FRENCH WEST AFRICA.

Consul W. J. Yerby, Dakar, Senegal, February 28.

Import Prohibition on Foreign Sugar, Molasses, and Alcohols.

The importation into French West Africa of foreign sugars, molasses, and alcohols is prohibited, according to an order of the Governor General, published in the Journal Officiel de L'Afrique Occidentale Francaise for January 27, 1923, which promulgates the French law of December 20, 1922, ratifying the French decree of July 8, 1919. That decree prohibited the importation of the products specified above in all the colonies and protectorates with the exception of those of India, Tunis, and Morocco.

This law is not applicable to the Ivory Coast or Dahomey, colonies which are placed under the régime of the International Convention of 1898.

ITALY.

Consul H. Earle Russell, Rome, February 27.

Removal of Export Restriction on Certain Grain Products and Lumber.

The Italian customs authorities are authorized to permit the exportation of oak lumber, except that railway ties of any kind of wood are still prohibited from export, with the exceptions noted below, according to the Bollettino di Notizie Commerciali. The customs authorities may allow the exportation of green oak ties of Sardinian production shipped from island ports under documents for foreign points, and larch ties may be exported under authorization from the Ministry of Finances.

Corn flour and the products from the grinding of wheat may also be exported, exporters being no longer obliged to present the permits for temporary importation of grain.

RUMANIA.

Consul Ely E. Palmer, Bucharest, February 28–March 5.

Proposed Import Prohibition on all Luxuries.

The Rumanian Government is considering the advisability of prohibiting the importation of all articles classed as luxuries, for the purpose of bettering the exchange situation, according to recent reports in the local press.

Export Restriction on Pumpkin and Squash Seeds—Establishment of Export Duty Thereon.

The exportation from Rumania of pumpkin and squash seeds is subject to special authorization according to a degree published in the Monitorul Oficial for February 24, 1923. The exportation of these products had previously been prohibited by decree of July 8, 1922.

The export duties established for these products, including the "commission" taxes, are as follows: For shipments to the United States, $225 per 10,000 kilos; for shipments to certain countries with greatly depreciated currencies, 30,000 lei per 10,000 kilos.

Export Prohibition on Sorghum Seed.

The exportation from Rumania of sorghum seed is prohibited, according to a decree published in the Monitorul Oficial for February 13 1923,

SPAIN.

Cablegram from Richard Stephenson, secretary to commercial attaché, Madrid, March 24.

Additional Articles Requiring Certificates of Origin.

In order to avoid fraudulent declarations, the Spanish Government has ordered, in a decree published March 23, that on and after May 1 a considerably increased list of articles must be accompanied by a properly viséed certificate of origin.

[Hitherto certificates of origin, certified by a competent local authority and viséed by a Spanish consul, have been required on shipments from the United States only on those classes of goods enjoying conventional reductions in duty, and a limited number of others which in the tariff schedule were marked with the letter "C." This list is now being considerably extended, and while it is not practical to present here all commodities affected, shippers to Spain should either take the precaution of applying to the local Spanish officials for a certificate of origin in each case or should make inquiry from the Division of Foreign Tariffs at Washington as to whether such a certificate is required on the particular commodities being shipped.]

YUGOSLAVIA.

Vice Consul H. R. Brown, Belgrade, February 14.

Admission of Hospital Supplies Free of Duty.

The Yugoslavian Minister of Finances has issued an order permitting the importation free of duty of all medical supplies and medicines for hospitals maintained by charitable organizations and located in the new territories of the Kingdom, provided that the domestic production is insufficient, and subject to regulations issued by the Minister of Finances.

Minister H. Percival Dodge, Belgrade, February 27.

Restrictions on Importation of Automobiles by Road.

The following information was furnished by the Ministry of Finance on February 22, 1923, concerning the importation of automobiles by road into Yugoslavia:

Import duties on automobiles coming from abroad, not only by railway and boat, but also by road, will be collected on those roads which have customs stations. In case no first or second class customs bureau is to be found on the road followed, secondary customs bureau and customs guards will have entering cars escorted to the nearest customs bureau of the first or second class competent to collect customs duties.

This authorization applies solely to the importation of automobiles (considered as merchandise subject to customs duties), while the exportation, circulation along the border, transit and conditional importation (entry under guaranty of reexportation) by road are forbidden.

TARIFF CHANGES ON SPECIFIC ARTICLES.

COLOMBIA.

Diario Oficial, Bogota, February 20, 1923.

Increase of Import Duties on Matches and Certain Beverages.

Four additional items are to bear increased customs duties, in lieu of the excise taxes abolished by Law No. 83 of November 28, 1922 (see COMMERCE REPORTS, Feb. 19), according to Decree No. 208 of February 15, 1923:

Tariff No.	Articles.	Former rate of duty.	New rate of duty.
		Pesos per gross kilo.	*Pesos per gross kilo.*
95	Wax matches	1.00	1.70
96	Matches (of wood)	0.60	1.02
219	Spiritous liquors (rum, etc.)	2.00	3.00
225	Bitters	1.00	3.00

FIJI ISLANDS.

Vice Consul Quincy F. Roberts, Apia, Samoa, February 27.

Reduced Export Duty on Copra.

Effective during 1923 the export duty on copra from Fiji has been fixed at 10 shillings per ton or fraction; formerly 15 shillings.

Export Duty on Trepangs Established.

For the calendar year 1923 the export duty on trepangs (heretofore exempt) has been fixed at 2 shillings per hundredweight or fraction.

FRANCE.

Journal Officiel, Paris, March 20.

Duty-Free Importation of Many Natural Moroccan Products.

A French decree of March 18, 1923, permits the duty-free importation into France and Algeria of a large number of important products from French Morocco, the quantities of such imports to be fixed annually by decree. The transportation of the products to France, or by sea to Algeria, is reserved to French or Moroccan ships. Among the articles admitted duty free are: Horses; mules; cattle; sheep; hogs; meat, fresh, frozen, salted, or canned; horns, bones, and hoofs of cattle; raw hides and skins; raw wool; cotton, raw and waste; cereals in the grain; flour of hard wheat; products of Moroccan fisheries; various dried and fresh fruits; various oil seeds; common wood; raw phosphates of lime.

The importation into France and Algeria of these products has been subject to the rates of the minimum tariff. All articles not enumerated above, with certain minor exceptions, when directly imported from French Morocco continue to be subject to the rates of the minimum tariff.

MEXICO.

Vice Consul Stephen E. Aguirre, Manzanillo, February 28.

Warning Against Sending Unsolicited Advertising Matter.

In view of the recent great increase in the duty on advertising matter, including catalogues and calendars in folio form, now 2.50 pesos per legal kilo (see COMMERCE REPORTS for January 29, 1923, page 309, and February 5, page 380), exporters should be certain that the material is desired by Mexican firms before shipments are made, otherwise it may be refused on account of the excessive customs charges. In making such shipments to consuls, arrangements for payment of duty should be made before shipment, since no appropriations are available to consuls for customs charges of this kind.

Diario Oficial, Mexico City, March 16.

Correction of Statement of Increased Duties on Carts and Carriages.

The official publication of the Mexican decree increasing the import duty on separate parts and motors for automobiles has been received. Upon examination of the original decree in Spanish, the announcement as published in COMMERCE REPORTS for March 5, 1923,

page 638, is found to be incorrect in applying the increases to parts for carts and carriages.

Parts for carts and carriages remain dutiable under items 633 and 634 with the same duties as heretofore of 0.75 and 0.50 peso, respectively, per gross kilo, while parts for motor vehicles are classified under new items added to the tariff schedule, effective from March 16, 1923, as follows:

Tariff No.	Articles.	Former duty.	New duty.
		Pesos per gross kilo.	*Pesos per gross kilo.*
633-C	Bodies and frames, and separate parts not specified for all classes of automobiles	(1)	1.50
633-D	Motors for automobiles, repair parts for same, and other parts which compose the propelling mechanism of these vehicles	(2)	1.50

[1] Formerly classified under items 633 and 634.
[2] Classified under item 613 and admitted free of duty.

Diario Oficial, Mexico City, March 12.

Method of Collecting the Export Tax on Copper.

The export tax on copper is to be determined by the official quotation of electrolytic copper on the New York market at the time the metal is presented for exportation, and according to the rate of sight exchange on that date between New York and Mexico City, according to a decree of March 7, effective from date of publication on March 12. The Secretaria de Hacienda is to publish each day the rate of exchange.

POLAND.

Acting Commercial Attaché H. B. Smith, Warsaw, March 1.

Modification of Taxes on Coal and Coke.

The 40 per cent ad valorem tax on imported coke was withdrawn on January 25, 1923, according to a decree published in the Journal of Laws for January 27, 1923.

Another decree published on the same date increases the tax on Dombrova coal from 20 per cent to 25 per cent ad valorem, and the tax on Dombrova surface coal and on Cracow coal from 12 per cent to 15 per cent ad valorem, effective February 1, 1923.

RUMANIA.

Consul Ely E. Palmer, Bucharest, February 28.

Increased Export Duties on Various Petroleum Products.

Increased Rumanian export duties on various petroleum products became effective on March 1, 1923, according to the Monitorul Oficial of February 22. The new rates, together with those previously effective, are given in the table below:

Articles.	Rate of export duty per car of 10 metric tons.	
	Old.	New.
	Lei.	*Lei.*
Benzine [1]	2,750	5,000
Gasoline [2]	600	4,000
Refined oil (illuminating oil)	200	1,500
Gas oil	200	4,000
Lubricating oil (heavy)	4,500	10,000
Lubricating oil (light)	700	6,000
Paraffin	(3)	20,000

[1] Specific gravity 0.700 to 0.730 at 15° C.
[2] Specific gravity 0.730 to 0.770.
[3] Exact former rate uncertain.

The above duties include the so-called commission taxes, and, when the merchandise is shipped to countries whose currency is at a premium compared with the leu, are paid (as noted in COMMERCE REPORTS for July 10, 1922) in the actual currency of such countries or in checks or drafts payable in this currency. For the payment of the duties the rates of foreign exchange are fixed periodically by the Minister of Finance.

Revised Schedule of Export Duties on Timber Products.

A revised schedule of Rumanian export duties on wood products was published in the Monitorul Oficial of the same date, as follows:

Articles.	New rate of duty.[1]	Articles.	New rate of duty.[1]
	Lei per cubic meter.		*Lei per cubic meter.*
Lumber, resinous wood	150	Slabs	45
Railroad ties, resinous wood	150		
Logs, resinous wood	150		*Each.*
Hewn timber, resinous wood	50	Railroad ties, beech	5
Other resinous wood, unshaped, less than 20 cm. in thickness	50		*Per carload of 10 metric tons.*
Sounding wood	300	Fire-wood, beech	500

[1] Comparison with former duties not presented, owing to radical change in classifications.

Special export duties effective only up to October 1, 1923, are established for certain products in the mills or lumber yards on February 1 of this year, as follows: Shaped oak, 400 lei; and oak railroad ties, mine posts, and timbers, not exceeding 20 centimeters in thickness, 275 lei, all per cubic meter.

[It is understood that the export duties on these lumber products are paid in the way explained above for petroleum products.]

UNION OF SOUTH AFRICA.

Cable from Trade Commissioner P. J. Stevenson, Johannesburg, March 31.

Increased Import Duty on Shoes, Condensed Milk, and Tires.

Important tariff changes are incorporated in the South African Parliamentary Budget affecting boots and shoes, condensed milk, rubber tires, and a number of other articles. These increases are made in pursuance of a policy of protection to home industry and are to be effective at once.

The changes made in the duties referred to are shown in the table below.

Article.	Former duty.		New duty.	
	General.	British preferential.	General.	British preferential.
Boots and shoes...ad valorem	20%	17%	22%	19%
Minimum per pair:				
Men's	9 d.		No minimum.	
Women's	6 d.			
Children's	3 d.			
Condensed milk, full cream ...per 100 pounds	5 s. 2 d.	4 s. 2 d.	10 s. 4 d.	9 s. 4 d.
Tires (all)...ad valorem	20%	17%		
Tires, pneumatic (new)[1] ...per pound			1 s. 10 d.	1 s. 7 d.
Tires, solid (new)...per pound			3 d.	2 d.

[1] The wording of the cable as received leaves a doubt as to whether or not tubes are included under the same rate as tires.

CUSTOMS REGULATIONS.

YUGOSLAVIA.

Minister H. Percival Dodge, Belgrade, February 27.

Certificates of Origin for American Products.

In order to permit goods of the United States to enjoy the conventional rates of the customs tariff of

Yugoslavia, the original invoice certified to by Yugoslavian consulates in the territory of the United States of America will be accepted as proof of the origin of products coming from the United States, according to an order issued by the Ministry of Finance of Yugoslavia on January 12, 1923.

PATENTS.

RUSSIA.

Abstracted by the Eastern European Division from Economic Life, Moscow, January 3, 1923.

Proposed Laws for Protection of Patents.

The Commission on Patents of the Supreme Council of National Economy of Soviet Russia has issued a proposed draft of a new patent law. According to this bill, the inventor may secure exclusive right to his invention by obtaining a patent; this abolishes a provision of the law now in force by which the State is empowered to expropriate any invention at its discretion. The patentee is, however, obliged to work his invention in Soviet Russia or in one of the federated Soviet Republics within a period of three to seven years from the date of the patent. The patented object must be produced in Russia in sufficient quantities to cover the estimated demand of the domestic market; otherwise the patentee may be compelled through a court order to assign a part of his right of production to another manufacturer.

There is a clause in the new law invalidating all agreements by which employees renounce in advance all claims to their inventions in favor of their employers. Preliminary examination of all patent claims is to be established, which is to be based, primarily, upon Russian patent literature as well as general technical literature. The term of a patent is limited to 15 years.

Compulsory expropriation of patent rights by the State is allowed in cases of inventions which are of importance to the latter against payment of just compensation to the inventor. Patents are subject to Government tax, which is increased progressively after the fourth year.

[The above proposal relates to domestic patent rights; thus far no change has been reported as to the rights of foreign inventors in Russia.]

WESTERN EUROPE

Charles E. Lyon, Acting Chief, Western European Division

AUSTRIAN MARKET FOR AMERICAN PRODUCTS.

Consul Carol H. Foster, Vienna, March 9.

Exporters should realize that there is an active demand in Austria for American products. Larger quantities would be sold and business could be done on a large scale if the qualities, prices, and terms of payments were adjusted to meet the requirements of foreign competitors.

During January and February of this year there was a lively market in Austria for American foodstuffs, textiles, copper, nickel, and aluminum, automotive products, office equipment, machines, tools, shoes, leather, tanning materials, and chemical products.

The period immediately following the formation of the Austrian Republic was characterized by a lack of raw materials. Supplies of all commodities were exhausted and almost all classes of products found ready sales in the market. Economic conditions have greatly improved, however, during the past few years in spite of the depreciation of the local currency, and now quality again ranks side by side with price. This fact is significant. Austrian buyers are willing to pay 30 to 40 per cent more for American goods because they expect them to be of the best quality, and it is to the advantage of American firms to maintain this quality.

Terms of Payment Suitable for Market.

The best terms of payment which the Austrian business man can offer are cash on delivery in Vienna. The usual American terms, cash in New York, would mean for the Austrian dealer the investment of very large sums for the period of transportation, requiring about two months. In view of the fact that 1 dollar costs about 72,000 Austrian crowns and that most Austrian business men have not been able to increase their capital in proportion to the depreciation, few local firms have sufficient means of their own with which to pay cash for a stock of American goods. It would be necessary for them to borrow the working capital and the bank charges for such credits are extraordinarily high. These bank charges in turn would have to be added to the cost of American goods, thus raising the retail prices and placing American goods at a considerable disadvantage in this market.

America's competitors in this market deliver their products to be sold on a commission basis and maintain transit stocks, not requiring payment until the goods are sold. They even offer short credits to buyers in order to get a quicker turnover, because the money market is tight at the present time. This indicates a return to pre-war customs. Moreover, spare parts and additional stocks can be obtained from these countries in a very short time. Experts agree that American exporters should adopt the system of selling their commodities on the consignment or commission basis and do away with middlemen, if they wish to enter and be successful in this market.

Shipping to Austria via Trieste.

In view of the political situation in Germany it would seem feasible to route overseas shipments to Vienna via Trieste. The Italian Government reduced the freight tariff on goods shipped from Trieste to Austria by 15 per cent on January 1, 1923. The German railway tariff on the other hand is rising. In spite of the depreciation of the mark the cost of transportation Trieste to Vienna is less than that from Hamburg to Vienna at present.

TRADE INFORMATION ON HUNGARY.

Consul Edwin S. Kemp, Budapest, March 1.

Hungary, which is mainly an agricultural country, has an area of 35,664 square miles, or about that of Kentucky. The climate is temperate as in New York, and

the average rainfall is 29 inches. The country is mostly lowland, about 400 feet above sea level, lying in the Danube and Tisza Basin. The population numbers 7,840,000, of which 91 per cent are of the Magyar race and 6 per cent Germans. The chief element in the population are the peasants, small farmers, and a few large landholders, with manner of living to correspond. Within the last 30 years there has also developed an industrial class in the cities, the chief of which are: Budapest, with 925,724 inhabitants; Szeged, 109,896; Debreczen, 103,228; Kecskemet, 72,758; Hodmezovasarhely, 60,854; Miskolcz, 57,384; and Ujpest, 55,525. The native language is Magyar; German is used for international business, though English is frequently understood.

Possible Market for American Goods.

Hungary's leading imports are manufactured goods, which come chiefly from Germany, Czechoslovakia, and Austria. American goods are liked and appreciated, however, and with a guaranteed credit system a market could be created for such articles as agricultural machinery, implements, automobiles, hardware, boots and shoes, leather and leather goods, rubber goods, typewriters, office supplies, paper, cotton goods, toilet articles, machine tools, phosphates, oils and lubricants, and dental supplies. There are also opportunities for capital investments when the political and economic conditions are improved.

Imports in 1922 were about 50 per cent greater than in the previous year, and amounted to 3,351,953 metric tons and 351,372 units of piece goods, as compared with 2,327,709 metric tons and 378,794 units of piece goods imported in 1921. The principal items were 991,987 metric tons of firewood, 605,001 metric tons of hard coal, 141,835 of iron and other ores, 39,021 of paper, 35,851 of textiles, and 110,641 of table salt.

Exports for 1922 somewhat increased as compared with the previous year and amounted to a total of 1,044,306 metric tons and 551,350 units of piece goods, as compared with 838,041 metric tons and 498,464 units of piece goods exported in 1921. The principal items were 303,714 metric tons of coal, 162,668 of wheat and rye flour, 44,954 of fruit and vegetables, 85,859 of wine, 147,812 of grain, 110,432 head of cattle and draft animals, and 285,272 pieces of poultry.

Trade Regulations and Requirements.

Prices should be quoted c. i. f. Budapest, if possible, Hamburg, or Rotterdam, and in United States currency. Direct representation is necessary and samples should accompany catalogues and price lists. Credit of from three to six months is granted by German firms to well-known Hungarian importers. Imported goods are largely shipped on consignment for direct sale to trade in small lots from warehoused stocks. Catalogues should be printed in German, and price lists should always accompany catalogues. Postage is 5 cents per letter ounce. The customs tariff is based on the old Austro-Hungarian schedule, with rates frequently modified to cover exchange fluctuations. Import and export permits are often necessary, and the requirements are frequently changed. No duty is charged on samples obviously such or carried by an authorized commercial traveler.

American goods are now imported via Rotterdam and Hamburg, with Fiume and Trieste as possible routes when conditions are more settled. Agents located in Vienna formerly handled the bulk of the import trade, but direct business is desired. The packing is that usual for European export.

DENMARK'S FOREIGN TRADE IN 1922.

Philander L. Cable, chargé d'affaires, Copenhagen, March 3.

The Danish balance of trade for 1922 resulted even more unfavorably than in 1921, imports increasing and exports decreasing when compared with the year before. Although the quantity of goods exported in 1922 in many instances increased over 1921, the total value of 1922 exports fell below that of 1921 by 210,000,000 crowns, mainly on account of low export prices. The total value of imports for 1922 was 1,448,000,000 crowns and of exports 1,173,000,000 crowns, thus creating an import surplus of 275,000,000 crowns. In 1921 the total imports aggregated 1,544,000,000 crowns and exports 1,383,000,000 crowns, and the import surplus was only 161,000,000 crowns. The 1922 figures do not, however, comprise transit trade figures which are not yet available and which have not been deducted from the deficit.

The largest single item on the import list was fuel. The value of this product reached only 125,000,000 crowns, as compared with 146,000,000 crowns for the year before, although the quantity was considerably larger. Practically all of the coal imported in 1922 came from Great Britain. Agricultural products make up the leading exports. The following table shows the value of the principal imports into and exports from Denmark in 1921 and 1922:

Leading commodities in Danish trade.

Commodities.	1921	1922	Commodities.	1921	1922
IMPORTS.	*Crowns.*	*Crowns.*	EXPORTS.	*Crowns.*	*Crowns.*
Coal	146,000,000	125,000,000	Live stock	112,000,000	47,000,000
Grain	134,000,000	122,000,000	Pork, meat, etc.	350,000,000	360,000,000
Fodder	133,000,000	112,000,000	Butter, milk, cheese	453,000,000	397,000,000
Groceries	75,000,000	87,000,000	Eggs	148,000,000	113,000,000
Textile materials:					
Silk	23,000,000	23,000,000			
Wool	42,000,000	60,000,000			
Vegetable fiber	51,000,000	77,000,000			
Lumber	57,000,000	73,000,000			
Raw iron	55,000,000	53,000,000			

Trade Balance for January Unfavorable.

The Danish trade balance for January was, like that of December, very unfavorable. The imports equaled those for the month before (141,000,000 crowns), while the exports showed only a slight increase (4,500,000 crowns) over those of December, amounting to 107,500,000 crowns. The chief items of import were: Feedstuffs, 11,800,000 crowns; groceries, 8,800,000 crowns; grains, 15,100,000 crowns; textiles, 16,500,000 crowns; and automobiles, 137. The most important products exported were: Dairy products, 37,100,000 crowns; packing-house products, 38,300,000 crowns; live stock, 2,450,000 crowns; eggs, 6,300,000 crowns; and cement, 26,500 tons.

The Present Depression in Southern Italy.

Consul Leon Dominian, Rome, March 6.

Uncertainty regarding the situation in European markets is the most observable feature at present in the commercial and industrial centers of southern Italy. The prevailing unsatisfactory conditions may be traced

to a number of causes, of which some of the more important are:

(1) Decline in the export trade in the agricultural products of the region, due partly to a declining purchasing demand from central European and Near Eastern markets, and partly to the keen competition of producers in other countries and the hindrances to trade brought about by high protective tariffs in purchasing countries.

(2) A decrease in tourist traffic, which affords winter work for entire families. The number of tourists traveling in Italy this year appears to be smaller than in former years, and complaints on the part of hotel keepers and all industries depending on the tourist trade are common.

(3) A falling off in the sailing-vessel and tramp-steamer traffic. The extensive coast line of Italy makes this industry important, providing work for a large seafaring population. However, many of the large sailing vessels which were lost during the war have not been replaced, and the tramp steamers which formerly plied between Italian ports and Near Eastern waters are now idle. Before the war it was possible for these steamers to get return cargoes of wheat in Russian harbors, but this can not be resumed until trade with Russia becomes normal.

(4) A decline in the wheat production of southern Italy. Between the periods 1909–1914 and 1919–1922, the average yearly production of wheat of the mainland of southern Italy fell from 1,150,000 tons to 960,000 tons, while the production in Sicily and Sardinia declined from 750,000 tons to 610,000 tons. Nevertheless during the past decade the population of the mainland of southern Italy has increased by a half million inhabitants, and a similar increase is recorded for the period in the insular areas of the country.

(5) A reduction in production is also observable in the case of other cereals, potatoes, and vegetables. Taken together, the yield per inhabitant of these three agricultural products has fallen from 481 pounds to 383 pounds on the mainland and from 469 pounds to 348 pounds on the islands. Thus it is seen that a general decline in agriculture has taken place in southern Italy and that this decline has been accompanied by a gradual loss of export trade.

Improvement in all of these conditions may be expected as soon as production from southern Italy begins to find its way to the markets of eastern Europe. An increase in emigration to Latin American countries, which is always a possibility, would also tend to increase the wealth of southern Italy.

[The complete report, from which this article is an extract, may be examined in the Western European Division by referring to file No. 88618.]

Labor, Wages, and Cost of Living in Spain.

Consul F. A. Henry, Barcelona, February 26.

Labor conditions in Spain at the beginning of 1923 reflected the continued general depression in commerce and industry prevailing throughout the country, and, compared with a year ago, the outlook does not appear very bright. With business even less stable than last year, retail prices of living necessities maintaining a war-time level, and the mines and industries, particularly shipbuilding, showing less activity than at any time since the reaction from war-time prosperity began, there is to be noted a gradual increase in unemployment. In spite of this, strikes have been numerous and have been coupled with demands for increases in wages. In Barcelona the unemployment situation has been aggravated by the continued falling off in activity of the important textile industries. British competition has been so successful in the district that Barcelona textile manufacturers are being forced to curtail production considerably and have already been obliged to turn off 25 per cent of their operatives.

There has been no general reduction in wages for ordinary and semiskilled labor in Spain since the war. In fact, nearly all controversies and strikes over the wage problem in recent months have been in the endeavor to obtain increases rather than as a protest against attempted reductions.

Index Prices Lower.

On January 15, 1923, the Council of Ministers created new provincial organizations for fixing retail prices, a work formerly carried on by the Junta de Subsistencias. A central organization has been established to consider requests for increases in prices. This system of artificial price fixing is apparently made necessary by the Government's protective tariff policy.

The following table giving the index numbers covering average prices in 1922 compared with January, 1923 (prices in 1913=100), reveals a downward tendency, only textiles and leather goods showing an increase.

	Average for 1922.	January, 1923.
Animal foods	197	192
Vegetable foods	165	161
Gas and electric combustibles	178	166
Textiles and leathers	149	166
Construction materials	242	229
Chemical products	159	143
Average	176	170

Although the past year has seen a reduction in wholesale prices of many articles of food, there has been only a slight reduction in retail prices, particularly in the better grades of food products.

Declared Exports to United States from Austria.

Assistant Trade Commissioner Allport, Vienna, March 1.

Austria's declared exports to the United States during February, 1923, exclusive of returned American goods, amounted to $280,520; this was greater than the exports of the corresponding month of 1922 ($252,970), but considerably below those of January, 1923 ($319,257). February shipments also failed to maintain the high monthly level established toward the close of 1922, possibly on account of the cumulative effects of the present industrial crisis. There was a marked diminution in the number of consular invoices certified, 291, during February, as compared with a monthly average of 317 during 1922 and 328 during January, 1923.

The principal Austrian products exported during February did not differ greatly from those of previous months; incandescent electric lamps valued at $44,054 came first, followed by undressed furs, $49,678, and manufactures of rubber, $16,030.

OCEAN IMPORTS INTO ITALY IN 1922.

Commercial Attaché Henry C. MacLean, Rome.

Complete figures covering Italy's foreign trade are available only for the first half of 1922, but the Ministry of Marine has compiled statistics covering the principal commodities imported by sea, which have been made public for the entire year. These statistics are subdivided so as to show separate totals for coal, cereals, cotton, metals, and mineral oils, and the following table shows a comparison of the quantities of these commodities imported in 1921 and 1922:

Principal commodities imported into Italy by sea.

Commodities.	1921	1922	Commodities.	1921	1922
	Tons.	*Tons.*		*Tons.*	*Tons.*
Coal	7,940,812	9,112,214	Phosphates	450,354	451,130
Cereals	3,816,283	2,967,650	Frozen beef	22,319	14,426
Mineral oils	412,011	437,661	General merchandise	1,777,074	2,033,185
Cotton	108,149	118,856			
Metals	56,234	166,997	Total	14,583,236	15,302,119

The only commodities which show a decrease are cereals and frozen beef, and the total for 1922 shows an increase of more than 700,000 tons over the previous year.

Coal Imports Reflect Industrial Improvement—Cereal Trade.

The largest increase appears in the case of coal, the figures for which include coal brought overland as well as that received by water. The United States was practically eliminated from the market, having supplied 1,608,000 tons in 1921 and only 95,000 tons in 1922. On the other hand, imports of British coal increased from 3,554,000 tons in 1921 to 6,386,000 tons in 1922. Shipments of German coal from Westphalia rose from 984,000 tons in 1921 to 1,783,000 tons in 1922, while shipments overland, practically all of which come from German sources, declined from 1,645,000 to 1,439,000 tons. The increased consumption of coal in Italy in 1922, evidenced by these figures, is due to the improvement that took place in industrial conditions.

Imports of cereals, which consist almost entirely of wheat, show a decline of 848,633 tons. This difference is explained by the fact that the wheat harvest of 1920, which was more than 15 per cent below average, resulted in exceptionally heavy imports during the following year, while the harvest of 1921 was unusually abundant. In 1922 the United States and Canada supplied nearly two-thirds of the total, having shipped 1,782,000 tons, compared with 483,000 tons from South America, 386,000 tons from Australia, and 168,000 tons from Rumania.

Activity in Other Lines.

While the Italian cotton industry did not suffer severely from the general crisis in 1921, activity was rather slack and imports in that year amounted to only 108,000 tons. The improvement in the business situation in 1922 resulted in imports of 119,000 tons, about 75 per cent of which came from the United States.

The greatest percentage of increase is shown in the case of metals, where the quantity in 1922 nearly tripled that of 1921. Here again the result may be traced to the improvement in the industrial situation and consequently a heavier demand for raw materials.

Mineral oils, another group of special interest to the United States, show an increase of 65,000 tons, or approximately 13 per cent, while phosphates, which are imported almost exclusively from Tunis, remained at practically the same level. Frozen beef, which is no longer an item of importance, declined from 22,000 tons to 14,000 tons. An increase was also shown in the case of general merchandise, the total for which rose from 1,777,000 tons in 1921 to 2,033,000 tons in 1922, of which North America supplied 360,000 tons; South America, 261,000 tons; and Great Britain, 200,000 tons.

Eastern Europe and Levant: Austrian-Yugoslav negotiations.
Tariffs and trade regulations: Newfoundland accedes to the terms of the Anglo-Spanish commercial treaty.

FAR EAST

F. R. Eldridge, Chief, Far Eastern Division

THE BOXER INDEMNITY ACCOUNT.

With partial decisions already made as to the disposition of outstanding balances on the Boxer indemnity account, there has been much discussion in the Far East regarding the future policy to be adopted by the powers with regard to this question, which has such an important bearing on Chinese governmental finance. There have been announcements from both British and Japanese quarters that some modification of the procedure followed by the United States (remitting part of the indemnity funds, which was used subsequently by China for educational purposes) may be adopted by them. An agreement has been signed devoting a large part of the French portion of the outstanding indemnity to refinancing the Banque Industrielle de Chine.

The following table is a statement of the status of the Boxer indemnity account on December 1, gathered from official Chinese sources, the conversions to United States currency being made at current rates of exchange on

Status of Boxer indemnity fund on December 1, 1922.

Countries to which due.	Amount due in original currency.	Equivalent value in United States currency.
France[1] francs	391,581,529	$27,489,023
Great Britain[2] pounds sterling	11,186,547	50,560,958
Japan[3] yen	72,121,578	34,986,177
United States[4] dollars	12,455,507	12,455,507
Italy francs	147,051,159	10,322,991
Belgium do	46,873,522	3,290,521
Portugal pounds sterling	20,386	92,141
Russia rubles	254,343,251	(5)

[1] Funds to be used partly for Sino-French educational purposes and partly for refloating the Banque Industrielle de Chine.
[2] Remittance for purposes mutually beneficial to China and Great Britain now under discussion.
[3] Remittance for purposes mutually beneficial to China and Japan now under discussion.
[4] Remission proposed.
[5] No exchange available.

The Boxer indemnity payments were suspended on

American Business Men Visiting Java.

Consul Charles L. Hoover, Batavia.

A large number of American business men are now included among the tourists visiting Java, with corresponding mutual benefit to this country and the East Indian island, with which, in many cases, they have had lifelong business relations.

For decades Java has supplied a very large part of the tropical produce consumed in the United States, and in recent years imports into the island from the United States have run into many millions, amounting in 1921 to $61,180,547, while exports from Java to the United States in that year were valued at $141,663,676. In the past, however, Americans have generally regarded Java as too remote to justify a visit, and they have been without knowledge of its many phases of scenic and historic interest, but the marked development of the Dutch East Indies as a distinct economic entity since the war has arrested the attention of the western world. The resulting personal contacts are expected to react most favorably upon the trade relations of the United States with Java.

Plans are being formulated by the official tourist bureau of the government of Netherlands India for the tourist traffic of 1924, arrangements having already been made for two steamers to carry American travelers. At present individual tourists and small parties come to Batavia on side trips from Singapore, and special trips are made by touring ships, for whose passengers entertainment and excursions are arranged in advance.

Improvement of Yalu River Channel.

Improvement and maintenance of a navigable channel in the Yalu River from Antung to the sea, now being considered in both Chinese and Japanese official quarters, promises not only to provide an important transportation facility for the Sino-Korean border lands but also to settle long-standing differences between China and Japan regarding the establishment of the boundary.

Antung is the lumber and silk trading center of Manchuria. It is situated 25 miles from the mouth of the Yalu River and opposite Hsin Wiju, the terminus of the Korean Railway. The outlet of the timber trade of Manchuria is the Yalu River, which is navigable for small vessels only as far as Antung. The practice at present is for large vessels to land their goods at the mouth of the river at Tasarugi Island, the cargo being conveyed to Antung by lighters, which is a costly process.

The yearly deterioration of the Yalu River between Antung and the sea, which is seriously affecting trade, and the exact definition of the frontier line between Manchuria and Chosen are two important problems vitally affecting the economic life of Antung. It is to the interests of both Antung and Hsin Wiju (hence China and Japan) that this waterway be conserved and improved as an access to the sea. The Yalu River, which is a general indicator of the boundary line between Manchuria and Chosen, frequently changes its course. Therefore, the first essential to any joint undertaking is to confine the river to one channel and to establish permanently the center of the deepest channel as the national boundary. Prompt action is an essential for this scheme of economic improvement, as an accurate and complete survey of the river by joint Chinese and Japanese officials has just been completed. In a few years the course of the Yalu will change and the survey will be practically useless for this purpose.

As the problem is of international importance, it is proposed that China and Japan each select an expert engineer to decide upon a general conservancy scheme. The execution of the work could be done locally by other engineers, appointed jointly, who would work under the technical direction of the experts residing elsewhere. This scheme is frequently resorted to in conservancy projects. All operations and control to be effective must essentially be based on the principle of equal representation.

Arrangements could be made whereby the National Governments concerned would defray the cost of the preliminary consultation of the experts, and the work itself could be paid for locally by taxes from a surtax on water-borne goods passing through the Antung customs, a similar tax raised through the Korean customs, a tax on the tonnage of all vessels of all types and sizes passing up or down the river, and a certain fixed contribution from each of the two Governments represented. This plan is believed to be feasible and would undoubtedly greatly benefit both China and Japan, through the ports of Antung and Hsin Wiju, besides settling permanently the international boundary.

Labor Costs a Problem of Japanese Industrialists.

Based on report from Commercial Attaché James F. Abbott, Tokyo.

Since Japan's ability to compete in foreign markets depends to a considerable extent upon the low production costs, the present high wage scale is a matter of concern to the industrialists and to the nation as a whole.

While the wage tendency is downward, reductions have been unimportant. It is obvious that no great progress can be expected in this direction so long as the cost of living remains at its present high level and the tendency has been upward since the first of the year. The cost of living in Japan to-day is over 100 per cent higher than before the war, and 150 per cent more than in 1900.

During January wages ranged from an average of 1.4 yen per day (1 yen=$0.4985) for textile workers to 4.45 yen per day for machine workers. The building trades, which include carpenters, bricklayers, stonemasons, and plasterers, are the second highest paid, the average wage being 3.8 yen per day. Compared with American wage scales, these figures seem low, but when contrasted with Japan's pre-war wages they are abnormally high. The relative efficiency of the Japanese workman is also a factor of importance.

Far Eastern Trade and Economic Notes.

Dishonored Bills Increase in Japan During 1922.

A very marked increase in the number and value of bills dishonored in Japan during 1922, as compared with the preceding year, is shown by an investigation made by the Tokyo Bankers' Clearing House, according to information just received from Commercial Attaché James F. Abbott, Tokyo. The total number of bills dishonored during 1922 reached 6,443—an increase of about 38 per cent over the preceding year—while the total value amounted to 5,867,000 yen, an increase of almost 25 per cent over 1921.

Indian Market for American Goods.

The possibilities of the Indian markets for American goods and the best methods to be adopted in their sale are thoroughly discussed by Trade Commissioner C. C. Batchelder in a bulletin just issued by the Far Eastern Division of the Bureau of Foreign and Domestic Commerce. Those interested may obtain copies by inquiring for Trade Information Bulletin No. 85: "Selling American Goods in India."

Economic Problems of Japan.

The economic problems facing Japan to-day, according to the governor of the Bank of Japan, are the refraining from the promotion of needless enterprises and the enforcement of rigid economy, in order to bring about a fall in the prices of commodities, which will in turn aid in the extension of foreign trade and tend to restore favorable balances. The problem of the industrial community is to adapt itself to the new price level by striving to reduce production costs. This may be done, it is pointed out, by increasing labor efficiency, improving organization, and promoting scientific research.

Hunan Currency.

The Hunan mint has coined 3,000 20-cent pieces and some 50-cent pieces of the same design as the Yuan Shih Kai dollar and with no designation showing that they were made by this mint. The coins were quickly disposed of, but it has been decided that they will not be accepted at face value. Silver dollars are scarce in Changsha now, as they have been drawn into the interior for payment of rice and other products. A large amount of notes issued by the Bank of China and the Bank of Communications at Hankow is being used in Changsha at 2 to 3 per cent discount to cover the cost of shipping in silver. (Vice Consul C. D. Meinhardt, Changsha, China.)

Japanese Exchange Steady.

The Japanese exchange rate on New York since November, 1918, has remained higher and has shown less fluctuation than that of any other industrial nation during the same period. At no time has it varied by 10 per cent either above or below par value—49.85 cents. During 1919 and 1920 yen exchange remained above par, with the exception of the first four months of 1920, when there was a slight drop, which reached the lowest point in March, but had recovered by May. The year-end settlements of 1920–21 sent the yen below par, where it has remained to this time. Since May, 1922, however, there has been an upward tendency. The average exchange rate for yen during December, 1922, was 48.85 cents, as compared with 47.32 cents during May of the same year.

Business Conditions in Karachi.

The rapid improvement in business conditions in Karachi is due to an increasing political quiet in northern India and the growing export trade in food grains, raw cotton, raw wool, hides, and skins, while the improved exchange rates and the increased purchasing power permit larger importations of foreign manufactures. The noteworthy feature of the import trade is the growing proportion of German imports of woolen textiles, hardware, iron and steel manufactures, and electrical and mechanical specialties. Exports to Germany show increasing quantities of raw cotton, wool, and cowhides. The German trade with Karachi is financed largely through London. Low retail prices, substantial agents' and wholesalers' profits, and the fair quality of German goods operate against successful competition from American and British exporters.

New Banking Firm in India.

The amalgamation in London of the Bank of Cox & Co. with Lloyd's Bank (one of the largest banking institutions in the world) is regarded by an authority on finance as a most important development in Indian banking. Since Cox & Co. was already well established in India through eight important branches, this change marks the first establishment in India of one of the great London clearing banks, thus greatly increasing Indian banking facilities. The Calcutta branch of the new firm will be known as Lloyd's Bank (Ltd.), Cox's Indian Branch. The Bank of Cox & Co., including its Indian branches, represented a paid-up capital of £1,250,000 and deposits amounting to £18,000,000, while Lloyd's Bank, with 60 London branches alone, has a paid-up capital of approximately £25,000,000 and deposits amounting to £347,000,000. (Commerce, Calcutta, February 17.)

Additional information regarding the Far East appears in this issue under the following sections:

Commercial law: Consignment laws in India.
Industrial machinery: Industrialization of India.
Textiles: India's textile trade with Japan.
Minerals and metals: Ceylon plumbago output and trade.
Lumber: Japanese imports of lumber.

SOUTH AFRICA

South African Exports to United States in 1922.

Consul Charles J. Pisar, Cape Town, January 24.

The total value of exports from South Africa to the United States during the year 1922 was $11,229,924, as compared with $7,463,844 in 1921. Shipments of wool to the United States during 1922 totaled 11,563,700 pounds, valued at $4,606,471, as compared with 8,508,983 pounds, valued at $3,876,989 in 1921. Exports of mohair tripled in quantity, increasing from 1,254,168 pounds, valued at $441,649, in 1921 to 3,901,248 pounds, valued at $1,896,446, in 1922; exports of raisins increased from 286,400 pounds, valued at $40,443, to 2,283,695 pounds, valued at $220,708; and exports of skins from 824,995, valued at $780,833, to 1,437,126, valued at $1,035,710. Shipments of corundum, chrome, and vanadium ore during 1922 showed marked increases, both in quantity and value, over the preceding year. Exports of rough diamonds increased from 6,127 to 11,125 carats in quantity and from $360,966 to $756,107 in value. The above totals do not, of course, show complete exports from South Africa to the United States, as many of the products of South Africa which reach the United States are first shipped to England and then reexported.

LATIN AMERICA

J. R. McKey, Acting Chief, Latin American Division

CHILEAN FINANCIAL AND TRADE CONDITIONS.

Based on reports from Assistant Trade Commissioner William E. Embry, Santiago, and Consul George A. Makinson, Valparaiso.

Since the beginning of the new year the attention of the Chilean business world has centered largely upon the new national budget, the nitrate market, and the foreign-exchange situation. A number of important developments have occurred in these and other lines during the past three months.

The New Budget.

Regarding the forthcoming budget, the Minister of Finance has made a public declaration to the effect that without a prompt revision of the tributary system a deficit may be expected at the close of the present fiscal year (December 31, 1923). The conservative element in Congress, made up of large land holders and money-eyed interests, appears reluctant to pass the income tax and increased inheritance tax bills and other measures, pending since 1921, which are designed to permit the balancing of the budget without recourse to further loans. Even if enacted within the next few months, some time must elapse before the necessary administrative machinery can be organized to make the operation of these laws effective. In view of the circumstances, it is reported that the President will press for the immediate adoption of an emergency measure authorizing the collection, during one year, of an extraordinary contribution of 10 per cent on all utilities and on certain classes of incomes. The necessity for some such action is recognized by economists and financiers, and the discussion of the subject by the press has not been unfavorable.

Chilean Nitrate Market Variable—Production Encouraged by Loans.

While the nitrate market is holding up well, in view of trade conditions in Europe, there has been a slackening of business. Exchange fluctuations, actual and threatened, have diminished the demand for nitrate, especially from France.

The law of September 13, 1921, which provided for the advance of money to nitrate producers against nitrate ready for exportation, either at port of shipment or in plants, has been extended until December 31, 1924. Legislation to this effect has been in force for the past five years, and it is admitted that this governmental assistance to nitrate producers has been their salvation, especially during some of the more trying periods since the war. Under the provisions of the present law the producers are advanced money on their stocks to the amount of 7.5 paper pesos (1 peso= $0.1278 at present exchange) for each Spanish quintal of nitrate at port, ready for shipment, and 6 paper pesos for the same amount at the plant. (1 Spanish quintal=46 kilos, or 101 pounds.) Under the provisions of this measure a producer with stocks on hand, who needs money with which to continue operations, goes to a local bank and presents documents showing possession of a certain quantity of nitrate. He is then allowed to borrow from the bank according to the rates allowed. The bank, in turn, presents the papers to the Government and is reimbursed. The law provides for the cancellation of these documents within six months, but with the privilege of extension for an additional six months. The proceeds on the first exportation that is made, following the loan, must be applied to the payment of these obligations.

Copper Market Continues Firm.

Reports on the copper industry, Chile's other principal export, indicate uneasiness, due largely to the same causes that are affecting nitrates, though the market continues active and firm. Local mining interests fear that the occupation of the Ruhr Valley may cause a severe drop in Germany's copper purchases. Reports from the north indicate little new industrial activity and state that only one-third of the nitrate plants are at present in operation.

Retail Buying in Chile Less Active.

While material improvement has taken place since the period of greatest depression following the war, reports from the northern districts of the Republic still show that the sale and consumption of all classes of merchandise is below that of normal years. Cargo offerings from central Chile to northern ports are scarce, and it is reported that several local steamship companies are no longer demanding the maximum rates allowed them under the terms of the coastwise shipping law recently enacted, but are cutting quotations in order to secure sufficient freight to enable them to avoid a curtailment of sailings.

Exports to Northern Europe Increase.

To compensate for the restricted domestic demand for the agricultural products of central Chile an increasingly favorable outlet for these products is being found in northern Europe. This increase is of such proportions that it has been found necessary to reserve space and pay for it in advance, in order to assure timely shipments at present, when northbound cargo space is largely taken up by the nitrate trade. The charter market is naturally feeling the effects of this demand for space.

Wool Prices High.

The past shearing season in the far south (Magellan Territory) is understood to have been a prosperous one, and reports indicate that the great bulk of the clip has already been disposed of at prices considerably higher than those prevailing last year.

Transandine Railway Activities.

Debenture stock amounting to £542,000 has recently been issued by the Chilean Transandine Railway. The proceeds are to be used largely in general improvements, including rolling stock, snowsheds, and other miscellaneous items.

An event of great importance to South American travelers and merchants is the recent final approval of the fusion of the Argentine and Chilean sections of the Transandine Railway. As a result of the agreement both the Argentine and Chilean Governments take a

financial interest in the combination, though the companies still retain their corporate independence. The fusion of the two administrations is to become effective on July 1 under the control of a joint committee.

Brazil's Foreign Trade in 1922.

Consul A. T. Haeberle, Rio de Janeiro, March 7.

Brazil's foreign trade during 1922 amounted to a total of 4,005,993,000 milreis (during 1922 the average value of the milreis was worth approximately 13.5 cents) according to the figures of the Brazilian Bureau of Commercial Statistics. Of the total, 2,332,084,000 milreis represented the value of exports, while the imports were valued at 1,673,909,000 milreis, giving Brazil a favorable balance of 658,175,000 milreis, or approximately $79,000,000. This is the largest favorable balance Brazil has had since 1919 and the second largest in its history. In 1920 Brazil's imports exceeded its exports by 338,222,000 milreis. In 1921 this condition was changed, however, Brazil's exports amounting to 1,709,722,000—a gain of 19,883,999 milreis—and its imports totaling 1,689,839,000.

Principal Articles of Export.

The marked increase in exports during 1922 was due principally to the heavier movement of coffee, which brought better prices in 1922 than in the years immediately preceding. Raw cotton, which probably ranked next to coffee among Brazil's exports, figured more heavily in the trade than in any year since 1913, with prices almost as high as in 1920. The volume of sugar exported last year was considerably larger than in 1921, but prices were not so good. Manganese, rubber, cacao, yerba mate, and hides and skins were exported in larger quantities than during the previous year. Frozen-beef exports were less than half of their 1921 total and rice exports decreased almost as badly. With the exception of these two articles and manganese, all other commodities figuring in Brazil's export trade showed substantial increases in value in 1922, as compared with 1921. Brazilian exports by general classes for the years 1920, 1921, and 1922 were as follows:

Brazilian exports by general classes.

Products.	1920	1921	1922
	Milreis.	*Milreis.*	*Milreis.*
Animal	235, 129, 000	186, 088, 000	182, 769, 000
Mineral	51, 113, 000	32, 728, 000	35, 360, 000
Vegetable	1, 466, 169, 000	1, 490, 906, 000	2, 113, 955, 000
Total	1, 752, 411, 000	1, 709, 722, 000	2, 332, 084, 000

General Decrease in Brazil's Imports.

The value of imports in 1922 decreased 15,930,000 milreis as compared with 1921. Although import figures in complete detail are not yet available for the full year of 1922, it can be said that there was a decrease in practically every general class of imports. Machinery, iron and steel, petroleum products, and textiles suffered worst of all. Food products and raw materials were, in general, slightly less than in 1921.

Among the few manufactured goods which showed increased imports in 1922 were automobiles—according to unofficial figures the increase in this line was slightly over 100 per cent—drugs and chemicals, leather, and rubber manufactures.

Commercial Failures in Argentina.

Commercial failures in Argentina during 1922 numbered 1,906, according to the February 1 issue of El Avisador Mercantil, and involved liabilities amounting to 125,788,711 paper pesos (1 paper peso=$0.4245). Judicial proceedings and private arrangements resulted in the payment of 32 per cent by the end of the year. Nearly half the losses were sustained in the city of Buenos Aires, where the liabilities of 544 bankruptcies, compositions, etc., reached 51,877,863 paper pesos. The Province of Buenos Aires led with regard to numbers, its total being 577, but contributed only 30,051,670 pesos of liabilities to the grand total. The Province of Santa Fe followed with 243 failures, involving liabilities amounting to 15,987,560 pesos. The greatest number of failures occurred during March, April, and May, when liabilities averaged about 15,750,000 pesos a month; but from June to the end of the year the average was only about half that amount, indicating a decided improvement in business conditions. The following table shows the trend of commercial failures since 1912:

Failures in Argentina since 1912.

Years.	Total liabilities.	Percentage paid.	Years.	Total liabilities.	Percentage paid.
	Paper pesos.			*Paper pesos.*	
1912	93, 109, 516	33	1918	55, 187, 585	24
1913	198, 385, 503	46	1919	40, 041, 769	28
1914	440, 078, 299	41	1920	65, 001, 958	21
1915	197, 824, 511	32	1921	165, 160, 994	32
1916	106, 532, 763	32	1922	125, 788, 711	32
1917	106, 354, 299	24			

Quarantine Regulations of Ecuador.

Ecuadorean consular officers in the various countries have been notified that all persons desiring to enter Ecuador shall be provided with a certificate of health and one of antismallpox vaccination, both to be viséed by an Ecuadorean consul. Certificates shall in every case be issued by a graduate physician, appointed, if possible, by the consular officer in the respective country. Passengers not in possession of the above certificate on arrival in Ecuador shall be immediately vaccinated for protection against smallpox.

Additional information regarding Latin America appears in this issue under the following sections:

Finance: Foreign loans of Peruvian cities.

Transportation—railways: Sales information on Latin American railways.

Tariffs and trade regulations: Customs surcharge on imports by nonlicensed concerns in Costa Rica.

American Consular Officers on Leave.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of venue.	Address.
Savage, John M	Southampton, England.	May 16	Care of Manhattan Club, Madison Avenue and Twenty-sixth Street New York City.
Strother, Shelby F	Guadeloupe, West Indies.	May 12	First and Burnett Streets, Louisville, Ky.
Huddle, J. Klahr	Hamburg, Germany	May 25	Shawhan Hotel, Tiffin, Ohio.

EASTERN EUROPE AND LEVANT

E. Dana Durand, Chief, Eastern European and Levantine Division

DISPARITY IN AGRICULTURAL AND INDUSTRIAL PRICES IN SOVIET RUSSIA.

In the early part of 1922, when Russian economics were still influenced in a large measure by famine conditions, the rise in prices of agricultural products was much faster than that of manufactured products; but beginning with May, when the prospects of a good crop became clearly discernible, the trend of prices in the two groups tended to converge until the rate of advance of both became the same in August. This coordination of rates of increase in prices of foodstuffs and of manufactured commodities was greeted in the Soviet press at the time as an economic achievement of the greatest importance.

From August, however, the rates of appreciation in the two groups again diverged, but this time in favor of manufactured products, so that by October 1 prices of foodstuffs had multiplied 27.4 times since January 1 and of manufactured products 44.1 times. (See COMMERCE REPORTS, January 1, 1923, p. 58.) The gap between the two groups has now become a source of considerable anxiety to the Soviet economists.

Wholesale Price Increases During 1922.

An analysis of the trend of wholesale prices at Moscow for the calendar year 1922 has been prepared by the Petrovsk Agricultural Academy (Economic Life, February 7). Taking the index for January, 1922, at 1, the general level of prices in December of the same year showed an increase of sixty-five fold for all products. The increases for specific commodity groups are stated in the following figures, in which, for example, food products are shown to have appreciated 44 times and manufactured goods 89 times, etc.:

	Multiple of increase.		Multiple of increase.
Manufactured goods	89	Food products	44
Stationery	132	Meat and fish	67
Nonfood groceries (soap, caustic soda, tobacco)	100	Groceries	57
Clothing and footwear	95	Dairy products and eggs	52
Household utensils	80	Vegetables and dried mushrooms	40
Fuel and lighting materials	71	Fats	35
Small household implements	64	Breadstuffs	24
		Fodder	31

It will be seen from the foregoing figures that bread increased in cost more slowly than any of the other foodstuffs and than all products in general.

Sharp Relative Advance in Manufactured Products.

In the following table of wholesale price changes—as worked out by the Gosplan (see COMMERCE REPORTS, January 1, 1923, p. 58)—column A shows the index of relative prices expressed in "1922 rubles," taking prewar prices as 1; column B shows the ratio between the index of the given commodity and the general index. To illustrate: The average wholesale price of grain in the "1922 ruble" (which represents 10,000 Soviet rubles) on August 1 was 542,[1] taking its cost in 1913 at 1; relative to the general price index for the day (which was 473), the ratio for grain was 1.15; that is, grain, as compared with 1914, had increased 15 per cent more than the average for all commodities. In March, on the other hand, the increase for grain, as compared with 1914, was only 72 per cent of that for all commodities.

Relative rates of increase in wholesale prices in Soviet Russia, between August 1 and December 1, 1922, and March 1, 1923.

Commodity groups.	Aug. 1, 1922.		Dec. 1, 1922.		Mar. 1, 1923.	
	A	B	A	B	A	B
Grain and fodder	542	1.15	1,047	0.85	1,874	0.72
All foodstuffs (including grain and fodder)	578	1.22	1,189	.97	2,248	.86
Fuel	502	1.06	1,460	1.19	4,228	.62
All metals	265	.56	952	.78	2,291	.88
Textile raw materials	300	.63	1,581	1.29	3,212	1.23
Textile fabrics	451	.95	2,086	1.70	4,923	1.88
Leather goods	351	.74	1,284	1.05	2,661	1.02
Chemicals	237	.50	924	.75	1,845	.70
Building materials	228	.48	760	.62	1,679	.64
Paper	378	.80	1,365	1.11	3,836	1.47
All agricultural commodities	547	1.16	1,068	.87	1,997	.76
All manufactured and mineral products	404	.85	1,430	1.17	3,504	1.34
General index ("Index ruble")	473	1.00	1,227	1.00	2,617	1.00

Whereas on August 1 the ratio of the average price index of all agricultural products to that of all commodities combined was 1.16 and that for all manufactured and mineral products 0.85, on March 1 the relation was more than reversed, the ratios standing at 0.76 for agricultural against 1.34 for other products.

Decreasing Buying Power of the Peasantry.

In an article entitled "The Cardinal Problem of Coordination," the editor of Economic Life (Moscow) says, in the issue of February 9:

> The movement of prices as observed since August last, showing the appalling gulf opening up between relative values and spreading faster and faster, is pregnant with most serious consequences for the whole national economics, and, first of all, for the industries themselves. The manufacturing industry is threatened with the loss of, and is in fact already beginning to lose, its sole and basic market—that of the peasantry. The "coupling up," or balanced interchange of commodities, between industry and agriculture is being disrupted and disorganized from day to day all along the line.
>
> Let us examine concrete figures, which will illuminate to the layman the dangers of this situation. A yard of calico was worth prior to the war 5¼ pounds of rye flour. By January 1, 1922, it was equal in value to 3.8 pounds only. As early as October, 1922, the full pre-war valuation was not only restored but exceeded, and a yard of calico fetched 9.4 pounds of flour; on December 1 it brought about 13¼ pounds; on December 15, 15 pounds; and in January, 1923, no less than 17 to 18 pounds—a more than threefold increase compared with the pre-war ratio of value.
>
> At a recent conference of produce-exchange operators the Commissary for Home Trade cited the figures of relative cost of the peasant's budget compared with pre-war costs. For a full assortment of commodities, representing a peasant's household budget, which was worth the price of 417.7 poods of rye grain in 1913, the peasant in January, 1923, would have to give up 1,115.6 poods of grain—a divergence in values of 167 per cent. It is most essential to diagnose the situation and to forestall the consequences. Even now a distinct setback is being felt on the market. The turnover of State trading organizations, as well as exchange transactions, is dropping quite steeply—especially on provincial exchanges. The merchandise element of peasant economics is dwindling. The peasantry are already

[1] This means that, in terms of the original denomination of Soviet rubles, the price was 5,420,000 times higher than in 1914.

pails, etc., are being replaced by homespun cloth, wooden buckets, and products of home handicrafts.

Lessened Incentive to Planting.

A further consequence of the curtailment of the market for manufactured articles is pointed out by P. Popoff, chief of the Central Statistical Bureau, in an article in Economic Life of March 1:

It has lately become a commonplace in which all shades of political economists agree—nationalists, communists, and practical workers of the soviet economics—that, under the present depreciation of bread relative to industrial commodities, the peasant loses his incentive in the pursuit of agriculture; and if such conditions are maintained, then the peasant will reduce his production to the extent just sufficient for satisfying his own consumption.

First of all, one must bear in mind that the prices of agricultural commodities in 1922 remained relatively higher than those of manufacturing industries, up until September. This means that until September the peasant had every incentive to expand the area of planting. Furthermore, the fall sowing campaign was carried out under the omen, "Expansion of area"; and, indeed, we observe that the fall sowing did expand considerably in the Provinces affected by last year's famine, although for reasons of a different nature.

After citing statistics of the fall sowing area of 1922, compared with that of 1921, the author continues:

Thus the curtailment of sown area can become manifest only at the beginning of the spring campaign when, in accordance with the above axiomatic position, the peasantry will have no impelling considerations either for extending their planting or even for maintaining them within the former limits.

In interpreting the foregoing statistics and comments it should be noted that the great bulk of manufactured and mineral products in Soviet Russia is produced by State-operated concerns, while practically all agricultural products are raised by the peasants, each working his own farm.

The Memel Territory.

In view of recent political events with regard to Memel, the following account of the territory's industries, traffic, and export trade, compiled from a report by Consul General L. J. Keena, Warsaw, Poland, and from other authentic sources, may be of value:

By the treaty of Versailles the Memel territory, consisting of the three counties—Memel, Heydecrog, and Pagegen—was separated from Germany and put under the protection of the Allies until its final disposition should be made by them. The territory is located on the southeastern coast of the Baltic Sea, occupies an area of 1,057 square miles, and has a population of 150,000.

Memel, comparatively speaking, has well-developed industries which, at the beginning of 1923, were employing 20,000 workmen and producing goods for both local consumption and export, particularly in the wood industry. Among the working industrial establishments are: Twenty-nine woodworking factories, including sawmills and veneer mills; a cellulose factory, one of the largest in Europe; a factory for artificial fertilizers; a dockyard for ships; several machine shops; breweries and alcohol distilleries; a large number of brickkilns; and installations for working peat.

The port activities of Memel have diminished in comparison with pre-war times. In 1913 the traffic of the port amounted to more than 1,200,000 tons, most of it composed of transit trade from Lithuania, made up chiefly of timber, grain, and other agricultural products. The annual value of exported timber was about $5,000,000. At present most of the Lithuanian foreign trade passes through the port of Libau, Latvia, although Lithuania has a small port of its own—Polangen—where exports in 1913 amounted to only 3,000 tons.

Additional information regarding eastern Europe and the Levant appears in this issue under the following section:

Tariffs and trade regulations: Temporary extension of commercial treaty between Greece and Costa Rica.

BALKANS AND LEVANT.

James A. Robertson, Chief, Levantine Section.

Austrian-Yugoslav Negotiations.

Assistant Trade Commissioner F. W. Allport, Vienna, Austria, February 28.

An agreement was reached at the recent conferences held between Austrian and Yugoslav officials at Belgrade, according to the local Vienna press. The settlement of leading questions is embodied in a protocol which has been signed and only awaits ratification to become effective. The protocol covers four subjects, as follows:

1. Release of sequestrated property of citizens of one country in the territory of the other and the removal of restrictions now in force concerning such property.
2. Settlement of obligations incurred in crowns of the former Austro-Hungarian Monarchy before March 1, 1919 (that is, prior to stamping of notes circulating in Austria).
3. Regulations governing the conduct of business enterprises that operate in the territory of one country while maintaining their seat of business in the other.
4. Question of ownership of shares, formerly the property of the Austro-Hungarian Government and now in Austrian possession, of companies in Bosnia and Herzegovina.

Questions were settled, also, pertaining to embassies and consular offices of the former Austro-Hungarian Monarchy in Serbia and Montenegro, as well as questions relating to frontier traffic, passport and traveling facilities, transit traffic, and the return of Austrian rolling stock in accordance with the Portorose Conference. A commission is to be created to deal with still unsettled questions. Special attention is to be devoted to the Serbian, Croatian, and Slovenian minorities genland. It was decided also to begin negotiations at the end of March for a comprehensive commercial agreement between Austria and Yugoslavia.

New Company for Rebuilding Smyrna.

William A. Yoder, secretary to trade commissioner, Constantinople, Turkey.

Local press reports from Constantinople note the organization of an Ottoman company in Paris. This company, which will work with the Banque Nationale de Credit, the Banque Perrier, and several other financial establishments, has been formed for the purpose of reconstructing the destroyed and damaged districts of the city and Province of Smyrna. An initial amount of 500,000 francs has been subscribed for the purpose of making studies in this connection, and a technical commission has been appointed to that end. The company contemplates reconstructing houses and other buildings according to the Turkish style. It is said that proprietors of such edifices may settle the ensuing debts by installments.

This company must be differentiated from the Ottoman Development Co., which was incorporated in the United States and which has taken up the old Chester project for the building of railways and the furnishing of necessary supplies to Turkey; also from the so-called Ottoman Estates Co., incorporated recently in Virginia for the purpose of developing the estates of

FOREIGN TRADE OPPORTUNITIES.

Reserved information may be obtained from the **Bureau and its district and cooperative offices** by duly registered firms and individuals upon written request by **opportunity number.** The **Bureau** does not furnish credit ratings or assume responsibility as to the standing of foreign inquirers; the usual precautions should be taken in all cases; references are generally furnished and form a part of the reserved information. Correspondence may be in English unless otherwise stated. Symbols: * Reported by American consular officers; † Reported by commercial attachés and trade commissioners; ‡ Direct inquiries received by the Bureau.

American manufacturers and exporters in following up "Foreign Trade Opportunities" submitted by foreign representatives of the United States Government should not fail to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters, as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.

6005.*—Black and colored box calf and sides, kids, patent kids and sides, buck sides, and veal sides for sport shoes—GREECE. Purchase. Quotations, c. i. f. Piraeus. Payment: Confirmed credit in New York. Correspondence, French.

6006.*—Best quality leather for making shoe uppers, of all kinds and colors—ITALY. Purchase. Quotations, f. o. b. American port.

6007.*—Heavy and medium quality glazed kid, 4 to 5 square feet per skin—AUSTRIA. Purchase. Quotations, c. i. f. any German port. Terms: Cash upon arrival of goods.

6008.*—Fine leathers, black and colors, for women's fine shoes—ITALY. Purchase and agency. Correspondence, French or Italian.

6009.*—Tanning materials (extracts, oils, etc.) for treating about 2,000 pounds of skins per month—MEXICO. Purchase. Quotations, c. i. f. Mexican port. Terms: Cash against documents.

6010.*—Tanning materials and tanning extracts—AUSTRIA. Agency. Quotations, c. i. f. Hamburg. Terms: Payment against documents.

6011.*—Shellac wax and carnauba wax for varnish manufacture—GERMANY. Purchase. Quotations, c. i. f. Bremen. Terms: Cash on delivery in United States currency.

6012.*—Caustic soda, tallow, grease, and raw materials for soap manufacturers—ITALY. Agency. Quotations, c. i. f. Italian port.

6013.†—Residuums of big slaughterhouses for use as agricultural fertilizer—SPAIN. Quotations and full information desired.

6014.*—Chemical and pharmaceutical products—FRANCE. Agency.

6015.*—Peru ocher—GERMANY. Agency. Quotations, c. i. f. Rhine port or Rotterdam. Terms: Cash on receipt of goods.

6016.*—Chemical products, such as are used for disinfectants and cleansing purposes—AUSTRIA. Agency. Quotations, c. i. f. Hamburg or Trieste. Terms: Cash against delivery or against documents.

6017.*—Casein, as adhesive for industrial purposes; pure industrial acetone, as solvent for celluloid; and amyl acetate, as solvent for varnishes—ITALY. Purchase and agency. Quotations, c. i. f. Genoa. Terms: Payment against documents.

6018.*—Small electric-driven refrigerators for use in private dwellings and hotels of a capacity up to one-eighth ton, direct-current, self-acting, and self-contained—NEW ZEALAND. Purchase and agency. Quotations, c. i. f. New Zealand port.

6019.*—Small automatic electric machine for grinding ice and filling glasses, for serving fruit juices on ice, the placing of the glass making the electrical connection—MEXICO. Purchase and agency. Quotations, f. o. b. New York or New Orleans. Terms: Cash with order. Correspondence, Spanish.

6020.†—Lighting fixtures, electrotherapeutic equipment, and signal system for sanitarium—SOUTH AFRICA. Purchase. Quotations, f. o. b. New York. Catalogues and general prices desired.

6021.*—Tea, cocoa, preserves, hemp, and flax—SWEDEN. Purchase and agency. Quotations, c. i. f. Swedish ports. Terms: Cash.

6022.*—Flour, sugar, cigarettes, unfinished felt hats, hosiery, and piece goods; cutlery, and motor boats—MADEIRA. Purchase and agency. Quotations, c. i. f. Ponta Delgada.

6023.*—Wheat flour in quantity of 1,500 bags per month and white corn meal in quantity of 200 bags per month—CUBA. Purchase and agency. Quotations, c. i. f. Cuban port.

6024.*—Large live pigs, bacon in boxes of 50 kilos, and lard in tins of 10 and 20 kilos—PORTUGAL. Quotations, c. i. f. Portuguese port. Terms: Part payment with order, balance against documents. Correspondence, Spanish or Portuguese.

6025.*—Oats, 100 to 200 tons; and wheat, 100 to 200 tons—FRANCE. Purchase. Quotations, f. o. b. New York. Terms: Cash.

6026.*—Cotton piece goods, shirtings, mattings, zephyrs, and hosiery; woolen piece goods for suitings, woolen hosiery, and scarfs; and silk hosiery, ties, jumpers, and scarfs—NETHERLANDS. Agency. Quotations, c. i. f. Holland ports.

6027.*—Cordage, lines, and canvas—NOVA SCOTIA. Purchase. Quotations, f. o. b. New York or Newport News. Terms: Cash against documents.

6028.†—Shirts of the cheaper grades, men's, women's, and children's hosiery of the cheaper grades in silk and cotton; and piece goods, such as voiles, organdies, pongees, muslins, percales, madras, oxfords, and gingham—CUBA. Agency. Quotations, f. o. b. American port.

6029.*—Automobile trimmers' materials, such as carpets, seat covers, hood cloths, canvas, turn buttons, and everything relating to this trade—SOUTH AFRICA. Purchase. Quotations, f. o. b. American port.

6030.*—Cotton twine—NORWAY. Purchase from manufacturers. Quotations, c. i. f. Norwegian port. Terms: Cash against documents.

6031.*—Burlap, 9-ounce, 45 inches wide, in quantity of 1,500 yards, to be delivered 3,000 yards monthly beginning June 1, 1923—CANADA. Purchase. Quotations, c. i. f. Canadian port. Terms: Cash against documents.

6032.*—Cotton and lisle stockings and socks in black and colors, and wool hosiery—FRANCE. Purchase or agency. Quotations, c. i. f. French ports.

6033.*—Clothing and dry goods, such as usually sold in large department stores—SWITZERLAND. Purchase. Quotations, c. i. f. Antwerp.

6034.*—General dry goods, particularly cotton piece goods, silks, ribbons, etc.—CHILE. Agency. Quotations, f. o. b. American port.

6035.*—Dry goods, underwear, and hosiery—FRANCE. Agency. Quotations, f. o. b. American port. Correspondence, French.

6036.*—Men's ready-made clothing, haberdashery, hosiery, and cotton piece goods—CUBA. Agency.

6037.*—Hosiery, underwear, bathing suits, bath towels and robes, haberdashery, cotton and linen goods, woolens, knit goods, silk goods, millinery, hats, boys' suits, fancy leather goods, raw leathers in general, oilcloths and linoleums, boots and shoes, and metal and shoe polishes and materials and necessaries relating to the boot and shoe trade—EGYPT. Agency. Quotations, c. i. f. Alexandria or Port Said.

6038.‡—Woolen and knit goods—JAPAN. Agency.

6039.‡—Cotton piece goods, such as unbleached, bleached, dyed, printed cloths, handkerchiefs, laces, and embroideries—CUBA. Agency.

6040.*—Pitch suitable for making briquets, 4,000 tons, to contain 50 to 55 per cent of volatile materials, with from one-half to 1 per cent of ash—SPAIN. Purchase for delivery in October, 1923. Quotations, c. i. f. Santander.

6041.*—All automobile parts which enter into the construction of a motor car, such as engines, chassis, and wheels—ENGLAND. Purchase from manufacturers. Quotations, c. i. f. Liverpool or Manchester. Terms: Cash against documents.

6042.*—Marine motors of various sizes, ranging from small ones for rowboats to motors large enough for 70-ton fishing vessels—SPAIN. Purchase and agency. Quotations, c. i. f. Spanish port. Correspondence, Spanish.

6043.*—Flexible transmission shafts and tubes of steel and accessories—ITALY. Purchase. Quotations, c. i. f. Genoa. Terms: Cash against documents.

6044.*—Iron and steel, glass, especially window and plate, paper, textiles, cement, and industrial chemicals—BRAZIL. Agency. Correspondence, Portuguese, French, or Spanish.

6045.*—Steel rails and fishplates, 3,000 tons—NORWAY. Purchase.

6046.*—Scrap iron and steel, and miscellaneous junk, about 1 carload, 50 tons—NOVA SCOTIA. Purchase. Quotations, f. o. b. port of shipment.

6047.*—Shipbuilding steel for 2 ships: 13 tons medium sheets; 525 tons thick sheets of principal thickness from 7 to 12 millimeters; 845 tons of thick sheets of principal thickness 7 to 14 millimeters; 245 tons of iron clamps; 250 tons of profile (shaped) iron; and 13 tons of angles, girders, etc.—GERMANY. Purchase. Quotations, c. i. f. German port per ton of 2,204 pounds.

6048.*—Small engines for rowboats—ITALY. Agency. Quotations, c. i. f. Italian port. Terms: Cash against documents. Correspondence, French or Italian.

6049.*—Small vulcanizing outfits and automobile accessories—ITALY. Purchase or agency. Quotations, c. i. f. Italian port. Terms: Cash against documents. Correspondence, Italian.

6050.*—Rough and planed southern yellow pine lumber, white pine, and cypress, in carload lots or full vessel cargo—CUBA. Purchase or agency. Quotations, c. i. f. Cuban port. Correspondence, Spanish.

6051.*—Lumber, principally southern yellow pine, and also white oak, quartered oak and mahogany—SPAIN. Purchase. Quotations, c. i. f. Spanish port.

6052.*—Oak staves for oil barrels, of first quality—GERMANY. Agency. Quotations, c. i. f. German port.

6053.*—Box shooks for fruit and other articles—PORTUGUESE EAST AFRICA. Agency.

6054.*—Printing presses and machinery generally, and bookbinding machinery and equipment—MEXICO. Purchase. Quotations, f. o. b. Mexican destination. Correspondence, Spanish.

6055.†—Complete cement-making plant of 1,000-barrel daily capacity, for making Portland cement—CHINA. Purchase.

6056.†—Machinery of all kinds and supplies—NEW ZEALAND. Representation by merchant who will shortly visit the United States. Catalogues and full particulars desired.

6057.*—Machinery and supplies for the opening of a newly discovered coal mine—PORTUGUESE EAST AFRICA. Purchase. Quotations, c. i. f. African port. Catalogues are requested.

6058.*—Full equipment for graphite mill in Madagascar—FRANCE. Purchase. Quotations, c. i. f. Madagascar. Terms: Bank credit to be arranged.

6059.*—Machinery for filling and weighing of oatmeal in paper boxes—NORWAY. Purchase.

6060.*—Machines to cast small parts of delicate apparatus of all kinds, such as small motor wheels, frames of mechanical appliances, gear parts, and small parts of precision instruments—FRANCE. Purchase. Correspondence, French.

6061.‡—Machinery and equipment necessary for the manufacture of porcelain—PORTO RICO. Purchase. Catalogues

6062.*—Mining machinery, such as small aerial tramways, compressor plants, concentrators, and general mining and milling machinery required for opening up, developing, and preparing ore for shipment—CANADA. Agency. Quotations, c. i. f. Canadian port.

6063.†—Paper-making machinery for a paper mill using sabai grass—INDIA. Specifications and catalogues are desired.

6064.*—Air compressors, pneumatic drills and hammers, and apparatus for sand blast—ITALY. Agency. Catalogues requested. Correspondence, French or Italian.

6065.*—Cane-sugar machinery for plantation and small mill uses—GUADELOUPE. Purchase. Catalogues and correspondence should be in French.

6066.*—Mine supplies of all kinds, including mining machinery, chemicals, explosives, metals, belting, lubricants, hardware, tools, and particularly hammer and pick handles—SOUTH AFRICA. Exclusive agency. Quotations, f. o. b. New York. Terms: Payment in New York.

6067.*—Machinery for making soap from coconut oils—EAST AFRICA. Purchase. Quotations, c. i. f. Mombasa. Terms: Cash against documents.

6068.*—Rubber to be used for bicycle brakes—NORWAY. Purchase. Quotations, f. o. b. American port. A sample showing the rubber desired may be examined at the bureau or its district offices. (Refer to file No. 88260.)

6069.*—Rubber balloons, all sizes—ENGLAND. Purchase. Quotations, c. i. f. English port.

6070.‡—Hardware, such as zinc plates, corrugated iron, galvanized pails, steel beams, and galvanized washbasins—CUBA. Agency.

6071.*—Light and heavy hardware—CUBA. Agency. Quotations, c. i. f. Cuban port.

6072.*—Novelties for fairs and carnivals, such as automatic water, peanut, and candy venders—MEXICO. Purchase. Quotations, f. o. b. factory. Terms: Cash with order. Correspondence, Spanish.

6073.†—Steel office filing equipment, including especially 4-drawer cabinets, card-index cabinets, and clothes lockers, in low or medium priced grades—SOUTH AFRICA. Purchase. Quotations, f. o. b. New York. Terms: Cash.

6074.*—Knocked-down oak office desks—BELGIUM. Purchase. Quotations, c. i. f. Antwerp. Terms: Cash on arrival of goods.

6075.*—Bronze urns for holding ashes after cremation, and bronze funeral ornaments—SWITZERLAND. Purchase. Quotations, c. i. f. Antwerp. Payment on receipt of goods. Correspondence, French or German.

6076.*—Office furniture and appliances, particularly modern novelties—GERMANY. Purchase. Quotations, c. i. f. Hamburg or Bremen.

6077.*—Nonperforated rolls of raw film of 110 meters each, in yearly quantity of 100,000 to 200,000 meters, to be used in the manufacture of negatives—AUSTRIA. Purchase and agency. Quotations, c. i. f. Hamburg. Terms: Cash upon arrival of goods.

6078.*—Plumbing supplies and sanitary appliances—POLAND. Purchase. Quotations, c. i. f. Danzig. Terms: Cash. Correspondence, French or German.

6079.*—Filing devices, card sets for index cards, novelties in stationery, and office supplies of all kinds—SPAIN. Purchase. Quotations, c. i. f. Spanish port. Terms: Cash. Correspondence, Spanish.

6080.*—Drugs and chemicals—SWITZERLAND. Purchase. Quotations, c. i. f. Marseille or Geneva. Correspondence, French.

6081.*—Standard lines of drugs and chemicals, specialties, toilet preparations, stationery, paper, and sanitary supplies—CANADA. Purchase and exclusive agency.

6082.†—Cotton knitting and weaving yarns, cotton and woolen piece goods, serges, suitings, and fancy cotton goods; cotton, artificial silk, and pure silk hosiery for men and women, and underwear—ARGENTINA. Agency. Quotations, c. i. f. Buenos Aires. Terms: Cash against documents.

6083.*—Raw hides—POLAND. Purchase. Quotations, c. i. f. Danzig. Correspondence, Polish, German, or Russian.

6084.*—Moccasins for men, women, and children, hunting and sporting boots and shoes, rubber boots, and fine shoes for men and women—EAST AFRICA. Purchase and agency. Quotations, c. i. f. Kilindini. Terms: Cash against docu-

INVESTIGATIONS BY UNITED STATES TARIFF COMMISSION.

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 1 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Oxalic acid.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 1 of Title I of said tariff act, namely, oxalic acid, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered, further, That all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office, in Washington, D. C.

And ordered further, That public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission, passed on the 27th day of March, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 2 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Diethyl barbituric acid and derivative thereof.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 5 of Title I of said tariff act, namely: Diethyl barbituric acid and derivatives thereof, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission passed on the 27th day of March, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 3 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Barium dioxide.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to the articles described in paragraph 12 of Title I of said tariff act, namely: Barium dioxide, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission passed on the 27th day of March, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 4 by the United States Tariff Commission for the purposes of section 315 of the Tariff Act of 1922.

Casein.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922, and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 19 of Title I of said tariff act, namely: Casein, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office, in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission passed on the 27th day of March, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 5 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Logwood extract.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 39 of Title I of said tariff act, namely: Logwood extract, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission passed on the 27th day of March, 1923.

JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 6 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Potassium chlorate.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922, and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 80 of Title I of said tariff act, namely: Potassium chlorate, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Re-

said publications are obtainable from the Superintendent of Documents of the Government Printing Office, in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission, passed on the 27th day of March, 1923. JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 7 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Sodium nitrite.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 83 of Title I of said tariff act, namely: Sodium nitrite, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of the order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission passed on the 27th day of March, 1923. JOHN F. BETHUNE, *Secretary.*

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 8 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Mirror plates.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 223 of Title I of said tariff act, namely: Mirror plates, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered further, that all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at a public hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office in Washington, D. C.

And ordered further, that public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

SERVICE OF DIVISION OF FOREIGN TARIFFS.

The Division of Foreign Tariffs offers to the general American export trade what most individual exporters can not afford to maintain, but urgently need—a staff of technical advisers on the problems arising from the charges and regulations that govern the shipment of goods from one country to another.

Specifically, the division informs and advises American exporters—through correspondents, the columns of COMMERCE REPORTS, and special publications—as to the conditions set by foreign countries with regard to duties, documents, consular and customs procedure and requirements, and all related official regulations, restrictions, and charges that pertain to the intimate business of exporting—the getting of American goods into foreign markets.

The division follows American goods into the foreign market, so as to be able to advise as to any internal charges or regulations affecting imported goods, such as sales or luxury taxes, consumption or excise duties, quality standards or regulations, on the sale or use of specific commodities. It carries its interest in American export products further by ascertaining the means of protecting the good will established by the sale of American branded or patented products abroad and by warning of attempts at unauthorized registrations of distinctive American trade-marks in foreign countries.

The division advises the American exporter as to the conditions governing his first entry into a foreign market, as to the licenses and fees to which commercial travelers are subject abroad, and the customs treatment of their selling samples in each country. It likewise advises with regard to the shipment of advertising matter and samples abroad, covering incidentally the official documents, charges, restrictions, and regulations governing the shipment of goods by parcel post.

While primarily concerned with the promotion of American export trade, the division also keeps informed as to the duties, restrictions, and regulations of foreign countries upon their export products, particularly those products which form the raw material for American industries.

COMMERCE REPORTS

A Weekly Survey of Foreign Trade

Herbert Hoover, Secretary of Commerce — Julius Klein, Director Bureau of Foreign and Domestic Commerce

Fundamental Principles Often Disregarded.

The decline in sales of American goods in southern Spain is due, in the opinion of Consul William C. Burdett, at Seville, to inadequate observance by American exporters of oft-repeated injunctions regarding commercial dealings with foreign customers. Too often the district has been considered merely as an outlet for surplus production after the war. Again, the loss of trade has been due to failure to make a thorough study of the conditions and special requirements of the market. Such a study is essential to the maintenance of permanent export trade. Attention must be given to correct documentation, the proper kind of packing to meet local conditions, the tastes of the population, and promptness in making shipments. English is practically unknown in southern Spain, so catalogues and correspondence in English represent a waste of time and money. Again, in the matter of credits, American exporters have been too prone to go to extremes, occasionally granting either indiscriminate credits or none at all. As credit hazards in Spain compare very favorably with those in most countries importing American goods, the American manufacturer should endeavor to give the same terms as our more conservative European competitors offer.

A sales campaign in Spain has better chances of success if the country is divided into districts; it is not a unit as a sales area. A personal visit of an official of the firm is highly desirable, particularly in the selection of an agent in southern Spain. The number of distribution centers in different sections of the country would be decided by the selling potentiality of the line in question, which would depend, of course, on the buying power of the surrounding region, the number and standing of the established competitors, transportation, and banking facilities. These factors differ rather widely between regions.

American articles successfully placed owe their success even more to the shrewd selection of unusually alert and energetic agents than to the outstanding merits of the goods themselves. It is not usually wise to insist on an agent's confining his activities to one's own line. An agent handling other noncompeting lines may well be selected, although, of course, he should not be tempted to overstock. Finally, it is incumbent upon the American firm to stimulate its agent in southern Spain by constant and sympathetic attention and by conservative criticism.

There are in southern Spain no American banks, no American chambers of commerce, and no permanent American population such as one finds in many other regions, so the exporter must plan to rely wholly on his own efforts and resources. Even the foreign money invested is largely from British, German, French, and Belgian sources. However, American products have won popularity by their high quality, and in some cases—notably in agricultural machinery, automobiles, and typewriters—they have been able to meet competition successfully.

Cultivating Export Vision.

Slow and unimaginative is the change in methods for the man without export vision. For years he shipped his goods to oversea markets on sailing vessels, little by little he changed to steam, and some day, imperceptibly, he may drift into aviation. Others plan, experiment, improve, blaze the way—the man without vision follows in due course. Thus he took up the film and the radio, as he had earlier adopted the telegraph and the telephone.

The man without vision sees the immediate trading opportunity. The man with vision does not neglect the present but looks also to objectives beyond. To develop such vision it is essential to add constantly to one's fund of information on world affairs. The lack of proper training in world history and world geography, the lack of accurate knowledge of the resources and aspirations of foreign nations, large and small, has made many of us deplorably nearsighted.

Mossul and Shantung, Chita and Angora, Tiflis and Baku, Memel and Ruhr, were names that had meant little to the average American business man, clerk, or high-school boy before the day's news brought them into prominence.

The man without vision notes the prominent part in international relations played by oil, coal, and iron, rubber and tin, sugar and coffee, copper and wheat; he dimly realizes that they are factors that may affect his own destiny; yet he has no background of world economics to enable him to appreciate their dramatic value in the trend of the times.

The man with export vision builds for to-morrow as well as for to-day, for America's good as well as for his own. He is, at least in some measure, conscious of his own part in the molding of export history. But to keep up with the swift changes the exporter must have

his finger on the pulse of events. He must keep regularly posted on what occurs in the business life of foreign nations. Otherwise he is certain to find himself hopelessly outstripped.

Knowledge of Foreign Methods Indispensable.

In one of the leading American publications there has been appearing a series of articles describing the methods of doing business in England. These fascinating articles have described in minute detail the business methods, likes and dislikes, customs, and traditions that govern English commercial practice. Although these articles have concerned only the broader and more interesting aspects of business, many readers have been surprised to learn of the marked difference between American and British business methods. With such a wide divergence between the practices in Great Britain and the United States—two countries that have more in common than almost any other two—it is obvious that the contrast between American methods and those of non-English-speaking countries is generally much greater. A realization of this serves to emphasize the fact that an intimate knowledge of business practice in such countries is a prerequisite to successful foreign trade.

Translation of Contracts.

While the English language is the most widely used business language in the world, there are, of course, certain countries where French, Spanish, and other languages are better understood. While ordinary correspondence in many cases may be conducted in English, it has often been found that foreign merchants not fully conversant with English are reluctant to affix their signatures to contracts in any language other than their own.

The question of having English contract forms translated into other languages has therefore arisen. Perhaps in no other case would it be so important to have an absolutely correct translation of the English text, and for this reason many of our exporters have hesitated to take the step because a shade of difference in the meaning of a word in the English and in the foreign text may cause the exporter important losses. It therefore seems a safe policy to adhere to the English text and make this the basis for transactions, but to have the English text translated on the back of the contract form for the convenience of the foreign importer.

Naturally, the translation must be as accurate as possible since, unless the exporter knows that the translation is entirely dependable, it would perhaps be better for him not to affix his signature to the foreign text.

The arrangement indicated above has been practiced for a number of years by leading exporters abroad and no doubt by several of the American merchants engaged in the export trade.

Reading by Proxy.

The exacting duties of the business executive make it a physical impossibility for him to give personal attention to the reading of the mass of periodicals that reach his desk. Important commercial organizations have devised a plan to cope with this problem by assigning the reading to a special clerk, who allots to the various officials those clippings or references which, in his judgment, are of particular interest to each.

This plan has the virtue of relieving the executive of a great deal of labor. At the same time it often works an irreparable hardship. In the miscellaneous reading thus passed by there is much that might prove vitally informative and profitable to the executive and be of substantial help to him later, at crucial junctures. Specific details may be intrusted to a specialist. But a fund of information can not be acquired by proxy.

It is believed that the export executive will find it worth while to read, personally, at least the cable reviews and the significant general articles that appear in COMMERCE REPORTS.

FOREIGN CUSTOMERS SECURED THROUGH BUREAU'S SERVICES.

An important lumber exporter on the Pacific coast of the United States writes as follows:

During the past two years we have secured several good customers in Australia for Pacific coast lumber through the services of the Lumber Division of the Bureau of Foreign and Domestic Commerce, and we wish to express our thanks for the services you have rendered us.

In the textile field, a large cooperative society of London, England, has placed a substantial order with a New York State concern, for fishing lines, as a result of a foreign trade opportunity submitted by Trade Commissioner Butler in London and handled by the Bureau's Textile Division in Washington. In consequence of another trade opportunity sent in by Mr. Butler, an American firm has just sold in England a quantity of sea island colored cotton twine.

Through the efforts of the Textile Division and the Bureau's district offices, a Georgia mills company has secured representative agents in Argentina, Brazil, and Peru from lists supplied by the Commercial Intelligence Division.

MONTHLY CABLE REVIEWS

WESTERN EUROPE.

Charles E. Lyon, Acting Chief, Western European Division.

RUHR SITUATION AND MARK STEADINESS AS THEY AFFECT GERMAN INDUSTRY.

Based on cable from Assistant Commercial Attaché Donald Breed, Berlin, April 14.

[The outstanding features of the past month have been the progressive shutting off of the occupied territory from the remainder of Germany, and the pegging of the mark at about 21,000 to the dollar by constant Reichsbank intervention. The isolation of the occupied area brings serious hindrances to traffic and communications, and conflicting German and French customs regulations contribute further to the causing of an almost complete deadlock. Industrial production in the occupied area is slowing down and many plants are already idle. The repairs and unproductive emergency work giving partial employment require large credits which are obtainable through the continuance of heavy inflation; Reichsbank note circulation increased 57 per cent during March and the private discounts 30 per cent.]

Inflation Unchecked—Budget Forecasts Meaningless.

Government finances are characterized by the continuance of unchecked inflation. The Reichsbank note circulation on March 29 amounted to 5,500,000,000,000 marks, and the floating debt in discounted treasury bills on March 31 was reported at 6,600,000,000,000 marks, of which 4,500,000,000,000 were held by the Reichsbank. The note circulation at the end of February had been given as 3,500,000,000,000, indicating an inflation during March of 2,000,000,000,000 marks. The former floating debt figure shows that the inflation of the month was 3,000,000,000,000 marks. Private discounts for March amounted to 2,400,000,000,000 marks as compared with 1,800,000,000,000 at the end of February. The tremendous increase doubtless represents in large proportion loans to industrialists of the occupied areas.

The first budget forecasts for next year showed a probable deficit of 7,000,000,000,000 marks, but such estimates are now meaningless; since actual Reichsbank gold is being spent in pegging the mark the true relationship between the gold values of income and expenditure is no longer clear from any budget statement.

Reichsbank Gold Loan Unsuccessful.

The recent $50,000,000 Reichsbank gold loan has been subscribed to only to the extent of 25 per cent, but banks have agreed to take almost as much more. One inference from the failure of this loan, which was to be subscribed only in high-exchange currency, is that the amount of foreign currency in the hands of private industrialists had been overestimated.

Bankruptcies Very Low—Capital Increases—Stock Index.

Bankruptcies to the number of 32 were reported for March, with many of the weaker firms on the verge of insolvency. Nevertheless, the total bankruptcies for the first quarter of 1923 set a new low record, being 70, as compared with 369 for the first quarter of 1922 and 739 for the first quarter of 1921.

The Frankfurter Zeitung gives the increases of capital during March as 13,800,000,000 marks and new incorporations as 6,700,000,000 marks, as compared with 14,731,000,000 and 4,252,000,000 marks, respectively, for February.

The stock index appearing in the same publication shows an increase from 2,009,965 on March 2 to 2,353,783 on April 6. Domestic loans, which had hardly changed during February, have dropped slightly from 6,605 at the beginning of March to 6,318 on April 6; foreign loans went from 267,900 to 344,450.

Wholesale Price Movements—Industrial Conditions.

The wholesale price index of the Frankfurter Zeitung shows a further decrease from its position of 7,159 times the pre-war figure on February 2 and 6,770 on March 2 to 6,393 on April 6. An influx of Czechoslovakian and British pig iron and steel, owing to the reduction of import tariffs in anticipation of a shortage, affected adversely the German heavy iron and steel plants, as the former products sold, temporarily, under German prices.

Industries are dull in general, on account of the reaction following the mark stabilization; domestic wholesale buyers seem reluctant to buy except in pressing need. Textiles are affected by the fact that raw materials were purchased at a low value of the mark in January and the prices which have to be charged now are discouraging to buyers. Sales in chemicals and dyestuffs are also very greatly reduced. Glass is active but impending increases of overhead make prospects discouraging. Half fabricated steel is dull; about 12 per cent of the plants in the Berlin district are running on half time.

Unemployment—Little Inclination Toward Strikes.

Unions report a continuing increase of unemployment. At the end of February there was 5.7 per cent (319,000) of the membership totally unemployed, as compared with 4.4 per cent at the beginning of the month. For the end of February unions report 16.5 per cent of their members engaged in part-time work. The exact extent of the reduction of working hours is not indicated but official reports state that the number of men working less than half time is increasing.

Doubtless on account of lack of funds and also ostensibly for patriotic reasons, labor still seems inclined not to institute strikes; however, increasing unemployment and the unwillingness of employers to raise wages are bringing difficulties nearer. There are minor strikes among the woodworkers of Saxony and Thuringia.

Cost of Living and its Relation to Wages.

The Government cost of living index (covering food, rent, heat, light, and clothing) stood at 2,854 as an average for March, showing an 8 per cent increase over the February average. The latter figure, 2,643, had shown an increase of 136 per cent over the January figure of 1,120. It will be noticed that this index is now being quoted on the basis of 1 for 1913 and 1914 instead of 100 as heretofore.

Doctor Kuczynski estimates the weekly expenditure of a family of four in Berlin at 77,741 marks for the first two weeks of March, and at 72,483 marks for the second half; during the first half of February the expenditure amounted to 81,671 and during the second half, 90,350. Bread prices are unchanged; butter, milk, and eggs are the only foodstuffs for which increases are reported. Rents remain practically the same except for small increases in provincial cities.

The average hourly wage in Berlin, which may be considered as typical of Germany as a whole, was about 1,400 marks, including bonuses, at the middle of April. Apparently, therefore, the weekly wages received for a family of four (about 67,200 marks) would cover about 85 per cent of the necessary living expenditures.

Foreign Trade Figures Misleading.

Statistics of German foreign trade become more and more meaningless with various methods of calculation and the present exclusion of the occupied area from consideration. The figures for the unoccupied territory show imports for February to be 3,160,000 metric tons and the exports 1,100,000 metric tons. In comparison with this the January imports of total Germany amounted to 4,729,000 metric tons and the exports to 1,309,000 metric tons.

LARGE DEFICIT IN NEW SPANISH BUDGET.

Based on cable from Commercial Attaché Charles H. Cunningham, Madrid, April 15.

[The situation of Spanish Government finances is growing steadily less favorable. The Government has an unfavorable balance with the Bank of Spain, and note circulation is increasing. The new budget for the fiscal year 1923-24 presupposes a deficit of 1,000,000,000 pesetas, which is no improvement over the past two years. Spanish industry in general is dull, but there has been some revival in the coal and steel industries.]

The 1923-24 Budget.

The publication of the tentative budget for the current Spanish fiscal year, which began April 1, shows no improvement over the preceding two years. The initial deficit is in the neighborhood of 1,000,000,000 pesetas, equaling the estimate for the past fiscal year, while the final deficit for the year 1921–22 has been announced as 1,300,000,000 pesetas. Expenditures for the current year are estimated at 3,048,000,000 pesetas, an increase of 4,000,000 pesetas over the budget for the past fiscal year. Economies reaching 50,000,000 pesetas are outlined, but the single increase of 47,000,000 pesetas for interest on public debt contracted in the past fiscal year practically offsets these savings. The fact that 321,000,000 pesetas are provided for war department expenses has caused general dissatisfaction in Spain. Of the total budget approximately 39 per cent is devoted to military and police items, 27 per cent to interest on the public debt, 15 per cent to public works, 3 per cent to education, and 2 per cent to religion.

The following appropriations made during the past fiscal year were outstanding on April 1, and are carried over to the new budget: Highway construction, 23,000,000 pesetas; port works, 37,000,000 pesetas; posts, telegraphs, and railways, 40,000,000 pesetas; navy, new construction, 43,000,000 pesetas; aeronautic service, 25,000,000 pesetas; transport service, 8,000,000 pesetas; and military sanitation, 2,000,000 pesetas.

Government Income Shows Slight Increase.

During the 10 months, April, 1921, to January 31, 1923, Government income exceeded the budget estimates by 57,000,000 pesetas. Reforms in tax laws in 1922 were expected to add 305,000,000 pesetas to revenues, but at the present rate the total increase for the fiscal year will not exceed 70,000,000 pesetas.

Customs collections for March, 1923, amounted to 44,300,000 pesetas. This is approximately equal to the yield in March, 1922.

There are indications that revenue from taxation in Spain has reached its maximum. The official Chamber of Commerce in Spain has protested against the increases in the utilities tax and surcharges, claiming that there has been an increase of 200 per cent in the past three years. Economies are said to be necessary, such as the reduction of the number of Government employees, which has increased 350 per cent in the past 10 years, the relinquishment of the policy of subsidizing uneconomic Spanish industries, and the elimination of the loss on public supplies and railway materials.

Statement of Bank of Spain—Exchange.

The statement of the Bank of Spain for April 7, compared with March 10, shows a continuation of the steady increase in note circulation, while the gold reserve remains unchanged. Small decreases are shown in all other items. The statement for the two dates follows:

Items.	March 10.	April 7.
	Pesetas.	*Pesetas.*
Gold reserve	2,525,000,000	2,525,000,000
Note circulation	4,106,000,000	4,140,000,000
Current accounts	1,043,000,000	1,040,000,000
Discounts	710,000,000	708,000,000
Guaranteed credits	882,000,000	845,000,000

On April 10 the Treasury had an adverse balance of 49,000,000 pesetas with the Bank of Spain, and this balance is steadily increasing.

On March 1 the peseta was quoted at 15.61 cents (noon cable rates, New York), and from that date declined gradually to 15.30 cents on April 4. Since then fluctuation has been very slight. The decline has been checked, but there has been no tendency toward a reaction. Various reasons have been advanced for the recession. The most important factors are probably speculative purchases of foreign currencies from Spain and renewed unrest in the Moroccan situation.

Industrial Conditions.

Business in general is dull. Labor difficulties continue to appear, centering especially around Barcelona and Bilbao. At the latter place the disturbances were caused by demands for increased wages, and the work-

men have threatened to strike unless their demands are granted. The prosperity of the Spanish steel industry continues. A new blast furnace has been put in operation, with an output of 100 tons daily. The coal trade is expanding, and there is a shortage in some localities. The subsidy to the coal industry has been extended. Favorable indications are reported from the petroleum drillings in the Province of Vizcaya.

At the automobile show in Madrid, only a limited number of American cars were exhibited, but several other foreign makes were displayed. The prospects for a good automobile selling season this year are improved; the competition is likely to be keener than last year. The tire market is becoming more active.

RECENT STRIKES REDUCE SWEDISH EXPORTS.

Based on cable from Consul W. A. Leonard, Stockholm, April 13.

[During March settlements were affected in strikes and lockouts prevailing in the wood pulp, lumber, and other industries in Sweden, and the number of strikers was reduced by 40,000. The slackening of industry resulted in the smallest total trade since February, 1922, the principal effect naturally being shown in a heavy decline in exports. The unfavorable balance for the month was 38,000,000 crowns. During 1922 there was practically an even balance of trade. Note circulation of the Reichsbank increased 25,000,000 crowns. Against these unfavorable factors must be mentioned a decrease in the floating debt, and an increase of bank clearings, of the Bourse turnover, and of quotations on industrials and bank shares. Failures during March were slightly less than in February and January.]

Important Strikes Settled.

Improved conditions have been reached in the wood pulp, lumber, and certain minor industries through the settlement of strikes and lockouts which have involved about 45,000 men. The situation in the iron and steel industry has not been settled.

The cost of living index on March 1 was 6 points below the January figure of 183. The wholesale price index on the other hand, at 162, maintains the increase of the last three months over the January figure of 156. Emigration to the United States amounted to 6,177 in the quarter year ended March 31.

Note Circulation and National Debt.

The note circulation of the Swedish Reichsbank amounted on April 7 to 549,000,000 crowns, an increase of 25,000,000 since March 10. The gold reserve is unchanged at 274,000,000 crowns. The national debt at 1,568,000,000 crowns was 2,000,000 crowns larger than on March 1, owing in part to the reduction of the floating debt from 78,000,000 to 71,000,000 crowns.

Clearings at the bank rose 313,000,000 crowns to 1,768,000,000 crowns. Industrial and bank shares, at 105 and 89.8, respectively, were considerably higher than the February figures of 93 for industrials and 81 for bank shares. Capital issues at 14,000,000 crowns showed an increase over the February figures. Commercial failures were 332 in number as compared with 338 in February.

Foreign Trade Total Shows Decline.

Imports for February were valued at 87,836,000 crowns and exports at 49,387,000 crowns. The chief items of import were: Textiles and clothing, 12,500,000 crowns; minerals, 11,000,000 crowns; textile raw materials, 19,415,000 crowns. Leading exports were: Wood pulp and paper, 8,816,000 crowns; minerals, 6,500,000 crowns; and sawn lumber, 5,091,000 crowns.

March imports by weight show interesting contrasts with February figures. Wheat, with 16,000 metric tons, and iron and steel, with 18,000 metric tons, were twice as heavy as February imports, at 8,000 and 7,000 metric tons, respectively. Maize, with 3,400 metric tons, was far below the February figure of 8,000 metric tons; cotton, with 2,300 metric tons, and mineral oils, with 12,600 metric tons, were practically identical with February figures. In March 836 automobiles were imported, as compared with 444 in February.

March exports show similar contrasts with February figures; paper at 21,000 metric tons, iron ore at 438,000 metric tons, and iron and steel at 21,000 metric tons were far in excess of February figures; wood pulp, on the other hand, by reason of the strike, fell to a point 25 per cent below the February figure of 13,800 metric tons. Declared exports from Sweden to the United States for the first quarter of the year were valued at $6,629,000.

TRADE AND INDUSTRY IN THE NETHERLANDS SHOW IMPROVEMENT.

Based on cable from Paul S. Guinn, office of commercial attaché, The Hague, April 13.

The unfavorable influence which is being exerted by the Ruhr occupation on shipping and trade in the Netherlands is still keenly felt, but the general situation is still somewhat improved over that of a month ago. Greater activity is noticed in the agricultural and other interests—notably the electric-machinery industry, which is receiving great impetus as a result of a decrease in German competition. On March 31 coal shipments from Germany were resumed, with the result that the existing industrial tension was somewhat relieved.

The consolidation of a number of important industrial concerns in the Netherlands is expected to take place soon. Arrangements are now under consideration, for instance, providing for the absorption of the Holland South Africa Lines by the United Netherlands Co. The completion of this deal depends upon the approval of the Government, which has heretofore granted subsidies to the latter company. The Amsterdam Rubber Co. and the Netherlands Rubber Co. are considering an amalgamation which would form the largest rubber company in the Netherlands.

FAR EAST.

F. R. Eldridge, Chief, Far Eastern Division.

JAPANESE CONDITIONS DURING MARCH.

Based on cable from Commercial Attaché James F. Abbott, Tokyo, April 14.

[Signs of activity in Japan were noticeable at the beginning of March but were not apparent as the month advanced. Gold holdings decreased 5,000,000 yen and postal savings declined. Capital expenditures during March reached 205,300,000 yen. The cost of living continues to advance. Unemployment is in evidence and the lowering of wages is noticeable. The importation of basic raw materials was heavy during the month. Trade returns for March gave Japan an unfavorable trade balance of 76,000,000 yen.]

Slump in Japanese Market During March.

The month of March began with a more optimistic tone in Japanese commercial circles and the stock market showed signs of liveliness, due to somewhat easier money conditions. As the month advanced, however, evidences of a slump were visible on all sides. The rise in iron and steel was halted; rice and cotton yarn declined; and the silk market remained very dull in spite of the maintenance of high prices.

Capital Expenditures Increase—Decrease in Gold Holdings.

Japan's gold holdings continue to decrease. At the end of March the combined gold holdings of the Government and the Bank of Japan, both at home and abroad, amounted to 1,803,000,000 yen (1 yen=$0.4985). This is a drop of 5,000,000 yen from February's figure and 117,000,000 yen less than at the end of March, 1922.

Postal savings at the end of March amounted to 994,000,000 yen—a drop of 5,000,000 from February deposits.

Capital expenditures during March, as reported by the Hypothec Bank, totaled 205,300,000 yen and included Government issues amounting to 81,600,000 yen, as compared with 103,000,000 yen during February; municipal loans totaling 26,600,000 yen; debentures amounting to 56,400,000 yen, as against 18,000,000 yen during the preceding month; and capital-stock payments amounting to 40,700,000 yen, as compared with 20,000,000 yen during February.

The total outstanding note issue at the end of March amounted to 1,310,000,000 yen—a decrease of 218,000,000 yen from the February report.

Cost of Living Advances—Unemployment in Evidence.

The cost of living continued to advance during March. The index, as indicated by the average wholesale prices of representative commodities in Tokyo, stood at 259 at the end of the month, as compared with 252 for February and 244 during January. The lowering of wages is becoming more noticeable and unemployment is more evident. Political conditions are reported to be quiet.

Warehouse Stocks Show Decrease.

Warehouse stocks at the end of March amounted to 418,900,000 yen, as compared with 561,700,000 yen at the end of January. Stocks of raw cotton (especially Indian cotton) and machinery show notable increases, which are due to heavy importations of these commodities during the month, but stocks as a whole are considerably diminished. Raw-silk stocks in Yokohama at the end of the month amounted to 29,000 bales and stocks of raw cotton at Yokohama, Kobe, and Osaka aggregated 231,000 bales. Wholesale stocks of cotton yarn at the two latter ports amounted to 42,000 bales at the end of the month.

The following table gives the value of stocks of leading commodities in Japanese warehouses at the end of March, as shown in the Mitsubishi report for that month, compared with those at the end of the previous month:

Value of principal stocks in Japanese warehouses on February 28 and March 31, 1923.

Articles.	February 28.	March 31.	Articles.	February 28	March 31
Rice:	*Yen.*	*Yen.*	Raw cotton:	*Yen.*	*Yen.*

NOTE.—All figures are preliminary and subject to revision.

Foreign Trade Characterized by Heavy Imports.

Imports for March amounted to 197,000,000 yen—an increase of 43,000,000 yen as compared with February—while exports were 1,000,000 yen under February's figure of 122,000,000 yen. This gives for the month of March an unfavorable trade balance of 76,000,000 yen, as compared with 32,000,000 yen for February and 54,000,000 yen for January. The unfavorable balance of the last three months' trade is not especially discouraging since under normal conditions Japan's trade always shows an import excess during the early months of the year. This is due, in part, to the heavy importation of raw basic materials during this season for various industries. During March imports of cotton and iron and steel showed substantial increases over the two previous months.

The imports of specie during March totaled 15,000 yen, as compared with 25,000 yen during February.

The chief item in Japan's trade during February and March, 1923, are shown in the following table. These figures are preliminary and subject to revision.

Japanese imports and exports in February and March, 1923.

Articles.	February.	March.	Articles.	February.	March.

Iron and Steel Boom Abated—Money Easier.

The iron and steel boom, which has been evident since the first of the year, is rapidly losing ground. Purchasers have refused to follow the advancing market and some orders have been canceled because of lower prevailing prices.

The financial situation is improving and credits are reported to be less difficult to negotiate.

Record sales of automobiles were made during the month and prospects of sales during the coming months are good. The vegetable-oil and lumber markets are active and prices are firm. An improvement in the petroleum market is manifest.

Japanese Shipping in March.

The charter market is reported to be about the same as last month. The demand for shipping space is normal. On March 15, 150 steamers of 57,000 tonnage were reported idle, as compared with 158 idle steamers of 95,000 tonnage on February 15.

PROSPECT OF LOWER SILVER AFFECTS CHINESE MARKET.

Based on cable from Trade Commissioner Lansing W. Hoyt, Shanghai, April 16.

[Money is plentiful in China but the prospect of lower silver in July is affecting forward purchases. Trade in all classes of cotton piece goods is reported to be the best of the year. Normal crops are predicted. Canton reports special construction activity. Living costs have decreased 1 per cent during the past month. Automobile sales are increasing.]

Shanghai Bank Stocks of Silver—Exchange Situation.

Shanghai bank stocks of silver are estimated at 71,000,000 Mexican dollars, as compared with 67,000,000 Mexican dollars in March. The New York bank buying rate on April 16 was $0.7436 for the Shanghai tael and $0.5352 for the Mexican dollar. It is estimated that the United States will have purchased the amount of silver required under the Pittman Act of 1918 by July 1 of this year and it is not expected that exchange will maintain its present strength upon the withdrawal of the United States Government from the silver market.

Discounts are lower, clearances are increasing, and money is plentiful. The Province of Kwangtung notes are quoted at a 91 per cent discount. In order to prevent the further circulation of these notes, which amounts to about $30,000,000, it is reported that measures have been taken whereby only national currency will be acceptable for the payment of national taxes in the Province and local taxes must be paid in local currency. The mint at Canton remains closed.

Cotton Piece Goods Market—Lumber Market Active.

The cotton piece goods trade in all classes is reported to be the best of the year. The cotton market is active and cotton yarn is strengthening, largely on account of production being reduced.

The lumber market is active with prices very firm and stocks almost exhausted. The price of wood oil has advanced on account of delay in delivery from the interior. The Hankow price of wood oil is $316 per ton.

Steel and Silk Markets Quiet.

A dull steel market is reported on account of high prices and late delivery. Buyers are cautious and are placing few orders, believing that the Ruhr situation will be settled this year and also that silver will go lower before July deliveries. The Shanghai raw-silk market remains quiet but it is expected that the present prices will be maintained.

Good progress is reported in the sale of automobiles. mobiles.

The Hankow charter market remains about the same as last month.

Exports to United States—Construction Activity.

Export business is generally improving in view of higher gold values anticipated for Chinese products after July. Declared exports to the United States for the first three months of 1923 from Hankow, Dairen, and Chefoo, representing about 20 per cent of China's total exports, were $6,959,000. The exports of each port were as follows: Hankow, $4,598,000; Dairen, $1,392,000 and Chefoo, $969,000.

Shanghai general building and construction continues normal. Special activity is reported from Canton in the construction of low-priced dwellings, offices, schools, and hospitals.

Normal Crops Predicted—Living Costs Declining.

Normal crops are predicted, especially in the case of the beans and rapeseed. The wheat crop is estimated to be 80 per cent of normal.

The cost of living has decreased about 1 per cent during the month, as compared with a 3 per cent increase during February. The March-Shanghai commodity index number (based on 1913 as 100) was 159, as compared with 162 for the previous month.

AUSTRALIA'S FINANCES IN FAVORABLE CONDITION.

Based on cable from Trade Commissioner J. W. Sanger, Melbourne, April 12.

[Bank clearings are increasing in Australia, being £20,000,000 larger during the first quarter of 1923 than for the corresponding period of 1922. February exports show large increase over January. Imports have also increased, one-sixth of February purchases coming from the United State. The Federal Government announces a 5 per cent loan of £38,000,000 to be floated at par for a period of 25 years. The Federal Ministry has granted a renewal of the beef export subsidy of 1 farthing per pound.]

Australian Financial Condition Favorable.

The financial condition of Australia is decidedly favorable at the present time. Bank clearances (usually a safe index to the general state of business activity) were £20,000,000 greater in the three months from January 1 to April 3 of the present year than in the correspondnig three months in 1922. Checking and savings deposits continue to increase, although, should the threatened drought materialize, a reverse movement will inevitably follow. The London selling rate of the pound sterling has swung back to the $4.64 of the month of February, but the Australian buying rate remains as $4.71. Local bank rates are unchanged and the securities market is firm.

The Federal Government announces a conversion loan of £38,000,000 to be floated at par and to run for

a period of 25 years at 5 per cent interest. The expectation is that the entire amount of the loan will be absorbed in Australia—another indication that money is easy.

Customs revenue for the nine months ended March, 1923, was £24,972,000. This was £4,648,000 more than the revenue for the nine-month period ended March, 1922—an increase of 23 per cent.

Exports and Imports—Stocks on Hand.

The value of exports from Australia for the month of February, 1923, was £13,200,000—an increase of £3,100,000 over export figures for the preceding month and £210,000 more than those for February, 1922. The value of imports also increased, being £11,960.000 in February, as against £11,600,000 in January and £9,350,000 in February of the preceding year. Of the total imports, £1,950,000, (nearly one-sixth of the total) represents the value of goods from the United States. Automotive, lumber, and textile imports from the United States show a steady increase, with the exception of knitted apparel, the imports of which are at present decreasing. This decline may be accounted for by the fact that Australia has several knitting mills and also that there has recently been a rather extensive "made-in-Australia" movement.

Oversea shipments of wheat showed a notable increase in March. Butter exports in February registered a decline. February meat exports were as follows: Beef, 2,500,000 pounds; lamb, 6,677,000 pounds; and mutton, 17,500,000 pounds. The Federal Ministry has granted a renewal of the beef export subsidy of 1 farthing (one-half cent) per pound.

Automotive stocks are reported as adequate to the demand and the market is said to be excellent. Australia is now importing more automobiles than any other country in the world, according to reliable authority.

The season's production of wool to March 31 was 1,727,000 bales. Exports of free wool amounted to 1,777,000 bales, with 128,000 bales remaining unsold. Bawra wool stocks unsold March 31 were: Australian, 415,000 bales; New Zealand, 249,000 bales. Bawra expects to dispose of this balance in February, 1924. The wool market is firm.

The price of copper has advanced.

Economic and Industrial Conditions.

There seems to be no diminution in the general building activity previously reported. The cast of living has decreased 1 per cent, but is still 3½ per cent higher than it was at this time a year ago. The commodity index number for February was 1612 (figured on a basis of 1000 in 1914), which is 42 points lower than the index figure for January.

The coal tribunal refuses to lower wages and the Newcastle mines decision is likely to hamper the continuous output of steel.

The seasonal rains are holding off. Fears of drought are entertained.

Conditions in New Zealand.

The value of February exports from New Zealand was £5,973,000—an increase of £1,713,000 over exports for January. Imports amounted to £3,041,000.

A decided reduction in the cost of building materials is reported, with consequent renewal of activity in this direction, particularly in the city of Auckland.

EASTERN EUROPE AND LEVANT.

E. Dana Durand, Chief, Eastern European and Levantine Division.

INFLATION CONTINUES IN POLAND, BUT PRICE ADVANCES CHECKED.

The increase in paper currency circulation during March, more than 60 per cent, was greater both absolutely and relatively than in any preceding month; but in spite of this, exchange fell but little and wholesale prices advanced with comparative slowness, although retail prices increased sharply. The checking of price advances was due partly to the release of speculative holdings of commodities. Stagnation in manufacturing industry continues, with increasing unemployment.

Extraordinary Currency Inflation.

The Diet has not yet enacted the measures proposed by the Cabinet for increasing taxation and checking inflation, and in any case it will take some time after their enactment to put them into effectual operation. Meantime, during March the Government deficit, swelled by the increase of salaries to meet the ever-increasing cost of living, was so great that more than 750 billions of marks had to be added to the outstanding currency—an increase of more than 60 per cent as compared with the end of February. The Government has also sold bonds to the amount of 10,000,000 gold zloti (a hypothetical currency unit equal to the Swiss franc).

Notwithstanding this extraordinary increase in the amount of currency, the exchange value of the Polish mark remained stationary during March and closed somewhat higher than at the end of February. During February a new system of control of exchange transactions had been introduced and a limited number of banks given the exclusive right to deal in foreign exchange; this fact, together with the decided improvement in the exchange of the German mark, helped to steady the Polish exchange.

Price Advances Less Conspicuous.

Moreover, wholesale prices advanced during March much less than would have been expected from the immense addition to the currency. The wholesale price index rose from 8591 (base in 1914 taken as 1) to 9844, or about 15 per cent, and at the end of the month prices were more or less stationary. The extremely rapid rise in prices during the two or three months preceding, which had outstripped the increase in currency, was partly due to the speculative buying up of commodities; the checking of the advance was largely due to the release of such commodities and the shaking out of unwholesome speculation. The so-called currency shortage (more strictly a credit shortage) was less acute during March. Any sustained improvement of internal conditions, however, can result only from effective legislation and adequate administration of Government finances.

Retail prices during the past two months have increased considerably faster than wholesale prices. The level of the former in March was about 120 per cent higher than in January, while wholesale prices had increased 80 per cent.

Industrial Conditions.

Manufacturing industries, which began to suffer in the latter part of January from the extreme disturbance in price levels and exchange, have continued depressed. The operating capital and credit facilities of the concerns are not proportionate to the new high levels of values. Unemployment in these industries is increasing.

Transportation, however, and apparently mining as well, have not been diminished by the depression in manufacturing lines. The average number of cars loaded daily in Poland, exclusive of Silesia, was 8,251 during March—higher than in any preceding month of Poland's history except October and November, 1922, and nearly 20 per cent higher than in March, 1922. The latest available figures of coal production are for January, when in Poland proper the output was 854,000 tons—almost equaling the record figure of March, 1922—and in Polish Silesia it was 2,346,000 tons—the largest figure since the transfer of this territory to Poland, and probably the largest since the armistice. It is noteworthy that, following the French occupation of the Ruhr, the exports of coal to Germany from Polish Silesia were considerably greater than normal; during January and February they totaled in each month around 800,000 tons.

Crude Oil Monthly Production Remains Almost Unchanged.

The exports of crude oil during the calendar year 1922 were 56,000 tons, and those of refined products 406,000 tons. Crude production is stationary at a point much below the capacity of the refineries, and stocks have now been reduced to such an extent that refineries are compelled to confine their business practically to the volume of current crude production.

FINLAND MAINTAINS STRONG POSITION.

Based on cable from Trade Commissioner C. J. Mayer, Riga, Latvia, April 14; report of Consul Leslie A. Davis, Helsingfors; the Finnish commercial press; and other sources.

In February economic conditions in Finland remained favorable. Imports, as in December and January, considerably exceeded exports, owing principally to the usual seasonal decrease in lumber exports. The mechanical and chemical pulp industries showed great activity. Falling prices and the rise of the exchange value of the mark indicate possible curtailment of paper production. Note circulation increased, probably incident to the financing of timber operations, and there was a parallel increase of balances in foreign banks.

February Trade Balance Unfavorable—Living Costs Decrease.

Exports during February amounted to 150,400,000 Finnish marks (roughly $3,956,000 at the average exchange rate for the month of 2.63 cents to 1 Finnish mark), and imports to 261,500,000 marks ($6,877,000). Excess of imports is the result of the usual seasonal decrease in lumber exports during the winter months. Customs returns show that the receipts during January kept pace with budget estimates or exceeded them. The annual income from import duties was estimated at 720,000,000 Finnish marks, and in January they reached 70,000,000 marks. Imports from the United States during January amounted to $927,520, or 12.2 per cent of the total Finnish imports for the month. They included grain and grain products valued at $436,480. Exports to the United States reached $1,120,960, or 22.7 per cent of all the exports from Finland; they were made up almost exclusively of wood pulp, paper, and cardboard.

The average index number of prices of imported goods during January shows a decline from 1,072, the average for 1922, to 940, while that for exported goods increased from 1,180 to 1,294. The cost of living, which has been steadily though slowly declining since November, 1922, continues its downward trend, the index in February being 1,148.5 (1914 taken as 100).

Brisk Pulp Trade—Lumber.

Mechanical pulp is in good demand at rising prices, manufacturers having sold their production up to May. The demand for chemical pulp is also brisk. Paper manufacturers, however, may be compelled to reduce production, as the falling prices, accompanied by the rise of the exchange rate, make competition on foreign markets difficult. The outlook for lumber exports is somewhat unfavorable, owing to the increase of Spanish customs tariffs as a retaliation against Finnish dry laws and to recent increased exports of Russian lumber on the European market.

Note Circulation and Foreign Credits Increase.

The balance sheets of the Bank of Finland indicates that the money market slightly stiffened during February. Notes in circulation on March 8 reached 1,533,000,000 marks, an increase of 120,000,000 over the preceding month. This may be attributed to the necessity of financing timber operations. Foreign balances held by the bank also increased by 54,500,000 marks; loans and discounts were little affected, showing a slight increase of 6,400,000 marks. The value of the Finnish mark continued to advance. During March it averaged $0.0276, as against $0.0263 in February. The turnover of the Helsingfors Stock Exchange during February was 12,000,000 marks, as compared with 14,000,000 in January; the index of the prices of leading securities remained unchanged.

GREEK ATTEMPTS TO REESTABLISH THE FINANCIAL SITUATION.

Based on reports from Acting Commercial Attaché R. O. Hall; Chargé d'Affaires Jefferson Caffery; Consul General Will L. Lowrie, Athens; and other sources.

The Greek Government is attempting to reestablish the country's financial situation. A program of economic restoration has been decided on, and new taxes have been imposed. A rise in the exchange value of the drachma has been noted. A reciprocal commercial agreement has been entered into with Rumania, Bulgaria, Turkey, and Yugoslavia, and a commercial treaty has been signed with Czechoslovakia. There has been some relief in the current and tobacco situation. A new agricultural bank is contemplated. The first refugee settlement has been started at Pangrati.

Financial Situation.

Greece is attempting to reestablish its financial situation as rapidly as possible. A program of economic restoration is made manifest by the suppression of all posts not indispensable and by the curtailment of all unnecessary expenditures. New taxes have been imposed. It is estimated that the budget's annual receipts will increase by about 500,000,000 drachmas as a result of these taxes. Inflation continues, however, and further inflation may be expected. The drachma,

which stood at $0.01067 on March 9, has slowly risen, standing at $0.011561 on April 14.

Commercial Treaties and Agreements.

A provisional commercial convention with Czechoslovakia was signed on January 10, 1923, exchanging the most-favored-nation treatment. Special facilities have been established by a ministerial decision of February 9 for the importation of limited quantities of native products from the neighboring countries of Rumania, Bulgaria, Yugoslavia, and Turkey, which shall not be subject to the usual exchange control. It is reported that a Greek bank has been established at Braila, Rumania, to facilitate trade between the two countries. The ratio of the paper to the metal drachma for the collection of import duty has been established by the decree of February 7, 1923, as 15 paper drachmas to 1 metal deachma.

Relief in the Currant, Tobacco, and Olive Situation.

Measures for the alleviation of the currant situation have been adopted. By an agreement (February 2, 1923) between the State, the National Bank of Greece, and the Privileged Company, it is provided that the National Bank shall buy for the account of the State before July 13, 1923, about 30,000,000 Venetian pounds, which the State in turn will sell by auction to local distillers for the production of alcohol. It is also provided that, by subsequent ministerial decision, certain quantities may be exported if the price on foreign markets makes this course desirable. By the decree of January 11, 1923, the export duty on olives has been reduced. By the decree of March 21, 1923, only 50 per cent of the exchange requirements in the case of tobacco need be sold to the Government, and the remaining 50 per cent may be purchased on the open market.

Industrial Situation.

An optimistic tone is taken as to industrial development. Gratifying increases in the production of native industries and in the consumption of Greek industrial products both at home and abroad have been noted. During the year 1922 there were established a window glass factory, a paint factory, a factory for the distillation of alcohol and spirits, and a textile factory.

The silk industry of Macedonia, which suffered heavily during the Allied occupation, is reported to be recovering.

Agricultural Situation.

There was an increase of 10 per cent in the production of the citrus crop during 1922–23, as compared with the preceding year. The fig exports during August and September, 1922, were practically the same as during the corresponding period of 1921. A new Government agricultural bank with a capital of more than 50,000,000 drachmas is contemplated. The first refugee settlement at Pangrati has been started. It is to be self-sufficient in every way.

EGYPTIAN BUDGET GIVES SATISFACTION.

Based on a report from Consul Lester Maynard, and other sources.

The steadily decreasing cotton yield per acre is causing grave concern: should this condition continue, Egypt will be compelled to rotate its cotton with other crops. Other crops are in a satisfactory condition.

The budget for the fiscal year 1922–1923 balances at £E34,905,000, which represents an excess of receipts over expenditures by £E550,000. Prospects for the coming year's budget are stated to be satisfactory. The Egyptian pound, which stood at $4.8173 on March 7, has slowly declined, standing at $4.7788 on April 13.

A press notice to the effect that there has been a renewal of the Egyptian-American cotton agreement for another year has just been issued. This will have a very favorable effect on the export trade of Egypt with the United States and will tend to better the general economic situation.

CABLE ITEMS.

New British Budget Reduces Income Tax.

Cable from Assistant Commercial Attaché Candler Cobb, London, April 15.

The new British budget introduced in the House of Commons by the Chancellor of the Exchequer bears out the prediction that the high taxation now in force can be partially relieved. During the last fiscal year a surplus of more than £100,000,000 of revenue over expenditure was achieved. This amount has already been applied to the reduction of the debt.

Comparison of total revenue and expenditures.

Items.	1922–23	1923–24 (estimated).
Revenues	£914,012,452	£818,500,000
Expenditures	812,496,604	816,616,000
Surplus	101,515,848	1,884,000

The Chancellor of the Exchequer estimated that the same tax rate during 1923–24 would produce £852,650,000, whereas estimated expenditure is fixed at £816,616,000. The margin of £36,000,000 allows a slight reduction in taxation. Most significant is the proposed cut in the basic rate of income tax from 5s. to 4s. 6d. in the £1. This represents a loss to the Exchequer of £25,000,000. Other cuts in taxation include a reduction in the beer duty, a reduction of 50 per cent in the corporation-profits tax, and the abolition of duties on mineral waters and cider. It was promised that telephone and postal rates will be reduced. Detailed figures follow:

The following figures show the actual receipts from the various revenue items during 1922–23, the estimated receipts from these items during 1923–24 at the present rates of taxation, and the estimated expenditures during 1923–24:

REVENUE.

Items.	1922–23	1923–24 (estimated at present rates of taxation).
Customs	£123,043,000	£118,500,000
Excise	157,275,000	155,500,000
Motor vehicle duties	12,321,000	13,250,000
Estate, etc., duties	56,871,000	52,000,000
Stamps	22,222,000	20,000,000
Land tax, house duty, and mineral rights duty	2,980,000	3,000,000
Property and income tax, including supertax	379,045,000	338,000,000
Excess-profits duties	2,004,000	12,000,000
Corporation profits tax	18,977,000	20,000,000
Postal service	31,150,000	54,500,000
Telegraph service	5,500,000	
Telephone service	13,350,000	
Crown lands	900,000	900,000
Interest on sundry loans	10,016,000	12,500,000
Miscellaneous ordinary receipts	24,140,000	12,500,000
Special receipts	51,017,000	40,000,000
Total revenue	914,012,452	852,650,000

EXPENDITURES.

Items.	1923-24 (estimated).
Interest on public debt	£310,000,000
Sinking fund for debt redemption	40,000,000
Payments to local taxation account, payments to Northern Ireland exchequer, land settlement, and other consolidated fund services.	30,470,000
Army, navy, and air force	122,000,000
Civil service, revenue departments, post office, etc.	436,146,000
Total expenditures	816,616,000

A significant item is the revival of the sinking fund of £40,000,000 for debt redemption. The exclusion of this item from last year's budget was the cause of considerable criticism. The Chancellor of the Exchequer throughout his speech maintained an optimistic view of next year's financial prospects. He indicated that no new sources of revenue had been fixed, but that a committee had been appointed to investigate the question of laying a tax upon betting. Doubtless very large sums could be raised by such a tax. The chief objection to the tax has been the fact that it would legalize the practice.

Italian Government Revenues and Foreign Trade.

Based on cable from Commercial Attaché H. C. MacLean, Rome, April 13.

Government revenues for March, 1923, amounted to 823,000,000 lire, an increase of 48,000,000 lire over March, 1922. This is a reversal of the tendency in the past few months toward lower revenues than in the preceding year.

Bank clearings in January amounted to 65,872,000,000 lire, and in February to 51,900,000 lire, compared with 56,303,000,000 lire in December and 54,108,000,000 in November. Bank clearings in January and February, 1922, were 53,874,000,000 and 45,564,000,000 lire, respectively. Business failures continue numerous. The Milan Chamber of Commerce records 364 in February, and the Turin publication, Le Procedure Commerciali, states that there were 434 failures in March.

As was anticipated, unemployment began to decrease after February 1. On that date there were 392,000 unemployed compared with 607,000 a year previous, and on March 1 the number was reduced to 328,000 compared with 576,000 on March 1, 1922. The cost of living for March showed an advance over February. Professor Bachi's index number (based on 1920 averages) of wholesale prices for March was 94, compared with 93.2 for February, 92.1 for January, and 90.1 for March, 1922.

Foreign Trade.

Imports in December, 1922, according to statistics just issued, increased greatly over preceding months, totaling 1,916,000,000 lire, compared with 1,255,000,000 lire in November. Exports in December amounted to 1,010,000,000 lire, a slight decrease from the November total of 1,046,000,000 lire, but a considerable advance over all preceding months of the year. In December, 1921, imports amounted to 1,900,000,000 lire and exports to 865,000,000 lire.

Statistics of imports by ocean, which appear considerably in advance of the complete figures, have been published for February, 1923. Imports of coal totaled 779,000 tons, compared with 738,000 tons in January. Of the amount received in February, 667,000 tons came from England, 4,000 tons from the United States, and 105,000 tons from Germany. February grain imports amounted to 300,000 tons, compared with 233,000 tons in January, and cotton imports to 16,000 tons, compared with 8,303 tons in January.

SPECIALTIES

Henry H. Morse, Chief, Specialties Division

CONDITIONS IN THE GERMAN MOTION-PICTURE INDUSTRY.

Assistant Trade Commissioner William T. Daugherty, Berlin.

Organization of the German motion-picture industry outlined with special reference to the type and location of producing companies, the costs of production, and the methods of distribution. German exports and imports of motion pictures. Types of motion pictures produced in Germany.

Organization of the Industry.

Approximately 140 out of a total of 250 motion-picture producing enterprises, which represent 80 per cent of the total German production, are centered in Berlin and its suburbs. Most of these do not produce regularly. Possibly 30 of them operate permanently. The largest film concern in Berlin is known by its abbreviated title "Ufa" (Universum Film Aktien-Gesellschaft), which produces five or six monumental films a year. The "Ufa" is a good example of vertical organization. It owns its own atelier and produces, copies, and distributes its output. It owns 30 theaters outright in Germany, 12 of which are located in Berlin, and holds shares in many others. Among the other largest and most prolific producing concerns in Berlin are such firms as the "Decla," the "Deulig" (Deutsche Lichtbild Gesellschaft), the Richard Oswald Co., and the "Terra."

Munich, in Bavaria, is the second center of German film production. As many as 100 concerns are on record as producers in this city, but only 12 produce films regularly. Production in Munich is said to be favored by lower production costs, while the landscapes in this district favor outdoor operations. The "Emelka," combining several subsidiary companies, is the most prominent of the Munich producers.

The industry has grown rapidly since 1912. In that year there were 11 producing enterprises; in 1914, 25; in 1918, 130; and now probably 250, including both permanent and casual enterprises.

Studios—Film Loan Companies.

The studios in Berlin and vicinity, owned by certain film interests, are often rented to other concerns when not in use by the owners, in order to increase interest on their investment. The larger Berlin studios are that of the Union in Tempelhof (South Berlin); that of

the Decla-Bioscop in Neubabelsberg (a suburb between Berlin and Potsdam), the Jofa studio (a reconstructed airplane and Zeppelin hangar), and the May, in Weissensee.

The German Film Loan Co. (Film Verleih Gesellschaft) occupies a position similar to that of a wholesaler in other branches. The first form of this organization was the theater owner, who bought the films from the producer and rented them to other theater managers in order to cover and profit on his initial purchase cost. From 1906 to 1908 the number of German motion-picture theaters increased, giving impetus, naturally, to the demand for more films. It was then that film loan companies took on the form of individual and independent enterprises. Before the war German film loan companies met strong competition from French and Danish enterprises, which prevented the former from attaining any special prominence. During the war, when Germany was cut off from foreign supplies of films, the film loan company gained greater prominence. Film loan companies in Germany number about 300 at the present time, compared with 256 in 1921, 230 in 1920, 204 in 1918, 91 in 1914, and 85 in 1913.

Motion-Picture Theaters—Production Costs.

The number of motion-picture theaters in Germany is estimated at 3,750, or one theater to each 16,000 of population. About 150 of these, including the best appointed and the largest, belong to large concerns, as was mentioned above in the case of the "Ufa." About 300 theaters, with approximately 225,000 to 250,000 seating capacity, are located in Greater Berlin. It is estimated that the daily motion-picture theater attendance in Germany amounts to about 1,000,000, although this number may probably be discounted now on account of the most recent mark collapse, which has restricted the average German's purchasing power to only the bare necessities of life.

In the following table an attempt is made to compute certain production costs in the German motion-picture industry during the third week of January, 1923. (At that time the American dollar sold for an average of 20,000 marks.) These are the minimum costs for making a "cheap" picture of, say, 25,000,000 marks:

	Marks.
Studio (including service, light, heat, etc.), in an 8-hour working day	600,000
Extra time, per hour	10,000
Raw film, per meter	680
Positive, per meter	380
Plates, per dozen	20,000
One manuscript	400,000
One director, per film	750,000
One operator, per day	20,000
One star, per film (minimum)	500,000
One player, daily	15,000
One super, daily	5,000–6,000
Rental of properties, etc	400,000

Many other costs, such as travel, expenses, etc., are incidental to the making of a picture. These are extremely high within Germany (reckoned in marks), while travel outside of Germany is quite difficult on account of Germany's unfavorable rate of exchange.

Because of these production costs the situation is made precarious, since theater operators can not raise their admission prices enough to enable them to show profit to the producers or to the distributing branch. The minimum admission fee now in Berlin motion-picture theaters is 200 marks plus a 40-mark luxury tax. The admission schedule is altogether inadequate for profit to the producers, and, as above stated, they view it now as yielding in the aggregate but 15 to 20 per cent of production costs.

German Exports of Motion Pictures.

It is estimated that exports of German films to European countries amount roughly from 30 to 40 per cent of the production, which in 1922 amounted to something less than 300 negatives, each averaging about 1,500 meters in length. Of these exports 30 per cent went to all countries other than the United States while the United States took less than 2 per cent. European countries which appear to be purchasing German films include Czechoslovakia, the Scandinavian countries, the Netherlands, France, Italy, and Spain. Some of the colonies belonging to European countries are also in the market, while South America occasionally buys German films.

As in the case of all branches of German industry, a post-war semiofficial foreign-trade control bureau has been established. Finished but not raw films may be exported without license. Export control is centered in the so-called "Aussenhandelsstelle fuer Films." (Foreign Trade Control Office for Films), in Berlin, which issues import and export permits. Unlike most other foreign-trade control offices, it has no committee composed of members of the film producing and distributing branches.

German imports of films are also controlled by this organization. In 1923 a quota of 400,000 meters of foreign film are to be allowed entry.

Types of German Film Production.

German film producers have profited by developing the educational branch of the motion-picture industry. The natural sciences and technical subjects, as well as travel, play, and sport, have been found especially fitting for filming. Mathematical subjects have been filmed, and one of the interesting accomplishments in this direction is a motion picture attempting to explain the very complicated and difficult Einstein theory of relativity.

Educational films are divided into three general classes: School films, illustrating scientific subjects; cultural films, which show scenes from nature, often combined with outdoor sports; and program fillers, which comprise current events, cartoons, and excerpts from other educational films.

Industrial films.—The German industrial films, which have aroused much interest, are the factory-operation film, the technical-industrial film, and the canvassing film. The factory-operation film is the most important of the three. It pictures comprehensively the essential phases of a factory in operation or its special processes, and even its welfare work, perhaps in a better manner than a tour of the factory itself would show. The technical-industrial film is one of the most useful in this class. It pictures, for the service personnel of a factory or others, the essential features of new machinery or tools, which otherwise would have to be explained with more labor, time, and cost. The canvassing or advertising film, as its name indicates, is a very useful instrument in showing a plant's output in attractive form. It is potentially useful in seeking out and finding markets for a plant's production in a more effective way than a staff of salesmen might do it.

Historical films.—German production has run especially to the historical film, but indications are that the fashion may change in 1923. American audiences are already familiar with the monumental productions of "Madame Dubarry" (Passion) and "Doctor Galigari's

Cabinet." A few of the more popular historical subjects now running are "Marie Antoinette," "The Man with the Iron Mask" (after Alexander Dumas's historical romantic novel), "Lucrezia Borgia," and "Paganini" (based on the life story of a violinist).

MOTION-PICTURE ITEMS.

American Motion Pictures Into Bergen.

The city of Bergen, Norway, owns and operates seven motion-picture theaters, six of which are open every day from 5 to 11 p. m. and one only on Saturday and Sunday evenings. The total attendance at these seven picture houses during the year 1922 was 1,540,229, as compared with 1,815,960 in 1921, and the total receipts from the sale of tickets was 1,838,818 crowns, as compared with 2,180,475 crowns in 1921. The population of Bergen is about 100,000, so that on the average every man, woman, and child in the city attended 15 motion-picture shows in 1922, the average per capita expenditure for such entertainment being 18.39 crowns, or, at average exchange (5.75 crowns to the dollar), $3.20. A majority of the films shown at Bergen are American, with German, Danish, and Swedish films in lesser demand. (Consul George Nicolas Ifft, Bergen, February 17.)

Imports of Films Into Spain in 1922.

The administration of customs has issued figures showing by countries of origin the importation of exposed and unexposed films into Spain during 1922. Of exposed films 32,401 kilos were imported from the United States; from Germany, 19,942 kilos; from Great Britain, 5,164 kilos; and from other countries, 6,418 kilos; making a total quantity of 63,925 kilos. Of unexposed films Spain imported from Germany 5,955 kilos; from the United States, 3,631 kilos; and from other countries, 9,580 kilos; making the total quantity of 19,166 kilos. (Assistant Trade Commissioner O. S. Payne, Madrid, March 2.)

Mexican Government Produces Motion Picture.

The Mexican Department of Industry and Commerce has announced the practical completion of a long motion-picture film descriptive of Mexican resources, industries, agriculture, etc. (Assistant Trade Commissioner H. Bentley MacKenzie, Mexico City.)

Additional information regarding specialties appears in this issue under the following sections:

Tariffs and trade regulations:
- Further postponement of Australian deferred duty on sewing-machine heads.
- German clocks and cutlery dutiable at increased valuations in Canada.
- Increased Italian export tax on archeological articles.

Foreign trade opportunities Nos. 6105, 6155, 6168, 6171, 6172, 6175, 6176.

CHEMICALS

Charles C. Concannon, Acting Chief, Chemical Division

UNITED STATES CHEMICAL IMPORTS REFLECT INDUSTRIAL ACTIVITY.

American chemical imports for 1922 show a healthy gain in sympathy with the general trend of increased domestic industrial activity. The aggregate value was 24 per cent greater than in 1921, the percentage of gain having remained the same for the entire year as for the first 11 months. During 1921 chemicals to the value of $53,153,000 were entered free of duty and $27,610,000 worth paid duty; in 1922 $63,126,200 were free and $37,477,500 dutiable.

A comparison of the imports into the United States of chemicals and allied products (exclusive of gums, resins, crude drugs, and vegetable dyestuffs) with the exports thereof during the years 1921 and 1922 discloses a more rapid growth in the former than in the latter, a 24 per cent gain having been made in the import trade whereas only a 1.4 per cent gain appears in the export trade. While the percentage gain in outward trade is relatively small, the fact that chemical shipments registered any increase at all is decidedly encouraging in view of the general decline experienced by most of the other commodity groups and by American export trade as a whole in 1922.

The aggregate value of the year's chemical imports was $100,603,700, against $80,763,600 in 1921; of the exports, $106,101,562, against $104,639,941.

The Year's General Trend.

Owing to the incomparability of many items of the chemical group through the inclusion of different commodities under the import and the export classifications and also because of material changes in the import schedules after September 21 of last year, only a very general idea of the trend of the country's foreign trade in chemicals can be obtained from an analysis of the official American statistics for 1921 and 1922. Of the items for which comparisons can be made, explosives, the class recording the most important expansion in exports (50 per cent), showed a relatively small growth (11 per cent) in imports. On the other hand, foreign shipments of American paints, pigments, and varnishes actually diminished 5 per cent while imports advanced 55 per cent. Fertilizers, another group having but a small gain (3 per cent) in exports, made a big jump (47 per cent) in imports.

The increase in America's sales of perfumery and cosmetics was greater than the gain in its purchases of these articles, exports having risen 33 per cent and imports 28 per cent. Imports of medicinal and pharmaceutical preparations increased 23 per cent whereas exports gained but 11 per cent.

The least change of all was in the general chemical group (which includes coal-tar and heavy chemicals), for, although the figures indicate a loss of but 4 per cent in export values, they likewise show a gain of but 3 per cent in imports.

Falling Off in Imports of Coal-Tar Chemicals.

The aggregate value of imports into the United States of all coal-tar chemicals declined from $11,225,700 in 1921 to $11,012,800 in 1922. For the

last three months of these years (the October, 1922, total including the last nine days of September also) the imports were:

Imports of coal-tar chemicals into the United States for October–December, 1921 and 1922.

Months.	1921	1922
October	$992,000	$1,128,000
November	509,500	1,055,500
December	1,087,300	688,000

Receipts of coal-tar crudes for the complete year 1922 dropped 11 per cent—from $5,281,400 to $4,740,400—noticeable declines occurring in all the classes except tar and pitch. Naphthalene fell 30 per cent in quantity and 60 per cent in value—from 4,495,800 pounds and $135,900 to 3,144,300 pounds and $54,000; dead or creosote oil increased 25 per cent in quantity but decreased 10 per cent in value, figures for which are 33,239,400 gallons and $4,756,600 in 1921, against 41,567,500 gallons and $4,240,400 in 1922. The biggest reduction of this class (90 per cent) was in benzene, which fell from 1,722,000 pounds ($42,370) to 172,500 pounds ($1,220); none was received from September 22 to October 31; 57,108 pounds ($381) arrived in November, and but 45 pounds ($8) in December.

Intermediates and Finished Coal-Tar Products.

Imports of coal-tar intermediates in 1922 exceeded those of 1921 by 867,300 pounds ($65,300), total receipts for last year being 2,136,700 pounds ($422,150). Arrivals of carbolic acid totaled 686,300 pounds, valued at $102,300, in 1922. Were it possible to procure comparative figures for finished coal-tar products for the two years under discussion it is believed that they would indicate, for the whole group, but little change in quantity. While slightly larger amounts of alizarin and derivatives and colors, dyes, stains, and color acids probably came in during the year 1922 than during 1921, on the other hand considerably smaller amounts of indigo, both natural and synthetic, and of coal-tar medicinals were received. Alizarin and derivatives rose from 375,100 pounds ($510,000) in 1921 to 479,900 pounds ($701,900) in 1922. During the entire year of 1921 there arrived from foreign countries 3,106,400 pounds ($4,445,350) of "coal-tar colors or dyes, n. e. s.," contrasted with 2,553,600 pounds ($3,762,800) for the period January 1 to September 21, 1922. During the month of December and the period September 22–December 31, 1922, the following amounts of coal-tar colors, dyes, stains, color acids, and color bases were received:

Imports of certain coal-tar dyes into the United States for December and for September 22–December 31, 1922.

Finished coal-tar products.	December, 1922.		Sept. 22–Dec. 31, 1922.	
	Pounds.	Value.	Pounds.	Value.
Anthracene and carbazole colors and dyes.	1,000	$1,230	17,697	$26,002
Color lakes	223	239	239	262
Indigo dyes, colors, stains, n. e. s., etc	.....	.....	872	1,482
Colors, dyes, stains, color acids, and color bases, n. e. s.	209,846	322,409	738,359	1,006,924
Germany	77,920	114,784	266,255	344,569
Switzerland	54,547	56,988	295,470	390,457
United Kingdom	16,834	13,130	31,374	27,812
Other countries	60,545	137,507	145,260	244,086

Medicinal and Pharmaceutical Preparations.

Heavier shipments of foreign medicinal and pharmaceutical preparations were made to this country in 1922 than during 1921, until a total of $4,762,000 was reached. Alkalies, alkaloids, preparations, mixtures, and combinations of, the largest and most important class of this group, maintained a rather steady improvement throughout the first nine months of the year. From January 1 to September 21, 1922, 15,460,300 pounds ($1,323,700) were received, compared with 13,151,000 pounds ($1,035,100) for the twelve months of 1921.

Receipts of quinine and other alkaloids and salts from cinchona bark also exceeded those of 1921. During the period of January 1–September 21, 1922, 1,995,300 ounces ($824,700) arrived; from September 22 to December 31, 869,300 ounces ($423,200) of quinine sulphate, 825,200 ounces ($275,200) of all other alkaloids and salts and derivatives of cinchona bark, and 39,100 ounces ($30,700) of strychnine were received. For the complete year 1921 imports amounted to 2,323,000 ounces, valued at $818,200.

Imports of General Chemicals.

Although the quantity of oxalic acid received during 1922 was 3 per cent greater than in 1921, the value was reduced approximately 30 per cent. It will be observed from a study of the following figures that the bulk of the oxalic acid arrived after September 21: Imports from September 22 to October 31—324,319 pounds, value $24,564; imports during November—460,514 pounds, value $44,117; imports during December—488,950 pounds, value $56,723; total since September 22—1,273,783 pounds, value $125,404; total for year—1,294,236 pounds, value $127,757.

During the period September 22–December 31, 1922, 1,741,000 pounds ($132,600) of arsenious acid or white arsenic, 112,700 pounds ($40,450) of citric acid, 629,000 pounds ($171,600) of tartaric acid, and 1,260,000 pounds ($12,200) of sulphuric acid were imported by the United States. Imports of arsenic sulphide dropped in value but increased in quantity during 1922, figures for which are 7,630,500 pounds and $472,000, compared with 6,686,600 pounds and $531,300 in 1921.

Bleaching powder, one of the heavy chemicals recording the biggest advance in exports (123 per cent), showed a material decrease (about 30 per cent) in amounts imported. On the other hand, imports of glycerin advanced 30 per cent but exports only 20 per cent. Imports of crude iodine in 1922 failed to reach the 1921 level of 646,000 pounds ($1,430,600) by 294,000 pounds ($406,000), or nearly one-half. Demand for citrate of lime during 1922 jumped more than 1,000 per cent, until a total of 15,982,000 pounds ($2,223,000) was reached. Receipts of potassium cyanide and potassium nitrate, crude and refined, in 1922 were below 1921, while those of other potassium compounds—carbonate, hydrate, hydroxide, bitartrate, etc.—were larger. Sodium compounds also reflected an expansion, sodium cyanide nearly doubling from 8,708,000 pounds, value $913,100, to 15,705,000 pounds, value $1,306,000.

Recovery in Pigments, Paints, and Varnishes.

A recovery of the foreign trade in pigments, paints, and varnishes was evidenced in the import trade as well as in the export trade, a gain of 55 per cent, as already stated, having been made. Although this growth in imports seems high, it must be remembered that the

total importations ($3,673,000) in 1922 are relatively small when compared with the total exportations ($11,475,000).

Double the amounts of foreign zinc pigments were required during 1922, imports totaling 27,846,000 pounds ($1,290,000), and receipts of mineral-earth pigments were larger by 20 per cent. Ochers and siennas to the value of $97,950, other mineral-earth pigments to the value of $254,275, paints, stains, and enamels to the value of $113,680, and varnishes to the value of $24,970, were imported during the September 22–December 31 period. Even with this apparent gain in imports of mineral-earth pigments, foreign sales were still considerably in the lead of purchases during the entire year of 1922, but most particularly during the latter half.

Big Gain in Fertilizers.

A notable feature of the trend of the import trade in fertilizers is the high percentage of gains in quantities but the much lower gains in values. The largest increases were in potassium sulphate (418 per cent in quantity and 237 per cent in value) and in manure salts (400 per cent in quantity and 153 per cent in value). Other commodities registering increases were calcium cyanamid (159 per cent in quantity and 133 per cent in value), potassium chloride (127 per cent in quantity and 16 per cent in value), sodium nitrate (47 per cent in quantity and 45 per cent in value), and bone phosphates (50 per cent in quantity and 7 per cent in value). Kainite rose 118 per cent in quantity but dropped 30 per cent in value. The total receipts of all fertilizers for the year 1922 were 1,340,025 tons ($45,183,574), as compared with 683,639 tons ($30,687,588, in 1921. The imports by classes for the year 1922 were :

Imports of fertilizers into the United States for 1922.

Fertilizers.	Tons.	Value.
Nitrogenous fertilizers:		
Calcium cyanamid	41,807	$2,236,474

[1] From Sept. 22 to Dec. 31 only.

Perfumery and Cosmetic Trade Expands.

That a stimulus has been given to the perfumery and cosmetic industries is evident from the improved conditions in both the import and the export trade. The adverse balance of trade has been cut nearly in half, bringing the excess of imports over exports to $1,435,400 in 1922, whereas in 1921 the excess was $2,311,000. Imports of perfumery and cosmetics expanded from $6,043,000 in 1921 to $7,764,800 in 1922. Figures for individual commodities prior to September 22, 1922, are not available. During the period September 22–December 31, 1922, there were received the following amounts of perfumery and cosmetics:

Imports of perfumery and cosmetic into the United States for September 22–December 31, 1922.

Articles.	Pounds.	Value.
Perfumery, including cologne	405,000	$937,971
October [1]	217,071	442,946
November	96,555	272,620
December	91,464	222,405
Bay rum, toilet waters, and floral waters	98,857	27,920
October [1]	41,391	11,167
November	21,443	9,834
December	36,023	6,919
Perfume materials, free	12,122	274,736
October [1]	1,959	64,113
November	4,584	128,629
December	5,579	81,994
Perfume materials, dutiable		494,698
October [1]		310,070
November		120,598
December		64,030
Cosmetics, powders, creams, etc	375,775	235,636
October [1]	203,482	110,601
November	93,839	77,072
December	78,454	47,963

[1] From Sept. 22 to Oct. 31.

Imports of Explosives Increase 11 Per Cent.

Explosives, one of the less important groups so far as importations are concerned, increased about one-tenth. Powders and explosive substances, which are admitted free, were imported to the value of $109,716 in the complete year of 1922. The dutiable goods entered from January 1 to September 22, 1922, had an aggregate value of $569,250; from September 22 to December 31, $88,376 worth of dutiable "azides, fulminates, dynamite, etc., and powder from country imposing duty" were imported.

AMERICAN IMPORTS OF CRUDE DRUGS, ESSENTIAL OILS, AND GUMS.

Of the crude drugs, herbs, roots, etc., purchased by the United States from other countries during the past two years, cinchona bark, the most important of the crude drugs, doubled in quantities and trebled in values received, imports rising from 1,032,900 pounds and $332,800 in 1921 to 2,503,600 pounds and $921,700 in 1922. The demand for licorice root also improved from 53,549,800 pounds ($2,516,450) to 56,129,400 pounds ($2,214,800). During the year 1921 there were imported 101,700 pounds ($345,000) of opium, compared with 102,160 pounds ($253,630) in the January 1–September 21, 1922, period. From September 22 to December 31, 1922, there were received 46,171 pounds ($149,113) of crude opium (8.5 per cent or more morphine). There is no record of any dried or advanced morphine being received since September.

Evidence of the general improvement in the perfumery and cosmetic and medicinal and pharmaceutical industries is seen in the large amounts of essential and distilled oils received during the past year, when more than $6,200,000 worth was imported. Imports of lemon oil expanded from 617,600 pounds ($447,600) in 1921 to 689,500 pounds ($466,000) in 1922. Of other essential oils the 1922 imports were:

United States imports of essential oils, 1922.

Essential oils.	Jan. 1–Sept. 21, 1922.		Sept. 22–Dec. 31, 1922.	
	Pounds.	Value.	Pounds.	Value.
Bergamot	47,070	$166,646	35,682	$104,824
Citronella and lemon grass	808,082	345,540	315,261	146,407
Lavender	88,941	126,452	79,298	128,833
Orange	172,538	508,199	48,390	92,273
All other, excluding lemon oil	1,094,626	2,061,107		2,107,150

Gums, Resins, Balsams, and Vegetable Dyes.

The growing demand for gums, resins, and balsams was reflected by a 35 per cent advance in imports from a value of $22,721,900 in 1921 to $30,917,700 in 1922. Imports of varnish gums expanded 47 per cent in quantity and 26 per cent in value—from 45,469,000 pounds and $15,688,000 in 1921 to 66,903,000 pounds and $19,875,000 in 1922. A noteworthy feature of this group is the drop of nearly 3,000,000 pounds in quantity of shellac received that accompanied the increase of over $1,000,000 in value, 25,162,500 pounds, worth $14,915,600, having come in during the year. Considerably heavier shipments of copal, damar, and kauri gums were made to this country in 1922 than in 1921, 29,053,500 pounds ($3,327,700) having been entered during the period January 1–September 21, 1922, as compared with 17,628,000 pounds ($2,069,300) for the entire year of 1921. From September 22, 1922, to the close of the year 2,006,700 pounds ($344,100) of damar and 2,406,600 pounds ($415,750) of kauri were received.

Owing to active industrial conditions in the United States, camphor importations rose over 200 per cent. It is interesting to note that refined and synthetic camphor increased 460 per cent in quantity and 400 per cent in value—from 480,100 pounds and $373,400 in 1921 to 2,690,800 pounds and $1,880,800 in 1922—although a much smaller gain, 130 per cent, was made in crude camphor. Receipts of crude camphor rose from 1,078,800 pounds ($636,900) in 1921 to 2,460,300 pounds ($1,553,600) in 1922. Lesser increases occurred in receipts of other gums and resins, gum arabic imports rising from 7,556,000 pounds ($624,800) in 1921 to 8,191,700 pounds ($798,000) in 1922, and gambier from 7,022,800 pounds ($269,900) to 9,003,400 pounds ($433,300).

Imports of vegetable extracts for dyeing, coloring, etc., in 1922 increased 200 per cent—from 1,043,200 pounds ($85,050) to 3,151,800 pounds ($214,000). Although the quantity of logwood arriving in 1922 exceeded that of 1921 by over 5,000 tons, the value was less by $200,000 (total receipts for 1922, 33,100 tons, value $616,500).

Copper-Sulphate Production in Italy.

Consul Joseph Emerson Haven, Trieste.

Italy, which leads the world in the consumption of copper sulphate, also stands at the head of the list of producers. The factories of this important branch of the chemical industry are scattered throughout the country, being most numerous in the north. The national production in 1914 amounted to 20,000 metric tons; this figure increased to 50,000 tons in 1918, and at present is more than is normally required, namely, 75,000 tons.

The minimum pre-war price of 45 lire per 100 kilos ($3.94 per 100 pounds) occurred in 1909 and the maximum of 65 lire ($5.69 per 100 pounds) in 1907. Present prices are about four times those of pre-war days.

Additional information regarding chemicals appears in this issue under the following sections:

Tariffs and trade regulations:
Further postponement of Australian deferred duty on citric acid.
Certain chemicals added to Polish luxury duty list.
Further extension of time for registration of pharmaceutical specialties in Spain.
Foreign trade opportunities Nos. 6088, 6097, 6155, 6162, 6163, 6164, 6166, 6167, 6168.

MINERALS AND METALS

Luther Becker, Chief, Iron and Steel Division

AUSTRIAN IRON AND STEEL SITUATION.

Assistant Trade Commissioner F. W. Allport, Vienna, March 12.

The reported increase in the activity of Austria's iron and steel industry resulting from the Ruhr embargo [see COMMERCE REPORTS for April 9, 1923] is not reflected in the February production or in the volume of unfilled orders of the leading unit of the industry, the Alpine Montangesellschaft. Pig-iron production in February was the lowest recorded for many months; the same is true of steel ingots, the February tonnage being but 61 per cent of the September output, and of miscellaneous manufactures, with half the production of September to their credit. Unfilled orders on the books of the company at the end of February were 13 per cent less than at the end of January and but 45 per cent of the orders remaining unfilled on September 30. The only signs of increased activity are in the mining of iron ore, which this company practically monopolizes in Austria.

The Ruhr embargo has had the effect of increasing Austrian iron and steel prices substantially, pig iron on February 28 being 50 per cent above the closing January prices; ingots were 36 per cent higher, bar iron 50 per cent, structural iron 44 per cent, and band iron 63 per cent higher.

The industry is again facing wage difficulties. The November contract expired on February 3. A temporary agreement was reached by which a cut of 5 per cent was accepted until March 3, the intervening month to be devoted to the conclusion of a permanent agreement. No such agreement being reached, special conferences arranged that present wages remain in force until March 31. After that date the metal workers claim they will be unable to accept the present scale.

Supplemental cable from Trade Commissioner Wm. Ford Upson, Vienna, April 7.

April Production Stopped by Miners' Strike.

Iron and steel production figures for March show a great increase over both the January and the February totals, the tonnages for the three months having been:

Iron and steel production in Austria, January–March, 1923.

Items.	January.	February.	March.
	Tons.	*Tons.*	*Tons.*
Iron ore mined	56,200	86,800	105,000
Production:			
Pig iron	20,000	19,700	33,000
Steel ingots	15,500	15,100	27,000
Miscellaneous manufactures	10,800	9,600	18,000
Unfilled orders at end of month	36,300	31,600	(1)

[1] Not yet reported.

The April outlook is not encouraging. All furnaces have been banked on account of the strike of the miners, which has halted iron-smelting operations.

UNITED STATES STEEL EXPORTS GAIN IN FEBRUARY.

United States exports of iron and steel in February amounted to 135,182 long tons, which total is in excess of that for the preceding month by 10,738 tons. Outstanding gains made in this month over January were in rails (6,247 tons), steel bars (2,837 tons), galvanized sheets (2,780 tons), plates (2,648 tons), and black steel sheets (1,860 tons). The noticeable losses were in semi-finished steel products (2,830 tons), structural shapes, plain material (2,291 tons), and iron bars (1,853 tons).

The following table analyzes the February exports of iron and steel by commodities and affords a comparison with January's trade:

Exports of iron and steel from the United States for 1923.

Articles.	January.	February.
	Tons.	*Tons.*
Steel rails	9,980	16,227
Steel bars	11,391	14,228
Boiler tubes and welded pipe	12,126	12,708
Iron and steel plates	7,848	10,496
Galvanized sheets	7,600	10,380
Structural shapes, plain material	10,943	8,652
Black steel sheets	6,508	8,368
Ingots, blooms, billets, sheet bars, and skelp	10,564	7,734
Tin plate, terneplate, etc	5,894	5,607
Barbed wire and woven wire fencing	5,006	5,334
Plain wire	5,171	5,184
Structural materials, fabricated	4,914	4,767
Hoops, bands, and strip steel	2,676	3,233
Pig iron, not including ferro-alloys	2,526	2,786
Scrap	1,663	2,647
Wire nails	2,131	2,131
Rail fastenings, switches, frogs, etc	2,615	1,964
Cast-iron pipe and fittings	2,637	1,746
Wire rods	1,696	1,624
Car wheels and axles	634	1,547
Iron bars	3,300	1,447
Bolts, nuts, rivets, and washers, except track	1,507	1,124
Wire, n. e. s., and manufactures thereof	1,051	1,113
Iron castings	843	843
Wire rope and cable	344	753
Black iron sheets	1,003	698
Nails, other than wire, including tacks	502	632
Malleable-iron pipe fittings	439	419
Forgings	258	211
Steel castings	73	123
Wire cloth and screening	167	112
Insulated wire and cable	188	100
Horseshoes	76	90
Metal lath	24	56
Alloy-steel bars	61	53
Ferrosilicon	33	39
Ferromanganese and spiegeleisen	2	6
Total	124,444	135,182

During the month of February shipments abroad of wood screws amounted to 583,909 gross, which figure compares with 984,166 gross in January.

[A discussion of the various markets that received the February, 1923, exports will appear in COMMERCE REPORTS at an early date.]

SOUTH AFRICA'S MINERAL OUTPUT DECLINES IN 1922.

Consul G. K. Donald, Johannesburg, Transvaal, February 5.

The year 1922 was notable in that its production brought the value of all minerals produced in South Africa since the earliest dates of existing records up to a total of over 1,000,000,000 pounds sterling—£1,053,480,000. The 1922 output was valued at £38,394,376, made up of gold £32,189,587, silver £171,324, diamonds £2,266,631, coal £3,467,412, copper ore and concentrates £37,036, metallic tin and tin concentrates £59,393, and other base minerals £202,993. This shows a decrease from 1921 of £12,871,125, of which gold alone contributed £10,575,560, due to a decline in the gold premium and also to a strike on the mines during the early part of the year. When compared with 1920 the 1922 total shows a decrease of some £16,800,000, but in that year diamonds were produced to the value of almost £15,000,000.

South Africa's mineral industry was affected last year by two distinct sets of circumstances, the one internal, the other external. The most serious of these, in the opinion of the South African Mining and Engineering Journal, was the virtual cessation of all productive operations on the Witwatersrand gold mines from January 10 to the middle of March. "This was an internal influence which not only was primarily responsible for the substantial decline in the gold output but also reacted in one way or another upon practically every other branch of trade and industry in the country. Another 'domestic affair' which was associated with the strike on the Rand was the downing of tools on the collieries; this had a most serious effect on the coal trade of the Transvaal." Among the external influences were the decline in the price of gold already referred to, competition from European collieries, and the world-wide depression, which especially affected the diamond market.

Comparative Output Figures—Mine Stores for 1923.

The gold output for 1922 totaled 7,009,858 fine ounces (6,797,772 ounces from the Rand, 211,995 ounces from other Transvaal districts, and 91 ounces from other Provinces), contrasted with 8,128,723 ounces (7,930,663 ounces from the Rand, 198,031 ounces from other Transvaal districts, and 29 ounces from other Provinces) in 1921. Silver production amounted to 1,117,649 fine ounces, against 830,339 ounces in the preceding year. The diamond output is given in the official returns as 652,248 carats, against 808,586 carats in 1921. Coal sales were 9,725,479 tons, against 11,389,015 tons; copper, 705 tons, against 158 tons; tin, 612 tons, against 1,431 tons. The principal increase in base metals was in lead. Corundum also showed a considerable increase, whereas the output of asbestos fell off some £20,000 in value.

It is hoped that in 1923 there will be a saving in mine stores from lower prices and economies effected sufficient to compensate, at least in part, for the loss of the gold premium. Domestic supplies are being used to a greater extent each year, and they are usually considerably cheaper than the imported articles, especially wire ropes, bar iron, rails, dies, and shoes. According to the local press the two last-named articles are quoted at 50 per cent below German and British competitors. Prices average about 25 per cent above the pre-war level.

Czechoslovakian Iron Output Improves.

Trade Commissioner H. Lawrence Groves, Prague, March 9.

The production of raw iron has been one of the industries of Czechoslovakia most favorably affected by recent developments in Germany. The Vitkovice mills have just restarted a third blast furnace and the Prague Iron Works the second. The former concern purposes restarting two other furnaces in the near future. The Trzynitzer Iron Works have recently erected a large new blast furnace, which will be blown in during the current week in addition to the two already in operation. It is estimated that the iron industry is now operating at 60 per cent of normal, having improved from, roughly, 40 per cent in January.

New Zealand's Iron and Steel Imports.

Consul K. deG. MacVitty, Auckland, February 16.

Imports of iron and steel products into New Zealand in December, 1922, increased approximately 80 per cent by weight and 35 per cent by value over the corresponding month of 1921. For the complete year, however, the record was not favorable, practically all of the leading items falling materially below the corresponding totals of 1921, as is brought out in the following summary:

Imports into New Zealand of chief iron and steel products, 1921 and 1922.

Iron and steel.	1921		1922	
	Tons.	Value.	Tons.	Value.
Pig iron and scrap	8,492	£69,657	4,729	£33,372
Bar, bolt, and rod	13,777	370,355	14,862	204,634
Angle and tee	918	24,568	808	10,152
Channel and girders	2,894	76,061	1,451	16,353
Hoop, black	1,543	45,396	2,009	33,826
Plates and sheets:

Tubes, pipes, and fittings	12,604	664,490	13,200	357,716

Production of the Metallurgical Industry of the Ural in 1922.

Abstracted by the Eastern European Division from Economic Life (Moscow, Russia), February 1. The Bureau assumes no responsibility for the accuracy of the figures.

The months of November, December, January, and partly February are the most favorable ones in regard to the volume of production in the metallurgical industry of the Ural region. During these months the industry is usually making up for the low production of the summer and fall months which is due to local labor conditions. There were 10 blast furnaces, 15 open-hearth furnaces, and 34 rolling mills in operation in this region in December. According to latest information, the number of rolling mills increased to 37 in January, 1923.

Shortage of labor and operating capital prevented the industry from developing its production regularly and made it necessary to stress those lines of production which are assured of the quickest turnover. So, for instance, in December, 1922, out of a total production of 746,000 poods of rolled materials, 282,000 poods, or 38 per cent, represented small bar and angle iron and 290,000 poods, or 39 per cent, roofing sheets. In November the percentage of these materials had been 50 and 35, respectively.

The output of pig iron, open-hearth ingots, and rolled materials during 1922 by the five Ural trusts is represented as follows:

Articles.	First quarter.	Second quarter.	Third quarter.	Fourth quarter.	Total output.
	Poods.[1]	*Poods.*[1]	*Poods.*[1]	*Poods.*[1]	*Poods.*[1]
Pig iron	1,520,000	895,000	515,000	1,000,000	4,530,000
Open-hearth ingots	2,343,000	1,975,000	742,000	2,925,000	7,985,000
Rolled materials	1,883,000	1,362,000	723,000	1,725,000	5,693,000

[1] 62 poods=1 long ton.

Havre Copper Market.

Consul General Augustus E. Ingram, Havre, France, March 13.

The importation and consumption of copper at Havre are considerable, but business is practically all done direct between the American producers and the users in this district of raw material (cathodes, ingots, cakes, and wire bars). Trade in copper has not regained its pre-war activity, but local brokers still hope the market may revive, and they would welcome proposals from American firms. Some years ago Japanese copper was on the market, but it has now disappeared.

Imports of copper at Havre last year amounted to 6,628 tons, against 9,747 tons in 1921: deliveries from public warehouse were 8,836 tons, against 10,837 tons; and stocks on hand December 31, 1922, were 3,398 tons, against 4,307 tons on December 31, 1921. Statistics published in the Journal du Havre give the imports at Havre from January 1 to February 28, 1923, as 478 tons and deliveries during that period as 834 tons, with stocks on February 28 totaling 3,043 tons.

[The address of a Havre firm of copper brokers may be obtained upon application to the Iron and Steel Division, Bureau of Foreign and Domestic Commerce, Washington, D. C.; refer to file No. 89073.]

Commercial Production of Radium in Cornwall.

Consul Ralph C. Busser, Plymouth, England, March 9.

The commerical production of radium at the pithead in England began in February with the completion of an extraction plant at the South Terras Mine in Cornwall. The capacity of the plant is reported as 300 to 400 milligrams a month In order to reduce the bulk of the ore and lessen the quantity of expensive chemicals necessary in the process a new concentration plant is also being added to the works.

Several Cornish mines have yielded radium-bearing ores for many years, but heretofore the output was shipped to Germany and France for treatment. The principal radioactive minerals found locally are pitchblende, autunite, and tobernite, the pitchblende deposits in Cornwall being said to be richer than those of Brazil, the United States, or Czechoslovakia. If the production of radium at the South Terras property prove successful, it is not unlikely that operations looking to a larger output of these ores will be undertaken at other mines in the region.

Additional information regarding minerals and metals appears in this issue under the following sections:

Cable review, Far East:
Japanese iron and steel boom abated.
Chinese steel market dull.
Latin America:
Conditions in the Torreon district.
Current developments in Northern Chile.
Far East: Decreased imports of iron and steel products to the Philippines in 1922.
Tariffs and trade regulations:
Further postponement of Australian deferred duty on certain iron and steel products.
Certain kinds of glass added to luxury list in Poland.
Survey of current business: United States record production of iron ore.
Foreign trade opportunities Nos. 6105, 6129, 6132, 6133, 6150, 6151, 6152, 6153, 6154, 6155, 6156, 6165, 6170, 6173.

TEXTILES

Edward T. Pickard, Chief, Textile Division

WORLD TEXTILE NEWS IN BRIEF.

Small Demand for Raw Cotton in Chile.

The annual imports of raw cotton into Chile amount to about 425 bales of 478 pounds each, practically all of which comes from Peru. This cotton is used almost entirely for the manufacture of mattresses, pillows, and bed comforts. (Assistant Trade Commissioner W. E. Embry, Santiago, February 15.)

Cotton Growing in Angola.

Although the production of cotton in Angola could be increased to many times the present quantity at a comparatively small additional outlay of money, the industry is hampered by the difficulty experienced in securing an adequate supply of labor. (Consul Reed Paige Clark, Loanda, Portuguese East Africa, February 1.)

Shortage of Bristles in Japan.

An increase in the price of Chinese bristles in Japan amounting to about 20 per cent since the middle of February is reported by the Japan Chronicle. A shortage of supply is predicted. (Commercial Attaché James F. Abbott, Tokyo, March 15.)

Argentine Sheep Reduced.

Argentine census returns for the Province of Buenos Aires for the year ending June, 1921, give the number of sheep as 18,784,043, compared with 21,576,428 in 1920. Taking the country as a whole, the flocks are believed to have diminished by not less than 40 per cent since 1919, and the firmness of the wool market is attributed to some extent to this diminution. (Consul General W. Henry Robertson, Buenos Aires, February 16.)

Kapok as a Substitute for Cotton.

The use of kapok in the Dresden consular district (a German textile center) is unimportant. Kapok came into use during the last years of the war as a substitute for cotton, and efforts were made to improve it for spinning purposes and to extend its use in making cloth by the Dresden Institute for Textile Research, but as nothing is known as to the results of these experiments it is presumed they proved unsuccessful. (Consul Louis G. Dreyfus, jr., Dresden, Germany, February 4.)

Barbados Market for Twines and Cordage.

The United Kingdom supplies most of the cordage and twine imported into Barbados. Imports of cordage amounted to £9,640 (201,827 pounds weight) in 1920 and £3,006 (60,103 pounds weight) in 1921, of which the United Kingdom supplied £7,984 (159,684 pounds) in 1920 and £1,599 (31,975 pounds) in 1921. Twines imported were valued at £3,428 in 1920 and £2,579 in 1921, the United Kingdom furnishing £2,144 worth in the former and £2,264 worth in the latter year. (Consul John J. C. Watson, Barbados, British West Indies, February 27.)

Seal Hunting Concession by Soviet Government.

A contract concluded by the commissary of supplies with a Norwegian firm granting the latter the privilege of hunting sea animals in the territorial waters of northern European Russia has recently been ratified by the Council of People's Commissaries. Under the provisions of the contract the company will employ 55 vessels and pay to the Soviet Government the sum of 200,000 Norwegian crowns or an equivalent in sterling or dollars. (Abstracted by the Eastern European Division from Economic Life [Moscow], March 1.)

Hull Wool Sale.

The monthly wool sale at Hull on February 23 was very successful. A selection of 30,000 bales, consisting entirely of crossbred wool, was offered by "Bawra," and it is reported that a complete clearance was effected at firm prices. Hull seems to be well established as a wool market now, and its importance is likely to increase with better shipping facilities from Australia. A recent announcement states that a regular direct steamship service is to be established between Hull and Australia. (Vice Consul Albert W. Scott, Hull, England, February 28.)

Japanese Wool Mills.

On March 31, 1922, there were 47 wool mills and 300,427 wool spindles in Japan. Wool consumption during the year ended March 31, 1922, amounted to 4,137,600 kin (kin=1.3227 pounds) of tops and 22,595,700 kin of other wool. Japanese consumers formerly used silk and cotton goods almost exclusively for clothing, but the increasing popularity of foreign-style garments has made them realize the advantage of wool, which is gradually replacing other materials in the manufacture of native-style clothing. (Commercial Attaché James F. Abbott, Tokyo, March 3.)

French Wool Trade.

Imports of wool into France during 1922 amounted to 308,561,400 kilos (kilo=2.2046 pounds) of raw wool, 325,300 kilos of combed or carded wool, and 6,782,600 kilos of wool waste. The principal sources of raw wool were: Australia, 122,019,300 kilos; Argentina, 86,553,000 kilos; England, 37,919,200 kilos; British West Africa, 20,751,400 kilos; Uruguay, 12,341,700 kilos; Spain, 6,382,900 kilos; Algeria, 5,710,800 kilos; Chile 3,361,600 kilos; other countries, 13,521,500 kilos. (Assistant Commercial Attaché J. F. Butler, Paris, March 7.)

Carpet Manufacturing in Greece.

The annual production of carpets in the western region of Asia Minor is estimated at $75,000,000 annually. The influx of refugees from Smyrna has made it possible for Greece to replace western Asia Minor in furnishing Europe with carpets. Factories have been erected at Athens with branches in the Cyclades Islands, and a plant is being built in Crete, which will utilize Micrasiatic labor exclusively. English importers of oriental carpets have recently sent representatives to Athens with a view to obtaining the exclusive sale of the output of these factories. (Bulletin of the Federated American Chambers of Commerce of the Near East, New York, March 31.)

WORLD'S COTTON GRAY CLOTH PRICES.

Richard A. May and E. A. Mann, Textile Division.

[Price, reinforced by quality and service, is the basis of competition, but just as in all other staple articles of world commerce cotton goods move primarily according to price. From January, 1919, to July, 1921, the Bureau of Business Research of Harvard University compiled, on behalf of the National Association of Cotton Manufacturers, weekly prices of cotton gray cloths in the important market centers of New York, Manchester, Osaka, Shanghai, and Calcutta. This was the first broad-gauged attempt anywhere to compare on a scientific basis prices of this commodity in more than two world's markets. The Textile Division of the Bureau of Foreign and Domestic Commerce has now taken up this important work.]

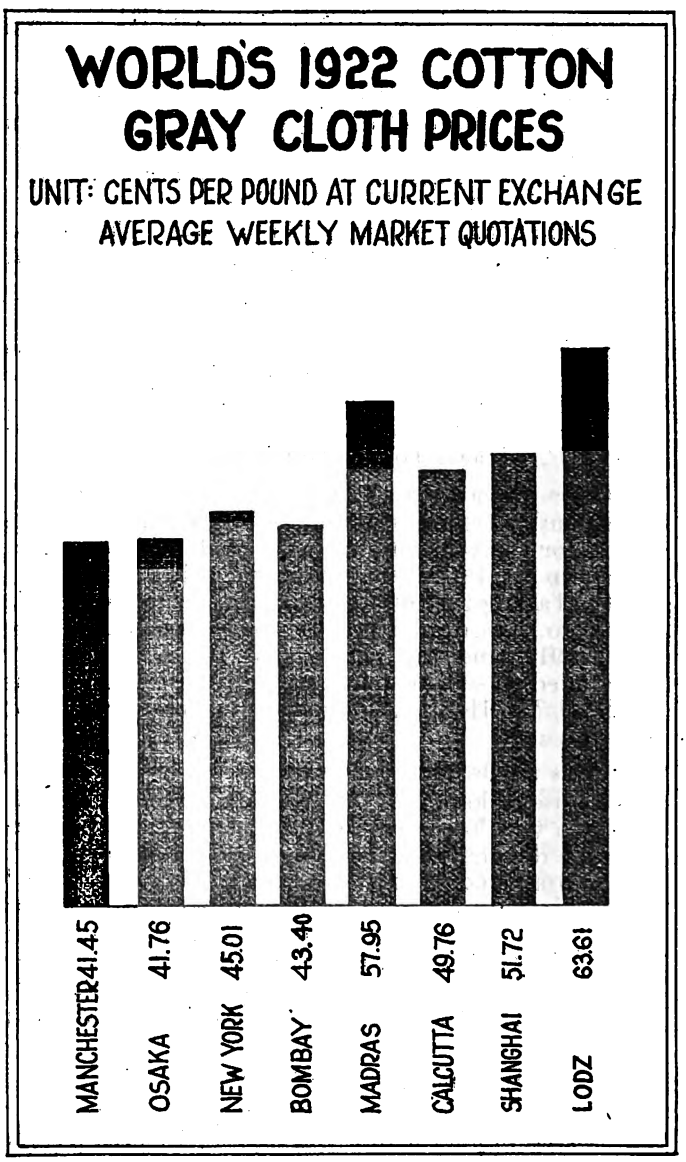
Many factors influenced the course of cotton gray cloth prices in the primary markets of the world during the past year. The same set of factors, however, did not operate in every market, at least so far as weekly price quotations might indicate. Of course, in all markets a first consideration in gray-cloth price fluctuations is the fluctuation in the price of raw cotton. Nevertheless the relative influence that raw-cotton prices may have in one market does not necessarily operate in another. For instance, commodity speculation, piece-goods supply and demand, industrial activity, financial ease or stringency, exchange depreciation and fluctuation, and tariffs and other trade restrictions are important factors which affect piece-goods prices differently in different markets.

Substantiation of this may be found in a study of the weekly price quotations of comparable cotton gray cloths as compiled by the Textile Division. For example, from January to December, 1922, gray cloths in New York rose approximately 10 cents a pound, while the rise in price of comparable cloths in Manchester was less than 2½ cents and in Calcutta 1½ cents. Prices at Lodz, despite wide fluctuations, were practically the same in December as in July, while in the course of 1922 comparable cloths at Osaka declined 2 cents a pound and at Shanghai nearly 4½ cents.

Average Weekly Market Prices Compared.

The following chart indicates the average weekly market price for comparable gray cloths in eight of the world's largest cotton-goods markets. In each instance prices of no less than four or no more than eight standard market cloths were averaged for each week, currency conversions being made at current exchange. Spot quotations were utilized wherever possible.

Spread of New York and Manchester Prices.



The Textile Division's New York weekly average price of three sheetings and five print cloths for 1922 opened the year at 43.38 cents a pound and closed at 53.45 cents. The high of the year, 53.61 cents, was reached in the week of December 9; the lowest price was recorded in the week of April 15 at 39.04 cents.

Manchester average prices as reported by Clerk P. Duckworth, of London, were composed of six gray shirtings and two printers. The average for the week ending January 7 was 41.47 cents a pound; the lowest price was 38.07 cents on February 18, the highest was 45.09 cents on July 8, and the December 30 average registered 43.85 cents. It should be remembered that in most foreign markets the term "shirting" is applied to what the American trade calls "sheeting."

High and Low for Osaka and Shanghai.

Japanese gray-cloth prices, as reported by Commercial Attaché James F. Abbott, Tokyo, comprised three sheetings, two shirtings, one T cloth, and one drill, all of domestic manufacture. The prices are of the Osaka market, where the January 7 average was 44.39 cents a pound, and the year closed with the average of 42.30 cents. The low point was 37.54 cents on September 30, and the peak of 45.75 was reached during the week of July 8.

Shanghai averages were made from six standard shirtings, auction quotations being forwarded by Trade Commissioner Lansing W. Hoyt. The first averaged

Chinese quotation of the year was 52.84 cents a pound, and the December 23 value was 48.51 cents. The peak price, which was practically maintained for four weeks, was reached on May 20, after the auctions had been closed for well over a month. The lowest price of the year, 47.73 cents, was registered on November 18.

Movement on the Indian Markets.

Since India is such an important factor in the world's cotton-goods trade, and also from a manufacturing viewpoint, it was deemed advisable to obtain current market quotations from the widely separated centers of

Calcutta, Madras, and Bombay. Each is a cotton-goods market unto itself. Consul Harold Shantz, Calcutta, submitted during 1922 weekly market prices for six shirtings. The year opened with an average of 48.47 cents a pound, and closed (December 23 quotation) at 49.83 cents. The year's high of 52.99 cents was recorded on May 20 and practically maintained for a month, while the low of 47.70 fell on January 28. The average construction of the Calcutta cloths used is 69 by 64.

Due to the fact that cloths of coarser construction are standard in the Bombay market the average of the two sheetings, three shirtings, and one domestic utilized is only 53 by 49. These cloths are the product of local mills, using domestic cotton almost exclusively, and throughout the year average prices ran well below those of comparable cloths in Calcutta and Madras. The Bombay quotations averaged in January 42.80 cents a pound, and closed in December at 41.25. The high of 46.59 cents was reached on August 19, and the low of 40.39 on December 9, according to Consul T. M. Wilson.

Higher type gray cloths are standard in the Madras market, and the average construction of the four shirtings, one dhoty, and one jaconet on which Vice Consul H. M. Doolittle submitted current prices is 65 by 57. The Madras average for January—52.05 cents a pound—was the low for the year. Highest prices recorded were August 19, 60.97 cents, and December 15, 61.18 cents. The last quotation received for the year was for December 23, 59.12 cents. Comparable cloths of coarser construction are not common on the Madras market.

Central European Conditions.

Depreciated and fluctuating exchange during 1922 made it extremely difficult to convert current market prices of comparable Polish gray cloths at Lodz. Acting Commerical Attaché H. B. Smith in the course of the year forwarded prices of eight shirtings at frequent intervals. These prices naturally appeared high and subject to severe fluctuation. Nevertheless, they are a valuable index of central European gray-cloth prices, since a great deal of the Polish production is exported to Russia and to other eastern European countries.

Current Austrian market prices in Swiss francs of five standard gray cloths are being received from Consul Carol H. Foster, Vienna. Since the details necessary for exact comparisons with other markets are not as yet obtainable, these prices have not been converted. Similarly, Consul Paul Chapin Squire, Lille, France, is working out the details necessary in the conversions from metric units for standard French gray cloths. Mulhouse prices of six shirtings and two printers are being compiled by Commercial Attaché Chester Lloyd Jones, but were not available for 1922.

A variety of reasons made it impossible to obtain average weekly prices of comparable gray cloths in other European countries. In a great many cases no exchanges or open markets operate. However, it is probable that satisfactory arrangements will be concluded in the course of the current year at Prague, Czechoslovakia, Cataluna or Barcelona, Spain, and appropriate centers in Belgium, Italy, and Germany.

Expansion of Service Planned.

Since the purpose of this service is twofold—that is, to acquaint the American exporter with prices, first, in foreign producing markets and, second, in foreign consuming markets—it is planned to include also such important competitive markets as the Philippines, Dutch East Indies, British South Africa, and Argentina so far as possible. To make this service more effective it is contemplated to establish a weekly cable reporting system so that average prices per pound, converted into American dollars, may be communicated promptly to the American exporter by means of special weekly bulletins from Washington.

United States Cotton Goods to Noncontiguous Territories.

February shipments of cotton cloths and knit goods from continental United States to Alaska amounted in value to $7,022; to Hawaii, $209,276; and to Porto Rico, $660,043. Alaska's purchases of these commodities for the month comprised 19,922 square yards of cotton cloth (6,800 square yards of which were piece-dyed goods), valued at $5,026; 224 dozen pairs of hosiery, $711; and 847 pounds of other knit goods, $1,285. Hawaii took 738,621 square yards of cotton cloth (262,425 square yards of which were bleached goods), valued at $183,318; 4,490 dozen pairs of hosiery, $10,416; and 19,228 pounds of other knit goods, $15,542.

Sales to Porto Rico of cotton cloth amounted to 3,510,122 square yards, valued at $623,723, apportioned as follows: Unbleached, 1,085,571 square yards; bleached, 508,275; printed, 462,832; piece-dyed, 985,477; and yarn-dyed, 467,967 square yards. Although total cloth shipments fell off because of material decreases in gray and bleached, an increase over January is shown in each of the other three classes. The hosiery trade maintained its regular tone with shipments of 16,770 dozen pairs, valued at $25,438. Other knit goods were sent to Porto Rico to an aggregate of 12,306 pounds, valued at $10,882.

It is interesting to note that each of these markets favors a different sort of cloth—Alaska piece-dyed goods, Hawaii white goods, and Porto Rico the gray.

March Fur Auction Sale in Montreal.

Consul H. Merle Cochran, Montreal, Canada, March 31.

Furs valued at $1,000,000 to $1,125,000 were disposed of at the fur auction in Montreal on March 27–29. The skins, which were generally of higher quality than those offered at the February sale, were well received. Prices compared with those obtained in February as follows: Wolf, best lot western Canada, and muskrat, winter quality, advanced 20 per cent; raccoon, Australian opossum, and beaver were 10 per cent higher; kolinsky declined 20 per cent; fisher, medium and small sizes, remained unchanged, but large sizes dropped 15 per cent; ermine, cross fox, and silver fox were 10 per cent lower; lynx, opossum, skunk, southern muskrat, white and red fox, mink, marten, stone marten, Russian sable, squirrel, bear, mole, and otter were unchanged.

FOODSTUFFS

Edward G. Montgomery, Chief, Foodstuffs Division

DUTCH EAST INDIAN TEAS IN 1922.

Consul Charles L. Hoover, Batavia, Java.

There is no undue accumulation of unshipped teas in Java and Sumatra, according to the Vereeniging Thee Export Bureau, an association of tea exporters in Batavia. This association is the highest authority on the tea trade of the Dutch East Indies.

Production in Recent Years.

Accordingly, after making allowance for a slightly larger yield from Java in December, 1922, than in the same month in 1921, the export figures may be accepted as representing approximately the production. On this basis the 1922 crops of Java and Sumatra as compared with those of the five preceding years are as follows:

Tea production in Java and Sumatra, 1917–1922.

(Thousands of kilos.)

Regions.	1917	1918	1919	1920	1921	1922
Java	43,500	36,000	42,500	47,000	28,000	37,000
Sumatra	2,000	3,000	4,000	5,000	4,000	6,500
Total	45,500	39,000	46,500	52,000	32,000	43,500

Quality Above Average.

It was not to be expected, nor was it advisable, that the system of fine plucking adopted generally in 1921 should continue after the crisis brought about by excessive stocks had passed. The majority of estates during the greater part of the year followed the policy of a useful medium pluck. This, combined with improved methods of manufacture resulting from the previous year's experience and a restricted use of Kampoeng leaf, resulted in a crop which was of very good quality and decidedly above the average. Toward the end of the year a somewhat coarser pluck and freer use of Kampoeng leaf was noticeable in the teas of some estates, but this was by no means general.

Exports During 1920–1922.

The following table shows the destinations of tea exports from Java and Sumatra for the years 1920, 1921, and 1922:

Exports of tea from Java and Sumatra, 1920, 1921, and 1922.

Countries of destination.	1920	1921	1922
From Java:	*Kilos.*	*Kilos.*	*Kilos.*
Netherlands	16,865,000	11,203,000	9,062,000
Other continental Europe	36,000	17,000	252,000
Great Britain	11,718,000	6,638,000	10,324,000
Australia	8,753,000	9,786,000	11,437,000
United States	3,475,000	2,537,000	4,187,000
Canada	796,000	38,000	453,000
Singapore	452,000	60,000	143,000
China	35,000	.....	.....
Other	452,000	472,000	230,000
Total	42,582,000	30,751,000	36,688,000
From Sumatra:[1]

Total	5,130,587	4,197,793	6,563,285

[1] Statistics supplied by the Medan Chamber of Commerce.

Condition of Tea Industry in 1922.

The industry has had a much more successful year than was anticipated. The remarkable recovery that took place was not expected unless Russia came back into the market. Labor difficulties, unfavorable climatic conditions, restriction of output in producing countries, and increased consumption in the United Kingdom are largely responsible for the high price level at which the greater part of 1922 crop was sold.

Forward selling of the 1923 crop began in October, and by the end of the year 1922 it is estimated that about 15,000,000 kilos had been contracted for in Batavia.

Beef Industry of Rio Brande do Sul, Brazil.

Consul Samuel T. Lee, Porto Alegre.

The prospects of the beef industry, which is the principal source of wealth in the State of Rio Grande do Sul, Brazil, are much better for the present killing season than they were for the last. The normal killing season runs from January 1 to June 30, and the opening of the present season looks very favorable for renewed activity in this industry. An improved market for jerked beef is expected. In the early part of the season last year there were large stocks of old jerked beef on hand, whereas at the beginning of the season this year the prior year's product had been marketed, and now, with a good demand, leaders in the industry are looking forward confidently to an active market. A much larger proportion of the present year's kill will be for frozen beef. With possibly 100,000 fewer cattle coming from Uruguay during this season, as compared with last year, competitive conditions for producers in Rio Grande do Sul are expected to be much more favorable.

Slaughterings in 1921 and 1922.

The annual report of the State secretary of the treasury of Rio Grande do Sul for the calendar year 1921 indicates that taxes were paid on approximately 10,000,000 head of cattle. During the years 1921 and 1922 the following numbers of cattle were slaughtered for the purposes specified:

Cattle slaughtered in Rio Grande do Sul, Brazil.

Purpose of slaughtering.	1921	1922
For:	*Number.*	*Number.*
Jerked beef	506,046	615,384
Frozen beef	134,407	31,789
Local consumption	337,934	364,335
Total	978,387	1,011,508

Foreign Markets for American Malted Milk.

In view of the constant and increasing exports of American malted milk and malted milk products, the Foodstuffs Division has conducted a survey covering the uses of malted milk in a number of foreign countries. This survey covers the production, consumption, and factors affecting the sale of the American product. Exporters wishing to consult these reports may do so by communicating with the Foodstuffs Division of the Bureau of Foreign and Domestic Commerce and specifying the countries in which they are interested.

Soap Manufacture in Cuba.

Acting Commercial Attaché Paul L. Edwards, Habana.

Approximately 60 per cent of the soap manufactured in Cuba consists of yellow laundry soap, about 10 per cent is perfumed toilet soap, and the bulk of the remaining 30 per cent is of the white floating variety.

Tallow used in the manufacture of the yellow soap is either bought locally or imported from Argentina or the United States. The larger part comes from the United States. Grease used in the manufacture of this soap is imported in tank cars from various parts of the United States via the Florida East Coast Railway, and to a less extent is purchased from domestic slaughterhouses.

The perfumed toilet soap is made from the best grades of imported oils and fats. Practically all material entering into the manufacture of this soap is imported. The white soap is made principally from coconut, cottonseed, and other vegetable oils, practically all of which are imported.

There is a movement on foot to increase the tariff protection on soap, especially on perfumed toilet soaps in solid or liquid form. In view of the 40 per cent tariff preferential in favor of American soaps of this class, it is predicted that such an increase in the duties would stop the importation of European perfumed toilet soaps.

TOBACCO

TOBACCO INDUSTRY IN FINLAND.

Consul Leslie A. Davis, Helsingfors.

The tobacco industry in Finland suffered an unusually bad year during 1922, the factories having operated at actual loss. The prospects for the present year seem to be somewhat better, partly owing to the fact that the duty on raw tobacco has been reduced 5 marks per kilo.

Industry Burdened by High Taxes.

The high excise taxes imposed by the Finnish State and the customs duties, which increased from about 6 per cent to 53 per cent of the total value of production in 1917, have been quite a burden on the industry.

According to statistics compiled by the Tobacco Industries Employers' Union, the State benefited by taxes imposed on tobacco to the extent of 3,300,000 marks in 1917; 7,200,000 marks in 1918; 87,700,000 marks in 1919; 206,600,000 marks in 1920; and 192,400,000 marks in 1921. (Normal value of mark is $0.193.)

Cost of Raw Tobacco—Import Trade.

The cost of raw tobacco, which constitutes one of the most important items in the cost of production, has increased from 6 marks per kilo in 1917 to 14 marks per kilo in 1918, to 30 marks in 1919, to 47 marks in 1920, and to 53 marks per kilo in 1921.

The imports of raw tobacco into Finland in 1913, 1920, 1921, and 1922 and the principal countries of origin were, according to official statistics, as follows:

Tobacco imports of Finland in 1913 and 1920–1922.

Countries of origin.	1913		1920		1921		1922	
	Leaf.	Stems.	Leaf.	Stems.	Leaf.	Stems.	Leaf.	Stems.

Denmark	.....	.....	.....	135,953	.....	21,087	.....	48,883
Netherlands	.....	.....	.....	41,927	556,430	.....	.....	.....
Other countries	246,070	1,432	2,119,231	62,814	1,230,230	5,542	1,989,814	32,971
Total	8,273,115	1,156,992	4,695,438	240,694	2,870,184	107,450	4,287,633	270,476

Finnish tobacco manufacturers have the advantage of high import duties on cigars and smoking tobacco, which make it unprofitable to import them. The quantity of manufactured tobacco, cigars, and cigarettes imported into Finland during 1913, and 1920, 1921, and 1922, was, according to official statistics, 129,001 pounds, 41,963 pounds, 2,688 pounds, and 3,933 pounds, respectively.

TOBACCO CONSUMPTION IN AUSTRIA DECREASED.

Consul Robert W. Heingartner, Vienna.

The director general of the Austrian tobacco monopoly has announced that in view of the recent marked decrease in tobacco consumption it will be necessary to reduce considerably the output of the Government tobacco factories. The first step in this direction was

taken on March 16 by reducing the weekly working hours from 44 to 40 hours.

According to the director general, the decrease in the consumption is due principally to the economic crisis and growth of unemployment in Austria, but there are other factors that combine to retard tobacco sales. The stabilization of the Austrian crown has put an end to periodical increases in tobacco prices, and as a result the practice of hoarding cigars and cigarettes has ceased, but the hoarders are consuming their large reserves, which reflects very appreciably on current sales. Another reason for reduced tobacco sales is the rapid growth of smuggling from Germany, which, owing to the depreciated mark, has become a flourishing business.

The standard cigarette, called "Egyptische," now costs 500 crowns, as compared with 6 heller (100 heller=1 crown) in pre-war times. The popular cigar of the "rat-tail" type, known as "Virginia," which in pre-war times cost 11 heller, is now sold at 1,600 crowns each.

Of the 30 factories belonging to the late Austrian Empire, only 9 are located within the boundaries of the Austrian Republic. However, two new factories have been built in order to supply the country's demand. It was planned to manufacture 240 million cigars and 5 billion cigarettes this year, but it is probable that this proposed output will be reduced about 25 per cent.

LUMBER

Axel H. Oxholm, Chief, Lumber Division

DESIRABILITY OF USING GANG SAWS.

A prominent and progressive European lumber manufacturer, who at present has leased several American sawmills and is running them to supply foreign markets, has expressed to the Lumber Division his surprise at the enormous waste in forests and sawmills in the United States. At least in the eastern and southern parts of this country conditions are not widely different from those in many European lumber-producing countries and the cost of labor is even less in many sections of the South than the prevailing wages in some of the principal European lumber-producing countries.

"Why do not the American sawmills cutting small timber use gang saws of the modern type?" he asked. "The second or third growth timber certainly does not produce a sufficient amount of clear lumber to justify the enormous waste of squaring the logs in the cutting of clear stock. It is quite evident to me that in order to enable me to make a profit I must use gang saws and minimize the loss of raw material by edging each plank and board separately. I have studied the Bureau's reports on sawing methods in northern Europe [Special Agents Series Nos. 195, 207, and 211] and am convinced that these methods would be the most economical ones in such parts of the United States where the dimensions of saw timber are, relatively speaking, small. Of course, in case of large virgin timber a combination of gang and band saws might be used. After having obtained all the clear lumber possible from each log, the cant (the central part of the log) might be passed through the gang saw, which is capable of producing lumber much more uniform as to size and width with a minimum of waste. I am convinced that a more extensive use of gang saws in this country would in many sections save 20 per cent in raw material. Should the present prices of lumber be maintained or should the prices increase I do not see how the lumber manufacturers can afford to disregard the more extended use of gang saws."

The lumber division agrees with the views expressed above and it may be added that several progressive lumber companies in the United States are using gang saws to some extent. Gang-sawed lumber has no miscuts and the modern type of a north European gang saw can saw an average log 18 feet in length, 8 inches in top diameter, in 45 seconds. Standard gang saws as manufactured in northern Europe are usually constructed for sawing of logs up to 2 feet in top diameter. A special type is manufactured for the cutting of logs 33 inches in top diameter, but there is no reason why greater gangs can not be constructed capable of sawing heavier logs without materially decreasing the speed.

FEBRUARY LUMBER EXPORTS INCREASE.

Exports of boards, planks, and scantlings in February, while only slightly larger than the January exports and the exports for February, 1922, still maintained the increase which was manifested in the January exports. The wood holding first place in exports during the month was southern yellow pine, while in February last year Douglas fir ranked first.

The February export of yellow pine boards, planks, and scantlings was 49,125,000 board feet, of which 26,160,000 feet were rough and 22,965,000 feet were dressed. Of the two combined, 19,824,000 feet went to the River Plate countries, 11,692,000 feet to Cuba, 4,311,000 feet to Mexico, 2,802,000 feet to the United Kingdom, and 1,829,000 feet to Spain. In addition to boards, planks, and scantlings there were exported in February 555,000 feet of yellow pine logs and round timber and 13,330,000 feet of yellow pine hewn or sawed timber.

The total February export of 36,604,000 feet of Douglas fir boards, planks, and scantlings was largely rough, only 565,000 feet being reported as dressed. Japan took 16,576,000 feet; Australia, 11,057,000 feet; China, 3,840,000 feet; Peru, 1,425,000 feet; and the United Kingdom, 1,400,000 feet. In addition to lumber, the February exports of Douglas fir logs and round timber was 666,000 feet, and of hewn or sawed timber, 13,990,000 feet.

United States exports of boards, planks, and scantlings.

Month and year.	Southern yellow pine.	Douglas fir.	Redwood.	Oak.	Gum.	Total, including "all other."
	M feet.	*M feet.*	*M feet.*	*M feet.*	*M feet.*	*M feet.*
February, 1922	35,785	59,485	2,871	6,444	2,920	125,970
December, 1922	42,270	36,327	4,054	9,158	2,848	115,097
January, 1923	57,725	31,991	4,093	12,856	4,548	130,772
February, 1923	49,125	36,604	8,615	10,536	3,845	132,544
Monthly average, 1913	100,432	56,302	4,325	22,108	6,510	198,005
Monthly average, 1921	36,481	37,936	1,324	5,785	2,303	100,587
Monthly average, 1922	39,521	51,225	2,762	9,018	3,796	127,744

Next to southern yellow pine and Douglas fir the most important export of softwood is cedar, of which in February there were exported 8,683,000 board feet of logs and round timber and 1,133,000 feet of hewn or sawed timber. Other softwoods are exported principally in the form of boards, planks, and scantlings,

February exports being as follows: Redwood, 8,615,000 board feet; western hemlock, 7,186,000 feet; spruce, 1,833,000 feet; and white pine, 1,666,000 feet. Shipments of softwoods other than these amounted in February to less than 1,000,000 feet each.

Exports of Hardwoods and Lumber Products.

Of the 10,536,000 feet of oak lumber exported during February the United Kingdom took 6,455,000 feet, while Canada and the River Plate countries took 2,103,000 feet and 1,149,000 feet, respectively. In addition to lumber there were 538,000 feet of hewn or sawed oak timber exported during the month.

Next to oak, gum is the most important export hardwood. Other kinds of hardwood lumber, exports of which amounted to over 1,000,000 feet during February, were: Ash, 2,034,000 feet, and yellow poplar, 1,694,000 feet. The February exports of railway ties totaled 308,657, of which 292,943 were softwood ties. Of the softwood and hardwood ties combined 86,654 went to Honduras, 20,000 to Peru, and 12,000 each to Canada, Guatemala, and Mexico.

Beginning January 1 the export of piling has been reported in linear feet, and in February 150,838 linear feet of piling were exported.

The total cooperage exports in February were valued at $685,246, as compared with $457,007 in the corresponding month of last year. Considering quantities, the greatest increase over February of 1922 was in slack staves, which more than quadrupled February, 1923, exports being 2,575,112. The February export of tight staves was 1,889,665 and of tight cooperage shooks 176,018 sets. Exports of slack shooks during the month amounted to 11,317 sets and of heading to 174,913 sets. Of the total export of both tight and slack staves, amounting to 4,464,777, the principal distribution was as follows: Canada, 1,706,013; Cuba, 907,200; British West Indies, 620,899; United Kingdom, 489,745; Portugal, 203,412; and Spain, 182,648.

February exports of box shooks included 2,200,968 board feet of southern yellow-pine shooks and 7,164,324 board feet of box shooks made of other kinds of lumber. In veneers and plywood the February export was 6,044,016 square feet, which was nearly three times the exports of this commodity in February, 1922. Figures now available covering hardwood flooring show that in February 228,000 feet of hardwood flooring was exported.

Tokyo Wholesale Lumber Prices.

Commercial Attaché James F. Abbott, Tokyo, Japan, March 15.

The following table has been translated from the monthly bulletin (Kwai-Ho) of the Tokyo Foreign Lumber Import Assn. (Gai koku Mokuzai Yunyu Kyokai), for March, 1923. In every Douglas fir item there is shown an advance for the end of February over quotations of a month before. At the time of writing (March 15) this tendency continues, and all prices are tending upward.

Wholesale prices of lumber in Tokyo.

	Jan. 23, 1923.	Feb. 25, 1923.
Douglas fir:	*Per Mft.*	*Per Mft.*
Large squares (merchantable), 18 to 24 inches by 24 to 40 feet	$40.58	$48.50

4½ inches by 13 feet and 4½ inches by 20 feet	42.21	42.03

NOTE.—Values computed approximately according to current exchange rates on these dates.

Activity in Canada.

Vancouver.—There were exported from the port of Vancouver during January 22,390,221 board-measure feet of lumber, 98,905 bundles of box shooks, and 569,720 bundles of shingles, according to a report from Consul General Frederick M. Ryder, at Vancouver, dated March 5.

Contracts have been closed for the entire output of most of the mills for months in advance, with additional offers daily and a boom market anticipated. Australian consignments are in arrears; shippers for the Atlantic coast markets are experiencing difficulty in placing orders, and exporters report that it is almost impossible to purchase squares for the Japanese market. Shippers for the Atlantic coast report that there has been no recession in the demand from those markets, and manufacturers do not attempt to estimate the price at which this product may move. It is said that $19 per thousand feet was formerly considered a fair price for common grades and it was not expected that the price would go much higher, but $25 has now been realized for the same grade. Should business continue at the present rate, the price may reach $30 in the near future. The Japanese, although having been urged for some considerable time to purchase their requirements, delayed, in anticipation of more favorable market conditions, with the result that their agents are now unsuccessfully endeavoring to place orders.

Australians are still purchasing when possible, the basic price c. i. f. for that market being $37.50. Steady buying by China continues, but not in large volume, while the market for the United Kingdom is not considered active.

India has placed orders for creosoted ties, two cargoes having gone forward, but the probable ultimate volume of this business is uncertain.

The export business in cedar logs has revived in fairly large proportions, a large quantity of first grade having gone forward and many having been purchased for future shipment.

Northern Ontario.—The prospects in the lumber manufacturing industry in Ontario in 1923 are the most encouraging in two years, and most mills will be operated at full capacity. The cut this season is estimated to be from 30 to 50 per cent more than in 1922. The lumber cut in northern Ontario in 1922 was 595,560,000 feet. Large stocks of dry lumber are said to be practically depleted and small holders are awaiting still higher prices than those now prevailing. It is predicted that some material will be sold green this year, owing to the scarcity of certain kinds of lumber. (Vice Consul Harold S. Tewell, North Bay, March 7.)

Sault Ste. Marie.—An American company will log 17 square miles of timber, mostly hardwood, in this district. They expect to log 15,000,000 feet per year and the company has already sold a five years' cut. It is the intention of the company to work all the year round. Their softwood cut will be sold locally. This increased activity in the lumber area will result in an 8 or 9 per cent increase in quantity of lumber shipped from this consular district. (Vice Consul L. Dale Pope, Sault Ste. Marie, March 17.)

Fort William and Port Arthur District.—A preliminary estimate for the 1922–23 logging season, now near a close, shows 1,450,000 ties and 20,000 piles. There will be sufficient local elevators and railways to require the entire output of ties and poles. (Consul Dudley G. Dwyre, March 26.)

Newfoundland.—It is reported that the cut of timber in Newfoundland this season will probably be the largest on record. The pulp mills and sawmills will continue to log until the rivers break up this spring. The sawmills have been operating to full capacity, and will have a good supply of lumber on the market by the end of May. (Consul James S. Benedict, St. Johns, March 21.)

Northern British Columbia.—Logging operations in the Prince Rupert forestry district in February show reduced figures for spruce logs as compared with January figures. The difference shown, about 4,000,000 feet, reduces the total of all logs scaled by more than one-half. Difficulty in woods operations, caused by heavy snow and extreme cold, is chiefly responsible for this falling off, as there is a good demand for spruce. Log scaling in the Prince George forestry district show reduced figures for spruce logs as compared with January figures. The decrease is due to the usual bad weather experienced during February. Logs cut in the two districts in February amounted to 4,592,488 board feet, of which spruce amounted to 3,264,353 board feet, red cedar, 1,009,212 board feet, and Douglas fir 318,923 board feet. (Consul E. A. Wakefield, Prince Rupert, Canada, March 14.)

CONSTRUCTION NEWS

[Further information pertaining to the following items may be obtained from the Bureau of Foreign and Domestic Commerce, or its district and cooperative offices, by referring to the reference numbers given. Where no reference number is given, further information is not available.]

Italy.—The Italian Government has guaranteed the sum of 240,000,000 lire (about $12,000,000) for the extension of the port of Naples. The Government has approved a considerable series of works, which, it is announced, will be begun immediately. Part of the construction work, according to Il Mezzogiorno, has already begun. The financing of this project is to be in 10 yearly installments of 24,000,000 lire (about $1,200,000) each. It is calculated that the project will be completed by 1933. Reference No. 90139. (Consul General Homer M. Byington, Naples.)

Colombia.—It is reported that the Ministry of Public Works at Bogota contemplates the construction of an aqueduct at Buenaventura, to insure the town a continual supply of water (it depends at present on rain); that the Ferrocarril Pacifico (Pacific Railroad), under the direction of the same Ministry, is planning to construct a modern hotel here; and that the Department of El Valle del Cauca is about to purchase a dredger to deepen the channel of the bay at Buenaventura and also to dredge alongside the pier. Reference No. 90236. (Vice Consul Thomas McEnelly, Buenaventura.)

Canada.—The General Asbestos Corporation of Montreal plans to erect an additional mill of 1,200 tons capacity per shift. This should nearly double the capacity of the present mill. An improved demand for asbestos is n d as a result of increased building in the United States. Reference No. 89764. (Consul General Albert Halstead, Montreal.)

Chile.—By virtue of Executive Decree No. 234 of February 20, 1923, bids are invited for the construction of the port works of Constitucion. According to the first provision of the decree the complete works shall be paid for by a concession and plans which are now on file in the office of the Ports Commission in Santiago and in the Chilean consulates in New York, London, Paris, Antwerp, Rotterdam, Berlin, Rome, and Geneva. The bids for this contract will be opened in Santiago on December 27, 1923, at 3 p. m. Reference No. 89919. (Ambassador W. M. Collier, Santiago.)

Uruguay.—The municipal government of Montevideo has purchased ground and material for establishing a municipal slaughterhouse (matadero municipal). The present city council is authorized to spend 150,000 pesos ($155,100 at par), and 600,000 pesos ($620,400) will be spent by future councils in the completion of the works. The estimated capacity of this slaughterhouse is given at about 1,000 cattle per day. Reference No. 87236. (Vice Consul Sherwood H. Avery, Montevideo.)

Additional information regarding construction news appears in this issue under the following section:

Cable review, Far East: Building and construction in Shanghai and Canton, China.

RUBBER PRODUCTS

P. L. Palmerton, Chief, Rubber Division

ARGENTINE RUBBER GOODS MARKET IMPROVING.

A. M. Walker, Rubber Division.

Rubber manufactures exported from the United States to Argentina during 1922 exceeded in value those of the preceding year by nearly $500,000. The value of our exports of rubber goods to that country in 1919 was $2,500,721; 1920, $4,262,719; 1921, $1,361,765; and 1922, $1,847,961. Exports of rubber goods from France to Argentina also gained, being 181.3 metric tons in 1919, 395.1 in 1920, 240.5 in 1921, and 351.2 in the first 11 months of 1922. German exports to this market during 1922 included 25,034 automobile casings and 14,791 inner tubes, a considerable increase over 1921. Statistics showing the exports of rubber goods from the United Kingdom to Argentina in 1922 are not available; in 1919 they were valued at £247,969; 1920, £570,596; and 1921, £284,372.

There is a keen competition in Argentina between American and European dealers. There are some small local rubber manufacturers, whose share in the total trade is negligible.

Dependent on Foreign Sources.

Argentina is the largest single market dependent entirely upon foreign sources of supply for automobile tires. Its registration of motor cars numbers approximately 80,000. The countries with a large number of cars—United States, Canada, United Kingdom, France, Germany, and Australia—all have important tire manufacturing industries. The Argentine tire market is just about equal in size to the Australian.

United States exports of tires to Argentina during 1922 were nearly 40 per cent greater than in the previous year. Details for the past three years follow:

Value of United States tire exports to Argentina.

Items.	1920	1921	1922
Automobile tires:			
Casings	$2,792,808	$739,316	$987,187
Tubes	307,143	68,938	141,640
Solids	20,886	29,716	12,718
Total	3,120,837	837,970	1,141,545
Other tires	42,675	9,695	34,451

The number of automobile casings shipped from the United States to Argentina in 1922 was 94,685. In September, 1922, it was estimated that there were 77,637 passenger cars and 776 trucks in Argentina, American makes predominating. About 40 per cent of the cars in use take inch-clincher tires, 40 per cent millimeter clinchers, and 20 per cent straightsides.

Strenuous competition has led to the elimination of agents as distributors. These have been supplanted by factory branches of American and European manufacturers with offices in Buenos Aires. The practice of tire consignments in vogue prior to the war, when European tires dominated the market, has become rare and sales against firm orders are now the rule. A general reduction in tire prices occurred in September, 1922. The trade discount allowed at that time was about 25 per cent; it is reported that discounts have since been increased to 25 per cent plus 10 per cent.

Large Growth in Footwear Sales.

An outstanding feature of the market is the steady growth in demand for rubber footwear. Exports from the United States to Argentina are given below for the past four years:

Year.	Boots.		Shoes.	
	Pairs.	Value.	Pairs.	Value.
1919	16	$76	61,338	$53,553
1920	1,836	4,769	133,358	159,621
1921	638	2,439	189,360	183,824
1922	923	2,684	482,717	384,683

Rubber-shoe exports from the United States to Argentina in 1922 included 463,432 pairs of canvas rubber-soled shoes, valued at $369,526. These are to some extent supplanting the native "alpargatas," the cheap canvas shoes with hempen soles. United States exports of rubber-soled canvas shoes to Argentina in 1922 were surpassed by shipments to only two other markets—the Philippine Islands and Cuba. Similarly United States exports of rubber soles and heels to Argentina are expanding; they were valued in 1920 at $32,710, 1921 $18,206, and 1922 $45,884; in the latter year Argentina ranked fourth among United States export markets for rubber soles and heels.

Mechanical Rubber Goods Trade Quiet in 1922.

United States exports of mechanical rubber goods to Argentina showed a decided decrease in 1922 over those of the preceding four years. They included belting, valued at $45,154; hose, $42,252; and packing, $9,428—a total of $96,834. The corresponding total in 1918 was $163,077; 1919, $236,980; 1920, $391,030; and in 1921, $130,896. The normal market for American-made mechanical rubber goods is greatly in excess of the $100,000 mark.

The latest Argentine census of manufactures—1913—listed 48,779 factories, with an aggregate authorized capital of 1,788,000,000 pesos. These include 5,000 food manufactories, 4,300 wineries, and many brick and tile plants, power houses, distilleries, flour mills, sugar centrals, textile mills, shoe factories, ice plants, soft-drink manufactories, macaroni factories, iron works, sawmills, soap factories, tannin extractors, carriage works, etc. There is some mining of copper, lead, mica, petroleum, and other minerals. In the Comodoro Rivadavia oil district there were 109 producing wells in 1919 and development work and production have since been speeded up. Railroads in operation January 1, 1921, covered 22,141 miles of line, and had aggregate rolling stock consisting of 3,910 locomotives, 3,222 passenger coaches, 2,786 baggage cars, 7,112 cattle cars, and 72,888 freight cars. Less than 10 per cent of the area of the country is cultivated. With a general revival of industrial activity in Argentina, exports of mechanical rubber goods from the United States to that country should be enormously expanded over the 1922 level.

British Press Campaign Against Importing Tires.

Tire imports into the United Kingdom in 1922 were valued at £4,241,847. The propaganda subcommittee of the British Rubber Tyre Manufacturers Association have opened a campaign to show British motorists that by buying imported tires they are injuring the English rubber and cotton industries, while by purchasing locally manufactured tires, alleged to be now fully equal in quality to imported makes, they would reduce unemployment. Recent issues of trade and leading newspapers have devoted considerable space to the arguments presented by the propaganda subcommittee. There has also been considerable discussion of a proposal to subject tire imports to the 33⅓ per cent tariff applicable to motor vehicles.

Additional information regarding rubber products appears in this issue under the following sections:

Tariffs and trade regulations: Proposal for revision of export taxes on rubber and balata in Peru.
Foreign trade opportunity No. 6147.

ELECTRICAL EQUIPMENT

R. A. Lundquist, Chief, Electrical Equipment Division

THE ELECTRIFICATION OF GERMAN RAILWAYS.

Consul Don S. Haven, Leipzig, March 8.

Unqualified public and professional interest is centered on the German Government's present efforts to circumvent its coal shortage by the electrification of all State railways. By demonstrating the superiority in service and economic efficiency of electricity over steam, it is hoped to offset the handicap to German railway transportation resulting from the occupation of the Ruhr coal fields and the deliveries previously made under the Versailles treaty. Not only railways but factories as well will be compelled to use electric power. There is not sufficient water power to meet the country's needs and coal will continue to play an important part. However, the only coal fields remaining in German hands yield a product which has proved unsuitable for locomotive use, but which may be used in connection with steam turbines with some efficiency.

The penetration by the French into Germany's most important bituminous coal district has forced the German State Railway Administration to withdraw a large number of trains. Even now the remaining trains run principally on imported (British) bituminous coal. Also the limits in the measurement of locomotive boilers, influenced by the requirements of bridge and tunnel profiles, necessitate the exclusive use of high-grade fuel. Leipzig is already the terminus of several electrified lines.

Use of Electric Power in Czechoslovakia.

Consul C. S. Winans, Prague, March 1.

Four companies have recently been organized in Moravia (the leading agricultural Province of Czechoslovakia) for the purpose of supplying the Province with electric power. Plans include the utilization of the power from the Moravice and Dyje Rivers. Work has already been started on some of the plants. The cost of the scheme is estimated at 225,000,000 Czecho-Slovak crowns ($6,525,000) and most of the material will probably be purchased locally.

[Firms wishing to communicate with these companies may obtain the names and addresses of the proper officials from the Electrical Equipment Division, Bureau of Foreign and Domestic Commerce, Washington, D. C., or through any of the bureau's district or cooperative offices, by referring to file No. 89635.]

ELECTRICAL TRADE NOTES.

Electrical Machinery Exports to Italy.

In electrical machinery lines, according to a recent article appearing in an Italian newspaper, the United States has taken Germany's position in the export trade with Italy. (Consul H. Earle Russell, Rome, February 10.)

Electrical-Supplies Trade of Australia Improving.

Considerable activity in the electrical-supplies trade of Australia is looked for. The new power being developed by the Government will give current at a low cost over a wide area, so that all classes of heating, cooking, and lighting appliances should be in demand. (Consul General Thomas Sammons, Melbourne, March 12.)

Interest Shown in Greek Telephone Concession.

It is stated that British, Belgian, Swedish, and French interests are active in connection with the telephone concession recently offered by the Greek Government to foreign bidders. (Commercial Attaché R. C. Hall, Athens, January 20.)

Bombay Electrification to Proceed.

Announcement has been made by the Great Indian Peninsula Railway that sanction has been received to proceed with the first 30 miles of the Bombay suburban electrification scheme as far as Thana. Preparations are far advanced and contracts will be placed at an early date for the first 20 miles of track work and special rolling stock. (Assistant Trade Commissioner C. B. Spofford, Calcutta, February 20.)

Electric Railway Concession in Chile Granted.

Rights to construct and operate an electric railway of 1.435-meter gauge are granted by a recent executive decree of the Chilean Government. The proposed line is to run between Santiago and Talagante, a distance of 42 kilometers (26 miles). The decree provides that plans for the proposed railway shall be submitted to the President for approval within one year and that the line shall be finished within two years from the date of approval of the plans. (American Ambassador, Santiago, February 20.)

Additional information regarding electrical equipment appears in this issue under the following section:

Foreign trade opportunities Nos. 6127, 6137, 6146, 6148, 6149, 6168, 6171.

AUTOMOTIVE PRODUCTS

M. H. Hoepli, Acting Chief, Automotive Division

PROSPECTS ENCOURAGING IN SOUTH AFRICA.

Compiled from reports submitted by Trade Commissioner P. J. Stevenson, Johannesburg; Consul G. K. Donald, Johannesburg; and Vice Consul A. H. Cawston, Cape Town.

The year 1923 promises to be a banner period for the automotive business in South Africa. In spite of the general depression during 1922 there was a steady increase in demand for motor vehicles of all kinds. Stocks of cars held in bond, which have so hampered the import trade since 1920, have practically disappeared, the 270 still located at the principal centers at the end of 1922 representing current stocks which will be cleared and replaced as new models come in.

This improvement has been variously attributed to the slight betterment in general business conditions, to the greatly improved local service facilities, and, most of all, to the reduced prices of American cars.

American Makes Constitute 90 Per Cent of Car Imports.

While the total number of cars imported during 1922 was more than double the number in 1921, the value was only about one-third greater. Since American cars, manufactured in the United States and Canada, comprise over 90 per cent of all cars brought into South Africa, this shift in ratio of values to numbers reflects chiefly the results of lowered prices for the American output as compared with prices in 1921.

The most gratifying feature about the comparatively heavy shipments received in the last quarter of the year is the fact that they were sold shortly after arrival. The unusually large number imported during November and December—546 and 538, respectively—in each case more than quadrupled the 137 received in February. Shipments received in the period, January–May, ranged between 137 and 387; in the period June–October, between 441 and 490.

Motor cars imported into South Africa during the years 1913, 1921, and 1922, by countries of origin.

Country of origin.	1913 [1]	1921		1922	
	Value.	Number.	Value.	Number.	Value.
Canada	£157,178	1,010	£180,143	2,625	£392,014
United States	383,781	802	302,864	1,944	421,783
United Kingdom	436,795	168	106,862	139	69,736
France	35,300	34	11,991	48	12,731
Germany	62,818	31	14,273	33	11,475
Italy	20,138	11	4,164	35	10,463
Austria				9	5,922
Belgium	4,066	10	5,215	6	1,473
Greece				4	753
Czechoslovakia		1	452	1	915
Netherlands	9	2	797		
Others [2]	782				
Total	1,100,867	2,069	626,701	[3] 4,844	[3] 927,265

[1] Includes both cars and parts; hence, numbers not given.
[2] Comprises Russia (£609), New Zealand (£108), Persia (£44), Norway (£13), and Sweden (£8).
[3] Totals for 1922, as published in the official South African monthly statistics, read 4,840 and £926,512, respectively. The slight discrepancy above occurs in the December figures, but the bureau has no way of trading it to the specific country.

While the principal source of supply continued, as in 1921, to be Canada, the United States, and the United Kingdom, the outstanding feature of the year's figures is the decrease in shipments from the United Kingdom. Imports from Canada increased greatly in the last half of the year, indicating the favorable results of our policy of supplying the market from American branch or affiliated factories. The scattering trade held by France, Germany, Italy, Austria, and Belgium is of little practical consequence at present and there are no indications that it will increase to any great extent. The four vehicles accredited to Greece undoubtedly represent transshipments of cars that were forwarded from that country as a matter of expediency.

Prices and Types Preferred—Closed-Car Prospects.

The best selling car in South Africa is an American designed, Canadian manufactured, light-weight make, selling for £200 and upward. Next to this the best sellers are light-weight American cars selling for £350 and £500. American manufacturers will find difficulty in disposing of cars in South Africa which sell for more than $1,200 in the United States. More five-passenger touring cars are sold than of any other type. A fair number of two-passenger roadsters are sold, and one Cape Town dealer has lately found the four-passenger sport model very popular.

Although closed cars have had little demand heretofore, a number of American makes were imported recently and sold practically on sight, their lowered prices, together with favorable ocean freight rates, making it possible to quote them at an attractive figure. In spite of the warm weather which prevails during most of the year, the wind and dust and the heavy rainfall in many sections make a closed car desirable, and the demand for that type is likely to grow.

Considerable interest has been manifested in the sales possibilities of the new British low-priced car, the Trojan—a Leyland production; but automotive experts believe it will not be a success in South Africa, as its wheel spread—narrower than the standard 56-inch—renders it unsuitable for country districts.

Motor-Bus Lines Offer Potential Market.

A flourishing motor-bus business has been started in Johannesburg since December, 1921, and has become a competitor of the municipal electric-car system, besides making trips to towns within a distance of 100 miles. Most of the busses in use have a capacity of 18 to 20 passengers, and all are on American chassis.

A large company has been organized recently, through the initiative of an American manufacturer's representative, with sufficient capital and backing for an extensive system of busses. The service will be started between Johannesburg and Pretoria and will gradually extend to all towns of the Rand, later reaching to the Cape Province and Natal. The one bus completed by this company thus far consists of an American chassis with a locally built body. It accommodates 25 passengers and has a maximum speed of 40 miles.

The Johannesburg Municipality is said to be considering the purchase of six motor busses to supplement its existing tram lines.

The Government-owned South African Railways have also initiated freight and passenger bus lines as feeders to the railroad, thus developing traffic with isolated country districts. On some of these lines the farmer can book his freight through to destination via motor or railroad. A C. O. D. system has been inaugurated.

Accessories Still Overstocked—No Market for Luxuries.

South Africa for the next year and a half or two years can not be looked upon as a promising field for the sale of accessories, as it will probably require that much time to absorb the stocks left over from 1920. The effect of throwing these stocks on the market at very low prices is seen in the decreased importations of parts and accessories, running from a value of £702,240 in 1920 to £213,878 in 1921 and to £208,744 in 1922 (the last amount includes chassis which, on the basis of the preceding two years' ratio, should not exceed 15 per cent of the year's total value as here given).

There is virtually no market for luxurious fittings, expensive novelties, etc. Only the necessities are salable. On account of freight costs, import duty, and larger profits required by dealers to cover the greater expense of larger stocks and salesman's travel, motor accessories have to be retailed for at least double the American retail prices; consequently, only the less expensive grades of such goods are in demand.

Fully 75 per cent of all accessories sold are imported from the United States. American goods are priced lower in most cases, and many accessories are obtainable only from the United States.

Distribution of Regional Markets in 1921.

While it is generally supposed that the greater number of motor vehicles operated in South Africa are in the farming districts, official registration figures for 1921 show that 53.8 per cent were located in the nine principal urban centers, led by Johannesburg, Cape Peninsula, and Durban.

Registration of motor vehicles in urban centers of South Africa in 1921.

Town or area.	Motor cars and taxis.	Other motor vehicles.[1]	Motor bicycles.	Total.
Witwatersrand (Johannesburg area)[2]	4,827	203	5,490	10,520
Cape Peninsula (Cape Town area)	2,255	374	1,273	3,902
Durban	1,442	222	1,271	2,935
Pretoria	639	24	967	1,630
Port Elizabeth	651	74	420	1,145
East London	613	54	313	980
Kimberley	491	25	358	874
Pietermaritzburg	375	19	334	728
Bloemfontein	442	10	176	628
Total	11,735	1,005	10,602	23,342

[1] Includes commercial classifications—busses, vans, and lorries.
[2] Krugersdorp to Springs.

Of the total 28,067 cars and taxis registered, 11,735 were in the cities, and the same areas accounted for 10,602 out of the 15,305 motor bicycles. The relatively small use made of commercial vehicles hitherto is apparent from the fact that only 1,344 were registered, and 1,005 of these were in urban centers.

Johannesburg an Automobile Center.

There are more than 10,000 motor vehicles in Johannesburg, on which is spent some £150,000 per month for upkeep. It is estimated that the monthly demand is about 116 vehicles, or 200 if subsidiary territory is considered. The municipal area has more than 200 miles of tar-coated roads.

The building of bodies for motor trucks and busses is an industry that promises increasing importance, particularly in view of the demand from the local bus companies mentioned above. One firm especially has been most successful in turning out satisfactory body work.

Extension of Market for American Cars.

American cars cost from 20 to 40 per cent less than British or Continental makes and are considered more durable and better suited to the local road conditions. The extension of the market for all cars is considerably retarded, however, by the high cost of running and upkeep, especially in the matter of gasoline and repairs. As indicated above, exceptionally high prices are charged for spare parts in South Africa, and this inevitably tends to lessen the number of potential buyers.

The native population as potential buyers of American motor vehicles does not justify any serious attention. The few sales made have been confined to high-priced models; the trade's estimates for this class of potential buyers does not exceed 50, or about 1 in every 100,000. One local distributor with 9 or 10 branches has yet to make his first sale to a native. The few motor cycles that in rare cases are owned by natives are generally dilapidated third-hand or fourth-hand machines. The day is too far distant when race progress will create a general demand for motor transportation, even of the cheapest kind.

Lists Available to the Trade.

[American exporters can obtain the following very complete and accurate lists of South African motor-vehicle owners from the compiler, The Motor Identification Company, 15–16 High Court Buildings, Fox and Joubert Streets, Johannesburg, South Africa:

	Price. £	s.
Transvaal car owners, excluding Johannesburg	7	7
Johannesburg car owners (with six-months supplements)	2	2
Johannesburg motor-cycle owners	3	3
Union of South Africa; price not determined, but will not exceed	14	14

All lists are multigraphed, and all are bound except that for Johannesburg motor-cycle owners. Practically all of them give name and address of owner, with make of car, as recorded in official registrations. While both cars and trucks are listed, the latter are not separated, and about half of them comprise the trucks of one well-known American manufacturer.

A list of operators of passenger busses in Johannesburg, together with the names of two body builders in the same city, is available to interested parties who inquire at the Automotive Division or through the proper district or cooperative office of the Bureau of Foreign and Domestic Commerce, requesting Exhibit No. 86119.]

AUTOMOTIVE DIGEST.

Paraguay—Motor-Vehicle Trade Inactive.

Future prospects in the motor-vehicle trade in Paraguay are not bright. There were no motor vehicles imported in 1922, and not more than six during 1920 and 1921. Approximately 350 were imported from 1914 to 1919. (Consul Harry Campbell, Asuncion, February 23.)

France—Marine Engine Exhibition at Boulogne-sur-Mer.

A competitive exhibition of marine engines for use in fishing vessels will be held at Boulogne-sur-Mer, September 9–16, 1923, in conjunction with the eighth International Congress of French Maritime Fisheries. While rules have not yet been laid down, it is understood that fuel tests will be held in addition to competitive trials for speed, durability, simplicity of motors, and general adaptability to the fishing trade. (Vice

Consul William W. Corcoran, Boulogne-sur-Mer, February 10.)

Formosa—Fishing-Boat Construction at Keelung.

The Keelung Dockard is constructing a fishing boat 80 feet in length, 12 feet 8 inches wide, and 6 feet 8 inches deep, with a capacity of 50 tons. The motor is 65 horsepower, with a speed of 10½ knots. Steel plates from two-eighths to three-eighths of an inch thick are used in the construction. Such a steel fishing boat can be constructed for 11,000 yen and can be used for over 20 years, whereas a wooden one costs about 7,500 yen, but lasts only six years, and its cost for maintenance is considerably more. (Consul H. T. Goodier, Taihoku, January 27.)

Netherlands—Omnibus Services Becoming Popular.

The registration of motor vehicles in Rotterdam on January 1, 1923, totaled 761 passenger cars, 381 taxicabs and omnibuses, 911 trucks, 44 postal-service cars, and 6 ambulances, representing an increase of 432 vehicles over the registration of the previous year. Most of the omnibus services have been established in the last few months between Rotterdam and various small towns and villages in that vicinity. The chassis of a low-priced popular American car is being used with a locally built body of rather heavy construction. The business is apparently profitable, and it is expected that it will expand rapidly. (Consul General George E. Anderson, Rotterdam, March 21.)

HIDES AND LEATHER

Wilbur J. Page, Chief, Hide and Leather Division

IMPORTANCE OF IMPROVING QUALITY OF SOUTH AFRICAN HIDES.

An investigation of the hide and leather industry in South Africa was made last year by Mr. W. N. Hutchings, a prominent tanner of Warrington, England, under the auspices of the United Tanners Federation of Great Britain. In his report, which has just been received, he stresses the importance of improved take-off of hides. The loss from bad flaying and wasteful branding to South African heavy hides is estimated at 10s. per hide; the loss on lighter hides is less easy to estimate, but it is thought a conservative average loss per hide, bulking the light hides with the heavy hides, would be 6s. 8d. This loss, which is almost wholly preventable, would amount to £400,000 on 1,200,000 hides. To the tanning trade it means that in place of 1,200,000 hides of good quality there is a quantity of hides more or less badly damaged.

The transportation charges on these damaged hides and the costs of tanning are as great as for first-class hides, while the leather produced is of inferior quality and cuts up with a far greater percentage of loss. Leather produced from defective hides can only be sold at a price proportionate to its quality, thereby tending to increase the cost of the leather tanned from the best quality hides.

Government Interested in Improving Flaying.

In Capetown, Durban, Johannesburg, Pietermaritzburg, and the neighborhood of Pretoria all cattle must be killed at the abbatoirs, but they are slaughtered by men employed by the butchers, so that the municipality does not control the flaying. The hides from different butchers vary greatly in quality of the flaying. The difference in the price according to the flaying is rarely less than 2d. per pound, or 10s. on a 60-pound hide. There is no reason for such a difference, except careless handling.

Some of the large firms have improved the standard and obtain a better than average price on the market—about ½d. per pound—but this is only a beginning. The average price can be greatly raised by higher standards. The great defect seems to be mixing hastily and poorly flayed hides with better take-offs. The Government of the Union of South Africa, which is most eager to improve the standard of all South African products, passed an act during July, 1922, which empowers the Government to inspect and grade hides at the abbatoirs. By virtue of this legislation the Government proposes to establish a high standard of take-off. This should have a far-reaching influence for improvement if efficiently administered.

Dry and Dry-Salted Hides Offer Difficult Problem.

The bulk of the South African hides exported are dry and dry salted, country killed. They are collected from all over the Union and from the southwestern territory and Rhodesia. The principal ports of shipment for these hides are Port Elizabeth, East London, and Durban. The hides are taken off by men who do not have enough practice to learn to do it well, and who have very little reason for giving special attention to it, as they get as much for one hide as for another, regardless of quality.

Often in very large areas the hides will be collected by the local storekeeper, who in turn sells them to dealers or sends them to a large merchant house. In some few cases he may send them direct to Port Elizabeth to be auctioned. No attempt has ever been made to impress on the storekeeper any more than on the farmer the value and importance of proper take-off. Therefore until this is made very clear to him he can not be expected to trouble much, because the collection of hides is to him a side line. The impetus, whether educational or compulsory, must come from the buyers, merchants, or dealers in the issuance of propaganda for better prices based on quality. With effective help

from the Government the idea of the importance of improving take-off may spread, even to the outlying districts. The small towns are more readily influenced, but there does not seem to be any reason to look for any widespread early improvement.

It is far easier to appraise the loss on poor quality of take-off for the wet salted hides, and the remedy is more accessible. As compared with hides from the River Plate, South African hides are not as strong as the saladero hides. A proportion have a yoke mark on the neck and some have thorn scratches and whip marks on the grain. These hides, however, are free from tick and in general are better trimmed than other South African hides.

Grading and Trim.

The standard of sorting hides at the coast for flay is poor and tends to perpetuate the fault. Any hide without a hole cut right through it in the body of the hide is classed as No. 1 take-off, although it might be scored half way through in a hundred places. If this standard could be altered at the Port Elizabeth auctions, the result would be far-reaching, as it would bring into action the incentive of better prices for good flaying.

Most of the hides are trimmed at the abbatoir with short shanks and trimmed cheeks; some, however, are sold untrimmed. As there is a difference of 10 pounds per hide betweeen the two trims, some butchers sell their hides with either trim at relative prices. Inasmuch as there is a difference in the classing of hides according to weight as heavies, or lights, there is apt to be a confusion of this with the trim, as a light hide is often classed as a heavy one if it is untrimmed. Buyers will be well advised to insist on and pay adequately for the close trim.

Branding Practices in Need of Modification.

The practice of branding in the Union should be drastically modified. In the Transvaal it is obligatory to brand first on the near rump and subsequently below this as long as there is space. This is repeated on the off side of the animal, then on the near shoulder, off shoulder, near ribs, and off ribs. In other parts of the Union no special place is stipulated. In Rhodesia the brand must be on the rump. This is only necessary when the cattle are running over a large area and are handled on horseback, the condition not applying to the greater part of Rhodesia.

The United Tanners Federation pointed out to the South African Government that the placing of the brand on the bend means depreciation in the value of the hide to the extent of 6s., besides rendering it unfit for the production of automobile upholstery leather and leather belting. In some of the larger ranches this bad practice in branding will probably be altered and the tanners' suggestion that the brands be on the cheek, fore shank, hind shank, or neck will, in many cases, be adopted.

Gore Marks.

Many hides are badly damaged by goring. This is chiefly caused during transportation of live stock. The remedy is to dehorn the calves, and this is being done on some ranches, not primarily for the sake of the hide, but because the damage to the condition of the beast is serious. In districts where cattle are not kraaled and where wild beasts are numerous it can not be done, but these districts are few.

Italian Hide and Leather Industry Marks Time.

Le Cuir. Paris, March 19.

The advantages of the steadiness of Italian exchange to the tanning industry during the last six weeks have been offset by the uncertainty in the political situation, the shortage of coal, and the rapid rise in fuel prices. Italy still suffers from strong German competition. While the German tanners of chrome have reduced their production greatly, they are sending large quantities of raw material into Italy to be tanned on account. Italian tanners also have to meet competition from Austria and Czechoslovakia, the Austrians particularly being able to compete on the basis of quality as well as price.

By a new commercial treaty concluded between Italy and Switzerland, the latter country authorizes the importation of large quantities of sole leather, belting leather, and leather shoes. These amounts will be revised from time to time. On the other hand, Italy has reduced its import duties on hides and skins, while Switzerland has only promised to allow its duty to stand without change for the duration of the agreement.

PETROLEUM

Henry C. Morris, Chief, Petroleum Division

POLISH PETROLEUM INDUSTRY IN 1922.

Based on reports from Consul General L. J. Keena and Assistant Trade Commissioner Elbert Baldwin, Warsaw.

Polish production of crude oil since the war has fallen steadily below the refining capacity of the country, although this decline showed a tendency to cease during the latter part of 1922 and the production figures were about the same as during the latter part of 1921. Statistics just given out by the Polish Government place the total output during 1922 at 713,100 metric tons, as compared with 704,874 tons in 1921 and 765,004 tons in 1920.

The decline in production during the past few years has been due primarily to the exhaustion of old wells and the slow development of new drilling since the war, while the more favorable trend in recent months has been caused largely by new wells in Boryslaw, Mraznica, and Ratoczyn. No further decrease is anticipated in 1923, as a number of Polish and foreign oil companies have been active in drilling and have increased their investments in Poland. French capital has been heavily invested in producing properties and at present controls more than half of the current Polish production. A report from Paris estimates the present investment by French companies in the oil industry

in Poland at 717,000,000 French francs. In December, 1922, there were 2,522 wells being drilled or in various stages of exploitation, an increase of 120 over the number of such wells at the beginning of the year.

Statistics of Production and Stocks.

The Polish Government statistics show the following figures for petroleum production and stocks during 1922:

Summary of Polish petroleum industry.

Periods.	Crude oil.			Refined products.	
	Gross production.	Delivered to refiners.	Stocks at end of period.	Production.[1]	Stocks at end of period.
1922.	*Metric tons.*	*Metric tons.*	*Metric tons.*	*Metric tons.*	*Metric tons.*
First quarter	161,151	180,626	241,665	146,997	139,525
Second quarter	181,513	208,560	162,235	170,088	165,331
Third quarter	192,142	187,631	119,995	172,219	165,691
Fourth quarter	178,292	186,636	96,520	169,006	164,523
Total, 1922	713,100	729,470	96,520	658,310	164,523
1921	704,874	656,636	322,411	571,671	169,716
1920	765,004	(2)	463,474	608,288	203,694

[1] Gross production less partially refined products returned into industry.
[2] Figures not available.

During 1922 Polish refineries continued to draw heavily upon stocks of crude oil remaining from prewar production, and such stocks were reduced from 600,000 tons in 1919 to 96,520 tons at the end of 1922. At current 1922 consumption, stocks remaining are equivalent to five months' supply. It is to be noted, however, that in November and December, with the exhaustion of stocks in sight, refinery operations and production were reduced from 67,450 tons to 48,780 tons of refined products, so that it became possible actually to add slightly to stocks of crude oil from the current December production. This limitation of refining activity in proportion to supplies of domestic raw materials, though reducing exports of refined products on which Poland is largely dependent in striking a trade balance, may nevertheless be considered from the point of view of the industry as a step toward deflation in operation. This is in accordance with the Government policy of placing the industry on a sound basis of domestic development as regards crude oil supplies.

Exports of Refined Products Increase.

During 1922 the total refinery production, which is the gross production of all products less partially refined oils returned into the industry for further operation, showed a noteworthy increase over the two preceding years. The Polish refining industry operates largely for export, and in 1922 the exports of refined products exceeded the 1921 figure and continued the export of refined products from stock as in 1920 and 1921. Comparative figures are shown in the following table:

Polish exports of refined petroleum products.

Products.	1921	1922	Products.	1921	1922
	Metric tons.	*Metric tons.*		*Metric tons.*	*Metric tons.*
Gasoline and benzine	45,640	54,820	Petroleum coke	3,420	4,790
Kerosene	105,720	110,600	Lubricating oils	320	400
Gas oil	78,090	93,680	Partially refined products	16,470	11,750
Greases	61,670	50,220			
Paraffin and candles	14,130	24,460			
Petrolatum	720	280	Total	333,650	355,470
Asphalt	7,470	4,470			

Shipments of crude oil from Poland during 1922 were somewhat less than during 1921, amounting to 56,100 metric tons, as compared with 69,580 tons in the preceding year. Of the 1922 exports, 23,290 tons went to Czechoslovakia, 17,640 tons to Hungary, 887 tons to Austria, and the balance chiefly to Yugoslavia. A marked increase is noted in the shipments to Hungary, while exports to other countries declined.

Importance of Petroleum Industry in Poland.

Exports of petroleum products from Poland during the first half of 1922 represented nearly 30 per cent of the value of all Polish exports. With the incorporation into Poland of Polish Silesia in June, 1922, and the greatly increased volume of Polish commerce resulting, the proportion of the value of petroleum exports as compared with total exports declined, but the industry remains nevertheless as a primary source of Polish wealth.

While no effort has been made to stimulate the domestic use of petroleum products in Poland, some concern has been shown for the demands of the domestic market, and the consumption during 1922 is estimated at about 50,000 metric tons above the 1921 figure. A noteworthy item is the increase in the amount of asphalt used, due to a large extent to the greater demands from Warsaw and other cities for the repairing of streets.

ACTIVITIES OF CURAÇAO PETROLEUM CO.

Consul B. S. Rairden, Curaçao, Dutch West Indies, March 14.

The Curaçao Petroleum Co. worked at full capacity during 1922, with the exception of three months, and employed about 500 men, including the European staff. Several large storage tanks were added and others are under construction. The company is reported to have storage capacity for 700,000 barrels (100,000 tons) of crude oil in addition to tanks for gasoline and light oils. Transportation facilities also were increased and improved, new wharves constructed, and other improvements made to expedite discharge of tankers.

The imports of crude oil by the company during the year were 286,280 tons from Venezuela, 17,070 tons from California, and 7,850 tons from Texas, showing an increase over the previous year's total of 197,480 tons. Exports were as follows: Crude, 116,489 tons; fuel oil, 540,408 gallons; gasoline, 1,994,713 gallons; benzine, 1,942,164 gallons; and kerosene, 3,123,348 gallons.

Shipping Operations.

At close of year this company had seven small tankers carrying about 500 tons of crude on a 11-foot draft and had added two new tankers built in the Netherlands, which carry about 950 tons of crude oil on a 11-foot draft instead of 1,200 tons, as previously reported. They expect to add in 1923 a steel oil barge and a tank steamer, to carry 1,400 and 1,000 tons crude oil, respectively. These are being built in the Netherlands.

At the end of the year the Curaçao Shipping Co., a subsidiary company, employed 230 men, including clerical staff at the refinery. Repairing work, except dry docking, is done by the company locally, and a dry dock may be ordered within a short period. A steam dredge for deepening the approaches to the wharves at the refinery has already been ordered. A slipway has been found impracticable and the idea was abandoned.

Additional information regarding petroleum appears in this issue under the following sections:
Cable review, Poland: Crude petroleum exports.
Cable review, Far East: Improvement in Japanese petroleum market.
Latin America: Economic conditions in Ecuador.

COAL

AUSTRIAN FUEL SUPPLY.

Assistant Trade Commissioner F. W. Allport, Vienna, March 15.

Austria's total supply, domestic and imported, of black coal, brown coal (lignite), and coke during 1922 amounted to 9,500,000 metric tons, an increase of 12 per cent over the total supply of 1921, 8,500,000 tons. Of the 1922 supply 5,800,000 tons were imported, as compared with 5,500,000 in 1921. Austria's domestic production in 1922 was 3,700,000 tons, an increase of 27 per cent over the production of 1921, 2,900,000 tons. The total supply of 1922 was about evenly divided between black and brown coal, the former, 4,100,000 tons, comprising 44 per cent and the latter, 4,500,000 tons, 47 per cent of the total. The coke supply was 770,000 tons, or 9 per cent of the total fuel supply.

Fuel requirements of Austria have been estimated at about 14,000,000 tons annually, with industry operating to capacity. It is safe to assume, however, that Austria had at its disposal during 1921 and 1922 all the fuel required under present conditions for the operation of its industries and the heating of its households, and that a maximum yearly supply of about 10,000,000 tons is adequate for present needs.

The question of the extent to which Austria is dependent upon foreign supplies of fuel is of importance. Since brown coal comprises 86 per cent of the domestic fuel production and but 24 per cent of the import, a comparison of tonnage of import and production is not sufficient. It is necessary to reduce local supply and imported supply to terms of black coal, and for this purpose 1 ton of black coal was considered as equivalent to 2 tons of brown coal or three-fourths ton of coke. Austria's total fuel supply in 1922 on this basis was equivalent to 7,400,000 tons of black coal, of which 5,200,000 tons, or 70 per cent, were imported and 2,200,000 tons, or 30 per cent, produced within the country. Approximately the same relation existed in 1921.

Increase in Imports from Succession States.

The following table, made up from the provisional figures of the coal office of the Austrian Ministry of Commerce, shows a slight decrease in imports of fuel from Czechoslovakia in 1922 as compared with 1921, a gain in imports from Poland and Galicia and from Germany, and a marked reduction in imports from other sources (chiefly from England and Yugoslavia):

Austrian fuel supply in 1922.

	Black coal.	Brown coal.	Coke.	Total, 1922.	Total, 1921.
	Metric tons.	*Metric tons.*	*Metric tons.*	*Metric tons.*	*Metric tons.*
Imports:					
Czechoslovakia	912,309	1,357,379	132,058	2,401,746	2,813,838
Poland and Galicia	468,208	6,636	.....	474,844	328,737
Upper and Lower Silesia	2,355,934	.....	58,339	2,414,273	2,162,955
Germany (Saar Basin and Saxony)	230,602	22,238	186,690	439,530	.....
Other sources	52,382	17,560	9,446	79,388	223,190
Total imports	4,019,435	1,403,813	380,533	5,809,781	5,528,720
Austrian production	165,540	3,110,448	383,885	3,659,873	2,942,987
Total imports and domestic production	4,184,975	4,514,261	770,418	9,469,654	8,471,407

It should be noted that, although the 1922 imports from Czechoslovakia and Silesia (Upper and Lower) are about equal in weight, more than half of the Czechoslovakian imports consisted of brown coal while all of that from Silesia was bituminous coal and coke.

ANTHRACITE COAL INDUSTRY OF WALES.

Consul A. B. Cooke, Swansea, February 16.

The Welsh anthracite measures furnish almost the entire supply of this coal in the United Kingdom. All the anthracite fields in Wales lie in the consular district of Swansea (in western Glamorgan, Carmarthen, Brecknock, and Pembroke Counties). An official survey of these measures made in 1904 for the Royal Commission on Coal Supplies reported the total amount of anthracite coal in sight as 6,310,292,214 long tons.

The South Wales anthracite measures have not been widely developed, owing to the limited demand, especially in the domestic market. Anthracite consumption in the United Kingdom does not exceed 2,000,000 tons per annum, and a large part of this is used in the making of gas and in malting. The use of anthracite for domestic heating is very limited; nor does it appear that there will be in the near future any great expansion in this last use, as the British people seem (from long custom, perhaps) to prefer an open soft coal fire.

Production and Export Trade.

The following table shows the output of anthracite coal in South Wales in the years 1912 to 1922, the amount of this output exported, and the percentage of exports based upon output:

Output and export of Welsh anthracite coal.

Year.	Output.	Export.	Percentage of export.
	Tons.	*Tons.*	
1912	4,353,010	2,365,718	54
1913	4,833,159	2,804,554	58
1914	4,370,239	2,256,272	51
1915	4,393,178	2,147,553	49
1916	4,318,201	1,929,405	45
1917	3,484,218	1,361,408	39
1918	3,518,735	1,125,857	32
1919	3,935,081	1,581,346	40
1920	4,231,951	1,627,693	38
1921	3,199,330	1,421,858	44
1922	4,168,257	2,037,476	49

France is by far the most important market for Welsh anthracite, taking from 60 to 65 per cent of the total exports, and Italy is second, taking about 15 per cent. The remainder goes chiefly to Sweden, Spain, Netherlands, Norway, Denmark, Egypt, and Portugal, in the order named. These markets and their relative importance in the Welsh anthracite coal trade have not varied greatly in the last 8 to 10 years.

Welsh Interests Seek New Markets.

With large measures of first-class anthracite coal at their disposal, and lying convenient for export at an

average distance from port of not more than 25 miles, Welsh anthracite coal owners are seeking new markets for their product, both on the Continent, where Welsh anthracite already is widely used, and in other parts of the world. There is at present a plan under way for increasing the consumption of Welsh anthracite in Canada. Also, within recent months, considerable tonnage has been shipped to the United States.

Coal Production and Consumption in Yugoslavia.

Consul J. F. McGurk, Zagreb, March 10.

Coal is found in all Provinces of Yugoslavia, but with the exception of that in Serbia proper is of recent formation. The three grades of coal mined in the country are classified as lignite, brown coal, and bituminous. Although lignite and brown coal are apparently the same, both terms are used locally; lignite is applied to coal of recent formation, and brown coal to that of older formation. It is said that sufficient coal can be mined to cover the entire demand of the Kingdom, except where bituminous is required for production of lighting gas and coke.

The annual production of all classes of coal in the Kingdom amounts to approximately 3,000,000 tons; about half of this amount comes from mines in Slovenia, and about 400,000 tons from Croatia and Slavonia. Slovenian coal is largely brown coal containing 3,000 to 5,400 calories, and the coal from Croatia and Slavonia contains 3,200 to 5,400 calories. The coal reserves of Slovenia are estimated to be 394,000,000 tons, and those of Croatia and Slavonia 154,000,000 tons. Serbia produces about 300,000 tons annually, and Bosnia and Herzegovina between 800,000 and 900,000 tons.

Additional information regarding coal appears in this issue under the following section:

Survey of Current Business: United States coal production.

AGRICULTURAL IMPLEMENTS

George B. Bell, Chief, Agricultural Implements Division

FINNISH IMPLEMENT TRADE IN 1922.

Consul Leslie A. Davis, Helsingfors, March 6.

In the first part of the year 1922 the demand for agricultural machinery was much below normal. Toward the latter part of the year, however, this demand increased to such an extent that the factories were obliged to operate at full capacity in order that the farmers might make their fall purchases of agricultural machinery. During the first part of the year Germany seemed to be the only important competitor of the domestic implement industry, but later some Belgian and English goods began to come in at reduced prices. Sweden played a very small part in the implement trade of 1922, because of the high exchange rate of the Swedish crown. The same is true of the United States, which, during 1922, exported implements to Finland valued at $31,153. This is nearly double the receipts from that source during 1921. As yet, however, there is nothing to indicate that American products are beginning to play a much more important part in the imports of implements into Finland.

The imports of agricultural machinery in 1913 totaled 2,999 metric tons (1 metric ton=2,204.62 pounds), valued at $477,365; in 1921 they amounted to 260 metric tons and were valued at $125,214; while in 1922 the volume had increased to 731 metric tons and the value to $231,927. It will be noted from these figures that the unit values were highest in 1921 and lowest in 1913, the 1921 values being three times those of 1913, while the values for 1922 were twice those for 1913, and one-third less than the 1921 values.

Items Imported by Finland.

Steam and oil tractors made up the largest part of the implements imported and in value comprised more than one-half the total imports both in 1921 and 1922. The quantity of tractors imported in 1922 was more than three times those imported in 1921, while the value showed an increase of about 50 per cent. Cream separators are the next most important item and in 1922 showed a 100 per cent increase in value and a 40 per cent increase in quantity. In this case there is an increase in the unit value.

In the following table are shown the detailed imports by articles for 1921 and 1922. Imports for 1913 are not shown, as they are not available by separate classes.

Imports of implements into Finland.

Articles.	1921		1922	
	Metric tons.	Value.	Metric tons.	Value.
Riding plows and ditching machines	5	$828	45	$7,303
Plows, not specified	40	6,416	82	15,605
Harrows	10	2,018	53	7,348
Power threshing machines	32	6,524	53	8,110
Hand threshing and clover machines	10	609	25	3,433
Grain and seed cleaning and assorting machines	17	3,522	28	4,567
Feed cutters	11	1,824	30	3,421
Milk and cream containers	6	1,361	7	2,018
Cream separators	25	16,848	36	32,293
Churns and butter-working machines	17	3,915	90	23,145
Steam and oil tractors	87	81,349	282	124,684
Total	260	125,214	731	231,927

Cream Separators Principal Finnish Exports.

Cream separators comprise the only important item of export. In 1921, 83 metric tons, valued at $72,699, were exported, and in 1922, 91 metric tons, valued at $87,160. Poland and Germany were the principal countries to which these exports were destined. It will be noted that the exports of this article are greater than the imports, which is a result of the recent growth of the Finnish separator industry, which enables it at present to supply all domestic requirements. Churns, butter-working machines, and harrows are also exported in small quantities. The total exports of implements from Finland were valued at $139,762 in 1913, $80,000 in 1921, and $91,641 in 1922.

IMPLEMENT AND TRACTOR NOTES.

Better Implement Business in Argentina.

The volume of implement business being done this year is somewhat in excess of last year, but demand is

irregular. More diversified farming, as a result of the heavy losses by live-stock breeders, may lead to an increased demand during the year, and the outlook generally is good. Tractors imported into Argentina from all countries during the first quarter of 1923 were 448 in number.

German Implement Industry in Frankfort District.

Manufacture of agricultural machinery during the year 1922 started with a considerable number of hold-over orders, which, with orders from domestic sources, kept factories running at full capacity until September. Deliveries of raw materials were slow and, in the latter part of the year, the cost of the finished product rose so high that domestic trade fell off and manufacturers found it difficult to compete in the foreign market with English and particularly Czecho-Slovak manufacturers. (Consul F. T. F. Dumont, Frankfort, January 29.)

Agricultural Implements to be Tested in Latvia.

Agricultural implements of decidedly inferior quality have appeared on the Latvian market in large numbers, and, in consequence, the Agricultural Department has begun to draft special regulations affecting trade in this line. According to these regulations all agricultural machinery and implements imported will have to be submitted to the Agricultural Department for preliminary test. If the tests show unfavorable results, the sale of the implements in Latvia will be prohibited. (Latwijas Karewis, February 10.)

Contest of Hay Pressers in the Department of Manche, France.

A contest of hay pressers will be held during 1923 or 1924 in the Department of Manche, under the auspices of the Office Agricole Regional du Nord and of the Office Departemental de la Manche. The contest has been organized by the Syndicate des Agriculteurs de la Manche. Machines exhibited must have a minimum width of 2.4 meters; they must be capable of operation by animal traction; and should truss or bale hay into bundles averaging from 5 to 10 kilos, the hay being gathered from the ground, spread or in swath. There will be various prizes of not less than 500 francs awarded, and allowances will be made to the exhibitors for the costs of transporting their machines and materials to the contest and for various expenses incurred during the contest. (Consular Clerk Paul Barbet, Cherbourg, March 6.)

Restricted Sales of British Implements in Italy.

The market for British agricultural machinery has become very restricted, principally owing to German and Austrian competition and to national production. Of the agricultural machinery imported 80 to 90 per cent comes from the United Kingdom, Germany, or Austria. Germany has more than 50 per cent of the trade, particularly in shallow plows and small machinery, where their packing and railway facilities assist them considerably, as no allowance has to be made for transshipment. The Germans make a special light plow for Italy, similar to that manufactured by Ansaldo, and adapted for the different soils and soil depths of the country. British machinery still salable includes threshing machines and portable engines for agricultural purposes. (British Board of Trade Journal, March 8.)

Additional information regarding agricultural implements appears in this issue under the following section:

Foreign trade opportunities Nos. 6117, 6118.

FINANCE

Grosvenor M. Jones, Chief, Finance and Investment Division

New Swedish Loan.

Consul Walter A. Leonard, Stockholm, March 16.

On March 16 the Kingdom of Sweden put out at 97 a 4½ per cent 500,000,000 crown loan to yield 4.64 per cent. The Government reserves the right to redeem a part or all of the loan on or after September 15, 1923, at par after advance notice of at least three months.

The purpose of the loan is to obtain revenues for the Government to take the place of certain war taxes (luxury taxes) which are no longer in existence, and also to obtain capital for public and semipublic utilities—construction of new railroads, development of hydroelectric power, etc.—and for new construction work in connection with the State telegraph system, with particular reference to radio.

About 18,000,000 crowns of the loan were taken up at the end of the first business day. It was not expected that there would be a great demand for the loan, because there is already outstanding the loan of 1913 at the same rate of interest, which is quoted at 96, or 1 point below the issue price of the current issue. All of the present loan was issued on the domestic market.

Argentine Live-Stock Collateral Loans.

Commercial Attaché Edward F. Feely, Buenos Aires, February 28.

In reply to an inquiry from the special live-stock committee of the Chamber of Deputies, the president of the Banco de la Nacion has furnished the following data as to the live-stock credits granted by that institution:

Since April, 1915, when law 9644 became operative, the Banco de la Nacion had discounted up to December 31, 1922, a total of 181,636,554 pesos, paper, guaranteed by live-stock collateral, of which 64,878,738 pesos, paper, was outstanding on the latter date.

On December 1, 1919, the rate of interest was fixed at 7½ per cent for loans up to 540 days and 7 per cent for the ordinary terms (180 days). These rates were reduced to 7 and 6½ per cent, respectively, on December 10, 1921. On August 28, 1922, a further reduction was made to 6 per cent for loans up to 540 days, plus a commission of 1 per cent, chargeable once, while the rate for the ordinary term was fixed at 6 per cent without commission.

The bank has not accepted live stock in payment of indebtedness except where it was necessary to bid at auction to protect its loans, and the total of cattle bid in did not exceed 1,000. The bank has also rented pasture lands which have been turned over to various debtors who had been obliged to abandon their own properties.

Repurchase of Dollars by Americans in Hungary.

The question of the right of American citizens to repurchase and take out of Hungary dollars brought into the country as well as the right of Hungarian importers of American goods, who have received permission from the Hungarian Government to import such goods, to purchase the necessary dollars to pay for the imported products, was submitted to the Hungarian Devisa Central by Consul Edwin C. Kemp, Budapest.

In the Devisa's reply the point was brought out that the granting of permits to American citizens to take out of Hungary a sum of money in dollars not exceeding the amount they had brought into the country on their arrival would be contrary to the regulations of the central; also that the granting of such permits would give opportunity for many abuses. The Devisa Central considered that the fact that Hungarian merchants might desire dollars to pay for goods of American manufacture for which an import license had been granted by the Hungarian Government involved no obligation on the central to satisfy their claims, and that permits to purchase dollars for such purposes could only be granted in the manner established by the committee attached to the Devisa Central for the examination of claims of this nature.

Additional information regarding finance appears in this issue under the following sections:

Cable review, Far East:
Decrease in Japanese gold holdings.
Prospect of lower silver in China.
Far East:
Increased monetary circulation in Philippines.
India to retain present exchange rate.
Eastern Europe and Levant: Finland again balances budget without loans.
Tariffs and trade regulations: Certain goods exempt from foreign exchange deposit in Greece.

SHOES AND LEATHER MANUFACTURES

A. B. Butman, Chief, Boot and Shoe Division

CONDITIONS IN THE AUSTRIAN SHOE INDUSTRY.

Consul Carol H. Foster, Vienna, March 1.

Austria's shoe industry turns out between 12,000,000 and 15,000,000 pairs annually. Of this amount, 8,000,000 to 9,000,000 pairs are sold in the domestic market and the remainder is exported. The factories supply 40 per cent of the local demand, imports 5 per cent, and shoemakers the rest. The production of the factories amounts to about 9,250,000 pairs annually, of which 3,250,000 pairs are consumed locally and 6,000,000 pairs exported. It is expected that the increase in the cost of maintenance (light, fuel, rent, wages, etc.) will eventually drive a number of shoemakers out of business, to the advantage of the factories.

Adverse Factors Influencing Industry.

There are several economic factors which influence the market for raw materials for the Austrian shoe industry. The manufacturers of shoes, as of many other commodities, were fully occupied during the war. The factories were supplied with modern equipment in order to meet war requirements, and important investments were made in the hope that the scale of production could be maintained even after peace had been declared.

These expectations, however, could not be realized because of the subsequent division of Austria-Hungary into several States and the consequent erection of new tariff boundaries. The States of Succession closed their frontiers immediately to protect their own industries, which with the exception of those of Czechoslovakia were very poorly developed. There was a virtual prohibition not only against the import of manufactured articles but also against the export of raw materials. As the centers for hides and leather in the former Monarchy had been in the territories now within Hungary, Yugoslavia, and Poland, and for textiles and other shoe accessories in Czechoslovakia, the acquirement of raw materials from countries of depreciated currencies was made very difficult.

Stagnation Begun in 1919.

The result was that the Austrian shoe industry suffered from stagnation during 1919. The situation was made more serious by the fact that the returning soldiers had to be given employment under the law and that no workman could be discharged or laid off in the absence of some very special reason. This combination of circumstances brought about an accumulation of stocks so that production had to be stopped entirely. It proved more advantageous for the manufacturers to pay the wages of their employees with factories closed than to make shoes to be stored away in warehouses.

Rough boots and shoes suffered the most under these conditions, as they could be produced in the States of Succession more easily than other types. The export of dress and fancy shoes, on the other hand, was increased by means of commercial agreements through which the Austrian Government arranged for the exchange of these goods for other commodities.

Extent of Austrian Trade in Boots and Shoes.

The following statistics show the Austrian import and export trade in shoes during 1919, 1920, 1921, and 1922:

Quantity of shoes exported and imported by Austria.

Countries of origin and destination.	1919	1920	1921	1922
EXPORTS.	*Kilos.*	*Kilos.*	*Kilos.*	*Kilos.*
Hungary	95,100	677,200	491,600	336,600
Poland	453,700	333,800	282,700	122,000
Rumania	36,100	118,000	94,500	72,200
Yugoslavia	23,100	206,500	232,600	168,900
Other countries	199,200	181,200	232,300	537,200
Total	807,200	1,516,700	1,333,700	1,236,900
IMPORTS.				
Germany	300	10,800	148,400	347,300
Czechoslovakia	83,100	87,600	230,900	40,200
Switzerland	49,100	20,600	30,600	10,000
France		40,500	10,700	3,300
United States	300	1,100	3,200	500
Other countries	500	32,900	78,400	10,200
Total	133,300	193,500	497,200	411,500

A study of the table will show an important increase of exports in 1920, when the amount almost equaled that of 1913. The chief cause for the progressive decrease of exports in 1921 and 1922 was the lessening of sales to Poland and Hungary. There are two important reasons for the drop in the trade with Poland. The first was the difficulties which the Austrian authorities placed in the way of Polish buyers in 1920, when the latter were permitted to stay only three days in Vienna. The second was the fact that Warsaw has been able to compete successfully in the market for the better quality shoes during the past two years.

The import statistics show an increase until 1922. There was a decided decrease, however, in the amount of imports from all countries excepting Germany during 1922. This was due to the depreciation of the Austrian crown, which maintained its comparative value with the German mark only.

Additional information regarding shoes and leather manufactures appears in this issue under the following section:

Foreign trade opportunities Nos. 6114, 6118, 6120, 6121, 6132.

COMMERCIAL LAW

A. J. Wolfe, Chief, Division of Commercial Laws

CREDIT AND COLLECTION FACTORS IN MADEIRA.

Consul Stillman W. Eells, Funchal.

The percentage that freight, duties, and handling charges add to the cost of foreign merchandise before a dealer in the Madeira Islands receives it is about 150 to 200 per cent on piece goods, 30 to 50 per cent on foodstuffs, and 100 to 150 per cent on hardware, tools, etc. On a shipment, say, of piece goods or hosiery for $5,000 a merchant would have to pay for the foregoing items, before he could obtain the goods, from $7,500 to $10,000.

Merchandise from continental Portugal can remain in the customhouse without charge for four days. Goods from other countries can remain without charge for two months, after which a charge of 0.0045 escudo per kilo per month or fraction thereof is made. All goods stored in the customhouse are at the importers' risk of fire, theft, etc.

The usual ratio of stock carried to cash capital is: Piece goods, 80 per cent; foodstuffs, 200 to 250 per cent; hardware, 100 to 150 per cent. That is to say, if a dealer in piece goods has a cash capital of $50,000, his normal stock on hand would be $40,000 and his annual sales about $300,000. A fair net profit of a firm having an annual turnover of $100,000 would be: On stationery, notions, chinaware, hardware, etc., about 20 per cent; on foodstuffs, 5 to 10 per cent; and on all other kinds of merchandise, from 10 to 15 per cent.

Commercial Financing in the Islands.

The two chief crops of Madeira are sugar cane and grapes, both of which are sold locally. Other crops grown are bananas, onions, beans, wheat, and maize, the first three being the only crops exported, and this must be done under license. Cane is cut in April and May and grapes are picked in late August and September, after which two periods money is most plentiful.

Bank accommodation is easy for merchants; interest charges are 6 per cent for credit and 8 per cent for debit loans. Banks charge one-half of 1 per cent for opening letters of credit and for collecting drafts, 1 per cent for a protest, and one-fourth of 1 per cent for documentary stamps.

Drafts are seldom refused on account of unfavorable exchange or other conditions if goods are as represented. Merchants sometimes will pay 25 per cent of the value of a consignment in advance, particularly if it is not the first time they are dealing with the exporter. It is, however, desirable to protest drafts if not paid, as certain legal rights are lost if the unpaid draft is not protested within three days after payment is due.

Arbitration of Disputes—Collection Facilities.

Trade disputes are arbitrated in the Tribunal do Comercio (Commercial Court); customs disputes are decided by the Contencioso Fiscal (Inspector for Disputes). The Chamber of Commerce (Associação Comercial do Funchal) does not provide for the arbitration of disputes, but sends its delegates to the courts. Surveys on ships, etc., are made by representatives of the Tribunal do Contencioso (Court of Disputes), the Contencioso Fiscal, and the Chamber of Commerce.

There are no commercial-inquiry agencies in Madeira. Banks will generally give credit information free of charge, if asked for it confidentially. Also there are no collection agencies. Lawyers charge for this service from 20 to 50 per cent, depending on the value of the account and the work done. There is no fixed tariff. Legal action is not advisable as a rule, because litigation lasts several months—sometimes over a year.

All merchants must be registered at the Tribunal do Comercio before starting business. A claim against an unregistered firm or individual, however, would not be invalid and can be sued for in the Tribunal Judicial (civil court). A claim against a debtor is valid for 30 years.

Credit Terms.

There are no local laws or business customs which have a special bearing on credit. Prior to the war German firms granted six months' credit and others from 60 to 90 days. Now German firms and some British grant three months, but most English houses require payment in 30 or 60 days. The Latin countries—Spain, Italy, and France—seldom grant more than 30 days, and more often allow but 15. Firms of other countries, including the United States, usually demand payment in 30 days, but sometimes extend this to 60 days.

Importers grant from 60 to 180 days to wholesalers, but sales to retailers are at sight or sometimes at 8 days

CONSIGNMENT LAWS IN SOUTH AFRICA.

Consul Charles J. Pisar, Cape Town, Cape of Good Hope.

There are no special statutes in the Union of South Africa covering consignments or conditional sales. Such sales are usually governed by the South African mercantile law of contract, purchase and sale, liens, agency, bankruptcy, etc., as embodied in the statutory law of the country. Apart from the statutes, the law of South Africa as it exists to-day is essentially the Roman-Dutch system. During the past 100 years this law has been widely influenced, and in its more recent developments to meet the requirements of modern society, largely molded, by the law of England. The result of this influence is to be seen both in the statutes of the local legislature and in the body of precedent formed by judicial decisions, particularly in the mercantile law of the country.

Ownership of Goods Shipped on Consignment.

When goods are shipped by an American manufacturer to a person in South Africa on consignment, i. e., where there is no contract of sale, the goods to be disposed of by the latter in the capacity of an agent who accounts to the shipper for the proceeds when the goods are sold and receives a commission for his trouble, they are not deemed under South African law to have passed beyond the ownership of the manufacturer, who retains title to the goods until sold.

From the foregoing it will be seen that the shipper of consignment goods does not lose his title to them until they have been sold. The insolvency law of South Africa fully safeguards consignment goods from being merged with the custodian's estate in the event of the latter's bankruptcy. This law provides that when property belonging to any person other than the bankrupt is in a bankrupt's possession at the time of the sequestration of his estate that person shall give notice in writing thereof to the legal representative of the estate within 14 days of the sequestration. If the owner fails to do so, he shall lose all right to recover such property if the same has in good faith been sold as part of the bankrupt's estate. The owner, however, is entitled to recover the net proceeds of such property from the trustee of the estate.

Liens on Consignment Goods in Custody of Agent.

Under South African law a lien is a right tacitly enjoyed by one person of retaining possession of specific property belonging to another as security for some claim in respect of that property until the claim has been paid. The lien only lasts, however, as long as the creditor remains in possession of the property, and consequently if he parts with the possession he loses his lien and its attendant privileges.

Liens over movable property, such as goods, may be exercised by artificers, bailees, factors, and landlords. An artificer is described as a person who makes or repairs articles of a movable nature. He has a lien on the article for the payment due to him for his work. A bailee, i. e., a person to whom goods are intrusted for a certain purpose, has a lien on goods for his charges in connection with the goods. A factor is described as a person employed to sell goods on behalf of his principal on commission; hence an agent for the sale and handling of consignment goods is recognized as possessing a lien on such goods for the amount of his reasonable expenses in handling and selling the same. A landlord has a lien for the amount of the arrear rent due to him by his tenant on such goods belonging to the latter as are on the leased premises and, with certain qualifications, on such goods belonging to subtenants and other persons.

As regards goods on consignment it has been held by South African courts that when the consignments were a regular method by which the tenant's stock was replenished, the goods were liable to the landlord's lien; but where the consignment was an isolated transaction made for some special purpose and for the benefit of the consignor, there was no such liability.

Relation of Principal and Agent to Third Party.

Under the agency law as applied in the Union of South Africa there are three cases in which an agent for a named principal is held personally liable on the contract as if he were himself the contracting party, namely, (1) where the agent has contracted for a principal not in existence at the time, i. e., when the agent acts on behalf of a company not yet formed, (2) where he has contracted for a principal having no capacity to contract, such as a minor, and (3) usually but not always when he has contracted for a foreign principal.

The liability of an agent for a contract made on behalf of a foreign principal is founded on a universal commercial usage whereby such an agent is presumed to contract personally unless a contrary intention plainly appear from the documents or the surrounding circumstances. If there is no such evidence, the presumption prevails that the agent has no authority to pledge the credit of the foreign principal and that he is personally liable on the contract. In the case of Sage & Co. *v.* Lezard Bros. (6 H. C. G. 139), principals resident in London were considered foreign principals in relation to an agent at Kimberley, South Africa, and principals resident anywhere outside the Union of South Africa would probably be so regarded.

Disclosed and Undisclosed Principals.

There is the case where the agent discloses the existence of a principal but does not name him. In such an instance the general principle is that when the agent makes it clear that he is acting as agent only he is not personally liable, but that when he contracts for an unnamed principal without expressly contracting as agent he may be held liable. However, the agent's liability is not all that the third party has to look to. He has the choice of suing the principal if he discovers his identity. He can not sue both, but must make his election of one or the other. This alternative liability of two persons may be excluded by the agent for an unnamed principal declaring himself to be the true principal.

A purchaser of goods sold by an agent for an undisclosed principal is entitled to regard the agent personally as the seller, and therefore to set off against the purchase price a debt owing to him by the agent personally. The real principal may always emerge from his obscurity and take advantage of a contract made on his behalf by an agent, but his rights are always subject to any right of set-off or other defense the third party may have against the agent and which accrued while he still supposed himself to be dealing with the agent as principal.

Agent Must Account for Goods.

Goods sold by American shippers to South African firms or individuals on consignment to be paid for as sold must be paid for as agreed between the principal and his agent. The latter is required to render strict care and diligence in handling and disposing of the

goods, and he will be held liable in damages to the principal for any loss occasioned even by slight negligence either on his own part or on that of a subagent appointed by him without the principal's authority. The agent to whom the goods are consigned is bound also to render prompt and adequate accounts of his transactions, and in the absence of a satisfactory explanation by him he will be liable to make good to the principal all payments for the goods sold for him. Failing amicable means for the settlement of such accounts, the only recourse left to the principal is to sue the agent in a South African court.

TRANSPORTATION

E. S. Gregg, Chief, Transportation Division

RAILWAYS.

SALES INFORMATION ON LATIN AMERICAN RAILWAYS.

The following article is the third in a series on individual railways in Latin America. The first two, dealing with the Ferrocarril Nacional de Chiriqui, Panama, and with the Colombia Railways & Navigation Co (Ltd.), appeared in COMMERCE REPORTS, April 9 (p. 121) and April 16 (p. 188), respectively. All available printed sources of information have been used, and additional data have been furnished by the Guayaquil & Quito Railway Co. A handbook containing this information in greater detail for all railways in Latin America will be published later.

THE GUAYAQUIL AND QUITO RAILWAY, ECUADOR.

F. E. Benjamin, jr., Transportation Division.

The only important railroad in Ecuador is the Guayaquil & Quito Railway, 288 miles in length, connecting the capital with the coast. Construction work on this road was begun by the Ecuadorian Government in 1872 and was completed in 1908 by an American company, which in 1897 had acquired a concession for that purpose from the Government. The present southern terminus is Duran, opposite Guayaquil on the east bank of the Guayas River. Ferry communication between the two cities is maintained by the railway company.

Grades and Curves.

The grades of the Guayaquil & Quito Railway range from 0.0024 per cent at a point a few miles out of Duran to 5.5 per cent at the River Angas at Loop Viaduct No. 54, and at a point a few miles west of Huigra. From Venecia to a point 10,648 feet above sea level, the upgrade is almost continuous. Over the entire line, as nearly as possible, a radius at curves of not more than 100 nor less that 60 meters is maintained.

Bridges and Tunnels.

On the route from Bucay to Pistichi, the Chauchan is crossed 26 times, and lateral streams 13 times. The total number of bridges on the mountain division is 72. All are single span and more than 3,000 tons of steel were required for their construction.

There are three tunnels along the line, all of them between Huigra and Sibambe. Tunnel No. 1 is of solid rock and 163 feet long; No. 2 is of gravel and timber construction and 263 feet long; No. 3 is of solid rock and is 69 feet long. The minimum width of the tunnels is 4 meters, and the minimum height is 2 meters above the cars.

Trackage.

The gauge of the road is 3 feet 6 inches throughout. All rails are steel and are American Society of Engineers standard 56 and 70 pound type.

Ties are of California redwood and native hardwood, 6 inches by 8 inches by 6 feet 4 inches, and are laid 2,640 to the mile.

Tie-plates are used on the redwood ties at curves.

The track is ballasted with a mixture of earth, loose rock, and solid rock.

Rolling Stock—Fuel—Shops.

The amount of rolling stock, motive power, and equipment in service on December 31, 1921, is shown in the following list:

Locomotives:	
Consolidation	11
Switch	7
Mogul	1
Total	19
Cars in passenger service:	
Passenger coaches—	
First class	6
Second class	5
Combination first and second class	3
Mail and express cars	4
Chair cars	2
Kitchen car	1
Total	21
Freight cars:	
Flat cars	8
Coal cars	4
Yard dump cars	4
Stock cars	24
Box cars	92
Total	132
Miscellaneous equipment:	
Ballast cars	10
Derrick cars	1
Tool cars	1
Ditcher	1
Oil-tank cars	2
Wood-carrying cars	8
Pay car	1
Track motor car	1
Total	25
Floating equipment:	
Ferryboat	1
Tugboats	2
Lighters	4
Total	7

Wood is used for fuel. The shops of the Guayaquil & Quito Railway are located at Duran.

Character and Volume of Traffic.

The freight handled by the railroad consists principally of native products, such as cocoa, sugar, fruits, rubber, ivory nuts, and straw hats. The fact that a normal cocoa crop amounts to over 750,000 pounds a year indicates the volume of traffic in that commodity.

Traffic statistics for the year ended December 31, 1921, are as follows:

Revenue freight moved	gross tons	108,853
Do	ton-miles	12,879,181
Revenue passengers carried	total number	232,913
Do	passenger-miles	11,957,485
Railway operating income		$3,514,237
Railway operating expenses		$2,904,891
Revenue from railway operations		$609,346

Finances of the Guayaquil & Quito Railway.

The American company which obtained the concession for the completion of the railway estimated the cost of the prod-

ect at $12,282,000, but the ultimate actual cost exceeded this estimate. Capital has been obtained through the issue of several series of bonds in Ecuador, the United States, and in England.

A statement of the assets and liabilities of the company for the year ended December 31, 1922, is given below:

ASSETS.

Investments:		
Invested in road and equipment		$53,117,320
Sinking funds—		
Prior-lien 6 per cent bonds. (*See* Liabilities.)		
First-mortgage 5 per cent bonds. (*See* Liabilities.)		
Cash	$1,954	
Miscellaneous property	37,265	
Notes	3,000	
		53,159,539
Current assets:		
Cash	664,668	
Special deposits	114,798	
Material and supplies	778,588	
Other current assets	141,317	
		1,699,371
Deferred assets:		
Due from Government of Ecuador account of unpaid interest, bills, sinking fund, and commissions	12,544,716	
Sundry items	53,545	
		12,598,261
Unadjusted debits		79,248
Corporate loss:		
Additions to property through income and surplus (Cr.)	719,346	
Sinking fund reserves (Cr.)	2,708,427	
Profit and loss—debit balance (gross) (Dr.)	11,444,518	
Profit and loss—debit balance (net)		8,016,745
Total		75,553,164

LIABILITIES.

Capital stock:		
Preferred stock	$10,762,500	
Common stock	14,417,650	
		$25,180,150
Long term debt:		
Funded debt unmatured—		
Prior-lien 6 per cent bonds	5,096,300	
Less held in sinking fund	2,607,600	
Outstanding		2,488,700
First-mortgage 5 per cent bonds	22,156,400	
Less held in sinking fund	155,800	
Outstanding		22,000,000
Total outstanding		24,489,300
Notes payable		75,609
Current liabilities:		
Interest matured unpaid	12,680,143	
Other current liabilities	1,176,005	
		13,856,148
Deferred liabilities:		
Liability of Government of Ecuador for unpaid interest, sinking fund, and commissions	11,736,941	
Other deferred liabilities	59,330	
		11,796,273
Unadjusted credits		155,684
Total		75,553,164

[The names of the members of the operating staff of the Guayaquil & Quinto Railway may be obtained from the Transportation Division on request.]

Additional information regarding railways appears in this issue under the following sections:

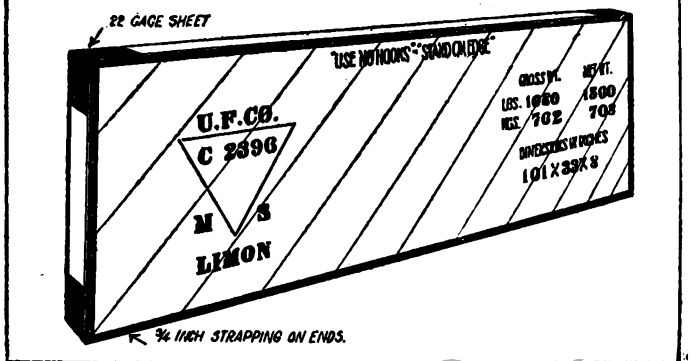
Cable review, Poland: Railway transportation problems.
Electrical equipment: The electrification of German railways.
Survey of current business: United States freight-car loadings.

SHIPPING.

German Steamship Service Around Africa Resumed.

Consul J. Klahr Huddle, Hamburg, February 14.

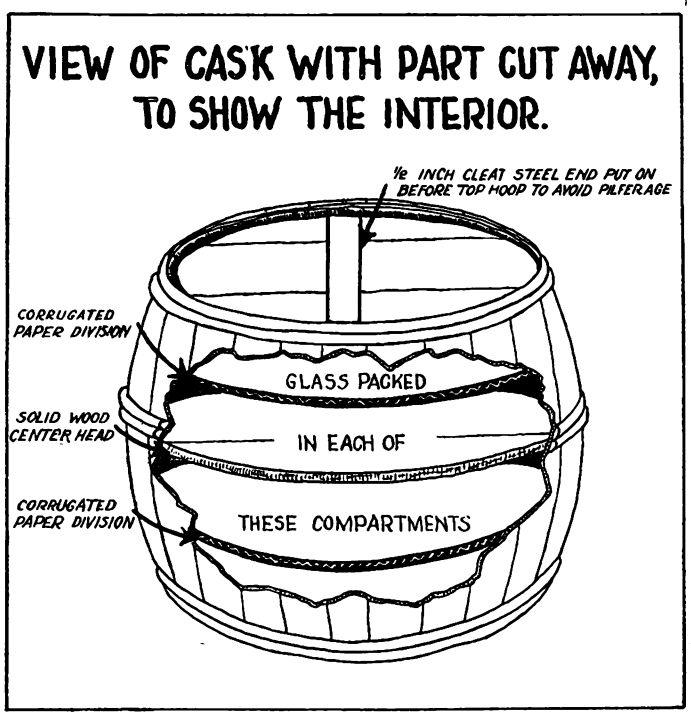
Beginning April 17, 1923, the German shipping companies combined in the German Africa Service will extend their present regular steamship service to both coasts of Africa by having part of their passengers regularly make the return trip from Beira via the Suez Canal. This resumption of pre-war trips around Africa will enable passengers in the future to go direct, through the Atlantic via the Canaries and South Africa beyond Beira, to Mozambique, Ibo, Dar es Salam, Zanzibar, Tanga, and Kilindini (port of Mombasa); thence they may return via the Suez Canal to Egypt, Marseille, Lisbon, Southampton, Rotterdam, and Hamburg. The service, of course, will also include freight. The first sailings will be those of the mail steamers *Usambara* on April 17 and *Usaramo* on June 12, both belonging to the German East Africa Steamship Line. The *Usambara* is a passenger steamer of 8,800 tons, with accommodations for first, second, and third class passengers.



Freight Forwarders at Texas Border Points.

The Transportation Division has available for distribution to interested persons lists of reliable freight-forwarding agents at Laredo, Eagle Pass, and El Paso, Tex. These lists supplement those previously prepared for New York, Philadelphia, Baltimore, Chicago, Boston, New Orleans, and London, copies of which may be obtained from the Transportation Division or from the district and cooperative offices of the Bureau of Foreign and Domestic Commerce.

Export Case for Metal Roofing.



An interesting development in the construction of a long case is shown in the illustration below. The boards forming the sides of the case run in opposite directions, giving protection against skewing in transit and against the strains incident to handling a longer-than-wide type of case.

CASE FOR THE EXPORT OF METAL ROOFING.

Barrel Specially Constructed for Shipping Glassware.

A solid wood center head in barrels constructed for shipment of glass tumblers is the latest packing development by a Pittsburgh glass concern. As shown in the illustration below, a thick disk of hardwood is built into the center of the barrel, making it impossible for the staves to cave in when the cask is rolled over or when it strikes against a hard obstacle. In addition, corrugated paper-board disks, with flat cardboard covers on both sides of them, are used as parallel partitions, the glassware being packed in straw in the compartments formed. To give further protection, a half-inch cleat with steel ends is placed in the center of the top and of the bottom, being put on before the respective hoops are nailed down.

Shipping and Port Notes.

New Steamship Service Between Chile and Argentina.

Braun y Blanchard, of Punta Arenas, have established a freight and passenger service between Buenos Aires and Callão, Peru, with intermediate ports of call. The *Valparaiso* (ex-*Tenisson*) of 5,000 gross tons, removed recently from the New York-Buenos Aires run, is the first vessel to make the trip from Buenos Aires. (Consul Stewart E. McMillin, Antofagasta, Chile, February 9.)

Proposed Free Port at Lisbon.

The Portuguese Minister of Finance, in collaboration with the Minister of Commerce, is studying the provisions of a new bill providing for the establishment of a free port or zone at the port of Lisbon, where shipments may be landed for sorting, manipulation, and reshipment in bond to other countries without being subject to any of the ordinary customs duties. (Consul General W. Stanley Hollis, Lisbon, January 29.)

New Dunkirk-Danzig Passenger Service.

The arrival of the *Pologne*, of the Compagnie Générale Transatlantique, at Dunkirk on March 12 marks the inauguration of a weekly service between Dunkirk and Danzig for the purpose of bringing Polish emigrants to France. Vessels assigned to the service are the *Pologne* (3,090 tons) and the *Californie* (5,158 tons). The vessels have accommodations for a limited number of first-class passengers and for a number of third-class passengers that is considerable in view of the size of the vessels. The service will be maintained for at least three months, and longer if profitable. The first-class fare is 600 francs, and the third class 200 francs. (Consul John S. Calvert, Dunkirk, March 13.)

Additional information regarding shipping appears in this issue under the following sections:

Cable review, Far East: Japanese shipping in March.
Tariffs and trade regulations: Further postponement of Australian deferred duty on vessels.

COMMUNICATIONS.

USE OF SHIP RADIO IN RUSSIAN WATERS.

Consul F. W. B. Coleman, Riga, Latvia, February 14.

A decree published by the Soviet Government in Izvestiya (Moscow), February 1, 1923, makes the following regulations obligatory on all foreign naval vessels, merchant ships, or private craft, in territorial or internal waters of the R. S. F. S. R. and allied Soviet Republics:

1. The present regulations do not apply to ships in danger, to those intending to render assistance, to those working in ice, nor to ships distant more than 10 miles from the nearest Russian shore station.
2. All foreign ships within the 10-mile zone (paragraph 1) must comply with the regulations of the International Radio Convention.
3. Foreign merchant and private craft are forbidden to exchange messages within the 10-mile zone; but foreign ships entering the zone are permitted to finish the sending of messages, on condition that the energy in the ship's antennae is reduced to that actually necessary.
4. Foreign ships in ports where there are no shore stations may use their radio only with special permission of the commander of the harbor, but must not use cipher or code.
5. Exchange of radio messages may be prohibited by the commander of the nearest port, and ship radio stations may be
6. Foreign men-of-war in the 10-mile zone must comply with the regulations of the International Radio Convention and with instructions in force in Soviet Russia or those communicated by the authorities in the ports of the Republic. In no case will the use of cipher or code be permitted.
7. Foreign ships in quarantine wishing to use their radio must follow the schedule fixed by the local stations for traffic and must reduce to a minimum the energy in the antennae.
8. The captain of a foreign ship is authorized to negotiate directly with the local authorities concerning these regulations.
9. These regulations are applicable only when Russia is not in a state of war and only to the benefit of ships of nonbelligerent countries.
10. These regulations become effective one month from date of promulgation.
11. Violations of these regulations are punishable according to article 218 of the Criminal Code.

Packing of Parcel-Post Packages for Russia.

Postal Bulletin, March 29.

The Russian postal administration has complained that many parcel-post packages from the United States reach Russia in a damaged condition, as the result of inadequate packing. It has requested that parcel-post

in canvas or similar material. Mere paper or cardboard wrapping is not sufficient to withstand the strain in course of transit.

Experimental Night Flying, London–Paris.

Experimental flights by night were conducted between London and Paris during February, with a view to establishing a night service between the two cities during the coming tourist season. It is thought that a night service would be more popular, since it would give the passenger the day and the dinner hour in either capital. The flights were accompanied by some engine trouble, but there were no casualties. The route is well lighted between Croydon (London) and Le Bourget (Paris) and is well known to the pilots. In connection with this projected service, it may be noted that during the summer of 1922, 70 per cent of the passengers traveling between London and Paris were Americans.

Commercial Air Service, Canary Islands-Europe-Africa.

Vice Consul Julian C. Greenup, Las Palmas, Canary Islands.

Experts representing the Lineas Aereas Latecoere, of Toulouse, France, visited the Canary Islands in January and selected grounds for airplane landings and buildings in connection with commercial air service.

The sites chosen were in Las Palmas, Grand Canary, and Santa Cruz, Teneriffe, according to the commission's report to the newspapers of Las Palmas. Daily service will begin in June, over the route from Malaga to Tangier, Rabat, Casa Blanca, Mogador, Agadir, Cape Juby, Las Palmas, Teneriffe, Porte Etienne, St. Louis, and Dakar. Daily service already exists between Toulouse, Barcelona, Alicante, Malaga, and Oran.

Passengers, letters, and mail will be carried; the rates as announced are only reasonably in excess of the prevailing rates by water and land. In many cases, as when mail steamers make poor connections in Cadiz, the transit of mail between the United States and the Canary Islands may be shortened by a week.

At present, regular passenger and mail steamers connect the islands with Cadiz, Cape Juby, and Dakar, covering transit periods of three, one and one-half, and five days, respectively. The Latecoere air service will afford passage from Malaga to the islands in one day during the summer and in one and one-half days during the winter, although the actual traveling time will be but 13 hours. The service to Dakar will be approximately the same.

French Currency Equivalent for Cable Rates.

Consul General A. M. Thackara, Paris, February 16.

On February 16 the fifth increase in cable rates in France on a currency basis became effective. At the present rate of exchange, the actual cabling cost in currency is slightly in excess of the cost on the gold-franc basis. The record of these increases is as follows:

Up to—	Coefficient of multiplication.
Aug. 4, 1921	None.
Apr. 12, 1922	1.8
Oct. 21, 1922	2.0
Dec. 16, 1922	2.2
Feb. 16, 1923	2.5
Present	3.0

It should be noted, however, that no increase has been made in the last four instances for cable traffic between France, Algeria, Tunis, and the French colonies, the rate in gold francs being still subject to a multiplication of 1.8 for the currency equivalent.

TARIFFS AND TRADE REGULATIONS

Henry Chalmers, Chief, Division of Foreign Tariffs

COMMERCIAL TREATIES AND AGREEMENTS.

FRANCE—PORTUGAL.

Diario do Governo, Lisbon, March 15.

Further Extension of Provisional Commercial Agreement.

The modus vivendi between France and Portugal, signed January 30, 1922, by which each country extends most-favored-nation treatment to the other, has been extended for another three months, ending June 16, 1923.

[A notice of the original provisional agreement was published in COMMERCE REPORTS for February 27, 1922. The original agreement was to run for six months, but it has been extended from time to time.]

RUMANIA—SWEDEN.

The Board of Trade Journal, London, England, March 22.

Provisional Most-Favored-Nation Commercial Agreement.

A provisional commercial agreement on a reciprocal most-favored-nation basis has been concluded between Rumania and Sweden by an exchange of notes on November 11 and December 18, 1922. This agreement may be denounced by either contracting party upon

GENERAL TARIFF CHANGES.

GERMANY (OCCUPIED TERRITORIES).

Trade Deadlock Continues Despite Reapplication of German Tariff.

The former German tariff schedule as it stood in May, 1922, is now again being applied by the French and Belgian authorities on all goods shipped into and out of the occupied territories of Germany, instead of the uniform 10 per cent import and export taxes which had been temporarily collected, according to a notice from the French foreign office to the American Embassy at Paris, under date of March 26, which has just been received at Washington. The movement of goods for export out of the occupied territories of Germany continues, however, practically deadlocked, owing to the two sets of contradictory customs orders issued by the occupational and the German authorities, and the refusal of most German concerns either to apply for allied licenses themselves, or to deliver goods to foreign purchasers intending in their own name to apply for export licenses to the French and Belgian authorities in control of the customs, according to cable advices received at the Department of Commerce from the

Upon representations from the neutral governments that shipments on contracts entered into before the occupation should not be subject to the same customs restrictions as later orders, the Inter-Allied Rhineland High Commission had, on March 15, announced that special facilities will be granted for the shipment or orders for export placed in the occupied region prior to February (for United States, February 10). The export taxes on such goods were to be those existing at the time the order was placed, and the foreign buyer was allowed to substitute himself for the German exporter in securing the export license; this privilege being conditional upon the German exporter authorizing such substitution, and assuming responsibility toward the German Government for any violation thereby of German laws.

The Rhineland Commission concessions of March 15 were, however, immediately countered by a German ordinance of March 16, in which the Berlin Government warned manufacturers in the occupied territories against complying with or recognizing the decrees of any authority other than the German, in all matters affecting the customs control of imports and exports, to the point of making punishable by imprisonment even the delivery of merchandise to foreign buyers when it is evident that the latter themselves intend to apply to the occupational authorities for export permits. The result has been that while some of the smaller German firms continue to sell for export, the larger firms generally are reported to be refusing sales or deliveries when it is understood that the goods are to be exported under the control of the occupying authorities.

With the restoration of the German tariff schedule of May, 1922, the official costs and conditions of doing business with the occupied regions become almost identical with those operative before the occupation, with the single difference that the license and tax system is under the control of the French and Belgian occupational authorities instead of the German, there being now no German office in the occupied area where export licenses can be secured and the duties paid.

While numerous complaints have been made to Washington and to the American representatives in France and Germany, of difficulties of obtaining shipments of goods ordered for American account from manufacturers in the occupied territories, investigation has in most cases found no evidence of official interference by the occupying authorities with the movement of goods, provided that the goods were accompanied by an export license issued by the French and Belgian authorities and evidence that the export tax had been paid. Reports indicate that the large quantities of goods made on export contracts which are not leaving the occupied territories are being held up for other reasons; partly by the congested transportation conditions, which are aggravated by the refusal of some German vessels on the Rhine to accept goods not covered by German licenses; and partly by the refusal of the German exporter himself to apply to the occupational authorities for the export license and pay the export tax to them, or to deliver to the foreign buyer who will apply for such a license.

The representatives of the United States, in connection with those of other neutral countries, are endeavoring to find a way out of the present deadlock, whereby the movement of goods for export out of the occupied territories could be actually effected, but until a way out is found the reported adherence of the majority of German concerns to the orders from Berlin is causing a practical standstill in foreign business with producers in the occupied territories.

Desirability of local representation.—A subsequent cable dispatch from the Commercial Attaché at Paris indicates that it is doubtful whether, under the present circumstances, it would be possible for an American concern to obtain the release of a shipment for export from the occupied territory without having a local representative, who would be willing to undertake to handle the arrangements for obtaining a license and taking over the goods from the German supplier. Concerns who do not now have a representative or correspondent in that part of Europe of other than German nationality are advised to endeavor to make such a connection through a bank, forwarding house, or steamship company, in the United States, which has non-German representatives either in the occupied territory or in the neighboring regions of France, Belgium, or Holland.

SPAIN.

Cable from Commercial Attaché C. H. Cunningham, Madrid, April 10.

Last Opportunity for Tariff Reclassifications.

The Director of Spanish Customs announces that the final reclassification of articles in the new customs tariff of Spain is now being prepared. Opportunity will be given until May 15 for the submission of suggestions for changes, in the case of articles believed to be wrongly classified or unclassified. The index to the new tariff of February, 1922, is also to be revised.

American concerns desiring to present applications for changes of classification in the Spanish tariff of articles of interest to them should have their applications in the hands of the American commercial attaché at Madrid before May 15. The Division of Foreign Tariffs at Washington will be pleased to receive such applications for transmission to Madrid.

IMPORT AND EXPORT RESTRICTIONS.

FRANCE.

Journal Officiel, Paris, March 15.

Reestablishment of Export Restriction on Molasses.

The exportation or reexportation from France of molasses is again subject to restriction, according to a decree of March 14, 1923.

[The exportation of molasses was placed under restriction by decree of August 28, 1919. This restriction was removed by decree of March 11, 1922.]

ITALY.

Cable from Commercial Attaché H. C. MacLean, Rome, April 12,

Removal of Restrictions and Reduction of Import Duty on Rice.

All restrictions on the importation of rice have been removed and the duties reduced, as follows:

Item.	Article.	Former duty (gold lire per 100 kilos).	Present duty (gold lire per 100 kilos).
68	In the husk	5.00	3.00
	Semicrude	7.50	4.50
	Polished	11.00	6.50

NETHERLANDS.

Consul General George E. Anderson, Rotterdam, March 1.

Importation of Live Trees Permitted.

Formerly the importation of live trees originating in the United States was prohibited by Dutch law according to the tenor of an act of May 23, 1899, which was enacted to prevent the introduction of the San Jose scale insect. This law, however, was repealed on May 19, 1922. Since that time all embargoes on American plants imported into Holland have been lifted.

TUNIS.

Journal Officiel Tunisien, March 21.

Establishment of Sugar Export Restriction.

The export of sugar or its reexport from a bonded warehouse or other storehouse is prohibited by a decree effective March 21, 1923, unless such shipment be to France or Algeria, except under permit from the Director General of Finances. Transit and transshipment of sugar is likewise prohibited with the same conditions.

[This restriction in Tunis follows a similar restriction in France, notice of which was published in COMMERCE REPORTS for March 26, 1923, page 829.]

UNION OF SOUTH AFRICA.

Vice Consul John R. Minter, Johannesburg, February 21.

Restriction on Imports of Indian Hempseed.

The importation of the seeds of any variety of Indian hemp (Cannabis indica or Cannabis sativa), or of any mixture of bird seeds or what-not containing such seed, has been prohibited, except under a permit issued by himself, by a regulation issued under the drug act by the Secretary for Public Health.

TARIFF CHANGES ON SPECIFIC ARTICLES.

ARGENTINA.

Commercial Attaché Edward F. Feely, Buenos Aires, February 19.

Proposal for Valuation of Automobiles by Weight.

The change from the present ad valorem basis for duties on automobiles imported into Argentina to a basis of valuation by gross weight has been recommended by a special committee of the tariff commission, recently established in Argentina. The committee claims that the basis of valuation which it has worked out is sufficiently accurate for customs purposes, and that all question as to the amount of the duty will be avoided, as the gross weight is something easy to determine upon the spot.

By the proposed plan all automobiles would be divided into four categories, as follows:

	Dutiable valuation (gold pesos per gross kilo).
Weighing up to 1,000 kilos	0.35
Weighing from 1,001 to 2,000 kilos	0.80
Weighing from 2,001 to 3,000 kilos	1.20
Weighing from 3,001 kilos up	2.50

The gross weight multiplied by the valuation fixed for the class into which a given automobile might fall would give the value for customs purposes. Upon this value the duty would be calculated at the present rate of 32 per cent (25 per cent plus 7 per cent surtax). The committee gives a number of examples for popular American cars, showing a result very closely approximating the actual sale price.

Automobiles imported without body would be subject to a surtax of 60 per cent of their value, and those equipped with a de luxe body would be subject to a surtax of 30 per cent. Should the automobiles be imported without accessories, in order to obtain a lower weight classification, they would be valued according to what the weight would be if they were complete with all the omitted accessories attached.

[Argentine importers of automobiles are reported to be making vigorous protests against the proposed method of valuation, stating that many cheap cars would, under the new proposal, pay higher duties than cars of much greater price. Specific instances are cited by the importers to show that certain expensive cars would actually cost the Argentine importer less than cheap cars, owing to a difference in weights, the cheaper cars paying ad valorem duties based on the price in the United States of from 50 per cent to over 150 per cent. A concerted petition is being presented to the Argentine officials.]

AUSTRALIA.

Official Representative M. B. Synan, New York, April 10.

Further Postponement of Certain Deferred Duties.

The application of the duties on the items shown below has been further deferred, according to advice from Australia received by the Official Representative in New York. The duties on all items except the last two had previously been deferred to March 31, 1923; the duty on item 181 B (2) had been deferred to January 1 and on item 424 B to July 1, 1923.

Item.	Article.	Postponed to—
136 F	Hoop iron and steel	Sept. 30, 1923
147	Iron and steel plates and sheets, plain tinned	Do.
152 A	Iron and steel tubes, etc.	Do.
168 B (1)	Sewing-machine heads	Do.
194 D	Chains, n. e. i.	Do.
197 B	Cutlery, n. e. i.	Do.
279 A	Citric acid	Do.
181 B (2)	Cables, etc	July 1, 1923
424 B	Vessels, n. e. i.	Jan. 1, 1924

CANADA.

Consul Felix S. S. Johnson, Kingston, March 21, 1923.

German Clocks and Cutlery Dutiable at Increased Customs Valuation.

Clocks and cutlery of German manufacture or production, subject to valuation under subsection 2, section 40, of the Canadian customs act, are appraised at the following advances on the selling price in Germany for export: Clocks, 100 per cent; razors (except safety), 40 per cent; pocket cutlery, 140 per cent; scissors and shears, 200 per cent.

German goods coming into Canada indirectly from another country are expected to be subject to the same rate of increase in appraisement, unless satisfactory evidence is produced to show that no less an amount has been already added to the German price. The German mark is calculated at its actual current rate.

GUATEMALA.

El Guatemalteco, Guatemala City, March 16.

New Duties on Certain Foodstuffs Imported Into El Peten.

A decree published in El Guatemalteco on March 16, 1923, changes the duties on the following articles when imported into the department of El Peten:

Article.	Duty for El Peten.	Duty in regular tariff.	Article.	Duty for El Peten.	Duty in regular tariff.
	Per gross kilo.	*Per gross kilo.*		*Per gross kilo.*	*Per gross kilo.*
Rice	0.06	0.02	Sugar, brown	0.10	[1]
Beans	.06	.04	Sugar, refined	[2] .15	[2] .20
Corn	.06	Free.	Coffee	.15	[1]

[1] Not specifically mentioned in regular tariff.
[2] It is not certain that these duties refer to the same article.

PERU.

Acting Commercial Attaché W. E. Dunn, Lima, March 8.

Proposal for Revision of Export Taxes on Rubber, Balata, Chicle, and Similar Products.

A bill proposing a revised system for collecting export duties on rubber and allied gums was introduced into the Peruvian Senate on March 6, 1923, by a member from the Iquitos district of the Department of Loreto, by which rubber and other gums, including chicle, balata, and their similars, shall be exempted from export duties so long as the market price falls below the following New York quotations:

	Rate of export duty (per cent).
Fluctuating between $0.50 and $0.70	2
Fluctuating between 0.71 and 0.90	4
Fluctuating between 0.91 and 1.00	6
Fluctuating between 1.01 and 1.30	8
For each increase of 20 cents per pound, New York market prices	2

This tax shall be levied on 70 per cent of the value of the product in accordance with the quotation prevailing in the place of exportation, 30 per cent being deducted to cover shipping expenses, insurance, etc., until it is sold in the consuming market.

Rubber coming from the Putumayo River district and that exported from the river customs agencies of the Rio Madre de Dios and its tributaries, as well as that by the way of the port of Mollendo, shall enjoy a rebate of 50 per cent on the taxable portion of 70 per cent mentioned above.

[As noted in COMMERCE REPORTS for April 2, 1923, page 69, an export tax of 5 per cent ad valorem has been decreed on balata at Iquitos, pending definite legislation. The proposal outlined above would, under present market conditions, amount to a removal of all export duties on rubber from the Iquitos district; balata and chicle, however, would not be exempt from export duty. The proposed law is yet in its initial stage, and may be considerably modified before its final passage.]

CUSTOMS REGULATIONS.

CANADA.

Consul H. Merle Cochran, Montreal, March 22.

Grading Requirements of Butter and Cheese for Export.

Creamery butter and factory cheese of Canadian origin must be graded before it may be exported, according to an Order in Council of February 26, published in the Canada Gazette of March 17, and effective from April 1, 1923.

Provisions are made by a system of factory numbering for the grading of each lot from the separate churnings of butter or vats of cheese, and should the different lots in a given shipment vary sufficiently in quality to warrant it, the shipment may be divided into lots of different grades. The butter or cheese is to be graded as first, second, or third quality, and a certificate issued by the Dominion Department of Agriculture for each lot.

Consul Felix S. S. Johnson, Kingston, March 23.

Pure Food Certificate Requirements.

All imports into Canada of human food must be accompanied by a pure food certificate. All meat and meat products imported from the United States must be covered by a certificate from the United States Bureau of Animal Industry, in addition to the Canadian meat certificate. Fish in any form, even when in brine or canned, must be accompanied by the special fish certificate. These certificates should be made out and sent by the shipper along with the usual invoice forms.

Consul Felix S. S. Johnson, Kingston, March 15.

Permanent Right to Make and Sell Oleomargarine Proposed.

A bill has been introduced into the Canadian House of Commons proposing to make permanent the right to sell and make oleomargarine in Canada.

The importation, manufacture, and sale of oleomargarine in Canada was first permitted in 1917, permission to continue during the war. Up to the present the privilege has been renewed annually for the period of one year.

ITALY.

H. C. MacLean, commercial attaché, Rome, March 24.

Marking of Imported Vegetable Preserves.

An Italian royal decree, published in the Gazzetta Ufficiale of March 20, prescribes new requirements for the manufacture of vegetable preserves in Italy and the marking of similar imported products.

Under this decree every owner or manager of a plant making preserves of vegetable materials is called upon, within a month of the publication of the decree, to inform the authorities of the raw material used, the processes employed, and the products turned out. The decree forbids in general the use of processes or their application in plants which do not allow hygienic and sanitary conditions to be met, the use of imitation, spoiled, or diseased materials, as well as the inclusion in the preserves of any chemicals that may be injurious. Manufacturers are permitted to use materials of inferior quality, provided they take care that such use does not result in a harmful product. Every manufacturer of food preserves must offer samples of his products to designated chemical laboratories for analysis.

The decree prohibits the placing on the market of any food preserves that do not carry clearly and indelibly on the receptacles or wrappers indications of the contents, the quantitative composition of the contents, net weight, name and location of the producer, and fulfilment of the laws that govern manufacture of food preserves. Furthermore, preserves made from materials of inferior quality must be marked with the words "Seconda qualita." Foreign food preserves can not be sold in Italy unless the country of origin is indicated on the containers and wrappers and also the information prescribed for those of domestic production.

In order to promote the use of improved processes and the trade in Italian food preserves, the existing Associazione Nazionale tra i Fabbricanti di conserve alimentari is converted into the Istituto Confederale dell'Industria delle conserve alimentari. The institute's functions are named as follows: (1) To supervise the manufacture of food preserves, safeguard the domestic consumers, and to see that exported preserves conform to Italian law; (2) to study and promote the development and trade in food preserves; (3) to bring about better relations between the manufacturers of food preserves and the producers of their raw mate-

rials; (4) to set up experimental stations for the purpose of extending the production of raw materials and assist the development of manufacturing technique; (5) to gather and disseminate news on market conditions.

SOUTHERN RHODESIA.

Consul G. K. Donald, Johannesburg, S. A., February 7.

Adoption of Standard Invoice Form.

The form of invoice and certificate of value printed in Commerce Reports for January 1, 1923, as applying to the Union of South Africa, was recently adopted for Southern Rhodesia; Notice No. 57, stating that this form of invoice would be obligatory after April 1, 1923, was published in the British South African Co. Government Gazette of February 2.

[In order to establish more uniform customs requirements among the various parts of the British Empire, a similar invoice form has already been adopted for shipments to Australia, most of the British West Indies, Newfoundland, New Zealand, and the Union of South Africa.]

SPAIN.

Gaceta de Madrid, Madrid, March 1.

Further Extension of Time for Registration of Pharmaceutical Products.

The time limit for the presentation of analyses and registration of all unregistered pharmaceutical specialties on sale prior to March 6, 1909, in the Spanish market has been further extended to June 30, 1923, by a royal order of February 28, effective March 1.

[Notice of the previous delay in the enforcement of these pharmaceutical regulations, granting extension of time to March 1, 1923, was published in COMMERCE REPORTS for February 19, on page 516.]

UNITED KINGDOM.

Consul General Robert P. Skinner, London, March 14.

Proposal to Require Marking of All Imported Eggs and Other Agricultural Products.

Each individual egg imported into the United Kingdom would be required to bear an indelible mark clearly indicating the country of origin or the word "imported," by the provisions of a bill recently introduced in the House of Commons. The bill also provides for the indelible marking of meat, fruits, vegetables, poultry, and dairy products with the country of origin or with the word "imported," but these products may bear the mark only upon the container in all cases where such a container is customary.

The proposed bill, known as the "Merchandise Marks Bill," is to go into effect, if passed as proposed, on October 1, 1923. It is understood that it is supported by a large and influential group in the House of Commons.

LATIN AMERICA

J. R. McKey, Acting Chief, Latin American Division

ECONOMIC CONDITIONS IN ECUADOR.

Cable from Consul General F. W. Goding, Guayaquil, April 5.

No important change has occurred in Ecuador since the publication of the last monthly cable on March 12. The local exchange rate has again been reduced by the Executive Economic Commission. While no drafts are available at present, owing to advance selling, relief is anticipated in the near future. The commission has announced that it will see that practically all drafts are paid, if a list of such drafts, with all particulars, be forwarded directly to that organization at Guayaquil. It should be remembered that 30 per cent of all drafts issued in Ecuador are employed only in covering back debts of merchants. The present situation can not be regarded as satisfactory from the point of view of American commerce with Ecuador. The rate now being paid for American exchange is 3.20 sucres to the dollar, while the average rate for the month of March was 3.25.

There is a small demand in Ecuador for exports of Panama hats, with 10 per cent reduction for shipments of 14,000 kilos.

During March there were 3,300 quintals of coffee exported, at a price of 50 sucres; 2,700 quintals of cotton, at 28 sucres; and 133 quintals of hides, at 20 sucres, with a good demand and active market. Tractor imports are increasing. Considerable delay is being experienced in the delivery of German goods, and a great deal of complaint is being heard on this score.

Probable Shortage in Cacao Crop.

Current estimates of the cacao crop indicate a shortage of approximately 6,000 tons in the present season's production, although there is a possibility of a later increase in yield. Prices prevailing locally are 28 to 29 sucres per Spanish quintal (1 quintal=101.4 pounds). The recent downward trend of prices has resulted in the postponement of all but necessary purchases until the limit of the decline appears to have been reached. The principal present demand is for futures, but even this trade has been inconsiderable. Stocks on hand at the close of February amounted to 478,251 pounds, shipments during March amounted to 42,000 bags, and receipts totaled 60,000 bags.

A promoter has announced that arrangements have been made by which funds will be advanced for assisting Ecuadorean banana planters to improve and increase their production and for the shipment of bananas to ports on the west coast of the United States. The exportation is to be carried on through Puerto Bolivar.

Petroleum Production.

Interesting developments in the petroleum market have occurred within the past month in the form of new concessions granted by the Government. Two new contracts have been signed, and it is reported that extensive operations are to be undertaken in the near future. An American company is to undertake the Ambato-Curaray Railway extension in eastern Ecuador, which will tap the oil fields previously granted the concern. Another company, also American, is reported to have reached a promising petroleum deposit at a depth of 2,000 feet. The production of petroleum during the month of February amounted to 7,470 gallons of refined oil and 7,720 gallons of gasoline. Peru was the principal source of petroleum imported during the past month.

Conditions in the Torreon District.

Consul C. H. Donaldson, Torreon, Mexico, March 19.

Imports and exports of the Torreon consular district of Mexico, comprising portions of the States of Coahuila and Durango, are still far below normal, and no great improvement is expected until production again reaches the average standard. Large wholesale houses are well stocked with imported goods and are very cautious in placing additional orders. Present activities of the three principal industries may be estimated at 50 per cent for agriculture, 75 per cent for mining, and 80 per cent in the case of manufacturing.

Crops Affected by Drought and Weevil.

Insufficient rains and continued drought have seriously affected crops of the Laguna district (the bed of a former inland sea), containing about 3,000,000 acres of very rich land needing only water for abundant production. Cotton, the chief crop, has also been seriously damaged by the widely prevalent boll weevil and pink worm. The 1922 yield was about 25,000 bales, and it is hoped that 50,000 bales may be raised this year. Corn and flour were imported from the United States, as local production did not meet the demand. Alfalfa, beans, and garden products were large enough for the home market.

Mining Activities.

Many small and a few large mines are being worked in this district, and the local smelters are running at about 83 per cent of full force. The principal minerals extracted are copper, lead, silver, gold, and zinc, with arsenious acid from the smelter stacks. Declared exports of this district do not show the full mineral production, as most of it is sent to the smelters at Monterey for further treatment prior to exportation.

Mills Working, but Not at Capacity.

Practically all the manufacturing industries in the district are employed in supplying domestic markets and have no surplus for export. The five textile mills are working to about 75 per cent capacity. Soap and cottonseed-oil mills, next in importance, are affected by the short cotton crop, and only one of the four small flour mills has been able to secure sufficient wheat to operate. One of the four rubber factories using guayule rubber is running, the iron foundry is operating at about 60 per cent of normal, and the brass works at 25 per cent of normal. The large winery at Parras, Coahuila, and the miscellaneous smaller factories or shops are producing for local or domestic requirements.

Exports to the United States.

Exports to the United States, declared at the Torreon consulate during 1922, increased nearly 140 per cent over those for 1921. The advance was chiefly due to larger shipments of minerals and to the resumption of exports of turpentine, glycerin, and cotton linters.

Current Developments in Northern Chile.

Vice Consul Richard P. Butrick, Iquique, March 6.

Business in the Province of Tarapaca continued good during the month of February, and the revival of the nitrate industry is being reflected more and more in the general trade of the Province. Local merchants are confident that the year 1923 will be one of prosperity for them.

Nitrate exported from all of Chile during the month of February totaled 2,705,979 metric quintals (1 metric quintal=220.46 pounds), as compared with 323,994 metric quintals for the corresponding month of 1922. Of the total of 2,705,979 metric quintals, 1,193,798 went to the United States. For the first eight months of the fiscal year, which will end June 30, 1923, the sales of nitrate totaled 19,457,731 metric quintals, which is 89 per cent of the maximum estimated sales for the year. That the year's sales will exceed the estimates seems likely.

Of the 55 nitrate plants in operation in Chile, 35 are located in the Province of Tarapaca. There are 94 plants still idle, of which 52 are in this Province. During the first two months of this year three plants resumed operations and one closed. The supply and demand for labor in this region continues well balanced. Workmen arriving from the south of Chile and from Bolivia are being quickly absorbed by the nitrate industry. During the month of February 500 workmen arrived in Iquique and have found employment.

Exports to the United States.

The value of the total exports to the United States from Tarapaca during the month of February was $2,415,783, as compared with $2,813,976 for January and $2,456,862 for December, 1922. The value of the exports to the United States for February, 1922, was only $57,408, or about 2½ per cent of the value of February, 1923, exports. The value of exports from Tarapaca in February, 1921, totaled $927,541. Nitrate constituted over 90 per cent of the 1923 exports.

Additional information regarding Latin America appears in this issue under the following section:

Transportation-Railways: Sales information on Latin American railways.

INVESTIGATIONS BY UNITED STATES TARIFF COMMISSION.

PUBLIC NOTICE of investigations by the United States Tariff Commission under the provisions of section 315 of Title III of the tariff act of 1922.

Investigation No. 1 by the United States Tariff Commission for the purposes of section 315 of the tariff act of 1922.

Oxalic acid.

The United States Tariff Commission on this 27th day of March, 1923, for the purpose of assisting the President in the exercise of the powers vested in him by section 315 of Title III of the tariff act of 1922 and under the powers granted by law and pursuant to the rules and regulations of the commission, hereby orders an investigation of the differences in costs of production of, and of all other facts and conditions enumerated in said section with respect to, the articles described in paragraph 1 of Title I of said tariff act, namely, oxalic acid, being wholly or in part the growth or product of the United States, and of and with respect to like or similar articles wholly or in part the growth or product of competing foreign countries.

Ordered, further, That all parties interested shall be given an opportunity to be present, to produce evidence, and to be heard at such hearing in said investigation to be held at the office of the commission in Washington, D. C., or at such other place or places as the commission may designate, on a date hereafter to be fixed, of which said public hearing at least 30 days' public notice shall be given by publication once each week for two successive weeks in Treasury Decisions, published by the Department of the Treasury, and in Commerce Reports, published by the Department of Commerce, copies of which said publications are obtainable from the Superintendent of Documents of the Government Printing Office, in Washington, D. C.

And ordered further, That public notice of said investigation shall be given by posting a copy of this order for 30 days at the principal office of the commission in the city of Washington, D. C., and at the office of the commission at the port of New York, and by publishing a copy of this order once a week for two successive weeks in said Treasury Decisions and in said Commerce Reports.

I certify that the foregoing is a true copy of an order of the United States Tariff Commission, passed on the 27th day of March, 1923.

JOHN F. BETHUNE, *Secretary.*

[The public notices of investigations Nos. 2 to 17, inclusive, were

WESTERN EUROPE

Charles E. Lyon, Acting Chief, Western European Division

REPRESENTATIVE BRITISH WAGE RATES.

A series of industrial disputes have been in the foreground in Great Britain for several weeks. British wages have steadily declined from the high point reached in 1920 until workers in many industries seem about to begin a long period of agitation for increased rates of pay.

The following table of weekly wage rates paid to adult males in various British industries during the month of January is substantially in force at the present time. If the pound sterling is taken at approximately $4.70, a weekly wage of 50 shillings equals practically $12, or $2 per day, and 65 shillings, $15, or $2.50 per day.

Weekly wage scales in Great Britain.

Industry or trade.	Hours per week.	Weekly wages (in shillings and pence).
Textiles:		
Wool warehousemen	48	53/0
Jute	48	56/8
Hosiery	48	80/0
Silk	52½	50/0 to 60/0
Dyeing, bleaching, and finishing, etc	48	54/0 to 56/0
Journeyman tailors	48	54/0 to 66/0
Boots and shoes:		
Clicking and other skilled	48	60/0
Heel building, stock, showroom	48	57/0
Leather gloves:		
Skilled	47	60/0
Semiskilled	47	45/0 to 50/0
Motor drivers	48	50/0 to 66/0
Tramway motormen (large towns)	48	58/0 to 62/0
Tramway conductors (large towns)	48	49/0 to 56/10
Dockers	44	66/0
Able seamen	(1)	(2)
Ordinary seamen	(1)	(2)
Compositors	48	89/0
Linotype operators	48	96/0
Lithographic printers	48	82/6
Cabinetmakers	44 to 47	82/0
Upholsterers	44 to 47	70/0 to 84/0
Bakers	46 to 50	66/0 to 70/0
Confectionery	48	53/6
Tobacco	48	50/0 to 60/0
Chemicals	47	50/0 to 52/0
Grocery managers	48	63/0 to 69/0
Clerks	48	45/0 to 51/0
Mail carriers	.....	45/0 to 90/0

[1] Variable.
[2] Able seamen are paid £10 per month and ordinary seamen from £5 10s. to £7 per month.

In some classes a range is shown to cover the many wage variations that are in effect currently in given groups. That range attempts to include all the minor differences of weekly earnings by reason of complicated classifications as to degrees of skill, length of period in service, cost-of-living percentage allowances, or other odd weekly increments above the fixed base levels of payment. In any event, the striking thing will be the generally low level of wages in British trades, as compared with similar occupations in the United States.

[This table has been prepared from a forthcoming Trade Information Bulletin, entitled "Representative Wages and Wage Bases in Great Britain," by Assistant Trade Commissioner H. B. Allin Smith, London. The bulletin presents an account of wage conditions in all major British industries. Copies can be obtained from the Western European Division, Bureau of Foreign and Domestic Commerce, or from the district and cooperative

FOREIGN COMMERCE OF SWITZERLAND IN 1922.

Official trade statistics for Switzerland covering the year 1922 bear out previous statements, revealing a diminution in trade for the year, but a slight improvement in the last three months.

The total import trade of Switzerland in 1922 (exclusive of minted precious metals) was valued at 1,914,465,119 francs, compared with 2,296,288,894 francs in 1921, while exports amounted to 1,761,576,533 and 2,140,141,442 francs, respectively, in the same years. The decrease in imports was 16.6 per cent, and in exports 17.7 per cent.

Principal Gains and Losses in Import Trade.

The principal import classes showing increases during 1922 were silk, wool, seeds and plants, hides and leather, flax, hemp and jute, tobacco, lead, and zinc. Imports of raw cotton declined to 65,540,000 francs in 1922 from 98,427,000 francs in 1921, but in the fourth quarter of 1922 amounted to 22,460,000 francs, compared with 21,014,000 francs in 1921, showing a reversal of the downward tendency of the early part of the year. This increase represents a greater demand on the part of the Swiss textile industries. The greatest decreases occurred in the imports of cereals, colonial goods, animal foodstuffs, beverages, rubber, wearing apparel, minerals, iron, unminted precious metals, machinery, vehicles, and instruments and apparatus. Of the total decline of 382,000,000 francs decreases in cereals, colonial wares, beverages, and animal foodstuffs account for 301,700,000 francs.

The Export Trade.

Although the total exports for 1922 declined below the 1921 figures, increases occurred in certain classes, particularly animal foodstuffs, animals, hides and skins, silk, wearing apparel, iron, copper and zinc, and clocks and watches. In nearly all instances these increases were due principally to larger exports in the fourth quarter of 1922. The chief decreases in exports in 1922 occurred in unminted precious metals, colonial products, tobacco, lumber, cotton, minerals, aluminum, machines, and drugs. In most items, except unminted precious metals and rubber, exports in the fourth quarter of 1922 compare more favorably with the corresponding period of 1921 than was the case in the first three quarters of the year. The change is especially marked in clocks and watches. In the first three quarters of 1922 exports of this class amounted to 114,640,585 francs, compared with 118,358,435 francs in the corresponding period of 1921. In the fourth quarter, however, exports of clocks and watches increased to such an extent that the total for the year amounted to 168,535,985 francs, compared with 157,958,605 francs in 1921.

Greenland's Population and Commerce.

Consul General Marion Letcher, Copenhagen, February 26.

The population of Greenland, according to an official census completed by the Danish Government on October 1, 1921, the results of which have just been made known,

14,081 natives. The natives number 6,729 men and 7,352 women. The area of Greenland is estimated at 2,170,000 square kilometers, of which 88,000 square kilometers are free of glaciers. The inhabitants live along the coast and on the adjacent islands that are not covered by glaciers.

Commerce and the development of natural resources of the country are carried on as monopolies under the Danish Government and administered by a bureau under the Ministry of Home Affairs. During the calendar year of 1921 exports amounted in value to 2,517,000 crowns; the chief items were fish, furs, whale oil, graphite, and cryolite ore. The total imports from Denmark the same year were valued at 2,508,000 crowns, the chief items including rye flour, ship's biscuit, sugar, groceries, cloth of cotton and linen, etc., lumber, and coal.

Signs of Improvement in the Netherlands.

Consul Frank W. Mahin, Amsterdam, March 2.

Many indications point toward an improvement of industry in the Netherlands. This is especially true in the diamond industry, upon which about 50,000 people in Amsterdam are dependent for support. A few weeks ago 5,000 workers, half of the total number, were unemployed, but this number has gradually decreased, and on March 2 numbered only 1,700. The revival in the diamond industry is in large measure due to the increase in exports to the United States, the value of the monthly shipments now averaging about 2,000,000 guilders, as compared with 1,500,000 guilders in 1922 and 1,000,000 guilders in 1921.

The shipping industry has experienced a decrease in idle tonnage for some months, but most rapidly since December, 1922. The highest number of idle steamships in the Amsterdam harbor in 1922 was 40 in the month of August. On January 1, 1923, this number had dropped to 26 and on March 1 to 10. These ships were all small, their combined tonnage being only 54,527. At the present time the idle shipping situation in this harbor is practically normal.

Savings in Great Britain Increase.

Savings in the United Kingdom as indicated by deposits in the Post Office and Trustee Savings Banks registered an increase during 1922. Total deposits on February 10, 1923, were £354,873,781, an increase of £10,000,000 over January, 1922. Deposits in Post Office Savings Banks are nearly four times as great as those in Trustee Savings Banks. National savings certificates are shown in the statement of the British national debt on February 10, 1923, at £353,000,000, an increase of 19 per cent over January of last year.

International Sample Fair at Padua.

The Fifth International Sample Fair at Padua (near Venice), Italy, will be held from June 1 to 15, 1923. This fair is considered of importance because it has been held regularly for the past five years and because the geographical position of Padua has rendered it an important center for commercial and industrial exhibits and intercourse between the various nations of central and eastern Europe. Participants at the fair and visitors are cordially invited.

E. Dana Durand, Chief, Eastern European and Levantine Division

FINLAND AGAIN BALANCES BUDGET WITHOUT LOANS.

Based on information in the Finnish commercial press.

The Finnish budget for 1923, as passed by the Parliament, authorizes expenditures of 2,633,500,000 Finnish marks, or, roughly, $65,900,000 at the current exchange rate of 2½ cents to 1 Finnish mark. The value of the Finnish mark is practically the same both at home and abroad, making this basis of conversion fairly accurate.

Budgets Balanced Without Loans or Currency Issues.

Ordinary revenues are estimated at 2,448,000,000 marks, exceeding the ordinary expenditures, 2,200,000,000 marks, by 248,000,000 marks; but the extraordinary expenditures result in an estimated deficit of 167,300,000 marks. This deficit is to be covered by State funds accumulated in previous years, no loans or currency issues being contemplated.

This is the third year in which the Finnish budget is balanced without loans or paper-money issues for ordinary State expenditures. A balance of about 500,000,000 marks (after allowing 167,300,000 marks for balancing the 1923 budget) had been accumulated at 1921 and 1922 exceeding the estimated amounts, together with the proceeds of certain small loans.

Sources of Ordinary Revenues, 1920–1923.

The following table shows the ordinary revenues for 1920 to 1923:

Finnish State ordinary revenues, 1920–1923.

[In millions of Finnish marks.]

Items.	According to balance of accounts.		According to budget.	
	1920	1921	1922[1]	1923
Revenue from State property	538.9	636.5	611.3	737.2
Direct taxes	357.4	537.6	463.9	463.4
Indirect taxes	487.0	677.8	688.0	879.1
Miscellaneous taxes	122.1	108.3	156.4	118.2
Charges	78.7	114.6	96.9	112.6
Miscellaneous receipts	150.3	208.3	111.0	137.5
Total	1,734.4	2,283.1	2,127.5	2,448.0

The figures for revenues from Government property, of which railroads are the most important item, are gross. The net receipts from railroads and from forests are expected to reach 70,000,000 marks each in 1923. Among indirect taxes import duties are the largest item, estimated to bring in 745,000,000 marks in 1923.

Adjustment of Expenditures, 1920–1923.

The principal items of expenditures for the years 1920 to 1923 are shown in the table below:

Finnish State expenditures (including extraordinary), 1920–1923.

Main groups.	According to balance of accounts.				According to budget.			
	1920		1921		1922		1923	
	1,000 Finnish marks.	Per cent.	1,000 Finnish marks.	Per cent.	1,000 Finnish marks.	Per cent.	1,000 Finnish marks.	Per cent.
Ministry of the Interior.	100.7	4.8	125.6	4.7	162.7	6.6	196.8	7.5
Ministry of Finance.....	188.5	9.0	309.1	11.5	95.2	3.9	44.9	1.7
Ministry of Defense.....	359.7	17.2	355.0	13.1	359.9	14.5	377.6	14.3
Ministry of Education..	101.0	4.8	167.7	6.2	203.0	8.2	278.0	10.5
Ministry of Agriculture.	132.4	6.3	194.0	7.2	166.3	6.7	192.3	7.3
Ministry of Communications.....	488.8	23.4	710.0	26.3	674.6	27.3	826.3	31.3
Ministry of Trade and Industry.....	38.8	1.9	50.4	1.9	43.7	1.8	65.9	2.5
Ministry of Social Affairs.....	42.1	2.0	69.3	2.6	74.1	3.0	85.1	3.2
Public debt.....	320.8	15.4	237.8	8.8	237.8	9.6	244.6	9.3
Other expenditures.....	316.7	15.2	679.1	52.3	457.0	18.4	322.0	12.4
Total.....	2,089.5	100.0	2,698.1	100.0	2,474.3	100.0	2,633.5	100.0

The estimated expenditures of 1923 exceed those of 1922 by 159,000,000 marks; but this is due to larger capital investments, including 100,000,000 marks for new railroad construction, 46,000,000 marks for increasing existing railroad facilities, 50,000,000 marks for rolling stock, and 22,000,000 marks for development of a power station at Imatra River.

PRODUCTION VALUES OF NATIONALIZED RUSSIAN INDUSTRIES.

The following detailed valuation of the output of the nationalized industries of Russia is abstracted from the soviet official daily, Economic Life, of February 7, 1923:

According to the calculations of the statistical division of the Gosplan (State Planning Commission) the gross production of all the basic State industries of Soviet Russia for the period January 1–October 1 is valued at 671,347,100 pre-war rubles, listed as follows:

	Rubles.
Mining industry (including oil)	193, 521, 500
Paper and printing	10, 160, 600
Silicate industry	5, 312, 900
Industries related to agriculture	52, 980, 300
Leather industries	30, 873, 800
Chemical industries	40, 481, 400
Electrotechnical industries	11, 473, 500
Textile industries	201, 419, 800
Metallurgical industries	82, 951, 000
War industries	35, 172, 300
[Adds to	664, 347, 100]

Production Values Compared with Pre-War.

The following figures for the value of pre-war industrial production, compared with that of 1921 and 1922, are abstracted from the data adduced by Mr. P. I. Popoff, chief of the Central Statistical Bureau, in his monograph on "Industries of Soviet Russia, 1912–1922," as cited in Economic Life of February 23:

Value of industrial production in Soviet Russia, 1921 and 1922, compared with 1912.

[In millions of gold rubles.]

Year.	Total, including workshops and home handicrafts.	Large and medium-sized enterprises.
1912	4,451	3,721
1921	845	585
1922	1,100	705

Data about production of individual industries during the fiscal year ended September 30, 1922, relative to the calendar year 1913, were published in the Moscow Izvestiya of November 7, and abstracted in detail in COMMERCE REPORTS of February 12, page 453.

In this connection, Trotski stated, on November 16:

For the time being we have such a condition that in the field of agriculture last year's crop will measure up, roughly, to three-fourths of pre-war average; and in that of industry we have, roughly, one-fourth of pre-war average output. (Economic Life, November 17, 1922.)

Value of Product per Worker Employed.

The productivity of labor is traced, parallel with the movement of wages and the proportion of wages per 100 rubles' worth of production, in the following table, abstracted from an article by S. Strumilin in Economic Life of February 17. As a basis for comparison with the data subsequent to the revolution, there are taken only the large industrial enterprises which were covered by the census of August, 1918—namely, 2,301 undertakings, which in 1913 employed 772,657 persons and produced goods worth 1,835,400,000 gold rubles, or 2,372 rubles per employee.

Yearly production and yearly wage values per employee in Russian industries, 1913–1922.

Year.	Production.		Wages.		Cost of wages per 100 rubles of production.
	Gold rubles.	Percentile relation.	In "cost-of-living-index" rubles.[1]	Percentile relation.	
1913	2,372	100	259	100	10.9
1914	2,408	101.5	270	104.2	11.2
1915	2,985	125.8	274	105.8	9.2
1916	3,023	127.5	278	107.2	9.2
1917	2,023	85.5	230	88.8	11.4
1918	1,044	44	133	51.4	12.7
1919	[2]479	20.2	101	39	21.1
1920	576	24.3	106	41	18.4
1921	702	29.6	104	40.2	14.8
1922	[2]1,220	51.5	[2]121	46.7	9.9

[1] The "cost-of-living-index" ruble is explained in COMMERCE REPORTS. Jan. 1, 1923, p. 58.]

[2] Figures approximate.

The following is abstracted from the comments made by the author regarding the above table:

The dynamics of productivity for the period 1913–1918 were impelled by the dominant factor of the war industries, which greatly enhanced both the general lead factor of the enterprises and the average productivity per employee. The following deduction is made and stress is laid on it, for the information of the authorities in charge of Soviet industries. The fluctuations, up or down, of the actual earnings of labor are followed by corresponding, but much more rapid, changes in its productivity. As a result, the cost of wages per unit of production fluctuates in inverse ratio

to the rate of wage earnings. Thus, during the period 1913–1916 the average earnings per employee increased by 7 per cent, while the productivity per worker mounted by 27 per cent. During the following period, 1917–1919, the earnings of labor fell to 36 per cent of the 1916 level, while its productivity slumped to 16 per cent. During the last period, 1919–1922, although there was as yet a relatively feeble advance in wages, the increase in real average earnings amounted to 20 per cent, while productivity went up 156 per cent.

Decline of Production During 1922.

The article in the February 7 issue of Economic Life, cited above, includes the following table, showing how the value of output of the industries in each month compared with that of January, 1922, taken as 100. The figures for April–September are much below those for January–March.

	Per cent.		Per cent.
January	100	June	99.5
February	98.1	July	62.1
March	112.6	August	65.7
April	73.3	September	79.1
May	88.2		

Proportion of Industries Operated by the Government.

The basic industries in Soviet Russia remain almost entirely under Government management and operation. In his address mentioned above, reported in the official Economic Life of November 17, 1922, Commissary Trotski stated:

> The number of men in the State-operated industries (exclusive of transport) is about 1,000,000, while the number of men in the leased enterprises is 80,000 in all; furthermore, the enterprises leased from the State are not all in the hands of private capitalists. One-half of them—i. e., those employing 40,000 people—have been leased by State institutions. The average number of employees in the leased enterprises is 18; in the State-operated ones, 50. This means that the entire basic industry is in the hands of the State, and working for the State. The enterprises which have been let out are all of third-rate importance.

Closing of Business Establishments in Petrograd.

Abstracted from the Economic Life (Moscow) of February 20.

A wholesale shutting down of taxable trading and industrial establishments has taken place lately at Petrograd, as a result of lack of operating capital, inflation of the prices of raw materials and fuel, and the pressure of taxation. During January last, 4,000 stores—or 25 per cent of the total—and 300 industrial establishments—8 per cent of the total—have closed their doors.

BALKANS AND LEVANT.

James A. Robertson, Chief, Levantine Section.

Exports From Rumania During 1922.

Acting Commercial Attaché Louis E. Van Norman, Bucharest.

Official figures furnished by the Ministries of Finance, Industry, and Commerce show the exports of Rumania, by quantities, for 1922, in comparison with the years 1913, 1920, and 1921, as follows:

Commodities.	1913	1920	1921	1922
Cereals:				
Wheat.....metric tons..	1,152,559	238	75,691	28,110
Wheat flour.....do....	123,125	811	19,423	23,231
Rye.....do....	66,153	41,460	55,864	26,786
Barley.....do....	374,737	420,872	387,108	581,986
Oats.....do....	173,649	38,595	165,466	228,673
Corn.....do....	974,449	440,178	769,149	291,649
Millet.....do....	13,830	22,806	33,565	5,909
Bran.....do....	60,751	8,134	3,957	3,955
Beans.....do....	70,691	46,493	68,960	76,902
Petroleum and by-products:				
Gasoline.....do....	241,726	55,511	145.115	131,584
Refined oil.....do....	428,098	149,446	172,971	272,316
Gas and fuel oils.....do....	350,816	25,806	15,210	14,877
Lubricating oil.....do....	7,832	15,163	13,533	16,857
Paraffin wax.....do....	664	.....	.....	10
Crude oil.....do....	26,873	3,500	15,511	2
Wood, lumber, etc.:				
Props and laths.....do....	1,323	.....	28	354
Boards, of fir.....do....	151,444	52,457	121,673	622,122
Other resinous wood.....do....	2,513	11,932	17,119	49,305
Oak lumber.....do....	1,131	360	5	338
Other miscellaneous lumber.....do....	1,286	430	746	6,685
Fir logs.....cubic meters..	203,658	2,117	20,029	86,559
Animals:				
Bulls.....heads..	12	1	131	400
Cows.....do....	157	10	8,687	19,341
Oxen.....do....	9,791	1,576	61,634	125,366
Pigs.....do....	1	53	61,351	174,207
Animal products:				
Lard.....metric tons..	1	5	786	273
Pork fat.....do....	80	21	158	63
Wine.....liters..	22	1,533	397	5,522
Salt.....metric tons..	31,949	22,570	7,396	33,999

The export of eggs during the first six months of 1922, according to COMMERCE REPORTS of November 13, 1922, page 436, amounted to 8,182,119. Figures covering the entire year, as received by the bureau, are not conclusive and have, therefore, been omitted from the foregoing table.

The value of all exports in 1913 amounted to 626,695,000 lei; in 1920, to 3,235,580,000 lei; in 1921, to 7,037,072,000 lei: and in 1922, to 9,816,111,000 lei.

The leu for 1913 was at par. The mean exchange value of the leu in terms of United States currency for 1920 was $0.0199; for 1921, $0.0126; and for 1922, $0.006936.

The Situation in Constantinople.

Cablegram from Trade Commissioner Julian E. Gillespie, Constantinople, April 6.

Business during March was at a standstill. Imports are decreasing, and exports consist chiefly of tobacco and mohair. Merchants are discouraged by the Turkish fivefold tariff and the registration law, although with some exceptions they appear to be slowly complying with these new requirements. Large stocks of American flour and oleo oil remain in the customhouse. The importation of alcohol is prohibited. Local milling is increasing, the wheat used being chiefly from Bulgaria. Shipping is dull. Little demand is being made for the purchase of foreign exchange. Dollar exchange is steady, but speculative features are seen in the exchange market.

Additional information regarding Eastern Europe and the Levant appears in this issue under the following sections:

Tariffs and trade regulations: Provisional most-favored-nation commercial agreement concluded by Rumania and Sweden.
Transportation—Communications:
Use of ship radio in Russian waters.
Packing of parcel-post packages for Russia.

FAR EAST

F. R. Eldridge, Chief, Far Eastern Division

FAVORABLE BALANCE CHARACTERIZES PHILIPPINE TRADE IN 1922.

There are many phases of the economic situation in the Philippine Islands, as disclosed by a review of the past year, which indicate that the period of crisis is past and a basis for normal conditions established. While it is probable that the trade of the islands (the criterion of conditions) will not soon again assume the proportions of the inflated year 1920, it is evident that the standard of 1913 (the last pre-war year) is much too low for the present-day business activities and development of the archipelago.

Large Favorable Trade Balance in 1922.

Imports into the Philippines in 1922 registered a total value of 160,395,000 pesos—a decrease of 71,282,000 pesos from 1921—and exports in 1922 amounted to 191,167,000 pesos, or an increase of 14,936,000 pesos over exports of the previous year. In 1922 exports exceeded imports by 30,771,000 pesos, compared with an adverse balance of trade of 55,446,000 pesos in 1921. It is highly significant of the basic economic soundness and recuperative powers of the Philippines that 1922 (the first year after the period of greatest depression in the history of the islands) should have witnessed a favorable trade balance far in excess of any previous year other than the three specific years of the war-period boom—1916, 1917, and 1918.

Compared with 1913, imports in 1922 increased 50 per cent and exports about 100 per cent. This development of the Philippine export trade should continue steadily with the greater production of and improved foreign markets for staple native products, and it is only through such development that demand in the islands for imported manufactured articles can be encouraged and markets maintained.

The principal items of export are shown in values and quantities for 1921 and 1922 in the following table:

Exports from the Philippines in 1921 and 1922.

Articles.	1921		1922	
	Quantity.	Pesos.[1]	Quantity.	Pesos.[1]

Leading Philippine Products Show Marked Revival.

It will be noted that the value of sugar exports (the leading item) remained practically the same, although a much larger quantity was exported in 1922 than in 1921. The sugar industry of the islands felt the stress of the acute financial condition at the beginning of the year and many planters were forced to sell ahead at extremely low prices because of immediate need of financial assistance. As the year progressed, however, the improvement in the sugar market throughout the world caused an upward tendency in the prices received for the Philippine product, and production at a profit was attained by the end of the year. Consumption in the United States was well maintained and by the end of the year conditions in the sugar market were extremely favorable. Reports received during the first three months of 1923 indicate a continued improvement in the sugar situation, bankers having estimated that during the present year the centrals indebted to them will be able to meet all expenses incident to operation and interest, as well as substantial payments on principal. The period of low sugar prices convinced the Philippine planter of the necessity of greater productivity, and the use of fertilizers had become general throughout the islands by the end of 1922.

Abaca (manila hemp), which has only been superseded by sugar in the list of Philippine exports since 1920, still holds the premier place among native industries, giving employment to millions of people and affecting the purchasing power of the country more largely than any other raw material. The beneficial effect of the revival in this industry upon the general economic situation can not be overestimated. The increase in abaca production during the year 1922 was phenomenal and at the same time shipments were large, materially reducing the stocks held in the islands and eliminating all old fiber, so that only good merchantable stocks remain. Price fluctuations were not so pronounced as in previous years, but showed a steady rise, particularly in the higher grades. Consumption in the United States increased over 100 per cent, and Japan continued to be an important factor in the trade. A fiber advisory board has been created by the Governor General for the purpose of handling all disputes regarding classification. The results ensuing from this arrangement are expected to be of great value to the abaca interests of the islands.

Considerable advancement will be noted in the 1922 exports of practically all the remaining Philippine products of importance. Greatly accelerated shipments of cigars to the United States accounted for the improvement in the tobacco market. The revival, however, has not been sufficient to warrant full forces or full-time operations in all tobacco establishments.

Philippine Imports in 1921 and 1922.

The decrease in imports in 1922 was the natural result of overstocks brought on by the heavy arrivals in 1921 of many goods ordered during the boom period. The values of the principal imports during the two years are given in the following table:

Imports into the Philippines in 1921 and 1922.

Articles.	1921	1922
	Pesos.	*Pesos.*
Cotton piece goods	25,464,000	34,408,000
Iron and steel	44,110,000	15,209,000
Cotton goods except cloth	12,184,000	12,821,000
Wheat flour	7,017,000	5,783,000
Crude oils	954,000	5,338,000
Coal	6,987,000	5,009,000
Paper and paper goods	6,066,000	4,920,000
Meat products	6,256,000	4,623,000
Rice	6,649,000	4,604,000
Dairy products	4,325,000	3,925,000
Gasoline	8,832,000	3,804,000
Illuminating oils	9,015,000	3,476,000
Silk and manufactures	3,722,000	3,117,000
Chemicals, dyes, drugs, etc	3,349,000	2,946,000
Fish and fish products	2,966,000	2,835,000
Tobacco and manufactures	3,212,000	2,480,000
Electrical equipment	3,402,000	1,892,000
Cattle and carabao	4,075,000	1,661,000
Leather and manufactures	1,786,000	1,564,000
Automobiles and parts	9,645,000	1,407,000
Lubricating oils	3,943,000	655,000
All other imports	57,718,000	37,918,000
Total	231,677,000	160,395,000

Cotton piece goods resumed the first place in the import trade of the Philippines in 1922, since overstocks of this important commodity had in a large measure been depleted in 1921. Imports of iron and steel products assumed second importance. A decrease in the demand for machinery, due to the suspension of industrial extension and public works during the financial stress of the islands, was largely responsible for the curtailment in iron and steel imports.

The general falling off in the minor imported articles reflects the more economical basis of living, which has followed the tendency to extravagance of the former prosperous period in the islands. In the case of cattle and carabao the decline in imports was due to the embargo placed on cattle imports by the government.

Importers and wholesalers in Manila had just begun by the end of 1922 to feel the benefits of improvements which were under way. Merchants and retailers had been indebted to them and they in turn were heavily indebted to the banks. Renewed buying on the part of the public toward the end of the year reflected the general feeling of confidence, which still prevails in the islands, and in the light of the continued favorable prices received for Philippine produce a period of profitable transactions is expected.

Increased Monetary Circulation—Improved Trade Expected in 1923.

Importers have also been aided by the fact that the Philippine currency system has been restored to a normal basis and monetary circulation has increased. At the beginning of the year this circulation amounted to 104,000,000 pesos, which continually decreased until October, after which an increase began. At the end of the year the total circulation amounted to 98,000,000 pesos. This was a decrease of about 5 per cent compared with 1921 but an increase of 94 per cent over the currency circulation of 1913.

The opinion is expressed that the volume of business during the present year will so improve that the recent increase in the sales tax from 1 to 1½ per cent will be sufficient to supply the budget deficit for the year. It is noteworthy that business failures in the Philippines have been very few.

United States Share in Philippine Trade Increased.

The share of the United States in the trade of the Philippines in 1922 increased from 61.7 per cent to 64.1 per cent. This advance was directly due to greater imports from the islands. Japan ranked second, with 10.7 per cent of the total trade, followed by China, with 8.2 per cent, and the United Kingdom, with 4.1 per cent.

INDIAN BUDGET AND FINANCES.

Based on report from Vice Consul Harold Shantz, Calcutta.

The Inchcape retrenchment committee, appointed in 1922 to devise means for reducing the Indian government expenses, presented its final report to the Indian Assembly on February 28, 1923, recommending a reduction of approximately 195,000,000 rupees in the general expenses. Not all of its proposals are to be carried into effect this year. The largest cuts suggested are 105,000,000 rupees in military expenditures, 45,000,000 rupees in railways, and 13,700,000 rupees in posts and telegraphs, and the remaining reduction will be distributed among the other civil departments. Military works and stocks of ordnance supplies are to be curtailed, and the Royal Indian Marine is to be entirely reorganized and drastically reduced. A strict watch is urged upon military expenditures, with a view to a final reduction for all such expenses to a sum not to exceed 500,000,000 rupees. The abolition of the Indian trade commissionership at London is further suggested.

Curtailment of Railway Expenses.

The curtailment of railway expenses is based on the fact that locomotives and rolling stock at present apparently exceed the traffic requirements and that there is an unnecessary expenditure of funds on unremunerative lines. Reductions in the working expenses of railways are contemplated for the purpose of providing an average return of at least 5½ per cent on the invested capital. The appointment of a financial adviser for the railroads, the abolishment of the present program of revenue and expenditure, and the annual provision for adequate finances by each railway for maintenance and renewal purposes are measures strongly urged.

India's Five-Year Deficit—Budget for 1922–23.

The necessity for adopting a stringent program of retrenchment is evident from the fact that for five years India has been exceeding its income, the annual deficits for that period totaling 1,000,000,000 rupees, with an estimated national debt amounting to 7,810,000,000 rupees on March 31, 1923, as against 4,110,000,000 rupees March 31, 1914, notwithstanding the additional tax which had been imposed for the last two budgets and was estimated to yield 280,000,000 rupees for 1922–23. Of this total deficit it is estimated that the sum of 310,000,000 rupees has been covered by the inflation of the currency and the remaining 690,000,000 rupees have been raised either through issues of treasury bills to the public or by floating loans.

While the finance committee found it impossible to incorporate completely this year all the recommendations reviewed, the annual budget reflects the intentions of the committee. The budget estimates for 1922–23, as finally passed, provided for a deficit of 91,600,000 rupees, the estimated revenue being 1,332,300,000 rupees and the expenditures 1,423,900,000 rupees. The revised estimates, however, while showing a reduction of 41,400,000 rupees in expenses, indicate that the revenue will be reduced by 124,800,000 rupees, resulting in a total deficit of 175,000,000 rupees.

This revenue estimate has been based on an improvement in trade, which appears to have been justified in

view of the fact that the balance of trade in India's favor during the first 10 months of this financial year has been 620,000,000 rupees, as compared with an adverse balance of 295,000,000 rupees in the corresponding period of the previous year. In spite of this, however, the custom's returns for 1922–23 will probably be 31,200,000 rupees less and the net revenue of the railroads 58,000,000 less, while income tax and postal and telegraph receipts will probably show further decreases.

One of the most important factors affecting the revenue was the import of sugar, which had yielded 65,000,000 rupees at the former rate of 15 per cent duty during 1921–22. While a continuance of such a large importation was scarcely to be anticipated for the past year, it was fully expected, however, that 62,500,000 rupees would be realized at the new tariff rate of 25 per cent. Returns are still incomplete, but it is scarcely probable that more than 15,000,000 rupees will be received from this source. This fluctuation can not be readily traced to any particular source.

There was an increase in opium and salt revenue and savings in provisions for interest on debt and in military expenses, especially in the Northwest Territory.

Budget for 1923–24.

In framing the new budget for 1923–24 the total expenditure is estimated at 2,043,700,000 rupees—a reduction of 110,000,000 rupees, in spite of an increase of 17,500,000 rupees for interest. Civil expenditures are reduced by 26,000,000 rupees to 1,013,000,000 rupees (the committee recommended a reduction of 55,000,000 rupees) and military expenditures have been cut from 677,500,000 rupees to 620,000,000 rupees. The income-tax revenues remain practically the same. There is a slight increase in the amount budgeted for sugar. Traffic receipts are estimated 35,000,000 rupees higher, with a net profit of 3,500,000 rupees, and posts and telegraphs are expected to yield 12,300,000 rupees, due to recovery in revenue and reduction of expenses.

These estimates are all made on the basis of present taxation, using 1s. 4d. to the rupee, and assuming that trade conditions will continue as at present and allowing for the ordinary normal growth of business.

Provincial contributions to the central government will remain the same as at present, although the government aims to eventually eliminate these entirely.

The deficit of 58,500,000 rupees in the new budget will be adjusted by an apparent saving of 15,900,000 rupees in bookkeeping, the remaining actual deficit of 42,600,000 rupees being met by an increase of the salt tax from 1 rupee 4 annas to 2 rupees 8 annas per maund (82.2 pounds). This increase is expected to return more than 45,000,000 rupees to the treasury in 1923–24, which leaves a small surplus of 2,400,000 rupees in the budget total.

Present Exchange Rates to Remain.

The finance member of the government advanced the opinion that the time was not ripe for adopting a new policy in regard to exchange. Stability is the ultimate aim and the government means to achieve it at the first opportunity. However, it is not believed that the internal prices of India have yet been adjusted to a level corresponding to 1s. 4d. exchange. Therefore, if exchange were stabilized at that rate now, internal prices would have to rise and government expenditures advance considerably in terms of the rupee. Also, the government does not wish to permit the rupee again to become more valuable as bullion than as currency. It is, therefore, estimated that exchange will not be interfered with at present in the hope that it may ultimately be stabilized at a higher value than 1s. 4d.

Revenue from Luxury Tax.

The finance member states that in spite of the fall in prices, the budget for 1922–23, estimating 28,400,000 rupees from the 30 per cent duty on luxuries, decreased only 1,100,000 rupees; that nearly twice as many automobiles were imported during the first nine months of fiscal year 1922–23, as in the same period of the preceding year (from April 1 to December 31, 1921, India imported 1,892 automobiles, and 3,303 for the same period in 1922), and adds: "If the value of cars imported has fallen considerably, this is due partly to the general fall in world prices and partly to the fact that people have been importing the cheaper American car in preference to the more expensive English car."

NEW ZEALAND EXPORTS IN 1922.

Vice Consul George H. Richardson, Wellington, February 6.

During 1922 New Zealand exported goods to the value of £42,720,894. Although this is a decrease from the exports of the two preceding years, the total is considered satisfactory in view of the heavy sales of old stocks in 1920 and 1921. Exports of wool were valued at £11,882,553 in 1922, as compared with £5,221,479 in 1921 and £11,863,827 in 1920. The principal exports in 1920, 1921, and 1922 are shown in the following table:

Principal exports from New Zealand in 1920, 1921, and 1922.

Far Eastern Trade and Economic Notes.

Proposed Reform in Tenant Farm System of Japan.

The Japanese Agriculture and Commerce Department is considering plans for some modification of the tenant-farmer system, which would tend to increase the yield of agricultural lands. One suggestion would change the tenancy laws to extend the period of possession under arrangements that would provide an incentive for intensive cultivation. Another plan would provide Government funds for the gradual transfer of title from the landlords to tenant farmers through long-time credits for purchase of farm lands. (Commercial Attaché James F. Abbott, Tokyo.)

American Consular Officers on Leave.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of venue.	Address.
Savage, John M.....	Southampton, England.	May 16	Care of Manhattan Club, Madison Avenue and Twenty-sixth Street New York City.
Strother, Shelby F....	Guadeloupe, West Indies.	May 12	First and Burnett Streets, Louisville, Ky.
Huddle, J. Klahr.....	Hamburg, Germany	May 25	Shawhan Hotel, Tiffin, Ohio.

SURVEY OF CURRENT BUSINESS

Prepared in the Bureau of the Census.

MARCH PRODUCTION IN THE UNITED STATES MAKES NEW RECORDS.

Record productive activity in both raw and finished products occurred in March, while an increasing consumptive demand apparently digested the goods produced without an appreciable increase in stocks. Cotton consumption and pig-iron production broke all previous records since data for these movements have been available, exceeding even the high records made during the war. Steel-ingot production and locomotive shipments were the highest since 1920, and unfilled orders for locomotives made a new high record. Zinc production was the highest since 1917. March production of bituminous coal was exceeded only twice since 1920—in January, 1923, and March, 1922. The production of anthracite coal was the greatest since August, 1918.

Retail sales, both by 10-cent stores and by mail-order houses, surpassed all previous records for this month since 1920, at the peak of high prices. Carloadings were the highest on record for this time of year. The wholesale price index advanced two points, being the highest since February, 1921. Sales of life insurance made a new high record since monthly figures became available.

Textiles—Record Cotton Consumption.

Consumption of cotton by textile mills in March broke all records, and at 623,105 bales was about 8,000 greater than in May, 1917, the previous high month. Mill stocks of cotton for March 31 were greater than those held on the last day of February, while warehouse stocks continued to decline, and the total stocks of 4,413,000 bales at the end of March were the lowest reported for this season of the year since 1914. More spindles were active in March than in February. Export of raw cotton declined to 318,210 bales in March. Imports of cotton, exclusive of linters, declined to 53,219 bales. Fabric consumption by tire manufacturers in February was the highest on record since such data have become available. Prices of cotton and cotton goods made substantial advances during March. Silk deliveries to mills declined from the high point reached in February.

Metals—Production of Pig Iron—Locomotive Orders.

Pig-iron production broke all previous records in March at 3,521,275 tons, and steel-ingot production, allowing for companies not reporting, amounted to 3,888,897 tons, the highest since March, 1920. Unfilled orders of the United States Steel Corporation increased to 7,403,000 tons, the highest since January, 1921. Unfilled orders for locomotives increased to 2,316, a new high record.

The productive activity of merchant pig-iron furnaces was greater than at any time since the end of 1920, while the sales of merchant pig iron were the highest since February, 1920. The forward business of these furnaces as represented by their unfilled orders was the largest since October, 1920, and represents approximately four months' production based upon the March rate.

New high records since monthly statistics were available were made in March by bookings of steel castings and of fabricated structural steel.

Zinc production, at 97,462,000 pounds, was the highest since 1917, while stocks on March 31 were close to the lowest on record.

Coal and Coke—Automobile Tires—Crude Rubber.

An increase occurred in bituminous-coal production and, with the exception of January of this year and March, 1922, was the highest figure since 1920. Anthracite coal, beehive coke, and by-product coke each registered a considerable increase in production in March, the former attaining the highest mark since August, 1918.

The output of pneumatic tires and the consumption of crude rubber in February, which figures have just become available, were the highest on record since these statistics were established, in November, 1921.

Automobile Production—Increase in Building Construction.

Automobile shipments for March increased, and on the basis of shipment figures the total production of automobiles for March is estimated as 346,000 cars and trucks, the largest monthly production on record, being double that of March, 1922, and 25 per cent greater than February of this year.

The total value of building contracts awarded in 27 Northeastern States in March was $334,000,000, or about 14 per cent greater than a year ago. Residential construction in point of value was greater than any month on record. Fire losses decreased slightly from the high mark of February.

The cost of building materials as represented by the Department of Labor index is still upward, while the labor shortage in the building trades is growing more acute.

Building Materials—Flooring Production Highest on Record—Leather.

Marked increases are noted in northern pine lumber and lath production and shipments in March, both as compared with February and with March of a year ago. Exports of planks, scantlings, and joists in February were higher than for the same month of 1922.

Production, shipments, new orders, and unfilled orders for oak flooring in March were the greatest on record, while stocks on hand were practically the same as on February 28, but 10 per cent less than a year ago. Receipts of turpentine and rosin at the three principal ports were higher than a year ago, while stocks on hand at the end of March were each more than 20 per cent lower than those held on March 31, 1922. Lumber prices advanced during the month.

Production of upper leather in February declined from the high mark of January, but was over 10 per cent greater than a year ago. Stocks of both upper leather and sole leather and belting leather continued to decline and are now the lowest since these statistics were established in September, 1920. Prices of hides, leather, and shoes, in general, declined in March.

Fats and Oils—Cereals—Small Winter-Wheat Crop.

The price of cottonseed oil advanced rather sharply in March. Receipts of flaxseed at Minneapolis and Duluth were slightly heavier than in February, while stocks were considerably lower than end-of-month stocks a year ago.

Wheat movement for March was about the same as a year ago, but the visible supply was 28,000,000 bushels larger. The 1923 winter-wheat estimate of 572,000,000 bushels by the Department of Agriculture on April 1 points to the smallest crop since 1918. Prices of wheat and flour in general declined in March.

Corn movement was much smaller than in March, 1922, and the visible supply was 20,000,000 bushels less. Grindings increased slightly, but were still under the figures for a year ago. The wholesale price of corn increased during March.

The visible supply of oats was 60 per cent less than the supply on March 31, 1922. Prices of oats rose, while the prices of barley and rye declined. Car loadings of grain and grain products declined slightly, both as compared with February and with March a year ago.

Transportation—Car Loadings.

Freight car loadings for March were not only the greatest on record for this season of the year but on a level not normally reached until about midsummer or early fall. As compared with a year ago, the March average loadings of ore were 150 per cent greater, while coal and forest products were upward of 40 per cent greater, indicating pronounced consumption of raw materials.

Data from Survey of Current Business.

The following table gives such data from the next issue (No. 21) of the Survey of Current Business as have been received up to April 17, 1923. Some data not included in the advance statements from the preceding issue (No. 20) are also given here. Another set of advance figures will be issued giving the remaining figures for the month of March.

All items given in the following table correspond with similar information in the issues of the Survey of Current Business. These figures should always be read in connection with the detailed tables in the Survey, where specific descriptions of the data and their sources are given. The figures given are in some instances collected by governmental agencies and in other cases by trade associations or technical journals. All of this is explained in the monthly Survey of Current Business, which may be obtained from the Superintendent of Documents, Washington, D. C., for $1 per year.

Eastern Europe	4,837	19,960	470
Western Europe	32,378	196,204	631

[1] Does not include inquiries handled by foreign service of the bureau (27 posts, 80 representatives) by the cooperative offices maintained by the bureau in 25 chambers of commerce and boards of trade in the United States.

[2] This classification of inquiries under "Regional," "Commodity," "Technical," and "Miscellaneous" headings cover only the period from Oct. 2, 1921, to July 1, 1922. The figures for trade opportunity addresses and trade lists are for the entire year.

[3] Information reserved from "Foreign trade opportunity" announcements, printed in each issue of the COMMERCE REPORTS. (Name and address of foreign inquirer interested in the purchase of American goods, including references, cable address, and other details.)

FOREIGN TRADE OPPORTUNITIES.

Reserved information may be obtained from the Bureau and its district and cooperative offices by duly registered firms and individuals upon written request by opportunity number. The Bureau does not furnish credit ratings or assume responsibility as to the standing of foreign inquirers; the usual precautions should be taken in all cases; references are generally furnished and form a part of the reserved information. Correspondence may be in English unless otherwise stated. Symbols: * Reported by American consular officers; † Reported by commercial attachés and trade commissioners; ‡ Direct inquiries received by the Bureau.

American manufacturers and exporters in following up "Foreign Trade Opportunities" submitted by foreign representatives of the United States Government should not fail to furnish the American consul, attaché, or trade commissioner who sent in the report a copy of their letter to the foreign merchant. This practice should work out to the distinct advantage of American exporters, as it will enable consuls and other representatives of the Government to follow up the matter personally with the foreign merchant.

Agricultural machinery 6117, 6118
Automotive products 6124, 6125, 6126, 6127, 6128, 6168
Belting 6119, 6132
Chemicals 6088, 6097, 6155, 6162, 6163, 6164, 6166, 6167, 6168
